The president has power to fill vacancies until a new election shall be held. The secretary, in addition to his other duties is to receive the money due the National Association and turn it over to the treasurer, making a settlement with him at the end of each month. His salary is \$2,000 a year, and he gives a bond for \$2,000. The treasurer is required daily to deposit any money received by him in depositories designated by the executive board and approved by the president. The members of the executive board act as trustees, and have general supervision and control over the association. They must direct the investment of the association funds "in readily convertible securities - Government, State, or municipal - that have a stated or well-known market value." They are forbidden to lend money on personal security or real estate mortgages.

The committee on legislation must "seek to improve the condition of letter carriers through legislation, to secure for every letter carrier the full benefits intended to be conferred by operation of laws already enacted." Any member or branch

<sup>1</sup> Postal Record, May, 1899, p. 126.

which shall introduce or try to have passed in Congress any measures relating to letter carriers which have not been approved by the association is to be expelled.

This provision is doubtless enacted in consequence of experiences of obstacles which are put in the way of legislation by the presentation of a variety of suggestions. The Postal Record for December, 1900, commenting upon the failure of a certain bill which the association had promoted at the previous session of Congress, attributed it to the "unwarranted interference" of some persons affected by the bill who had sent to Congress certain amendments, and by so doing had led the committee to think that the men affected "did not know just what they wanted."

**State associations.**—The constitution contemplates the formation of a State association in every State which has 3 branches. Branches in States where less than 3 branches exist are to be assigned by the president to the jurisdiction of State or district associations.

**Membership.** Membership is confined to regular and substitute letter carriers. Applications must be made in writing, and each applicant must be recommended by a member in good standing, and must be elected by a two-thirds vote of the local after his application has been presented at one meeting and laid over to the next.

**Discipline.** Charges must be made in writing, clearly specifying the offense, and signed by a member of the branch. A copy of the charges, under seal of the branch, must be served on the accused. The charges are to be referred to a committee of disinterested members, who are to summon the parties, hear and take down the testimony, and report the evidence and the facts elicited, with their verdict. The branch is then to pronounce its judgment and fix the penalty if any. Expulsion can be inflicted only by a two-thirds vote. A member may appeal from the decision of his branch to the committee on appeals, consisting of the vice-president, the chairman of the executive board, and the chairman of the committee on constitution and laws.

**Finances.**—The charter fee for cities where there are 20 or more carriers is \$5. Dispositions are granted for \$1 to cities where less than 30 carriers are employed, and also to State and district associations. The per capita tax is \$1.50 a year. Assessments can be levied only by popular vote.

Any branch which neglects to pay its dues or assessments within 30 days after they are due is to be fined 10 per cent of the amount and to stand suspended until payment is made. Any branch which remains suspended for 12 months forfeits its charter.

Members 3 months in arrears for dues are not entitled to vote in the branch, nor eligible to office. When 6 months in arrears they are suspended. They can be reinstated, after paying all demands against them up to the time of suspension, by a two-thirds vote of the branch.

**Benefits.**—The constitution provides that branches may, at their option, make provision for payment of relief or funeral benefits and for levying additional dues for such purposes, but branches are forbidden to compel applicants for membership to participate in such benefits and dues in order to become members.

The association has organized the United States Letter Carriers' Mutual Benefit Association, whose funds are separate and whose management is in the hands of different officers. This benefit association issues certificates, payable at death, for \$1,000, \$2,000, and \$3,000. It is believed to be the only insurance association connected with any American labor organization which grades its assessments according to the ages of its members. Even the great railroad brotherhoods charge the same amount for an insurance certificate of the same size, no matter what the age of the holder may be. The Letter Carriers' Association grades its assessments according to the ages of its members upon joining, from 38 cents for a single assessment on a \$1,000 certificate for a man who joins between 21 and 25 to 88 cents for a man who joins between 49 and 50. An assessment is levied regularly at the beginning of each month, and extra assessments may be levied when they are required. The beneficiary is not entitled to more than the proceeds of one assessment, even though these be not equal to the face value of the certificate.

Fifteen per cent of each certificate is charged against it at the time of issue, and if the holder dies before he has paid assessments to the amount of this 15 per cent the deficiency is deducted from the amount due his beneficiary and placed to the credit of the emergency fund. The emergency fund can be drawn upon only for death benefits, and only when more than 16 assessments are required to pay liabilities in 1 year. Besides the deductions from quickly matured certificates, the

emergency fund is replenished by an addition of 10 per cent to the regular amount of each of the first 80 assessments which each member pays. The general expenses of the benefit association are paid by an annual per capita tax of 50 cents upon the members of it.

If the amount of each monthly assessment is not received at headquarters within 15 days after it is due or if the amount of any special assessment is not received within 15 days after it is called for, the chief collector, the head officer of the mutual benefit association, is to notify the secretary, the president, and the collector of the delinquent branch of its suspension from benefits, and 30 days thereafter, if payment has not been made, the title of the members to benefit ceases. Any member who forfeits his membership in the Letter Carriers' Association by nonpayment of its dues, and any branch which is dropped from membership for the same cause, forfeit all their rights in the mutual benefit association at the same time.

An applicant for admission to the benefit association must be a member in good standing of the Letter Carriers' Association, between the ages of 21 and 50 years, must be recommended by some competent practicing physician appointed by the board of trustees, must be examined according to the published rules for medical examiners, and his application must be approved by the chief medical examiner.

### AMALGAMATED MEAT CUTTERS AND BUTCHER WORKMEN OF NORTH AMERICA.

**History.**—The organization called the Amalgamated Meat Cutters and Butcher Workmen of North America was formed in January, 1897. Sixty-three charters were reported as having been issued at the end of the fiscal year, December 1, 1899, 89 charters up to July 9, 1900, and 134 up to June 1, 1901. On July 9, 1900, the number of members in good standing was reported as 1,026.

In February, 1901, the secretary gave the total membership in good standing and in bad as about 6,000, and in June, 1901, as about 10,000.

**Preamble.**—The preamble to the constitution of the Meat Cutters and Butcher Workmen contains the following:

"The concentration of wealth and business tact conduces to the most perfect working of the vast business machinery of the world, and there is perhaps no other organization of society so well calculated to benefit the laborer and advance the moral and social condition of the mechanic of the country if those possessed of wealth were all actuated by those pure and philanthropic principles so necessary to the happiness of all, but alas for the poor of humanity, such is not the case. 'Wealth is power,' and practical experience teaches us that it is a power too often used to oppress and degrade the daily laborer."

**Conventions.**—The convention is held biennially in August. No local is allowed more than one delegate. In order to be represented, a local must have been affiliated at least 60 days, and must have paid its dues to the International body up to within 60 days of the convention. In order to be eligible as a delegate or alternate, one must have been a member in good standing a year before the election, unless his local has not existed so long.

**Referendum.**—All questions which the executive board consider of sufficient importance, or as to which one-fourth of the local unions make the request, are to be submitted to a popular vote.

**Officers.**—The officers are a president, who is also general organizer; a secretary-treasurer, and 5 vice-presidents. The vice-presidents are elected from separate districts, and each in his own district acts as a central executive officer. The president has power to visit any local union and inspect its proceedings and examine all its books and documents, either personally or by deputy. The secretary-treasurer is required to deposit all money above \$100 in his name as secretary-treasurer. The president and the secretary-treasurer receive \$75 a month apiece and expenses. The vice-presidents receive \$3 a day for time devoted to the service of the union, and expenses.

**Local Unions.**—A local union may be established by seven practical workmen of the occupations included. The power to grant charters is in the executive board. When one union has been established in a town, a second charter is not to be granted without the consent of the existing local, unless the executive board overrules the objections offered, on the ground that they tend to retard the work of organization.

The president of the Butcher Workmen tried in 1900 to organize a packing trades council at Kansas City, embracing the stationary firemen, the coopers, and

the various unions of butchers and laborers. The firemen and the coopers refused to go into the plan.

**Membership.**—The organization is meant to include all workmen in retail work-shops and in slaughterhouses, except common laborers; as the secretary-treasurer says: "Every wage earner, from the man who takes the sheep, hog, or bullock on the hoof until it goes into the hands of the consumer." At the close of 1900, the secretary expressed the opinion that the members were about equally divided between slaughterhouses and retail shops. Retail butchers who do not employ any help may be received, at the discretion of the local union. Any one who becomes a member of any retail protective association or board of trade must be granted a retiring card. The minimum age for admission is 16.

**Cards.**—Any member in good standing is entitled to a transfer, traveling, or retiring card at any time. No extra charge or initiation fee can be demanded of a member who presents a transfer or traveling card.

**Discipline.**—Any officer who has charge of any book necessary to union meetings is to be fined 50 cents for each failure to have such book at a meeting. Any officer who does not have charge of any book is to be fined 10 cents for each absence, except when he is sick or out of town. For three consecutive absences without proper excuse an officer forfeits his place. Any member who accepts an appointment on any committee, and fails to act, is to be fined 25 cents for neglect of duty.

Any member who disobeys the chair or uses profane or indecent language is to be called to order and fined 25 cents. If he continues to disturb the meeting, he is to be removed from the room and fined \$1.

**Finances.**—The charter fee for a new local union is \$15. This covers the cost of the seal and the outfit of books and stationery. The per capita tax is 25 cents a month; 10 cents goes to the defense fund, and 15 cents for general expenses.

The initiation fee of local unions may not be more than \$5, and the dues may not be less than 50 cents a month. Dues are collected for by means of adhesive stamps, furnished by the national secretary-treasurer, put by the local financial secretary upon the member's card, and canceled.

There is a provision for the reception of workmen of the craft, who are not near a local union, as members at large. The initiation fee of such members is to be the same as that of the nearest local, but is not to be less than \$2 nor more than \$5.

The total receipts during 14 months ending November 15, 1900, were \$8,176.91, the total expenditures, \$7,304.83, the balance on hand November 15, 1900, \$1,385.80. No part of the expenses of the period was for the support of strikes.

Any local which is 2 months in arrears in its dues to the national union, after receiving notice from the secretary-treasurer, is to be suspended. When 4 months in arrears, the constitution provides that its charter shall be revoked and it shall be fined \$10, unless the international executive board rules otherwise. Locals 2 months in arrears are not in good standing, and, according to the constitution, any grievance presented by them is not to be considered by the international organization, and they are not entitled to any benefits.

Any member 2 months in arrears is to be suspended and fined 25 cents. When 4 months in arrears, he is to be expelled. An expelled member may be reinstated by a two-thirds vote.

**Strikes and boycotts.**—Each local union is directed to appoint a grievance committee of three members, who are to investigate any grievance and report to the local before any action is taken. Locals are forbidden to order strikes without the consent of the international executive board. The constitution even says that a reduction of wages demanded or enforced by an employer does not constitute a lockout. When a difficulty with an employer arises, the local must hold a meeting to consider it. A three-fourths vote of the members present, by secret ballot, is necessary to insist on a grievance, and no member is allowed to vote on the question who has not been a member for at least 3 months continuously. If it is decided to insist on the demand, the members involved must remain at work and the union must send a statement of the case to the national president. No member who was not employed in the place before the difficulty arose may go to work there while it is pending. The president must proceed to the place, personally or by deputy, and try, in conjunction with the local committee, to effect a settlement. If he fails, the case is submitted to the executive board. The local must be governed by the action of the board. If it strikes after notice has been given that the grievance is not sanctioned, it is subject to suspension.

Members out on authorized strikes are entitled to \$5 a week after the first week. Every member who receives strike benefit must sign a voucher for the amount received for each week or fraction of a week, and the local union must send these vouchers to the general secretary, with a weekly statement in detail. The president and the executive board, if they become satisfied that the strike is lost, may

declare it at an end, so far as the support of the national body is concerned; but they must give 2 weeks' notice.

No member is entitled to receive strike pay until he has been a member in good standing for 6 months. No local union is entitled to draw strike pay until it has been affiliated 6 months, and if a local is suspended for any cause it can not receive any benefit until 6 months after it is reinstated.

The union finds it hard to enforce these excellent regulations. In reporting upon a disastrous dispute with Jacob Dold & Co., at Buffalo, the president said: "I found the same old course had been pursued—violate the constitution and then call on the executive council for advice and assistance." A dispute having arisen over a demand that the company discharge two men who were not in good standing in the union, the local declared a strike without waiting to consult with the national officers.<sup>1</sup> In spite of the illegal action of the local the national officers felt compelled to take up its contest. A boycott was declared against the products of the Dold Company. The convention of 1900 empowered the executive board to levy an assessment of 25 cents a member a month on all members of the organization for such time as the board might deem necessary in order to push the fight and to give necessary aid to the strikers.

After the union had fought Swift & Co. with a boycott for almost 3 years, the president of the union said in his report to the convention of 1900: "In view of the fact that the large packers are seemingly in a combine, one of the purposes being to cease selling meats to any retailer who refuses to purchase from a boycotted packer, thereby rendering a boycott on a member of the combine ineffectual, I hereby recommend that this convention take steps to remove the boycott on Swift & Co."

The representative of the Meat Cutters introduced a resolution in the American Federation of Labor convention of 1900, reciting that the boycott upon the Swift Packing Company had existed almost 3 years and had received but little attention from organized labor, while it had prevented the organizing of the men working in many of the large plants of the "Big Four" and had disrupted many local unions of meat cutters throughout the country. The resolution instructed the executive council of the Federation to designate two members of the council to go to Chicago and effect a settlement of the existing difference. A settlement was made, and the secretary reported in June, 1901, that a perfectly friendly feeling existed between the organization and all the large packers. "The only people who now object to their employees becoming members of the A. M. C. & B. W. are the small packers, who, in order to compete with the large firms, desire to reduce the wages of their employees. The organization is growing rapidly and we are enforcing the constitution and preventing strikes, as our object is not to antagonize our employers, but, by organizing, to make better men and more efficient workmen, and work in harmony with our employers and settle all differences by arbitration."

**Union label.** The Meat Cutters and Butcher Workmen have adopted two devices in the nature of a union label. One is an actual label intended to be attached to the products of slaughterhouses and packing houses. The other is a card which is meant to be displayed in retail shops, to indicate that the shops employ union men and are run under union conditions. The union shop card can not be placed in any meat market without the permission of the national executive board. It remains the property of the union and can be withdrawn at the discretion of the general secretary-treasurer. It may not be displayed in any shop where nonunion men are employed. The packing-house label has not obtained any extensive use. The secretary reported that about 5,000 shop cards had been sent out up to February, 1901.

## THE AMERICAN FEDERATION OF MUSICIANS.

**History.**—The National League of Musicians was organized in New York City in March, 1886. As the American Federation of Labor gradually increased in size and power a dispute arose in the National League of Musicians over the question of affiliating with it. The proposal to affiliate was brought up in every convention of the League from 1887 to 1896. It was always defeated, but by a steadily decreasing majority. In 1895 the convention of the Federation of Labor instructed its executive council, in case the League of Musicians failed to affiliate, to call a convention of the musical organizations of the United States to form another national body. Messrs. Gompers and O'Connell, of the executive council of the Federation of Labor, appeared at the convention of the League of Musicians in 1896 and urged

<sup>1</sup> Convention Proceedings, 1900, p. 7.

<sup>2</sup> Meat Cutters' Convention proceedings, 1900, p. 5.

<sup>3</sup> American Federation of Labor Convention Proceedings, 1900, p. 207.

**affiliation.** The proposition was defeated, it is said, by a tie vote, and only by the negative votes of three delegates who had been instructed by their locals to vote in the affirmative. The president of the Federation of Labor issued a call for a convention of musicians to meet in October, 1896. Forty organizations sent representatives to it, of which 35 were locals of the National League of Musicians. It is said to have been the intention of these locals not to form a hostile body, but to form a friendly body which should ultimately combine with the League in affiliation with the Federation of Labor. The convention organized the American Federation of Musicians. It adjourned to meet at the same time and place at which the National League of Musicians was to hold its next convention. The president of the League undertook to revoke the charters of all the locals which had joined the new body. This is asserted to have been contrary to the constitution of the League, which gave every local the right to a formal trial before revocation of its charter for any offense. This view appears to have been ultimately upheld by the courts. Long before the courts had reached a settlement of the question the League of Musicians had ceased to exist, and the American Federation of Musicians had absorbed nearly all of the former members of the League. It was stated by the secretary of the Federation of Musicians, in September, 1900, that all of the former locals of the League but four were then members of the existing Federation.

The number of locals reported May 1, 1897, was 51; 1898, 83; 1899, 93; 1900, 114; 1901, 138. The membership was estimated May 1, 1897, at 5,979; 1898, 5,915; 1899, 9,552; 1900, 10,176; 1901, 11,767. In his report to the convention in June, 1900, the secretary-treasurer estimated a net membership of 8,555. He also stated to the convention that it was impossible to make an accurate estimate of the membership, because the great majority of the locals had failed to comply with those provisions of the constitution which require an accurate return of the membership to the secretary-treasurer.

**Convention.**—The convention is held annually. Each local of 100 members or less is entitled to 1 delegate. Larger locals have 1 delegate for each additional 100 members or majority fraction thereof, but no local can have more than 3 delegates. Locals can cast 1 vote in the convention, however, for each 100 members or majority fraction thereof, up to 10 votes.

**Constitutional amendments.** The constitution may be amended by a majority vote of the delegates present at the convention. In practice, important propositions are often submitted to popular vote.

**Officers.**—The officers are a president, 4 vice-presidents, a secretary, and a financial secretary-treasurer. The United States and the Dominion of Canada are divided into 5 districts and 1 vice-president must be a resident of each district. The vice-presidents take rank according to the number of votes which they receive. All officers are elected in the annual convention.

The president's salary is \$100 a year. Each vice-president is expected to appoint organizers in his territory, and himself to act as organizer if he does not find suitable persons to appoint. The vice-presidents receive, for their services as such, only their actual expenses, not exceeding \$25 a year. Organizers receive \$25 for each new local formed. The recording secretary is paid \$800 a year. The financial secretary must give bond for \$5,000, the cost of which is paid by the union, and his salary is \$150 a year.

**Local unions.**—A local union may be formed by not less than 20 musicians. A charter is not to be granted until the secretary has communicated with the nearest adjacent local and given it an opportunity to object. If it does object, the objections are to be submitted to the executive board and the issue of the charter depends upon the board's decision.

**Membership.**—All professional instrumental performers are eligible to membership. Members are required to be citizens of the country in which their local unions are situated, or to have made a declaration of intention to become citizens. In the latter case naturalization is required to be completed with due diligence.

**Traveling members.**—Any member who goes either temporarily or permanently into the jurisdiction of another local than his own must deposit his card with it. If he fails to do so within 3 days, and if it can be proved that he has played with persons not members of the Federation during the interval, the international executive board is to deal with him as it deems best. If he desires to share in the sick and death benefits of the local he joins, he must pay its full initiation fee into its treasury. Members are forbidden to accept an engagement within the jurisdiction of another local without learning through the secretary whether there is any reason why they should refuse.

**Military bands.**—The competition which the musicians complain of most strongly

is that of military and naval bands. The Federation has passed a resolution protesting "against the engagement or management of army or navy bands by any civilian manager or contractor for any proposed concert tour," on the ground that civilian musicians "are thus deprived of so much of their necessary income as will be received by the paid employees of the United States Government." Strong efforts have been made to have Congress forbid the giving of paid entertainments by bands of enlisted men. As long ago as 1886 the convention of the American Federation of Labor passed a resolution asking Congress to prohibit "United States soldiers from competing with citizens of any trade or calling under any condition whatever." The demand has been repeated from year to year, and the legislative committee of the Federation of Labor has tried to get Congress to enact the prohibition. These efforts have not yet succeeded. The Musicians' Federation forbids any member to play a paid engagement with any enlisted man in the United States Army or Navy. If any member enlists in the United States Army or Navy, or enters the postal service his membership becomes null and void. Exception is made of such members as may enlist in the volunteer service of the United States during time of war.

**Alien contract labor.** The musicians have also complained that the contract-labor law has been loosely interpreted to their injury. The convention of the Federation of Labor in 1891 passed a resolution at their instance, protesting against the Treasury Department decision which admitted bands of musicians under contract on the ground that they were artists. The musicians maintain that the term artists means only celebrities, and that band and orchestra musicians are laborers, and that the law forbids the admission of them under contract.<sup>1</sup>

**Finances.**—The charter fee for new local unions is \$25. Seals and necessary supplies are furnished by the national union. The per capita tax is 25 cents a member a year, but every local must pay at least \$25.

The initiation fee of local unions, except for charter members, may not be less than \$5. In practice it varies from \$5 to \$50. The receipts for the year ending April 30, 1901, were \$5,388, and the disbursements \$1,510. The balance on hand May 1, 1901, was \$2,666. Donations of \$177 to the Galveston sufferers are included in the receipts and payments.

**Benefits.**—The constitution specifically provides that no general death benefit or assessment insurance provision shall be made by the federation; but local unions may make such arrangements of this sort as they choose.

**Strikes.** No local is permitted to order a strike or a boycott without the previous sanction of the national executive board.

**Official journal.**—The paper called the American Musician, though a private enterprise, had formerly authority to use the words "Official organ of the American Federation of Musicians" on its title page. The federation always took 1,000 copies a month for use in propaganda. The authority to appear as the official organ of the federation was revoked by the president in August, 1900, and his action was sustained by the executive board. The convention which met in May, 1901, established a new journal—the International Musician—which is the property of the organization and is sent to all members.

**Union label.**—The union label of the musicians is used upon stationery, and in particular upon contract blanks of the local unions. The secretary-treasurer reported to the convention in May, 1900, that 27 locals were then using the label.

## INTERNATIONAL BROTHERHOOD OF OIL AND GAS WELL WORKERS.

**History.**—The International Brotherhood of Oil and Gas Well Workers was organized in December, 1899. The secretary reported 5 locals and 260 members on January 1, 1901, and 25 locals and 2,500 members in August, 1900.

**General aims.**—The Oil and Gas Well Workers state in the preamble to their constitution that their union is formed because "organization is necessary for the amelioration and final emancipation of labor," and that the members of the union will devote their attention to the following subjects: The abolition of the system of contract labor, the enforcement of the foreign contract labor law and the proper protection of American mechanics against imported pauper labor, the repeal of all

<sup>1</sup> American Federation of Labor Convention Proceedings, 1891, p. 26.

## 316 THE INDUSTRIAL COMMISSION:—LABOR ORGANIZATIONS.

conspiracy laws that in any way abridge the rights of labor organizations, and the adoption of proper apprentice laws to govern all branches of mechanical industry, and of proper rules of local unions to govern apprentices.

**Convention.** Conventions are held annually. Each local union is entitled to one delegate for the first 50 members or less, and one additional delegate for each additional 50 members or majority fraction thereof. The members of the executive board are expected to attend the convention, but are not entitled to vote. No member can be a delegate who has not been a member in good standing for at least 6 months, unless his union has been formed within that time. The expenses of delegates are paid by the local unions.

**Constitutional amendments.**—The constitution may be amended by a two-thirds vote in the convention.

**Officers.**—The officers are a president, 5 vice-presidents, a secretary-treasurer, and an organizer. The officers are elected by the convention for a term of 1 year. A majority of all votes cast is necessary to election. The president decides controversies, subject to appeal to the executive board, whose decision is final. The executive board is composed of the officers.

**Membership.**—Applicants for membership must be of good character, and must have been engaged not less than 1 year in the following occupations. Drilling, tool dressing, rig building, wooden-tank building, lease work, shooting, drive pipe and casing pulling, oil and gas well contracting, and pipe-line employment. He must be actively engaged in such work, unless temporarily out of employment.

**Finances.**—The organization fee collected from new unions is \$10, which includes the cost of seal, books, and stationery. The per capita tax is 20 cents a month. Dues of local unions may not be less than 50 cents a month, the initiation fee may not be less than \$1.

**Strikes.**—The constitution of the Oil and Gas Well Workers makes no provision for strikes.

### UNITED BROTHERHOOD OF PAPER MAKERS OF AMERICA.

**History.**—The United Brotherhood of Paper Makers of America was organized in 1888. In August, 1900, the secretary reported 9 locals and 800 members, comprising, according to his estimate, only about 5 per cent of the workers in the trade.

**General aims.**—The Paper Makers declare in the preamble to their constitution: "Capital is organized, so must labor be. There is no antagonism to our employers in this brotherhood. We do not mean to act as if there were any necessary antagonism between capital and labor. We rather believe that we who labor have more interests in common with our employers than we have in separate or hostile action. This brotherhood aims for peace and good will and to lessen friction rather than to increase it."

They enumerate among the objects of their organization: to raise their trade "from the low level to which it has fallen," to resist further encroachments, to encourage a higher standard of skill, to eliminate jealousy and selfishness, to establish feelings of friendship and fraternity, to assist each other to secure employment, to reduce the hours of labor, to secure adequate pay, and by every means to elevate the moral, mental, and social condition of the members.

**Convention.**—The national convention is declared to consist of the national officers and delegates from the subordinate lodges. The delegates are to be elected at the first meeting in July. Each lodge is entitled to one delegate at large and 1 additional delegate for each 25 members or majority fraction thereof.

**Officers.**—The officers are a president, a vice-president, and a secretary-treasurer. These officers are elected at the annual convention. They comprise the national board of trustees. It is declared to be the duty of this board when the national president is unable to decide as to the proper course to pursue to assist him by their advice, "and at all times carry out the order of the national president."

**Membership.**—The Brotherhood is to consist of paper makers over 18 years of age, who have worked at the trade 1 year, and are vouched for by 2 members of the Brotherhood in good standing. When a member has been promoted so that he has the power to hire and discharge help, or when he wishes to engage in other business, he may take a withdrawal card, or at his option he may continue a member of the union.

**Finances.**—The constitution provides for the admission of journeyman paper makers (machine tenders, engineers, and boss finishers) who have worked at the

trade 6 months, on payment of an initiation fee of \$3, and for the admission of helpers who have worked at the trade 1 year, on payment of an initiation fee of \$1.50. A member who has been admitted as a helper and who has been promoted to a journeyman's position may apply after 6 months to be rated as a journeyman. He is then to pay the remaining \$1.50 of the journeyman initiation fee. One-third of the initiation fee goes to the national body. The per capita tax is 10 cents a month. The board of trustees may authorize the national president to levy an assessment to meet any extraordinary expense.

**Strikes.**—No local lodge may permit any of its members to go on strike unless by a two-thirds vote of the members present at a regular meeting or a well-advertised special meeting, and the decision must also be indorsed by the national board of trustees. The national board of trustees is empowered to exhaust every honorable means of settling any grievance before indorsing a strike.

### NATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES.

**History.**—The National Alliance of Theatrical Stage Employees of the United States and Canada was organized July 17, 1893. The number of locals and the number of members in successive years are given as follows.

Year	Locals	Members	Year	Locals	Members
1894	12	1,200	1898	58	3,500
1894	26	1,800	1899	71	3,750
1895	43	2,000	1900	76	3,750
1896	43	2,000	1901	87	4,000
1897	50	3,000			

The Alliance formerly had a conflict of jurisdiction with the electrical workers. The American Federation of Labor convention of 1896, on motion of the representative of the Electrical Workers, passed a resolution reciting that the Stage Employees had been doing work which belonged to the Electrical Workers, both in the theaters and out of them, and recognizing the trade jurisdiction of the Electrical Workers over such work. But the next convention of the Federation adopted a resolution reciting that the Brotherhood of Electrical Workers had conceded to the Stage Employees the control of work on the theatrical stage, and declaring that the Alliance of Stage Employees should have jurisdiction over all work back of the proscenium arch or stage line in theaters. It was understood that this resolution did not include engineers or firemen.

**Objects.**—The Alliance states its objects to be "the maintenance of a fair rate of wages for its members, and to see that only competent persons who are members of this Alliance are employed as carpenters, property men, gas men, electricians, stage hands, flymen, callum and electro callum light operators in the various theaters throughout the United States."

**Convention.**—The convention is held annually. Each local is entitled to 1 delegate for the organization and 1 additional delegate for each 100 members or major part thereof. A local a thousand miles or more from the place where the convention is held may cast its full vote if it sends only 1 delegate. The expenses of the delegates are paid by their locals. The president, the first vice-president, and the secretary-treasurer, if not elected delegates, attend at the expense of the Alliance.

The constitution may be amended only by a majority vote of the convention.

**Officers.**—The officers are a president, three vice-presidents, and a secretary-treasurer. The officers constitute the executive board. The secretary gives a bond for \$1,000, in a surety company, at the expense of the Alliance. The president receives no pay, but only his railroad fare and hotel expenses. The secretary-treasurer receives \$300 a year, and his expenses when traveling. All officers are elected annually by the convention.

**Local unions.**—A local union can not be formed with less than 15 members. A smaller number may be constituted a branch under the jurisdiction of the nearest local. Applications for charters are passed on by the executive board. Any union applying for a charter must show by a certificate of the local central trades union that it is in good standing in the central body. Not more than one local can be formed in a city.

**Discipline.**—It is the duty of the master machinist to demand the membership card of every applicant for work, under a penalty of \$1 for each omission. Any

member who goes to work for less than the schedule rate of wages is to be suspended or expelled. "When a member has deliberately ratted, it is not necessary that he should be cited for trial, but he may be summarily expelled." An appeal lies from any decision of a subordinate union to the president, from him to the executive board, and from the board to the convention. In presenting appeals, the truth of statements must be verified by affidavit. The decision appealed from must be complied with in the interim, except that a verdict of reprimand or censure is stayed.

**Finances.**—The charter fee for new locals is \$25. The per capita tax is 50 cents a quarter. A local 3 months in arrears is liable to suspension after notification by the secretary-treasurer.

**Strikes.**—When a disagreement with an employer arises, the local union is to notify the organizer, and the organizer is to go to the place and try to adjust the difficulty. If he fails, he is to notify the executive board. If a majority of the board considers a strike necessary, the local may be authorized to declare one. When this authority has been given the president of the local is to call a meeting within 24 hours, giving notice to all members. A three-fourths majority is necessary to declare a strike. No one can vote on the question who has not been in good standing in the local union for 6 months. A local which goes on strike without the approval of the executive board can receive no benefits unless "a strike, lock-out, or reduction of wages has been forced upon" it without an opportunity to apply for authorization. No local is allowed to begin a strike within 1 year after it is chartered. If a local is involved in a strike which includes one-third of its members, it may refuse to receive new members by traveling or transfer cards for 3 months, or, with the consent of the national president, for 6 months. At other times a valid card must always be received.

The constitution does not fix a definite strike benefit, but authorizes the executive board to levy such assessments as it may decide on to help a local union which has not money to carry on a contest.

Any member "traveling with road shows playing in theaters where a strike exists will only be allowed to receive half the salary that the schedule calls for." If a company discharges a member for refusing to work in any unfair house, the locals are to be asked to refuse to work with that company until the differences are adjusted.

The union reported to the Federation of Labor in the fall of 1900 that it had won 3 strikes during the preceding year, involving 500 men and benefiting 800. The cost was about \$500.

**Hours of labor.**—August 1, 1900, the secretary reported that all the unions had secured a 48-hour week.

**Wages.**—The Stage Employees' Alliance has a class of members who are perhaps differently situated from any members of any other labor union, in that their regular occupation carries them constantly from place to place without change of employers. These are the men who accompany the traveling troops. For them the alliance has fixed a uniform minimum scale of wages, ranging from \$35 a week for master machinists down to \$30 for assistant property men and extra men.

### NATIONAL STOGIE MAKERS' LEAGUE.

**History.**—The manufacture of the cheap cigars called stogies is almost confined to West Virginia, Pennsylvania, and Ohio. The Cigar Makers have felt their own interests to be threatened by the growth of the trade in stogies. They have forbidden the use of their label on any goods that are sold so cheap. They would have been glad to strangle the manufacture if it had been possible. The preamble to the constitution of the Stogie Makers' League begins as follows: "The establishment of a national organization among the various local bodies of stogie makers, who have maintained an existence in opposition to an unwarranted and tireless persecution by the Cigar Makers, has finally been effected." The president of the Stogie Makers' League denies, however, that his organization is antagonistic to that of the Cigar Makers, except in legitimate trade competition. He says: "The stogie industry is a separate and distinct trade, of rapid and wonderful growth, evidently affecting the production and sale of cigars, with an average wage above the average cigar wage."

As long ago as 1888, in the General Assembly of the Knights of Labor, the position of the stogie makers was discussed, and complaint was made of the attitude of the Cigar Makers' International Union and of the Federation of Labor toward them. Means were proposed for organizing the stogie makers under the jurisdic-

tion of the Knights, and for issuing a special label for the protection of their trade.<sup>1</sup> No notable result seems to have come from these discussions.

The National Stogie Makers' League was organized in November, 1896. The American Federation of Labor convention of December, 1896, approved the following resolution, which had been adopted by the Cigar Makers:

*Resolved*, That the American Federation of Labor denounces the attempt of the stogie and cigar makers who recently met in Pittsburg, Pa. with the avowed purpose of organizing a Cigar and Stogie Makers' National Union, and the officers, delegates, and members of the American Federation of Labor are hereby requested to use their best efforts to discountenance this rivalry, antagonism, and proposed dual authority to the end that these workmen may become organized under the jurisdiction of the Cigar Makers' International Union of America."

The Cigar Makers' Union in 1896 also adopted the following resolution:

*Resolved*, That the international president is empowered, with the advice and consent of the executive board, to arrange for the placing of the label of the American Federation of Labor or the Tobacco Workers' National Union on the product of union stogie makers organized in the Cigar Makers' International Union of America. But the president shall determine and prescribe what shall constitute and be understood as a stogie, providing the 8-hour law and all other laws of the international union are complied with. A minimum scale of prices shall also be set for stogies upon which the label shall appear."

The American Federation of Labor convention of 1899 declined to grant a charter to the Stogie Makers' League, and advised its locals to affiliate with the Cigar Makers' Union, "with the understanding that they shall have the regulation of their own bills of prices, and shall have a special label to be known as the stogie makers' label such label, however, to be granted under the rules and regulations governing the Cigar Makers' international blue label, except in reference to the wage scale governing the same.

The question came up again in the convention of 1900 with the same result. The Stogie Makers maintain their organization, but without the recognition of the Federation. The president reported 12 locals and 1100 members in June, 1901.

**Convention.**—The convention meets annually. Each local is entitled to 2 delegates for each 100 members or less, and to 1 additional delegate for each additional 100 members or fraction thereof.

**Officers.** The officers are a president, a vice president, a recording secretary, and a treasurer. The executive board consists of the president, the recording secretary, and 3 other members. All are elected by majority vote of the convention. Money due the national union is received by the secretary and turned over by him to the treasurer. The salary of the treasurer is \$10 a year. Organizers and members of the executive board receive \$3 a day and expenses for time devoted to the interests of the league.

**Membership.**—All persons engaged in making stogies who are 16 years old and have worked 2 years at the trade are eligible to membership, provided they do not work with machines or in teams. Machine and team workers are excluded. When an applicant is balloted for, if 4 black balls appear the application goes over to the next meeting. Unless reasons for the opposition are presented in writing, the member is then declared elected. If reasons are presented, they are submitted to the local, but without the names of the objectors. A rising vote is then taken on the application, and a majority elects.

**Finances.**—The local initiation fee may not be less than \$2, and \$1 of it goes to the national body. The per capita tax is fixed by the executive board. At present it is 60 cents a year. A revenue is also derived from the sale of labels and other supplies to the locals. An annual assessment of 25 cents a member is levied for advertising purposes.

**Strikes.**—Local unions are forbidden to engage in strikes without the permission of the national executive board. The board has power to levy assessments to suppress approved strikes.

**Wages.**—The constitution fixes a minimum wage rate of \$3 a thousand stogies, below which members are forbidden to work.

**Union labels.**—The league has adopted a union label, which is issued to all factories where union prices are paid, but which can not be placed on stogies produced by machine or team work. In June, 1901, it was stated that 60 manufacturers were using the label, and that it was placed on 108,000,000 stogies a year.

## TOBACCO WORKERS' INTERNATIONAL UNION.

**History.**—The Tobacco Workers' International Union was organized in 1895. It includes makers of plug, twist, fine-cut, and all chewing and smoking tobaccos, paper-wrapped cigarettes, and snuff. The number of locals in May, 1896, was reported as 25; in May, 1897, 29, in May, 1898, 36; in May, 1899, 40; in May, 1900, 57. The secretary said in his report to the convention of September, 1900: "It will be seen that out of the 58 charters issued there are now 44 in active state, which gives us a net increase of 16 locals over the number in active operation at the date of our last convention," in 1898. The number of members reported in September, 1900, was 6,677. The number reported at the previous convention—that of 1898—was 4,500. The secretary said at the convention of 1900 that nearly 25,000 members had been received during the preceding 5 years. The very large proportion of losses was attributed in large part to the policy of the tobacco trust, which had bought up and closed many factories, and in part to the increasing introduction of labor-saving machinery.<sup>1</sup>

**Convention.**—The constitution provides that the convention shall be held biennially, subject to call by referendum vote. Locals are entitled to 1 delegate for 25 members, 2 delegates for 300 members and 1 additional delegate for each additional 100 members above 300. Unions of less than 25 members unite with others of similar size in choosing delegates. Delegates who represent more than 100 members are entitled to a vote for each 100 or major part thereof. The international union allows to local unions \$1 a day, including Sundays, for the attendance of delegates, together with transportation rates by the shortest routes.

The holding of a convention in 1899—at the regular time—was voted down by a majority of 2,938 on a popular vote. One was held in 1900.

**Constitutional amendments.** The constitution is amended by a majority vote on referendum. Amendments may be proposed by the convention or by a local union with the assent of three other unions.

**Officers.** The officers are a president, five vice-presidents, and a secretary-treasurer. The constitution declares that neither color nor sex is a bar to any official position. Officers are elected by ballot in the convention, each delegate casting votes according to the number of members he represents. A majority of such votes is necessary to election. An auditing committee of 3 is elected at the same time as the other officers. Its duty is to audit the accounts of the secretary-treasurer quarterly. The members give a bond for \$1,000 each and receive \$1 a day for their services, and railroad fare. The secretary-treasurer receives \$15 a week and gives a bond for \$5,000. The other members of the executive board receive \$1 a day for attendance at meetings of the board, and railroad fare.

**Local officers.**—Local financial secretaries and treasurers are required to be bonded for from \$100 to \$500, according to the size of their locals. The premiums on the bonds are paid out of the funds of the local unions, and the bonds are deposited with the international secretary-treasurer.

Each local union is required to elect a finance committee of 3 to serve 1 year, whose duty is to audit the books and stamp accounts of the local financial officers once in 3 months and report to the international secretary-treasurer. Failure in these duties is punishable with a fine of not less than \$2 for each offense.

In every place where there are more than 3 locals they must combine to elect 1 financial secretary-treasurer, who must keep a separate set of books for each union and attend all meetings of all unions. He receives a salary to which the several unions in the place contribute.

Each local recording secretary is required to make an annual report to the international secretary-treasurer on the state of trade, wages, hours of labor, and other conditions.

**Membership.**—Applicants are received upon their own statement of eligibility and by vote of the local executive board. No person can be received who is under 16 years old or over 60, or who by reason of sickness is incapable of working. All applications for membership are sent to the international secretary-treasurer. There the age of the member and the date of his initiation are recorded, and his due book is made out and given its serial number. The international secretary-treasurer keeps a record of the relations of each member to the union—suspension, expulsion, withdrawal, etc.

No foreman or forewoman who has power to hire or discharge is eligible to membership.

**Color question.**—The constitution declares that the organization "will draw no

<sup>1</sup>The Tobacco Worker, October, 1900, pp. 17, 18.

line of distinction between creed, color, or nationality, but shall work hand in hand for the common good of all." In the convention of 1900 the complaint arose that colored members had been unjustly treated by white members in Covington, Ky., in that attempts had been made to exclude the colored from employment. The convention adopted a resolution urging all members to live up to the declared policy of the union.

**Finances.**—The charter fee of new locals is \$5. The initiation fee is uniformly \$1. If a member is suspended his reinstatement fee is \$2. The dues are 10 cents a week. The executive board has power to levy assessments to the extent of \$1 a member in any year. In case of a lockout or strike the limitation is suspended. Assessments may also be levied by local unions. A member who fails to pay dues or fines, local or international, for 4 weeks is to be suspended; but a member out of work must be given 12 weeks, provided he reports twice a week to the local financial secretary. A member who is sick and not entitled to sick benefit because he has not been 6 months a member can not be suspended until 4 weeks after he has recovered from his sickness.

Payment of initiation fees, dues, fines, and assessments is evidenced by adhesive stamps, issued by the international secretary-treasurer, which each member is under obligation to demand when he makes a payment and to affix in the proper place in his membership book. Shop collectors are chosen by the locals for each union shop, whose duty is to collect all payments due from members in their shops and to turn over the money to the local secretary within 48 hours, on pain of a fine of \$5. The local secretary must forward all collections to the general office within 48 hours after he receives them. If they are not received within 1 week after the Saturday on which the collections should be made the president of the local union is to be notified.

Two-thirds of the fees, dues, and international fines (fines payable to the international union under the constitution) are to be sent to the international office; one third belongs to the local union. All international assessments go to the general office and all local assessments are retained by the local union. All receipts of the international office are divided equally between the general expense fund, the sick and death benefit fund, and the strike benefit fund. The constitution provides that these funds shall not be transferable one to another.

The convention of 1900 passed a resolution canceling all indebtedness of local unions to the general body up to September 1, 1900. The resolution provided that for the future any indebtedness which might arise must be paid within 60 days, or the local would be suspended and not reinstated until the debt should be settled.

The secretary said in his report to the convention of 1900 that the receipts from initiation fees and dues during the 5 years ending June 30, 1900, amounted to nearly \$108,000, and that the share which went to the general fund was a little over \$70,000. Additional assessments had been levied to the amount of a little over \$7,000.

**Benefits.—Death benefits.**—Upon the death of any person who has been a member for at least 1 year a funeral benefit of \$50 is paid. Four thousand four hundred dollars were paid out for death benefits during the 5 years ending June 30, 1900.

**Sick benefit.**—One who has been for 6 months continuously a contributing member, if he becomes sick or disabled so that he can not attend to his usual vocation, is entitled to a sick benefit of \$3 a week, payable for not more than 13 weeks in 12 months. Every person who claims sick benefit must be examined by a physician employed by the local union, at the expense of the international union, for the purpose. Every local must have a visiting committee of at least three members, whose duty is to visit sick members at least once a week, no two members going at the same time. Failure to perform the duties of the visiting committee involves a fine of 50 cents, and a false report involves a fine of \$3 on each committee member. The committee are excused from visiting members who have contagious diseases. If admittance to a sick member is refused, the union is not obliged to pay the benefit. Female members are not entitled to sick benefit for 3 weeks before or 5 weeks after confinement.

Any member who is taken sick while traveling may draw benefits from the local union where he is by depositing his card. Since all benefits come from the international union, it is a matter of indifference where they are paid.

All applications for sick benefits and death benefits must be forwarded to the international secretary-treasurer on blanks furnished by the international union, and must be indorsed by the local executive board. Members of a local executive

<sup>1</sup> The Tobacco Worker, October, 1900, pp. 53, 54.

<sup>2</sup> The Tobacco Worker, October, 1900, p. 51.

board who knowingly indorse a false and illegal application for benefit are subject to a fine of \$3 each.

During the 5 years ending June 30, 1900, \$23,331 was paid out for sick benefits.

**Strikes.**—When any difficulty with employers arises, three officers of the local union must send a full statement of it to the secretary-treasurer for submission to the executive board. If more than one union exists in the locality, no application can be sustained unless all of them have voted on it and the proposition has been sustained by a majority of all votes cast. If more than 25 members are involved in any difficulty, it must be submitted to a general vote of the local unions and can only be approved by a two-thirds majority of the votes cast. Every local is required to vote in such cases within 1 week after receiving notice, on pain of a fine of \$3, payable to the international union.

Members who participate in an authorized strike are entitled to a benefit of \$3 a week, beginning on the day when the strike is approved by the authorities of the international union. The international executive board has power to appoint one or two members from other places to act with the local authorities in arranging the difficulty. If a settlement is agreed on which is not satisfactory to the union involved, it may be submitted to a general vote of all the local unions, and, if approved, is then binding.

**Labor Day.**—Men who work on Labor Day may be fined \$2 at the option of the international executive board.

**Wage scales.**—Much emphasis was placed in the convention of 1900 on the desirability of establishing fixed wage scales wherever the union had the power. The secretary remarked that the union had necessarily devoted much of its strength to getting members in regions where unionism was scarcely known, and that considerations of wages had been postponed to this primary necessity. Established wage scales were grievously needed; all the more because many of the members live in the South, where labor is poorly paid and general conditions are bad.<sup>1</sup>

**Official journal.**—The monthly official journal, *The Tobacco Worker*, is edited by the secretary-treasurer, and is sent free to all members. "Any member of the International Union may write articles for publication in the official journal, and the editor is required to publish the same unless said article or articles should be injurious to the Tobacco Workers' International Union." A member whose communication is rejected may appeal to the executive board.

The secretary, in his report to the convention of 1900, said that the management of the journal had been governed by the following purposes:

First. To advertise the union label.

Second. To educate the people regarding the label and organization.

Third. To present the grievances of other organizations to our membership and ask their aid.

Fourth. To fight the trust and all trust-made tobacco.

Fifth. To eliminate as far as possible all political sentiments, personal grievances, and disputes.

The expense of printing the paper during the preceding year, from 7,000 to 10,000 per month, was reported as \$2,663. The receipts from advertising, subscriptions, and sales were \$2,799.<sup>2</sup>

**Union label.**—The union label is furnished free of charge to all strictly union shops. It is provided that no shop shall be considered strictly union unless all the employees who are eligible are members of the International Union. It is also required that all boxes, pails, buckets, or other articles used in shipping the product be made by union labor as far as practicable. The union claims jurisdiction over all local unions composed exclusively of makers of boxes for tobacco. A manufacturer who operates more than one shop can not use the label unless all his shops are union. The International Union allows to local unions an attorney's fee, and an additional amount of \$25 for committee work, for prosecuting each case of counterfeiting of the union label, when approved by the international executive board.

The union label was adopted in July, 1895. The secretary reports that at the end of the first year 12 manufacturers were using it, at the end of the second year, 30; at the end of the third, 45; at the end of the fourth, 63; at the end of the fifth, 90. During the first year 18,246,991 labels were issued; during the second, 38,657,531; during the third, 55,648,342; during the fourth, 104,187,757; during the fifth, 130,600,934. In the summer of 1900 the secretary estimated that about one-fifth of the product of the trade was put out under the union label.

<sup>1</sup> *Tobacco Worker*, October, 1900, pp. 20, 21.

<sup>2</sup> *The Tobacco Worker*, October, 1900, p. 21.

In 1900 the Tobacco Workers complained of the introduction of an independent label by a local union of cigarette makers in New York. The American Federation of Labor convention of 1900 passed a resolution condemning this action of the New York union, and promising the Tobacco Workers all possible assistance in driving out cigarettes which bear the New York label.<sup>1</sup>

### UPHOLSTERERS' INTERNATIONAL UNION OF NORTH AMERICA.

**History.**—The Upholsterers' International Union of North America was organized in 1892. It takes in workers at upholstering, mattress making, carpet laying, and drapery work. In the summer of 1900 it reported 16 local unions and 1,300 members, all of whom were male; in June, 1901, 23 locals and about 2,000 members.

**Convention and constitutional amendments.**—The convention meets biennially on the second Monday in July, unless two-thirds of the local unions decide otherwise by a referendum vote. Each local union sends 1 delegate. Ex-delegates have the right to appear and speak in subsequent conventions, but not to vote or make any motion. The mileage of delegates is paid by the International Union, their other expenses by their locals. Every local which has 25 members must be represented. A smaller local may be represented by proxy, through the delegate of the nearest neighboring local.

Each delegate is the corresponding secretary of his local. When the delegate of any local is elected president of the International Union his local must elect another delegate.

The constitution may be amended by a two-thirds vote of the members of the convention. Provision is also made for a vote by referendum upon any measure of importance. Any local may propose laws for submission to the general vote. Thirty days is allowed for voting, and any local which does not report its vote within 15 days after the expiration of the 30 is counted as voting in the affirmative.

**Officers.** The officers are a president, 3 vice-presidents, a treasurer, and 2 other members, who, with the president, the first vice-president, and the treasurer, constitute the executive board. All the officers are elected by the convention by ballot. A clear majority is necessary to a choice, and in case of failure to elect the vote is repeated and the candidate who received the fewest votes is dropped.

The president fills also the place of a secretary. His salary is \$624 a year.

The treasurer is required to deposit all money in a responsible bank, under the direction of the local of which he is a member. He may not have more than \$50 in his possession at any time. His salary is \$35 a year. He must be the delegate of such local union as may be chosen by the convention, and in case he is not reelected a delegate his successor as delegate is to assume the duties of treasurer. His local is responsible for all money and property of the International Union which he holds as treasurer. The local is directed to appoint an auditing committee of 3 members, in June and December, to examine his books and accounts, count the money in his possession, and report to the president of the International Union.

**Statistics.**—The delegate of each local union is directed to send to the international president quarterly a report of the name of each member proposed, elected, rejected, or suspended, with the cause of rejection or suspension, the average wages paid, and general statistics of the condition of the trade. The finance secretary is to make a detailed quarterly report of all money which he has collected, to the international president.

**Shop delegates.**—The constitution directs that every shop elect shop delegates, 1 for every 10 men or fraction thereof. It is the duty of these delegates to try to bring every worker in the shop into the union, and to watch the wages of the men, to see that none works below the scale. Where men are paid by the week the delegate must see that no man does more or less work than his wages amount to, estimating the work by the piece prices. The delegate must use every possible means to learn the amount of wages the men receive, and if a member of the union refuses to give the information he may be fined or suspended.

**Employers.**—Any member who becomes financially interested in an upholstering business which employs one or more upholsterers for 6 months, must take a withdrawal card.

**Woman workers.**—The constitution says, "No member of the Upholsterers' International Union is permitted to work in a shop or factory where female help is employed at upholstering or at any of its branches excepting as seamstress."

<sup>1</sup>American Federation of Labor Convention Proceedings, 1900, p. 170.

**Apprentices.**—The constitution provides that not more than 2 apprentices shall be employed in a shop of 10 journeymen or less, with 1 additional apprentice for every 10 journeymen or major part thereof. No boy may enter a shop as apprentice under the age of 14. After 6 months at work the apprentice is required to take out an apprentice's card from the local, for which he is to pay \$1.

**Finances.**—The charter fee for new locals is \$5. The per capita tax is fixed at "one-third of all dues collected each quarter, on a minimum basis of 25 cents per month each member." It amounts in practice to \$1 a year. If the funds fall below \$50 the president may levy an assessment of not more than 5 cents per capita. All official supplies of the locals must be bought from the international president, and this is doubtless a source of some revenue to the International Union. No local union may charge less than \$2 for initiation, or less than 25 cents for monthly dues.

The constitution contains the curious provision that all money shall be forwarded to the treasurer "by post-office money order inclosed in a registered letter."

**Strikes.**—While the constitution provides that the decision of a local union to go on strike shall be subject to the approval of the president and executive board of the International Union, the provisions for enforcing the supervision of the general officers are not clear or specific. Striking members are entitled to benefits of \$5 a week for single men and \$7 a week for married men. Assessments for the support of strikes may be levied on the locals in proportion to their membership, excluding members on strike.

The union reported to the Federation of Labor in the fall of 1900 that it had won 8 strikes, compromised 1, and lost 2 during the preceding year. Three hundred members were involved, of whom 200 were benefited. The cost of the strikes was \$3,000.

**Employment bureau.**—Each local union is expected to have an employment officer, to whom members out of employment are to report, and to whom members are to give notice of any vacancies they know of. The president of the International Union is designated chief employment officer, and the employment officers of the locals are directed to correspond with him upon employment matters.

**Hours of labor.**—The constitution forbids working more than 10 hours for a day's work, and forbids any member to work overtime for less than 50 per cent extra pay. The secretary asserts that these rules are enforced in every shop under the jurisdiction of the union.

**Piecework.**—The practice of piecework is general among the upholsterers, and the union approves of it.

**Union label.**—A union label was adopted by the upholsterers in September, 1898. The constitution provides that it is to be issued to any firm which employs only members of the International Union, that it is to be supplied by the local unions without charge, and that the members themselves are to place it upon the articles they make. The president reported in the summer of 1900 that 18 manufacturers were then using the label, that some 30,000 labels in the aggregate had been issued, and that the label was supposed to be used on about 5 per cent of output of the trade. In March, 1901, the secretary reported that about 3,000 labels a month were used. In June he stated that such a demand for the label had arisen, especially in San Francisco, Indianapolis, and Detroit, that the total consumption was then about 18,000 a month. In San Francisco alone, he said, from 12,000 to 15,000 labels a month would be used.

### NATIONAL AND GENERAL TRADE SYSTEMS IN THE UNITED STATES.

---

#### I. THE COAL-MINING INDUSTRY.

1 Early arbitration in the anthracite coal regions.—The report of Mr. Joseph D. Weeks on arbitration published by the Massachusetts Bureau of Labor in 1881, describes the early joint agreements of employers and employees in the anthracite coal regions. He states that during the war the conditions there were very unfortunate. There had been alternate periods of prosperity and depression in the coal industry, which had resulted in strikes and frequently in violence. The character of the miners of the anthracite regions had greatly degenerated.

On April 6, 1868, the Workmen's Benevolent Association of Schuylkill County was established, and this in the following year was extended to various other parts of the anthracite region, a General Council of the Workmen's Benevolent Association being formed at Hazleton in 1869. Soon after the employers formed the Anthracite Board of Trade of the Schuylkill Coal Region. In April the miners belonging to the Workmen's Association inaugurated a general suspension of work. On May 11 the General Council of the Workmen's Benevolent Association resolved to try to establish a scale of wages based upon the selling price of coal. In June the employers' association presented a series of propositions on this principle, and an agreement was soon reached by which work was resumed in the Schuylkill district, although the strike continued longer in the other districts. This agreement fixed a certain scale of wages to be paid when the price of coal should be \$3 as a basis. The workmen were to receive one-fifth of all advances above this price and a corresponding reduction should be made in their wages if the price fell.

As a matter of fact, prices remained considerably above \$3 and the employers became dissatisfied with the higher wages which they were paying. They accordingly proposed a reduction in wages, and the refusal of the employees to accept the terms proposed resulted in a prolonged strike in 1870. This was finally compromised by another sliding-scale agreement having a somewhat different basis.

The miners, however, broke this agreement with their employers early in 1871. Disputes had meanwhile arisen as to the rights of employers and employees in the matter of the recognition of unions and the granting of employment. Mr. F. B. Gowan, president of the Reading Railroad, proposed that the existing disputes as to wages and as to the conditions of employment should be settled by arbitration. An agreement was accordingly reached by which each side selected five arbitrators. These arbitrators met and chose Judge William Elwell as umpire. The representatives of the miners, however, refused to submit the question of wages to the decision of the umpire, and his judgment accordingly related only to the conditions of granting employment. A few weeks later, however, the miners of Schuylkill County agreed to abide by the decision of Judge Elwell as to the wages to be paid, and he accordingly established a new sliding scale. Within a

few months the price of coal fell below \$2.75, which had been made the basis of the new sliding scale. The miners of one company after another, in violation of this award of the umpire, demanded that wages be kept up to the basis rates, and be not reduced with the lowered prices. The employers were forced to make this concession, but the action of the miners in thus seeking a temporary advantage resulted in the end of all attempts at arbitration in the anthracite region. Nevertheless joint agreements between organizations of employers and employees continued to be made from time to time in the anthracite region. The system of sliding scales prevailed up to the great strike in the anthracite field in 1900, but it could scarcely be said that they represented negotiations between employers and employees. The miners' organizations had virtually disappeared, and the sliding-scale system did little to prevent disputes. The demand of the miners in the strike of 1900 that the system be abolished was conceded.

Mr. Weeks also describes various early attempts at the formation of boards of conciliation and arbitration in the bituminous mines of western Pennsylvania and of Ohio, but none of these appear to have resulted successfully.

**2. Bituminous coal field.—introduction.**—The most important result of the recent movement in favor of more peaceful relations between employers and employees has been the establishment of a system of joint agreements covering the bituminous coal fields of Pennsylvania, Ohio, Indiana, and Illinois, and applying to more than 125,000 workmen. Beginning in January, 1898, 4 annual conferences have been held between representatives of the United Mine Workers, the organization of employees, and representatives of the mine operators, who have no definite organization. These conferences agree upon a general basing scale of wages for the entire central competitive coal field covered by the system. On the basis of the general rate thus fixed special rates are adopted by local conferences of operators and miners, taking into account the wide differences in local conditions. One or two other matters of general importance, such as the size of screens to be used in screening coal previous to measurement, are covered by the general agreement, while the various local agreements in some instances are much more detailed, that adopted in Illinois between the State organization of the United Mine Workers and the Illinois Coal Operators' Association being especially elaborate. In Illinois there has also been developed within the past year or two a very satisfactory arbitration or conciliation system for the settlement of minor disputes arising in the interpretation of the joint agreement.

**3. Origin of the bituminous agreement system.**—It seems doubtful whether the system of collective bargaining and agreements which was established more than 30 years ago in the anthracite coal region had any influence in the establishment of the present system in the bituminous field. The labor organizations in the bituminous mines have had a very checkered existence. At various times they were relatively strong. During the period between 1880 and 1890, when the labor organizations were fairly well established, an attempt was made to introduce a system of agreements regarding the conditions of labor, but it never became thoroughly effective in preventing disputes. After the great strike of bituminous miners in 1894 there was a period of great depression in the mining industry. Wages fell greatly and the organizations among the miners became very weak. Conditions became so bad that finally in 1897 a very general strike of miners took place. During this strike the United Mine Workers greatly increased their membership. On account of the great prolongation of this strike and its serious effect upon the conditions of industry throughout the country, and particularly in the States directly concerned, the State boards of arbitration of Ohio, Indiana, and Illinois undertook to cooperate in bringing about a settlement. One of the chief difficulties encountered was the lack of uniformity in prices for mining among the mines in the same district and among the different districts, as well as the lack of uniformity in the methods of payment and measurement. At the instance of these boards a convention of Pittsburg coal operators was held in the latter part of July, 1897, which declared itself in favor of arbitration and drew up articles of agreement regarding wages and conditions of labor. By these articles an attempt was to be made to establish a system of arbitration as regards differentials in rates of wages between different districts. Meantime a joint convention of the leaders of the striking miners and of representative coal operators was held at Pittsburg, and later, pursuant to adjournment, at Columbus. An agreement was reached in September, which was ratified by a special national convention of the United Mine Workers. This brought an end to the strike. The success in reaching an agreement in this manner, as well as the desire to avoid disputes in the future and to establish uniformity throughout the central competitive coal field, led the

<sup>1</sup> See also testimony of various witnesses in the report on the Mining Industries, vol. xii, especially that of Mr. John Mitchell, p. 697, and of Mr. Hermann Justi, p. 677.

president of the United Mine Workers to call for a conference of the representatives of that organization and of representative coal operators at Columbus. This conference met on December 27, 1897, and issued a call for a joint convention of the miners and operators of the States of Pennsylvania, Ohio, Indiana, and Illinois to be held at Chicago January 17, 1898. This Chicago convention was the first of the series of annual conventions for the Central States, and the methods of negotiation established at that time have remained virtually unchanged.

**4 Organization and methods of business of conferences.**<sup>1</sup>—The joint conferences between the coal miners and operators of Pennsylvania, Ohio, Indiana, and Illinois are not carried on under any such formal system of organization as prevails in some of the English industries where joint boards have been introduced. Each conference adopts its own rules and issues a call for the succeeding conference only. Nevertheless the method of representation and of procedure seems to have been essentially unchanged during the Interstate conferences so far held. In fact, the methods employed have doubtless been copied more or less from those previously used in joint conferences representing the individual States as districts. Each of the 4 States taking part is allowed an equal number of votes in the conference, notwithstanding the fact that the importance of the coal interests represented is not equal in the different States. An earlier proposition, that representation should be somewhat in proportion to coal production, was rejected. Each State has 4 votes in behalf of the mine operators and 4 votes in behalf of the miners. Although in the convention a much larger number is always present, the miners delegates in the convention of 1901 numbering 199 and those of the operators 182, the greater share in the negotiations leading to the agreement falls to the joint scale committee established by the convention and composed of 4 members from each side for each State. In practice the operators, of course, designate their representatives on the scale committee and the miners select theirs.

The following are the rules adopted by the third conference, January, 1900, for its regulation. The same rules were adopted, with one or two slight changes, in 1901.

First. That the convention meet daily at 9 a. m. and 2 p. m., and adjourn at 12 m. and 5 p. m.

Second. Special meetings may be held, or evening sessions, if so ordered.

Third. That the Miners' representatives occupy the left side of the hall and the Operators' the right, facing the stage.

Fourth. That each State be allowed the same number of votes on the floor of the house, four votes in behalf of the Operators and four votes in behalf of the Miners of each State.

Fifth. That no vote be declared carried unless on the affirmative vote of the Miners and Operators of each State.

That upon all questions of mere procedure the rules of parliamentary procedure, as stated in any standard manual, shall be the rules of this convention, and that in no event shall the rule requiring unanimous vote on all main and principal questions be suspended. Main and principal questions mean all questions affecting the proposed scale and agreement.

Sixth. That each State represented in the convention have four operators and four miners on the scale committee, to be appointed with the understanding that each State may have an alternate for each representative, who shall have all the privileges of the scale committee, but shall have no vote except in the absence of his principal.

Seventh. That sessions of the joint convention will be open to the public, except when otherwise ordered.

A study of the proceedings of the joint conferences shows that the greater part of the work of bringing about an agreement is performed by the joint scale committee, the ultimate question of the precise rate of wages being usually referred by that committee to a subcommittee of 16 members. The joint scale committee reports from time to time to the convention the progress which is being made, and after discussion in general conference the unsettled questions are referred back for further discussion. When the joint scale committee makes its final report it is usually adopted unanimously without change.

The most significant thing about the system is that it is one of conciliation, of negotiation between the parties directly interested, of "collective bargaining;" in short, it is not a system of arbitration. There is no provision in the agreement or in the rules for reference to outside arbitrators, and the whole method resolves itself into a bargaining between the two sides, in which an agreement is effected

<sup>1</sup>See reports of the four annual joint interstate conferences of coal miners and operators.

<sup>2</sup>Report of third conference, p. 27.

only because each party recognizes the evils which would result from ultimate failure to adopt a scale. The requirement that all votes of the convention and of the scale committee be unanimous is also an interesting and important one, showing that neither side is willing to trust the decision of such weighty questions to a vote of the members on the other side, plus, perhaps, only a single member from its own ranks. The reports of the proceedings show that usually each side presents at the outset a proposition, and that in the joint scale committee all the operators at first vote in favor of their own proposition, and all the miners in favor of theirs. Only after a long discussion is a compromise arrived at. Each point is thrashed out carefully. One side grants a concession in return for some advantage yielded by the other. The speeches in some cases are acrimonious, but probably each side from the beginning is resolved to make concessions if necessary rather than to break up without an agreement.

**5. Extension of joint agreement system.**—By dint of energetic effort on the part of the organizers of the United Mine Workers the membership of that body has been rapidly increased in several States not belonging to what is called the central competitive field, and not covered by the interstate joint agreement. With the extension of the organization has come the endeavor to establish the system of joint annual agreements with local associations or representatives of the employers. No little success has been obtained in this movement. Joint State or district conferences and agreements have been established, on the line of the interstate system, in Alabama, Kentucky, Tennessee, Missouri, Kansas, Iowa, Michigan, and central Pennsylvania, and under these agreements hours have very generally been reduced to 8 per day and wages considerably advanced.

The United Mine Workers are especially anxious to extend the interstate agreement to other States than the 4 now covered. At the 11th annual convention of the organization, in 1900, a motion was carried that the representatives of the miners attempt to secure the admission of Iowa, and all other States which were willing to apply for admission, to the joint conference of miners and operators. This demand was accordingly presented by the miners' delegates at the joint conference of 1900. Iowa and Michigan had actually sent representatives on behalf of both the operators and the miners to seek admission. The operators unanimously opposed the admission of these States, or of other States. One of their representatives declared that the extension of the joint agreement to new States would prove cumbersome, and was contrary to the very principles at the base of the interstate arrangement. Each State, he said, has its own questions, and the rule of the interstate conference requiring unanimous consent of all the delegates would result in preventing agreements if more States, with different ideas and interests, should be admitted. The operators of the 4 States already in the conference are not conversant with the conditions of mining in other States, and can not judge fairly in forming scales to cover them. Another representative of the operators suggested that the proper thing to do would be to organize a second group of States west of the Mississippi River, with Iowa as a nucleus, and to establish interstate agreements for that group. To attempt to bring all of the States into one organization would make the system break down of its own weight.

In reply to these arguments the miners urged that Iowa and other Western States were direct competitors of the four States covered by the joint agreement, and that the same policy which dictated the attempt to regulate the conditions of competition in the four States demanded the extension of the joint-agreement system to the more Western States. The purpose of the whole movement was to wipe out that excessive competition which forces wages below the living point. Iowa was directly a competitor of Illinois and other States in the present system as West Virginia, which the operators were anxious to bring into the interstate conference. A representative of the Iowa operators, who was allowed to address the conference, presented essentially the same arguments as the miners. He was willing to further any plan to establish new groups of States having agreements among themselves, but he held that these groups would still compete with one another and with the central field, and that some form of agreement between all fields would be desirable. The central States would still be the basing point for coal prices, and the others ought to have some influence in determining the conditions in this basing district.

Since unanimous action on the part of the conference is required to reach a decision, and since all of the operators opposed the proposition to admit Iowa and other Western States, the movement for the time being failed. The same result followed an attempt to secure participation of the delegates from Iowa and Michigan to the convention of 1901.

The operators of West Virginia were invited to attend the first interstate conference, held in 1898, but they refused to do so. The operators in the four States

represented in the conference have repeatedly expressed the desire to bring West Virginia into the system, especially with a view to checking the alleged unfair competition of the operators in that State, who pay much lower wages than prevail in Pennsylvania, Ohio, Indiana, and Illinois. The operators have urged the United Mine Workers to extend their organization among the miners in West Virginia until it shall have become sufficiently powerful to force the West Virginia operators to pay higher wages and thus to be willing to enter the interstate conference. In connection with the discussion as to the admission of Iowa to the conference, a prominent representative of the operators, in 1900, charged the United Mine Workers with having failed to fulfill their earlier promise that they would increase their strength in West Virginia and force the operators of that State to make terms. He declared that out of 28,000 miners in West Virginia only 421 were members of the United Mine Workers, and that as a result of the low wages prevailing in that State it had been able rapidly to increase its output of coal, the prospect being that in 1900 the West Virginia output would exceed that of Illinois, bringing her up to the rank of the second coal-producing State in the Union. The United Mine Workers, he added, had been spending their money and their efforts in extending the organization into the more Western States, where the wages and conditions were fair, and where the competition with the central States was not excessive. Instead of this policy, the organization should put all of its efforts into bringing West Virginia into line. To this argument the miners appear to have made little reply. One of them urged, however, that the West Virginia operators had declared themselves unwilling to agree to pay higher wages so long as many operators in the districts covered by the joint agreement were continually breaking that agreement and cutting wages so as to compete severely with West Virginia.<sup>1</sup>

**6. Enforcement of joint agreements.**—The members of the United Mine Workers take to themselves credit on the ground that they have practically in no case refused to carry out the terms of the interstate agreements. Especially during the year 1899, when the conditions in the mining industry had so greatly improved as to warrant higher wages, the miners refrained from strikes or violations of the agreement.<sup>2</sup> Operators, however, hold that violations, though of a minor character, do occur, often against the will of the officers of the miners' organization.

The miners on the other hand complain that the operators not infrequently violate the agreements. As a matter of fact, there is no definite organization of all the operators of the four central States, and the agreements are signed only by a few operators as the representatives of those present in the convention, but with no particular power to coerce such operators as refuse to be bound. So, too, most of the subagreements in the different districts are signed by individual operators, not representing any strong organization. The miners declare that in such circumstances the burden of enforcing agreements as regards both parties falls upon the United Mine Workers' organization alone. The organization is expected to strike or threaten to strike in order to bring the rebellious operators to terms.<sup>3</sup>

It appears that most of the serious strikes in the central coal-producing States during the past two or three years have resulted from the refusal of the operators to abide by scales. As a general thing, the United Mine Workers have been sufficiently strong to bring the operators into line. Thus the operators of the Hocking Valley district, one of the most important, refused to sign or to recognize the agreement reached in Pittsburg in 1899, and only after considerable negotiations and threats of a general strike did they finally accede to the scale. The same was true regarding the block-coal operators of Indiana.<sup>4</sup> The serious strikes at Virden and Pana, Ill., in 1898, were also caused by the refusal of the operators of those districts to recognize the agreement.<sup>5</sup> There were during that year a considerable number of other similar strikes in Illinois. At the beginning of the scale year, April 1, 1899, about 5,000 miners were on strike for the purpose of enforcing scale rates, and 3,000 of these were still out in September, although afterwards most of the strikes were terminated in favor of the miners.<sup>6</sup>

The Illinois operators, as is pointed out below, now have a strong organization, and are undertaking more effectively to enforce obedience to the agreements on the part of operators and miners alike.

**7. Wages and conditions of labor under joint agreement system.**—The joint agreement which immediately succeeded the great strike of 1897, above described, while not

<sup>6</sup> Report Tenth Annual Convention, p. 29.

so wide-reaching in its application as the annual agreements adopted thereafter, had a very important effect in securing uniformity in the rates for mining under similar conditions. By this agreement it was provided that neither owners nor operators of mines should be interested in company stores or in the sale of merchandise to their employees; that wages should be paid semimonthly, and that the price for pick mining in the thin-veined district of Ohio and Pennsylvania should be uniform, while the price for pick mining in the thick-veined district should also be uniform, the difference between the two rates being fixed. The rate of wages for the thin-veined district was fixed at 65 cents per ton, and for the thick-veined district at 56 cents per ton. This represented an advance in wages, as compared with the conditions before the strike, of a little over 20 per cent.

The later agreements established by the joint conferences of operators and miners for the four States of Pennsylvania, Ohio, Indiana, and Illinois have still further raised wages, and have established the base prices upon which local scales were to be constructed.

The rates of wages prevailing in the various mining districts in January, 1898, according to the Ohio State Board of Arbitration,<sup>1</sup> were as follows: Pittsburg district, thick vein, 48 to 52 cents per ton; thin vein, 65 cents per ton, except at mines of New York and Cleveland Gas Coal Company, where the rate was 55 cents per ton, coal being passed over standard screen, day's work, 10 hours. Ohio, generally 56 cents per ton, coal being passed over standard screen; day's work, 9 or 9½ hours. Indiana, 56 cents per ton over diamond-bar screen, with 1½ inches space between bars, day's work, 9 hours. Illinois, 28 to 45 cents per ton for run-of-mine coal (i. e., coal as it comes from the mine, of all sizes, without screening); day's work, 10 hours.

The first joint convention, held at Chicago January 17, 1898, reached an agreement which was at first signed on behalf of the operators only by the representatives of Illinois, Indiana, and Pennsylvania, although after vainly endeavoring to obtain modifications in their favor the Ohio operators later acceded to the agreement. By this agreement a uniform rate of 66 cents per ton for screened coal was established for western Pennsylvania, Ohio, and Indiana, the differential previously existing in favor of Ohio and Indiana being abolished. The agreement provided for a uniform screen, 6 by 12 feet, having bars of not less than ½ of an inch surface with 1½ inches between them, although the block-coal district of Indiana was allowed to use the diamond-bar screen. In Illinois, which as before was to remain under the run-of-mine system strictly, the price for mining was fixed at 40 cents per ton. The hours of labor for men working by the day were fixed at 8, and a joint committee of operators and miners was established to determine the wages to be paid to the different classes of day labor. This committee afterwards established a scale for day labor inside mines, ranging from \$1.75 to \$1.90 per day, except for trappers, who were to be paid 75 cents per day. Owing to the difference in conditions the committee could not agree upon a uniform rate of wages for outside labor.<sup>2</sup>

The Ohio State Board of Arbitration appears to uphold the contention of the Ohio coal operators that the removal of the differential in favor of Ohio coal as compared with Pittsburg coal was an injustice. During the year 1898, according to the State board, Ohio coal interests suffered severely, many mines being forced to discontinue operations, and the total output for the State being noticeably reduced. The board calls attention to the fact that the operators of West Virginia, who had refused to take part in the Chicago convention, have been paying lower rates for mining and that their output for the year 1898 accordingly considerably increased.<sup>3</sup>

In accordance with the agreement made at the Chicago convention in 1898, the interstate convention of miners and mine operators met for the second time at Pittsburg in January, 1899, for the purpose of agreeing upon a scale of wages for that year. After a session of 7 days the convention readopted the agreement of 1898, with the provision that the question as to the relative prices of pick mining and machine mining in Illinois should be settled by the Illinois State convention or by arbitration.<sup>4</sup>

During the year 1899 there was a very marked improvement in the condition of the coal trade and the miners came to the next convention, in January, 1900, with a demand for a great increase in wages. Indeed, they took credit to themselves because none of them had broken the agreement of 1899 by demanding higher wages before its expiration. Under instructions from the annual convention of their own organization, held just before, they demanded that all coal be paid for

on the run-of-mine basis throughout the 4 States covered by the agreement. This question caused prolonged discussion, but the miners finally withdrew from their demand, except as to Illinois, which had adopted previously the run-of-mine basis. After another period of negotiation an agreement was reached fixing the wages at a point intermediate between the demands of the miners and the rate which the operators had proposed in the first instance. This conference was the longest which had yet been held, lasting from January 23 to February 3. The agreement which was reached is so interesting that it is here printed in full:

## INDIANAPOLIS AGREEMENT

*Between the United Mine Workers of America and the coal operators of Pennsylvania, Ohio, Indiana, and Illinois*

Covering and effective during the scale year from April 1, 1900 to April 1, 1901

It is hereby agreed

SECTION I. (a) That an advance of fourteen (14) cents per ton of two thousand (2,000) pounds for pick mined, screened coal shall take effect in western Pennsylvania this year, the Hooking, the basing district of Ohio, and the block coal district of Indiana.

(b) That the Danville district, the basing point of Illinois shall be continued on an absolute run-of-mine basis, and that an advance of nine (9) cents per ton over present prices be paid in the district named.

(c) That the bituminous coal district of Indiana shall pay forty nine (49) cents per ton for all mine run coal loaded and shipped as such. All other coal mined in that district shall be passed over a regulation screen, and be paid for at the rate of eighty (80) cents per ton of two thousand (2,000) pounds for screened lump.

SECTION II. That the screen hereby adopted for the State of Ohio, western Pennsylvania, and the bituminous district of Indiana shall be uniform in size, six (6) feet wide by twelve (12) feet long, built of flat or A-iron shaped bar of not less than five eighths (5/8) of an inch surface, with one and one fourth (1 1/4) inches between bars, free from obstruction, and that such screen shall rest upon a sufficient number of bearings to hold the bars in proper position.

SECTION III. That the block coal district of Indiana may continue the use of the diamond bar screen, the screen to be seventy-two (72) feet superficial area of uniform size, one and one quarter (1 1/4) inches between the bars, free from obstruction, and that such screens shall rest upon a sufficient number of bearings to hold the bars in proper position.

SECTION IV. That the differential between the thick and thin vein pick mines of the Pittsburg district be referred to that district for settlement.

SECTION V. (a) That the price of machine mining in the bituminous district of Indiana shall be eighteen (18) cents per ton less than the pick mining rate for screened lump coal, when punching machines are used, and twenty one and one half (21 1/2) cents per ton less than pick mining rates when chain machines are used.

When coal is paid for on run-of-mine basis, the price shall be ten (10) cents per ton less than the pick mining rate when punching machines are used, and twelve and one half (12 1/2) cents per ton less than pick mining rates when chain machines are used.

(b) That the machine mining rate in the Danville district, the basing point of Illinois, on both punching and chain machines be thirty nine (39) cents per ton.

SECTION VI. That the machine mining rate in the thin vein of the Pittsburg district, and the Hooking, the basing district of Ohio, for shooting, cutting, and loading, shall be advanced nine (9) cents per ton, and that the block coal district of Indiana shall be advanced eleven and one half (11 1/2) cents per ton.

SECTION VII. That the mining rates in the central district of Pennsylvania be referred to that district for adjustment.

SECTION VIII. That the advance on inside day labor be twenty (20) per cent, based on the present Hooking Valley scale, with the exception of trappers, whose compensation shall be one dollar (\$1.00) per day.

SECTION IX. That all narrow, dead work and room turning shall be paid a proportionate advance with the pick mining rate.

SECTION X. That internal differences in any of the States or districts, both as to prices or conditions, shall be referred to the States or districts affected for adjustment.

SECTION XI. The above scale is based upon an eight (8) hour workday.

The foregoing scale, having been unanimously adopted by the interstate convention of miners and operators, at Indianapolis, Indiana, on February 23, 1900, in witness hereof we hereto attach our signatures.

W. C. PEARCE, *Secretary.*

Attest  
F. S. BROOKS, *Secretary.*

This agreement provided for an advance of 14 cents per ton for mining screened coal in Pennsylvania, Ohio, and the block coal district of Indiana. This raised the pick-mining rate from 66 cents to 80 cents. The operators had offered an advance of 9 cents, while the miners had demanded an advance of 20 cents. The run-of-mine system, which was excluded in Ohio and Pennsylvania, was made optional in the bituminous coal district of Indiana, and remained compulsory in Illinois. The rate for run-of-mine coal was fixed at 49 cents in Illinois and Indiana, as compared with 40 cents in the preceding year. The question of the differential between pick mining and machine mining, which had caused no little discussion, was finally settled by this agreement. An advance of 20 per cent in wages for day labor inside of mines was also agreed upon, this advance being in nearly the same proportion as that in the rates per ton for mining. The union states the advance of the mining rate at 21.21 per cent.

At the fourth annual joint conference, held at Columbus, Ohio, January 31 and February 9, 1901, this agreement was renewed and continued in force for the year from April 1, 1901, to April 1, 1902.

**8. State and local agreements and arbitration.**—The joint annual conference representing the coal mining interests of the four States of Pennsylvania, Ohio, Illinois, and Indiana attempts to determine only such matters as are of common importance to all of these States. The different conditions of mining in various localities make it desirable that certain modifications or special arrangements should be made for them as to many matters. In fact the policy of the joint conference is to establish only such terms as are necessary to make the conditions of competition between the operators of the different States fair. Questions which affect only the operators and miners of a single State or district are referred to the locality for settlement.

Most of the local agreements<sup>1</sup> are made by conferences between representatives of the local organizations of the United Mine Workers and the operators. There are in most instances no very formal organizations of the coal operators and the conferences, by which the joint agreements are adopted, are of a very informal character, not established or regulated by permanent constitution or agreement.

*Ohio.*—There are 6 or 7 of these joint agreements covering the different districts in Ohio. Perhaps the most elaborate of these fixes the mining scale and the conditions of labor for the Hocking Valley, which is the district taken as a basing point in the scales adopted by the joint conferences of the four central States. This agreement for the Hocking Valley fixes not only the general rate for pick mining (80 cents for lump coal and 57½ cents for run-of-mine coal), but also establishes a scale of prices for work in entries, for day labor inside the mines (\$2.10), for cutting and loading in connection with machine mining, and for various other special classes of work. The agreement also regulates the docking system, providing that for less than 150 pounds of dirt per ton of coal no reduction shall be made in the weighing of the coal, while for 150 pounds of dirt or over, 350 pounds of good coal shall be deducted, and for 300 pounds of dirt, 700 pounds of good coal shall be deducted. The agreement further regulates the system of turns and of check-offs, the limit of loading mine cars, the use of sprags, the size of rooms in mines, the removal of slate, and several other special matters of this sort.

The joint agreement for the *Pittsburg* district for the year beginning April 1, 1900, contained no provisions except as to prices and wages for different classes of work.

*Indiana.*—In this State there are two agreements, one covering the bituminous-coal field and the other what is known as the block-coal field. The agreement for the bituminous-coal field contains a number of regulations in addition to those fixing the rates for different kinds of work. The most important of these provisions relates to the settlement of differences between the operators and the miners. Pending such settlement, no stoppage of work is permitted. If the parties immediately affected can not reach an agreement the question shall be referred to the board of arbitration, consisting of two operators chosen by the interested operator, two miners selected by the United Mine Workers, and if these can not reach an agreement, a fifth, to be selected by them. The decision of this board is to be final. This is, perhaps, the most thoroughgoing system of arbitration which is provided in any of the coal fields except Illinois. The agreement also recognizes the mine committee of the United Mine Workers for each mine, but provides that it shall exercise no other control over the operation of the mine than the adjustment of disputes between the mine boss and members of the union.

<sup>1</sup>See Report of Fourth Joint Conference, pp. 1-41.

In the block-coal district the agreement also provides for the peaceful settlement of disputes. If the parties affected can not reach an adjustment they shall refer the matter to the executive board of the United Mine Workers for the block-coal district and an equal number of operators, whose action shall be final. There is, however, no provision for selecting an umpire in case of failure to agree.

**9. The Illinois system.**—The most elaborate system of joint agreements regarding the details of mining has been established in Illinois. The importance of the system may be judged by the fact that it applies to fully 10,000 wage-earners. In that State the coal operators are at present thoroughly organized and are able, as is scarcely the case in other States, to enforce effectively the carrying out of joint agreements on the part of each operator.

The Illinois Coal Operators' Association was organized in December, 1897. Its present constitution, adopted January 29, 1901, declares that "its object is to negotiate and make effective agreements with labor organizations, fixing the wages and conditions of employment in and about the coal mines of Illinois, and to prepare statistics of the coal industry." Any person, firm, or corporation operating a coal mine is eligible for membership and entitled to one vote, the membership fee being \$2 per mine operated by the applicant and the annual dues \$5 per mine. The association has also power to levy assessments on its members. One of the most interesting provisions of the constitution is that regarding the maintenance of wage scales and obedience to joint agreements.

"Every member obligates and pledges himself to maintain and observe the contracts and agreements entered into by the association, paying no more nor less than agreed prices, and making no more favorable conditions than set forth therein—any changes to be considered a violation of such contracts or agreements, and for any failure or refusal to do so, when changes have been preferred and proven, may be expelled from the association by a majority vote of the association, or by a majority vote of the executive committee at any meeting of said committee.

"But in recognition of the fact that this is purely a voluntary organization, designed to negotiate agreements acceptable to the majority interest, without undue prejudice to the rights of the minority, it is therefore the right and privilege of any member dissenting from any agreement or contract made or executed by the association to withdraw from the association by filing written notice of such withdrawal with the recording secretary not more than fifteen (15) days after the making or execution of said contract."

The association has an executive committee of two members from each of the 9 mining districts into which the State is divided, with provision for a third member in certain districts. This committee acts as the scale committee in the conferences with the miners, and as a grievance committee with power to investigate all alleged violations of existing agreements. There is, however, no definite provision regarding the fining of members who violate agreements. The most recent action of the operators' association, with regard to the settlement of disputes, is the establishment of a commission, the chief object of which is to investigate local differences regarding the interpretation of the joint agreements and other matters and to cooperate with the officials of the United Mine Workers in bringing about a peaceful settlement. The work of this commission is described more fully below.

The representatives of the Illinois Coal Operators' Association have, since the winter of 1898, met annually in conference with the State organization of the United Mine Workers for the establishment of a State scale of wages and the regulation of the conditions of mining.<sup>1</sup> These conferences are conducted in almost precisely the same manner as those covering the four Central States. There is no formal constitution for the joint organization nor any agreement providing for its permanent establishment. Nevertheless, by custom a practically uniform method of organization and procedure has been adopted. The conferences are held at the same time as the annual conventions of the State organization of the United Mine Workers. A very large proportion of the representatives attending the convention of the mine workers also attend the joint convention. At the convention of 1901 there were 268 delegates representing the miners and 155 members of the Illinois Coal Operators' Association. On the floor of the house, however, each organization is allowed an equal number of votes, 4 on each side, and no motion is "declared carried unless upon the affirmative vote of the miners and operators." A further rule, which has been adopted at each convention, provides for a scale committee, consisting of 2 operators and 2 miners from each of

<sup>1</sup>See reports of joint conventions of Illinois coal miners and operators. The report of 1901 is especially complete.

the 9 districts. The main work of agreeing upon a scale of wages and conditions of employment falls to this scale committee, although the other delegates remain in attendance until it has reached an agreement, and from time to time meetings of the entire convention are held to discuss partial recommendations of the committee. The joint convention of 1901 lasted from February 25 to March 11.

It is especially important to observe that this system, like that of the joint conferences for the four Central States, is one of conciliation and not of arbitration. The parties must come ultimately to a unanimous agreement, working out their differences, and there is no provision for reference to an outside arbitrator.

The joint agreements reached in this way have become exceedingly elaborate, and additional regulations from year to year have been inserted in them. The conditions in the different mining districts of Illinois vary so greatly that a large number of different rates for mining are necessary.

In addition to the special provisions for the different mining districts contained in the State agreement, special agreements are made in many of the districts and subdistricts between local conferences of miners and operators. In fact, the joint-agreement system has been carried almost, if not quite, to its logical completion in Illinois. Conditions of national importance are fixed by the interstate agreement, those of importance to the entire State by State agreements, and local conditions are established by local agreements. The reason for fixing the general scale of wages for each district by one State agreement arises from the necessity of equalizing the conditions of competition among mine operators in the different districts.

The Illinois State agreement of 1901 (printed in full below) regulates in very considerable detail the methods of labor. In particular, provisions are inserted to prevent careless mining, to provide for the docking of wages in case of the loading of unduly impure coal, and to define the duties of the miner with regard to the use of timber, blasting, and other methods of mining. The price of powder is fixed at \$1.75, and the charge for blacksmithing is also established. The meaning of the 8-hour day is carefully defined. The duties and rights of drivers and of various other special classes of employees are further regulated.

The most important provisions of the Illinois joint agreement of 1901 are those regarding the settlement of disputes. While no permanent and all-powerful board of arbitration is established, the intention of doing away with strikes and lockouts during the existence of the joint agreement is made clear. The mine operators recognize the organization of the United Mine Workers, virtually agreeing to employ no miners not belonging to the organization. The "pit committee" for each mine is also recognized, although its duties are limited to the adjustment of disputes, and it is prohibited from interfering with the working of the mine or going about the mine unless called on account of a grievance. In particular, it is provided that the operator or his manager shall have the general direction of the working force and the right to hire and discharge employees at will, subject to the provision regarding the employment of union members. Any employee who is suspended or discharged, however, may demand an investigation as to charges against him, which shall be conducted and settled in the same manner as investigation concerning disputes as to other matters.

In case a dispute arises in any mine the "pit committee" and the local president of the miners' union are empowered to settle it with the pit boss if possible. In the event of a disagreement the matter is referred to the superintendent of the company and the president of the miners' local executive board. The next resort is to the superintendent of the company and the miners' president of the subdistrict, and finally the dispute may be carried to the higher officials of the company and the State officials of the United Mine Workers. There is no provision in the agreement for reference to an outside arbitrator. In practice, although the joint agreement makes no reference to this method, disputes which can not be otherwise settled are at present usually referred to the commissioner of the Illinois Coal Operators' Association, above mentioned, and the State officers of the United Mine Workers. The duties of the commissioner of the Coal Operators' Association who is at present Mr. Herman Justi, are chiefly to cooperate with the officials of the United Mine Workers in investigating grievances and alleged violations of the joint agreement.<sup>1</sup> The representatives of the conflicting parties are invited to appear and to present testimony bearing on the questions at issue. If necessary, the miners' officials and the commissioner, with witnesses and parties in interest, visit the mine and examine the conditions at first hand. There is no

<sup>1</sup> See testimony of Mr. Justi, Reports of Industrial Commission, vol. xlii, p. 677; also various pamphlets issued by the Coal Operators' Association, particularly "Plans of conciliation and arbitration," an address before the conference of the National Civic Federation at Chicago, December, 1900, also published in the report of that conference.

authority on the part of the informal joint board thus created to render a binding decision, unless by the agreement of the parties in interest, but, in general, its recommendations are accepted. On this subject Mr. Justi stated in December, 1900:

"Of the 100 or more cases that have been presented for adjustment since this commission was established on June 1 of the present year, a decision was promptly reached in all but 3 of the cases, one of which has since been decided. Unable to agree on these 3 questions, the miners' officials decided to refer them to the national president of the Mine Workers' Union of America, who, with the commissioner of the Illinois Coal Operators' Association, has had them under consideration, one of them having been disposed of and the other two still remaining undecided."

One of the most important disputes which has arisen in the Illinois mining district was settled in April, 1901. It related to the interpretation of the sixteenth clause in the State agreement as regards its application to the Danville subdistrict. This clause provided that the scale of prices should include "except in extraordinary conditions, the work required to load coal and properly timber the working places in the mine," it also provided that the miners must "shoot" their coal carefully, and established certain other detailed regulations. Disagreement arose as to the definition of "extraordinary conditions" and as to compensation for so-called "dead work" in the district. A joint meeting of miners and operators of the subdistrict was held, and it was agreed to refer the matter to Mr. Mitchell, president of the United Mine Workers of America, and Mr. Justi. These two officials visited a number of mines and made a most thorough investigation. They succeeded in agreeing upon a detailed series of recommendations. While the methods of mining in dispute were necessarily of such a character, as pointed out in the recommendations, that absolutely definite rules could not be applied, and while the first recommendation of all was that both parties should act in the spirit of mutual fairness and conciliation, a number of fairly precise rules were laid down. The decision in general favored the contentions of the operators. This recommendation was adopted by the contending parties.<sup>1</sup>

Both miners and operators in Illinois seem well satisfied with the working of the joint-agreement system and with the provisions for settling minor disputes arising under it. Strikes have not been absolutely done away with, but they have been reduced to a minimum. A circular of the Illinois Coal Operators' Association, dated April 10, 1901, states that at the joint convention of 1901 the operators proposed a clause in the agreement providing for fining those violating any of its provisions. The miners admitted that the operators had some cause for complaint because of local strikes, but declared that they believed that their organization could suppress them in the future with the cooperation of the operators. The president of the State organization of miners declared at that time that if the miners persisted in violating the agreements the organization would be willing to provide for a penalty or some other effective means of enforcing the agreement.

#### ILLINOIS AGREEMENT AS TO MINING PRICES AND CONDITIONS, 1901-2.

##### AGREEMENT

Whereas a contract between the operators of the competitive coal fields of Pennsylvania, Ohio, Indiana, and Illinois and the United Mine Workers of America has been entered into at the city of Columbus, Ohio, Feb. 9, 1901, by which the present scale of prices at the basic points as fixed by the agreement made in Indianapolis, Ind., Feb. 2, 1900, is continued in force and effect for one year from April 1, 1901, to March 31, 1902, inclusive, and

Whereas this contract fixes the pick mining price of bituminous mine run coal at Danville at forty-nine cents per ton of two thousand pounds. Therefore be it

Resolved, That the prices for pick-mined coal throughout the State for one year beginning April 1, 1901, shall be as follows:

##### FIRST DISTRICT

Streator, Clarke City, and associated mines, including Toluca thick vein . . . . .	58c
Third vein and associated mines, including twenty-four inches of brushing . . . . .	76c
Wilmington and associated mines, including Bloomington thin vein, including brushing . . . . .	81c
Bloomington thick vein . . . . .	71c
Pontiac, including 24 inches of brushing . . . . .	81c
Pontiac top vein . . . . .	58c
Cardiff long wall . . . . .	81c

NOTE.—An additional ten cents per ton shall be paid in all such places where the weight does not force the mining, until July 1, 1901. In other respects, Wilmington conditions shall prevail.

Marseilles and Seneca—Price to be determined by Messrs. Justi and Russell and become a part of this contract.

<sup>1</sup>See pamphlet entitled "Decision of the Commission Selected by the Operators and Miners of the Danville Subdistrict . . . April 27, 1901," reprinted in Reports of Industrial Commission, vol. xii, p. 684.

# 336 THE INDUSTRIAL COMMISSION:—COLLECTIVE BARGAINING.

## SECOND DISTRICT

Danville, Westville, Grape Creek, and associated mines in Vermillion County ..... 49c

## THIRD DISTRICT

Springfield and associated mines ..... 49 7c  
 Lincoln and Niantle ..... 53c  
 Colfax ..... 53c

## FOURTH DISTRICT

Mines on C. & A., south of Springfield, to and including Cathlamet, including Taylorsville, Pana, Litchfield, Hillsboro, Witt (Paisley), Dyermon, and Pawnee ..... 49c

NOTE.—The foregoing scale, in so far as it relates to the Pana mines, is effective subject to modification by joint action of the State executive board of the United Mine Workers and the Illinois Coal Operators' Association. A joint commission, consisting of three men to be appointed by the Illinois Coal Operators' Association and three men appointed by the United Mine Workers shall convene at Pana prior to April 1, 1901, and shall give a full hearing to all parties in interest, and as soon thereafter as practicable shall report their findings and recommendations, upon which there shall be a joint meeting of the executive committees of the two associations and suitable action taken based upon such findings and recommendations. Provided, that in case no change is jointly agreed upon by the executive committees of both associations the Pana scale as herein fixed shall be effective for the scale year.

[Similar detailed prices for different mines in the five other districts follow.]

1st. The Columbus convention having adopted the mining and underground day labor scale in effect April 1, 1900, as the scale for the year beginning April 1, 1901, no changes or conditions shall be imposed in the Illinois scale for the coming year that increase the cost of production of coal in any district in the State, except as may be provided.

2d. No scale of wages shall be made by the United Mine Workers for mine manager, mine manager's assistant, top foreman, company weighman, boss drivers, night boss, head machinist, head boiler-maker, head carpenter, night watchmen, hoisting engineers. If being understood that "assistant" shall apply to such as are authorized to act in that capacity only. The authority to hire and discharge shall be vested in the mine manager, top foreman, and boss driver. It is further understood and agreed that the night watchman shall be exempt when employed in that capacity only.

3d. Any operator paying the scale rate for mining and day labor under this agreement shall at all times be at liberty to load any railroad cars whatever, regardless of their ownership, with coal, and sell and deliver such coal in any market and to any person, firm, or corporation that he may desire.

4th. The scale of prices for mining per ton of 2,000 pounds run of mine coal herein provided for is understood in every case to be for coal free from slate, bone, and other impurities, loaded in cars at the face, weighed before screening, and that the practice of pushing coal by the miners shall be prohibited.

5th. (a) Whether the coal is shot after being undercut or sheared by pick or machine, or shot without undercutting or shearing, the miners must drill and blast the coal in accordance with the State mining law of Illinois, in order to protect the roof and timbers in the interest of general safety. If it can be shown that any miner persistently violates the letter or spirit of this clause he shall be discharged.

(b) The system of paying for coal before screening was intended to obviate the many contentions incident to the use of screens, and was not intended to encourage unworkmanlike methods of mining and blasting coal, or to decrease the proportion of screened lump, and the operators are hereby guaranteed the hearty support and cooperation of the United Mine Workers of America in disciplining any miner who from ignorance or carelessness or other cause fails to properly mine, shoot, and load his coal.

6th. In case slate, bone, sulphur, or other impurities are sent up by the miner it shall be the duty of the trimmer of the car to call the attention of the weighman and checkweighman to the same, and the miner so offending shall for the first offense be suspended for one day or fined one dollar, for the second offense he shall be suspended for three working days or fined two dollars, for the third and each subsequent offense occurring in any one month he shall be suspended, discharged, or fined four dollars, provided, that in malicious or aggravated cases, the operator shall have the right to suspend or discharge for the first or any subsequent offense. Any miner abusing or seeking to embarrass the trimmer for performing his duty shall be fined three dollars or discharged. The proceeds of all fines to be paid into the checkweighman's fund. Under no circumstances shall fines be remitted or refunded.

7th. The miners of the State of Illinois are to be paid twice a month, the dates of pay to be determined locally, but in no event shall more than one-half month's pay be retained by the operator. When the men locally so demand, statements will be issued to all employees not less than twenty-four hours prior to pay day. No commissions will be charged for money advanced between pay days, but any advances between pay days shall be at the option of the operator.

8th. The price for powder per keg shall be \$1.75. The miners agree to purchase their powder from their operators, provided it is furnished of standard grade and quality, that to be determined by the operators and expert miners jointly where there is a difference.

9th. The price for blacksmithing for pick mining shall be six-tenths of a cent per ton for room and pillar work and twelve and one-half cents per day per man, or twenty-five cents per month for long wall for pick and drill sharpening.

10th. It is understood that there is no agreement as to the price of oil.

11th. The inside day-wage scale authorized by the present agreements—i. e., the Columbus scale of 1898, plus an advance of twenty per cent—shall be the scale under this agreement, but in no case shall less than \$2.10 be paid for drivers.

12th. The above scale of mining prices is based upon an eight hour work day, and it is definitely understood that this shall mean eight hours work at the face, exclusive of non-time, six days a week, or forty-eight hours in the week, provided the mine desires to work, and no local ruling shall in any way affect this agreement or impose conditions affecting the same. \* \* \*

13th. (a) The duties of the pit committee shall be confined to the adjustment of disputes between the pit boss and any of the members of the United Mine Workers of America working in and around the mine, for whom a scale is made, arising out of this agreement or any subdistrict agreement made in connection herewith, where the pit boss and said miner or mine laborer have failed to agree.

(b) In case of any local trouble arising at any shaft through such failure to agree between the pit boss and any miner or mine laborer, the pit committee and the miners' local president and the pit

boss are empowered to adjust it; and in the case of their disagreement it shall be referred to the superintendent of the company and the president of the miners' local executive board where such exists, and shall they fail to adjust it—and in all other cases—it shall be referred to the superintendent of the company and the miners' president of the subdistrict, and should they fail to adjust it, it shall be referred in writing to the officials of the company concerned and the State officials of the United Mine Workers of America for adjustment, and in all such cases the miners and mine laborers and parties involved must continue at work pending an investigation and adjustment until a final decision is reached in the manner above set forth.

(c) If any day man refuse to continue at work because of a grievance which has or has not been taken up for adjustment in the manner provided herein, and such action shall seem likely to impede the operation of the mine, the pit committee shall immediately furnish a man or men to take such vacant place or places at the scale rate, in order that the mine may continue at work, and it shall be the duty of any member or members of the United Mine Workers who may be called upon by the pit boss or pit committee to immediately take the place or places assigned to him or them in pursuance hereof.

(d) The pit committee in the discharge of its duties shall under no circumstances go around the mine for any cause whatever unless called upon by the pit boss or by a miner or company man who may have a grievance that he can not settle with the boss, and as its duties are confined to the adjustment of any such grievances it is understood that its members shall not draw any compensation except while actively engaged in the discharge of said duties. The foregoing shall not be construed to prohibit the pit committee from looking after the matter of membership dues and initiations in any proper manner.

(e) Members of the pit committee employed as day men shall not leave their places of duty during working hours except by permission of the operator, or in cases involving the stoppage of the mine.

(f) The operator or his superintendent or mine manager shall be respected in the management of the mine and the direction of the working force. The right to hire must include also the right to discharge, and it is not the purpose of this agreement to abridge the rights of the employer in either of these respects. If, however, any employee, shall be suspended or discharged by the company, and it is claimed that an injustice has been done him, an investigation, to be conducted by the parties and is determined that an injustice has been done, the operator agrees to re-engage said employee and pay him full compensation for the time he has been suspended and out of employment, provided, if no decision shall be rendered within five days the case shall be considered closed in so far as compensation is concerned.

(10b) The wages now being paid outside day labor at the various mines in this State shall constitute the wage scale for that class of labor during the life of this agreement, provided, that no top man shall receive less than \$1.80 per day.

(15b) In the event of an instantaneous death by accident in the mine, the miners and underground employees shall have the privilege of discontinuing work for the remainder of that day, but work, at the option of the operator, shall be resumed the day following, and continue thereafter. In case the operator elects to operate the mine on the day of the funeral of the deceased, individual miners and underground employees may at their option absent themselves from work for the purpose of attending such funeral, but not otherwise. And in the event that the operator shall elect to operate the mine on the day of such funeral, then from the proceeds of such day's operation each member of the United Mine Workers of America employed at the mine at which the deceased member was employed shall contribute fifty cents and the operator \$25.00 for the benefit of the family of the deceased or his legal representatives to be collected through the office of the company. Except in case of fatal accidents, as above, the mine shall in no case be thrown idle because of any death or funeral, but in the case of the death of any employee of the company or member of his family, any individual miner may, at his option, absent himself from work for the sake of attending such funeral, but not otherwise.

(16b) (a) The scale of prices herein provided shall include, except in extraordinary conditions, the work required to load coal and properly timber the working places in the mine, and the operator shall be required to furnish the necessary props and timber in rooms or working face. And in doing wall mines it shall include the proper mining of the coal and the brushing and care of the working places and roadway according to the present method and rules relating thereto, which shall continue unchanged.

(b) If any miner shall fail to properly timber and care for his working place, and such failure shall entail falls of slate, rock, and the like, or if by reckless or improper shooting of the coal in room and pillar mines, the mine props or other timbers shall be disturbed or unnecessary falls result, the miner whose fault has occasioned such damage shall repair the same without compensation, and if such miner fails to repair such damage he shall be discharged.

In cases where the mine manager directs the placing of cross-bars to permanently secure the roadway, then, and in such cases only, the miner shall be paid at the current price for each cross bar when properly set.

The above does not contemplate any change from the ordinary method of timbering by the miner for his own safety.

(17b) The operators shall recognize the pit committee in the discharge of its duties as herein specified, but not otherwise, and agree to check off union dues and assessments from the miners and mine laborers, when desired, on the individual or collective continuous order prepared by the attorneys representing both the miners and operators, as at present existing, and when such union dues and assessments are collected through the office card days shall be abolished.

(18b) The operators shall have the right in cases of emergency work, or ordinary repairs to the plant, to employ in connection therewith such men as in their judgment are best acquainted with and suited to the work to be performed, except where men are permanently employed for such work. Blacksmiths and other skilled labor shall make any necessary repairs to machinery and boilers.

21st (a) Except at the basing point, Danville, the differential for machine mining throughout the State of Illinois shall be seven cents per ton less than the pick-mining rate.

22d Any underground employee not on hand so as to go down to his work before the hour for commencing work shall not be entitled to go below except at the convenience of the company. When an employee is sick or injured he shall be given a cage at once. When a cage load of men comes to the bottom of the shaft, who have been prevented from working by reason of falls or other things over which they have no control, they shall be given a cage at once. For the accommodation of individual employees, less than a cage load, who have been prevented from working as above, a cage shall be run mid-forenoon and mid-afternoon of each working day, provided, however, that the foregoing shall not be permitted to enable men to leave their work for other than the reasons stated above.

### 338 THE INDUSTRIAL COMMISSION:—COLLECTIVE BARGAINING.

26d. This contract is in no case to be set aside because of any rules of the United Mine Workers of America now in force or which may hereafter be adopted, nor is this contract to be set aside by reason of any provision in their national, State, or local constitutions

26th. The companies shall keep the mines in as dry a condition as practicable by keeping the water off the roads, and out of the working places

27th. All operators shall keep sufficient blankets, oil, bandages, etc., and provide suitable ambulance or conveyances at all mines to properly convey injured persons to their homes after an accident

28th. The operators shall see that an equal turn is offered each miner, and that he be given a fair chance to obtain the same. The checkweighman shall keep a turn bulletin for the turn keeper's guidance. The drivers shall be subject to whomsoever the mine manager shall designate as turn keeper, in pursuance hereto

29th. There shall be no demands made locally that are not specifically set forth in this agreement, except as agreed to in joint subdistrict meetings held prior to May 1, 1901. Where no subdistricts exist local grievances shall be referred to the United Mine Workers' State executive board and the mine owners interested

THE ILLINOIS COAL OPERATORS' ASSOCIATION

O. L. GARRISON, *President*

E. L. BENT, *Secretary*

THE UNITED MINE WORKERS OF AMERICA, DISTRICT NO. 12

W. R. RUSSELL, *President*

W. D. RYAN, *Secretary*

SPRINGFIELD, ILL., March 11, 1901

10. *Opinion of miners concerning agreement system.*—The officers of the United Mine Workers appear highly satisfied with the working of the joint-agreement system in the industry, and are anxious to extend it more widely. The following quotation from the annual address of President Hatchford before the convention of the organization in January, 1899, shows the general opinion of the miners as to the system:

"The agreement (of 1898) quoted advanced your wages generally about 18 per cent, and reduced the hours of labor almost in the same ratio; it reduced the size of screens to the smallest prevailing standard, and to a very great extent abolished them entirely. It equalized the wages of the different classes of labor and made conditions uniform in all of the fields covered. It reestablished healthy and mutual relations between employers and employees. It gave our organization place and prestige in the business and industrial circles of the country, and banded together in unity and fraternity a greater number of miners, covering a greater number of States, than was ever known at any previous time in our history. Of all the advantages gained, to which only a brief reference is made, the 8-hour day is decidedly the greatest because it is the most lasting."<sup>1</sup>

The secretary-treasurer, Mr. Pearce, in his report to the convention of 1900, also speaks of the rapid growth of the joint-agreement method, and declares that experience has shown its advantages. During the past year "the scope of its efficiency largely increased, and the employers and employees, after in some instances severe contests, have finally agreed that it is the most reasonable method to adjust differences."<sup>2</sup>

The present secretary-treasurer, in reply to a schedule of questions, also says that in Ohio, where the joint-agreement system has been longest in force, there are the fewest strikes, and that the longer the system exists the less likely are evasions or violations of agreements to occur.

The following is taken from a circular of the Illinois district of the United Mine Workers regarding the plan of enforcing the joint-agreement system in that State:

Whatever may have been done elsewhere to determine the respective share of the employer and the wage earner in the fruits of labor, the fact remains that in the State of Illinois at least the representatives of capital and of labor, in one department of industry at least—that of coal mining—do meet upon common ground to decide the conditions, as well as the wages of labor.

Less than four years ago chaos prevailed throughout the coal fields of Illinois, just as it existed elsewhere and as it does still exist to-day in some sections of the country. Strikes were of frequent occurrence in which human life was needlessly sacrificed and valuable property was ruthlessly destroyed. The relations between the contending forces were so strained that the laborer too often looked upon his employer with suspicion, while the employer all too frequently looked upon the laborer with disdain. They either envied or despised each other. As a consequence we have often unintentionally nurtured many morbid thinkers and miserable workers who have been fomenting strife ever since. Under such conditions it is easy to understand that capital could not always be safely employed nor could labor always find profitable employment.

The first wise step tending to improved relations was taken when the coal operators and the coal miners of Illinois, through organized bodies of each, decided to enter into annual agreements intended to be binding alike upon the employer and the employee. These annual agreements, which are nothing more nor less than contracts between business men, will be looked upon in time as sacred obligations which each side will scrupulously respect and the violation of which will be repudiated by all parties to the agreement, and a way will be found to punish the offender. Each year the language and the terms used in these agreements will be so exact or so plain that the chances of

<sup>1</sup> Report of Tenth Annual Convention of United Mine Workers, p. 13.

<sup>2</sup> Eleventh Annual Convention, p. 25.

misunderstanding them will be steadily reduced, the effect of which will be that if difficulties arise, it will be easy to place the responsibility where it belongs to the end that the guilty may be punished.<sup>1</sup>

The next wise step by the coal miners and coal operators was taken when they agreed upon a plan designed, not only to enforce these agreements upon employer and employee alike, but when they adopted a simple, practical, and humane plan of adjusting any difference or dispute arising between employer and employee, calculated to disturb peaceful and pleasant relations between them, or designed to interfere with the natural course of trade.

## II. IRON, STEEL AND TIN INDUSTRIES.<sup>1</sup>

**1. History and present extent of system.**—It is the distinction of the iron and steel trade that it was the first in the United States in which a system of regular annual conferences and joint agreements regarding wages and the conditions of labor was introduced, and that it is still the only trade in which wages are uniformly and in most cases successfully determined on the sliding-scale system. As far back as 1858 the puddlers in the iron mills of western Pennsylvania organized a strong union known as the United Sons of Vulcan, which repeatedly demanded increase of wages.<sup>2</sup> Finally a general conference of representative employees and employers was suggested. Such a conference was held, and after repeated meetings it finally established, on February 13, 1865, a scale of prices to be paid for boiling pig-iron. This was the first sliding scale adopted in this country. The amount to be paid for boiling iron ranged from \$1 a ton, when iron should be sold at 24 cents per pound, to \$9 per ton, when the price should be 83 cents per pound.

This scale lasted only a short time, since the men demanded higher pay than it provided for. In 1866 the manufacturers attempted to reduce the wages again, but the union refused to accept the reduction and a lockout resulted, which finally ended in the defeat of the manufacturers. In 1867 another conference between representatives of the Sons of Vulcan and the manufacturers was held, and a new sliding scale was agreed upon. This remained in force for 7 years, until in 1874 the manufacturers gave notice of their intention to terminate the agreement, with the purpose of reducing the rate of wages. This resulted in a strike which kept many of the mills of Pittsburg in idleness during the winter of 1874-1875. The strike was finally settled by the manufacturers individually signing scales of wages, there being no longer a joint agreement between the manufacturers as a body and the puddlers as a body.

Meantime scales of wages had been adopted for other classes of iron work, several trade unions having been established in these lines. In 1875 these separate organizations united with the Sons of Vulcan under the name Amalgamated Association of Iron, Steel, and Tin Workers of the United States.

At present the wages of practically all the skilled workmen in the iron and steel industry, so far as they are members of the Amalgamated Association of Iron, Steel, and Tin Workers, are determined by written agreements between either individual manufacturers or associations of manufacturers and the union. There are a considerable number of employers who do not deal with the Amalgamated Association, usually employing exclusively nonunion men. Where the Amalgamated Association is recognized, the agreement and sliding-scale system prevail. In some branches of the trade, notably in the manufacture of tin plate, practically all the workmen are members of the Amalgamated Association, or of the recently formed organization of Tin Workers, which also makes joint agreements with employers. The system does not apply in any branch of the iron and steel trade to merely unskilled laborers, not members of the unions.<sup>3</sup>

In some branches of the trade uniform annual agreements cover a large number of plants, practically all of the establishments recognizing the union. This is true as regards the manufacture of bar iron, various special forms of iron, sheet steel, and tin plate. On the other hand, the conditions in steel rail mills and in many other classes of mills differ so greatly that uniform scales are impracticable. In these mills separate agreements are adopted from time to time.

**2. Methods of adopting scales.**—The more general scales referred to were formerly adopted by agreements between the Amalgamated Association of Iron, Steel, and Tin Workers on the one hand, and associations of bar and other iron manufacturers, of sheet steel manufacturers, and of tin plate manufacturers on the other

<sup>1</sup> This account is based on the constitution of the Amalgamated Association, printed copies of recent scales, on testimony of witnesses, especially in Reports of Industrial Commission, vol. vii, pp. 81 ff and 382 ff, and on correspondence with representatives of the Amalgamated Association.

<sup>2</sup> For account of early history of agreement system see report of Joseph D. Weeks, on arbitration, in Annual Report of Massachusetts Bureau of Labor, 1881.

<sup>3</sup> Much information in this and the following paragraphs has been furnished by Mr. M. M. Garland, former president of the Amalgamated Association.

hand. At present nearly all the manufacturers formerly making up these associations have entered into industrial combinations. The Republic Iron and Steel Company includes a large proportion of the bar iron and other iron mills of the country, especially those west of Pittsburg. The American Sheet Steel Company includes very nearly all the sheet steel mills in the country, and the American Tin Plate Company has brought together almost all of the tin plate mills. The general scales are accordingly adopted by conferences between the Amalgamated Association and these three corporations.

The constitution of the Amalgamated Association describes the methods which shall be employed on the side of the workmen in securing the adoption of the general scales. If any local lodge of the union desires changes, it must, after a formal vote in their favor, submit them to the National Lodge, which must have them printed and furnished to every local lodge 6 weeks prior to the meeting of the annual convention, which takes place in May. The proposed changes must be discussed in each lodge, and the delegates to the national convention instructed. A wage committee of delegates is appointed by the president of the National Lodge to take up the proposals and discuss them before they are actually brought before the convention. The convention decides what demands it shall make from the manufacturers. In order to recommend a change in the basis of any part of the scale, a two-thirds vote of the delegates is necessary. Nominally the convention adopts a scale, although practically the terms are subject to modification by later conferences with the employers.

At the annual convention the president appoints a general conference committee, composed of 10 members, to meet manufacturers after the adjournment. Nine of these members represent the boiling department, and, in conference with the representatives of the Republic Iron and Steel Company (formerly with the Association of Bar Iron Manufacturers), establishes a scale for boiling iron (the process by which pig iron is transformed into wrought iron), and the allied processes of scrapping, busheling, muck mill rolling, and knobbling. A second division of the conference committee consists of 11 members from the bar, guide, plate, and structural departments, and from jobbing mills working pipe iron. This division, in connection also with the representatives of the Republic Iron and Steel Company, adopts scales for a considerable number of different products falling under the heads indicated and for others of an allied character. A third division of the committee consists of 9 members of the steel and jobbing mills, who confer with the members of the American Sheet Steel Company (formerly with the Association of Iron and Steel Sheet Manufacturers). Finally, there is a division composed of 9 representatives of the tin and black-plate mills and tinning houses, who confer with the representatives of the American Tin Plate Company. The president and secretary of the national lodge are members of each division.

Since each of the great corporations named is a combination of many separate establishments, each sends a number of representatives from its different plants to the national conference. As a matter of fact, however, it is not essential that there shall be an equal number of employers and employees at the conferences. Votes are not taken jointly, but the members of each side stand together and continue negotiations with the other side until an agreement is reached. In connection with each proposal which requires formal action, the representatives of the two sides go into separate rooms and, by vote among themselves, decide as to the position which shall be taken. If these separate votes fail to result in an agreement between the two sides, further negotiation in joint conference takes place.

In case one or more of the divisions of the conference committee above named fails to reach a settlement, the general conference committee meets and strives to adjust the matter. The conference committee and its divisions are not positively bound by the instructions of the national convention. They may modify them in order to reach an agreement. If, however, the representatives of the workmen in the conferences insist upon demands which the manufacturers will not concede, the matter has to be submitted to a referendum vote of all the local lodges of the Amalgamated Association. It requires two-thirds of all the members of the organization voting to insist upon the demands which have given rise to the disagreement. If the local lodges insist upon disagreement, all the members of the union working for plants covered by the system of general conference must cease work. As a matter of fact, there have been few instances in recent years of a general cessation of work on account of failure to reach a settlement, although in some cases negotiations have been greatly prolonged. The great dispute between the Amalgamated Association and the United States Steel Corporation in the summer of 1901, however, shows that the agreement system does not always result in industrial peace.

Frank recognition of the labor organization is obviously one of the prerequisites to its successful working. Of course the conditions in 1901, arising from the formation of the great combination in the iron and steel industry, were very peculiar. It will scarcely be appropriate in this place to express any opinion as to the merits of that dispute, which (at the present writing, August 15, 1901) is still unsettled. It may be suggested, however, that the outcome is scarcely likely to be a complete destruction of a system of negotiation and agreements which has proved so advantageous in the past.

In the case of rail mills and other classes of steel mills not covered by the general agreements above described, scales are adopted by conferences directly between the local union or unions affected and the individual employers. The local lodges must, according to the constitution of the Amalgamated Association, formally vote upon proposed changes in scales. The holding of meetings by members of the organization outside the lodge room, for the purpose of "agitating" class legislation, is prohibited. A two-thirds majority is required to propose changes in the scales. In each plant there is a mill committee, or two or more committees, representing different classes of work. These committees present the proposed changes in the scale to the officers of the company for adoption, and informal conferences for the discussion of the terms are held. If an agreement is not reached, the case is referred to the district executive committee of the union, which confers with the manufacturers. In case of ultimate failure to sign a scale before June 30, all departments of the establishment cease work at that time.

Mr. Nutt, who has for some years acted as adjuster in the bar-iron mills and has been active in the conferences of employers and employees, reports that he succeeded in persuading the Republic Iron and Steel Company to agree to arbitration in case of failure of conferences to agree. The proposition was rejected by the Amalgamated Association. But an agreement for calling in conciliators to aid in negotiations, pending which work should be continued, was adopted, as follows:

*Agreement, made in Pittsburg June 29, 1901, by and between the Republic Iron and Steel Company and the conference committee representing the Amalgamated Association.*

A yearly scale shall be presented to the Republic Iron and Steel Company not later than May 1, said scale to take effect July 1.

Failing in an agreement being reached by July 1, one conciliator shall be selected by the Republic Iron and Steel Company and one by the Amalgamated Association, and the two so selected shall select a third.

These three conciliators shall meet the representatives of the Republic Iron and Steel Company and the general officers and representatives of the Amalgamated Association, of which there shall be such number of employees of the Republic Iron and Steel Company as the employees of the Republic Iron and Steel Company in good standing of the Amalgamated Association bear to the whole number of members of the Amalgamated Association in good standing who are governed by this scale.

They will then try to effect an agreement as soon as possible. Mills to run pending negotiations.

It being understood that wages beginning July 1, 1901, be paid pending negotiations.

**3. Contents of joint agreements and sliding scales.**—The general joint agreements in the bar-iron, sheet-steel, and tin-plate branches of the iron and steel trade consist chiefly of scales of wages for different classes of work. They contain also, however, some regulations regarding the hours of labor and the methods of work. In particular, there are limitations in several cases upon the amount of work which shall be performed in a day. One provision, for example, reads as follows:

In order to insure uniformity of iron in boiling furnaces and avoid the increasing custom of running in strong for common iron, thus increasing the hours and work of the boiler, the limit of time for each heat shall be as follows: For a single furnace, 1 hour and 45 minutes, for a double furnace, 1 hour and 50 minutes, for Siemens furnace, 1 hour and 55 minutes, and for a double double furnace, 2 hours.

Since the amount of the charge of each furnace is also limited, the total production is quite definitely restricted. So, too, in the tin-plate scale, the limit of work for an 8-hour day is fixed for each class or gauge of plate, ranging from 13,500 pounds for Nos. 8 to 11 to 4,950 pounds for No. 34 and lighter.

The agreements also provide for modifications in the base rate of wages in case of special classes of articles. Thus, in the tin-plate scale the prices are based upon steel plates, with a provision for 13 per cent lower rates for iron plates and

for 20 per cent higher rates for changed iron and steel. It is also stipulated in many of the departments of work that the employing company shall pay all of the different classes of workmen required on a particular job. It has sometimes been the practice, for example, that the roller in a bar-iron mill would be expected to pay the man heating the iron. In the case of muck or puddle mills the existing agreement provides that the roller shall pay all labor for taking iron from the squeezer and delivering it straightened, except the labor of the bloom boy. On the other hand, the agreement covering the mills making a specialty of working pipe and skelp provides that one man's help shall be furnished by the employing company to the roller and heater.

*The sliding-scale system.*—The general agreements for the different classes of iron manufactures base the wages of workmen strictly upon the price of bar iron. The different classes of work covered are quite numerous. The broader divisions are named as follows in the joint agreement: Boiling, mucks or puddle mill, scrapping and busheling, busheling on sand bottom, knobbling, heating slabs and shingling, bar and 12-inch mills, mills working skelp, guide, 10-inch, hoop and cotton-tie mills, and plate and tank mills.

Of course, the basis of the sliding scale does not remain the same indefinitely. It is likely to be changed by each annual agreement. If the workmen feel that they have grown in power to make demands, or that they have not before secured a large enough share in the profits of industry, they will ask for a higher wage than before, on the basis of a given price for the product. Especially are changes made from time to time in the minimum below which wages are not to fall whatever the price.

The agreement of 1900-1901 provided that when the price of bar iron should be 1.4 cents per pound the rate for boiling a ton of 2,240 pounds should be \$5.00. The changes in rates as prices fall or advance are shown in the following table:

#### BOILING

Based on actual sales of bar iron, as per conference agreement		Boiling per ton (2,240 pounds)
1 cent bar iron . . . . .		\$4 75
1 1 cents bar iron . . . . .		4 75
1 2 cents bar iron . . . . .		4 75
1 3 cents bar iron . . . . .		4 87½
1 4 cents bar iron . . . . .		5 00
1 5 cents bar iron . . . . .		5 25
1 6 cents bar iron . . . . .		5 50
1 7 cents bar iron . . . . .		5 62½
1 8 cents bar iron . . . . .		5 75
1 9 cents bar iron . . . . .		5 87½
2 cents bar iron . . . . .		6 00

It will be observed that the rate of increase in wages is less rapid when prices are above 1.7 cents than when they are below that rate. It will also be observed that there is no provision for lowering wages if prices fall below 1.2 cents.

In several of the scales fixing the rates for other classes of work there is a minimum below which wages shall not fall. Thus, in the case of the agreement regarding wages in tin-plate mills the basing rates are fixed on the price of \$4 per box of 100 pounds of coke tin plates. As prices rise 10 cents per box (2½ per cent) wages increase 2 per cent, but it is stated in the agreement that the wage fixed on the basis of \$4 per box is the minimum for the year.

In the case of several classes of iron and steel manufacture, the wage scales become highly elaborate. Not only are the rates for three or four different classes of workmen prescribed, but there are many different sizes and kinds of articles manufactured for each of which the rates are fixed. All of these rates then rise and fall in proportion to prices. As an illustration of the complexity of these scales a part of the table for guide, 10-inch, hoop, and cotton-tie mills is inserted below (scale of 1900-1901):

#### GUIDE, 10-INCH, HOOP, AND COTTON-TIE MILLS

It is agreed that the base price at a one and four-tenths (1½) cent card rate based on *actual sales of bar iron*, as per conference agreement, with extras, shall be the straight one dollar and twenty-five cents (\$1 25) per ton for rolling, sixty-two and one half (62½) cents for heating, thirty-four and three-fourths (34¾) cents for roughing, and thirty-four and three-fourths (34¾) cents per ton for catching on guide, 10-inch, hoop, and cotton-tie mills, with two (2) per cent additional for each one-tenth (⅒) advance or decline on said card from one and four-tenths (1½) to two (2) cent card.

The rollers, heaters, roughers, and catchers shall each be paid by the company. It is understood, however, that this arrangement shall in no way detract from the authority of the roller in controlling all hands on mill, including hiring and discharging, and, as heretofore, the roller shall be held responsible for the work done.

The following figures to be advanced ten (10) per cent.

Sizes	Total	Roller	Heater	Rougher and catcher, each
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	\$8.35	\$4.08	\$2.04	\$1.14
$\frac{3}{4}$ .. .. .	6.71	3.28	1.61	.89
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	5.19	2.54	1.27	.69
$\frac{3}{4}$ .. .. .	4.52	2.21	1.10	.60
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	3.87	1.89	.94	.51
$\frac{3}{4}$ .. .. .	3.08	1.51	.75	.40
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	2.95	1.44	.72	.38
$\frac{3}{4}$ .. .. .	2.81	1.38	.69	.37
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	2.55	1.25	.62	.33
$\frac{3}{4}$ .. .. .	5.19	2.54	1.27	.69
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	4.66	2.28	1.14	.62
$\frac{3}{4}$ .. .. .	3.61	1.76	.88	.48
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	7.17	3.66	1.83	.99
$\frac{3}{4}$ .. .. .	6.73			
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	8.26			
$\frac{3}{4}$ .. .. .	9.63			
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	11.00			
$\frac{3}{4}$ .. .. .	3.08	1.51	.75	.40
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	2.55	1.25	.62	.33
$\frac{3}{4}$ .. .. .	7.83	3.83	1.91	.94
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	4.66	2.28	1.14	.62
$\frac{3}{4}$ .. .. .	3.61	1.76	.88	.48
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	3.08	1.51	.75	.40
$\frac{3}{4}$ .. .. .	2.55	1.25	.62	.33
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	8.36	4.09	2.04	1.14
$\frac{3}{4}$ .. .. .	7.83	3.83	1.91	1.04
$\frac{1}{2}$ and $\frac{3}{4}$ .. .. .	3.61	1.76	.88	.48
$\frac{3}{4}$ .. .. .	3.08	1.51	.75	.40

The rates of progression in wages as compared with the progression in prices differ considerably on different classes of articles, depending, of course, largely on the proportion which the labor cost of the articles bears to the entire cost. The more common provision seems to be that wages shall advance by 2 per cent steps for increases of from 3 to 5 per cent in prices. Of course an advance in prices may be accompanied by so great an advance in the cost of raw materials that the workmen gain more than the employer by a rise in prices, while in other cases the employer may get more advantage than the workmen.

In the case of steel-rail mills and various other classes of mills not covered by the uniform scale, the local agreements establish sliding scales based either upon the general scales above described, with allowances for local conditions and peculiarities, or based upon the prices of steel rails and other articles as published in some standard trade journal. The methods are very similar to those already outlined.

It is customary in mills where the sliding-scale system prevails to make changes of wages once in 2 months on the basis of prices during the preceding 2 months. In the case of the mills covered by the general scales all prices are ascertained by means of sworn reports by selected manufacturers, which are submitted in confidence to representatives of both employers and employees. The methods of ascertaining prices and of settling differences as to the basis of wages are well described by Mr. James H. Nutt in the Bulletin of the Department of Labor (vol. 5, p. 549). Mr. Nutt has been employed since 1892 as an adjuster, chiefly for the bar-iron mills. Since this account was written these mills have mostly entered the Republic Iron Company. Mr. Nutt says in part:

"The concerns for which I have worked were all independent until recently, when they formed what is known as the 'Labor Bureau Association.' The mills contained therein are all situated west of Pittsburg, Pa., and include nearly all the bar-iron manufacturers doing business west and south of Pittsburg. These mills all negotiate with the Amalgamated Association of Iron, Steel, and Tin Workers.

"The method by which differences between the parties are settled and adjusted may be described as follows: In June of each year the manufacturers meet in conference with a committee representing the workmen and make an agreement for the year beginning on the 1st day of July following, concerning the scale of wages, etc. The duties of the adjuster require him to be present and assist in the making

of the scale of wages, which is based upon the sales and shipments of base sizes of bar iron. . . .

"At the end of each bimonthly period the manufacturers make sworn statements to the adjuster and, together with a committee of three, one of whom must be an officer of the National Lodge of the Amalgamated Association of Iron, Steel, and Tin Workers, he goes over these sworn statements, and, according to what the price at which the material was sold is found to be, it is decided whether or not there shall be an advance or reduction in the wages of the workmen.

"Under the agreement made in the annual June conference, if for any reason the committee of three are not satisfied with the sworn reports, they have the right to examine the books and accounts from which these reports are made. In case of any disagreement in any of the mills as to the construction of the agreement made in the annual June conference, the matter is referred to the adjuster by the manufacturers, and it then becomes his duty to visit the works and endeavor to make a settlement with the parties interested. . . .

"In addition to the question of the wage scale, the enforcement of rules and cases where workmen are discharged form the major part of the difference adjusted. . . .

"During the time that this system of adjustment of difference has been in operation—since 1892—in but one of the many differences which have arisen has there been a failure to arrive at an adjustment, and there has been but one strike through a disagreement where the negotiations have been conducted by the adjuster. . . .

"Both the employers and the employees seem to be very well satisfied with this method of adjustment of differences. This is shown on the part of the employees by the fact that the officers of the union have often notified the adjuster that they have been called to a certain mill before he has been notified by the firm, and by the further fact that in certain instances the workmen have left it to his decision, in case of disputes, thereby putting him on his honor to deal fairly with both sides.

"Experience in the methods employed to adjust disputes between the iron workers and the manufacturers has brought me to the conclusion that this system, as here described, is by no means perfect, but is at the same time a great improvement upon the methods adopted by a good many labor organizations. When once the scale of wages as agreed on is signed it is quite certain that the mills will run for the year without interruption, so far as labor difficulties are concerned, for if any difficulty arises the rules of the Amalgamated Association provide that work shall be continued pending an investigation by both parties to the controversy, and for this reason most of the disputes lose that bitterness which is caused by the sudden stoppage of the works. Such a stoppage seriously interferes with the plans of the employers, and always causes more or less serious financial loss to both parties to the controversy."

4. *Opinions of employers and employees as to the sliding-scale system.*—There has usually seemed to be very general satisfaction with the sliding-scale system, both on the part of employers and employees in the iron and steel trade,<sup>1</sup> although employers often object to being forced to deal with the union at all. It is pointed out by workmen especially that the absence of any fixed agreement regarding the conditions of labor, leaving the determination of wages and other conditions to arbitrary action by the employer, is productive of industrial warfare. On the other hand, if wages are fixed for a given period of time the workmen can not share in the advantage of increased prosperity during that period. By means of the sliding-scale system an arrangement is established which prevents the question of changes in wages from being brought up for discussion except at fixed times and in a systematic manner, while at the same time wages adapt themselves to changes in conditions. Since the profits of the manufacturer increase more rapidly with rising prices than the wages of workmen, there is little temptation to deceive as to the actual prices received and little disposition to object to the advantage gained by the workmen. On the other hand, the representatives of the workmen insist that in general a minimum should be established, beneath which wages shall not fall, whatever be the prices. It is urged that living wages must be paid under any circumstances, and that prices must, if possible, be forced to a point sufficient to pay such wages. If this is impractical, the manufacturer is in a better position to do without profits, at least for a time, than the workman to do without adequate wages.

<sup>1</sup> See especially opinions of Mr. Garland, former president of the Amalgamated Association, and of Mr. Schaffer, its present president, Reports of the Industrial Commission, vol. vii, pp. 88-97, 383-387.

The sliding-scale system possesses, of course, also the same general advantages in promoting industrial peace which belong to other systems of conciliation by which joint agreements as to the conditions of wages are reached. Indeed, the familiarity with the conditions of production which comes to the representatives of the workmen through the inspection of the accounts of manufacturers to ascertain the proper basis of prices on which to determine wages under the sliding-scale system, tends especially to promote intelligent negotiations as to the general wage scale.

**5 Settlement of minor disputes.**—The general scales of wages adopted by the conferences of manufacturers with the Amalgamated Association provide for the settlement of local disputes, not by arbitration, but by negotiations between officers of the union and the representatives of the employing company. The same is true in general regarding agreements entered into by individual companies and the Amalgamated Association. All these agreements provide that disputes shall be adjusted in accordance with the rules of the constitution of the Amalgamated Association. These rules provide that each sub-branch shall have a mill committee consisting of 3 members from each department of work represented in the lodge. This committee takes up any matter of dispute, such as is likely to arise especially regarding details, with the employing company. In case the committee for any department of work fails to adjust the difficulty, a joint meeting of all the lodges directly affected is to be held to consider the grievance. If the meeting determines to insist upon the position taken, it must notify the vice-president of the Amalgamated Association for the particular district in which the mill is located. The vice-president investigates the matter and negotiates with the officers of the company to secure a settlement. In case of a failure to effect an adjustment a strike ensues. There is no general provision for referring the dispute either to outside arbitrators or to a joint committee of employers and employees not directly concerned.

**6. System among the tin workers.** The workers in the tin-plate industry, especially those employed in the tinning houses, have recently formed a national union. They have naturally followed the Amalgamated Association in methods of organization and of dealing with employers. The constitution of the Tin Workers provides that wherever practicable scales of prices shall be established for each branch of the trade in the district, subject to the control of the executive committee of the district or of the convention. The recent policy of the organization has been, so far as possible, to govern the entire field by uniform scales of wages. The constitution provides further that when the employees of any department of a factory desire a revision of the scale they must submit the proposed changes to the local lodge. The lodge shall take a written ballot on the question. No lodge or member shall countenance the holding of meetings outside of the lodge rooms for the purpose of agitating for the advantage of particular classes. The alterations approved by the local lodge must be sent to the secretary-treasurer of the international lodge. They must all be printed and sent to the subordinate lodges, who shall direct their delegates to the international convention how to act upon them.

Prior to the meeting of the convention the president appoints a wage committee from among the delegates. This committee must be furnished by the local lodges with a detailed statement concerning the condition of their mills, the amount of work done, the feelings of the members regarding wages, etc. The wage committee draws up a report, which is considered in secret session of the convention. Any change of scale requires the vote of two-thirds of the delegates.

The attempt is made to secure a conference with the representatives of the employers immediately after the convention of the Tin Workers, for the settlement of the scale. The constitution formerly provided if no agreement should be reached in this conference the matters in dispute should be submitted to the sub-lodges for action, proper voting sheets being prepared for that purpose. The vote of the individual members should be returned within 14 days, and it required a two-thirds vote of the members voting to insist upon the demands that have given rise to the disagreement. If there were a two-thirds vote further negotiations must be begun, and if no settlement were reached there must be a strike.

In practice these rules were somewhat modified by the attitude of the employers. A conference was held with the representatives of the American Tin Plate Company in 1899. The company recognized the organization and signed the scale, but the terms contained were not as favorable as desired and there was some criticism upon the officers accepting them. The officers, however, declared that the organization was not strong enough to push further claims. In 1900 the constitution was amended so as to give the conference committee practically unlimited power.

## 346 THE INDUSTRIAL COMMISSION;—COLLECTIVE BARGAINING.

The actual procedure in the adoption of the scales of 1901 is described by the secretary of the Tin Plate Workers as follows:

"This year our conference committee was made up as follows: A general conference committee composed of 10 members, 2 from each of the 4 districts, and the president and secretary-treasurer. This committee met the American Tin Plate Company only. A subconference committee made up of 5 members, 2 of whom were the president and secretary-treasurer, the other 3 being different individuals from those on the general committee. This committee conferred with the independent firms, i. e., independent of the American Tin Plate Company. However, before settling with the American Tin Plate Company this year, after having been in session 3½ days, the subconference committee was called and joined with the general committee for a joint consultation. This subcommittee did not meet with the general committee in its session with the company."<sup>1</sup>

The following are the main provisions of the agreement with the American Tin Plate Company covering 1901-1902. It will be noted that provision is made for negotiation between committees of employers and employees as regards minor disputes without reference to arbitration or for a formal vote by a joint board:

### SCALE OF PRICES, 1901-1902

We, the American Tin Plate Company, parties of the first part, and the Tin Plate Workers' International Protective Association of America, parties of the second part, do hereby agree that in all mills recognized by the parties of the first part as now organized, the following scale of prices shall govern the wages of employees, commencing July 16th, 1901, and ending July 15th, 1902.

SECTION 1. Timmers shall receive on humpo stacks  $5\frac{1}{2}$  cents per box and risers  $3\frac{1}{2}$  cents per box for all plates occupying over 36 inches of the rolls. For all plates occupying 36 inches and less of the rolls, timmers shall receive 6½ cents per box and risers 4½ cents per box. [Numerous details as to special classes of work omitted.]

\* \* \* \* \*

SEC. 12. That all rates shall be advanced 5 per cent for the following employees:

Plate wheelers earning less than \$2.00 per day  
Assorters earning less than \$1.25 per day  
Boxers, shearmen, and picking hands earning less than \$1.75 per day  
Scrapers, gatherers, blammers, floor sweepers, janitors, tin-house greasemen, palm oil, metal, storehouse, and lime men, and all truckers in and around tin house and assorting room earning less than \$1.45 per day.  
Reckoners earning \$1.15 per day and less.

It being understood that there shall be no advances on 1900-1901 scale rates for the following: Crane-men, bosh truckers, tin weighmen, cold-soft and annealing department employees.

That men working on scud furnaces at American and Anderson works shall be paid \$1.52 per day.

SEC. 13. That at the option of the American Tin Plate Company a box of tonnage rate not in excess of the adjusted day rate may be fixed to govern all operatives named in clause 12.

This box or tonnage rate to be established locally by the district manager representing the American Tin Plate Company, and the national president and district vice president representing the Tin Plate Workers' International Protective Association.

SEC. 14. It is further agreed that no timmer shall be required to tin plates on Saturday later than 12 noon or earlier than 5 o'clock on Monday morning.

\* \* \* \* \*

SEC. 16. The American Tin Plate Company shall, in such works as it deems expedient, arrange that eight hours shall constitute a day's work on all tinning machines, it being agreed, however, that where the eight-hour system at present obtains it shall be continued, and that where two turns of ten hours each are worked the turns shall not be increased.

Where two turns exceeding ten hours are worked the day turn shall be reduced to ten hours and the night turn to eleven hours, and the turns shall alternate.

SEC. 17. The rates for openers shall be the same as those in scale of 1900-1901, it being agreed that the parties of the first part shall handle all iron, both before and after being opened in the Indiana and Muskegon mills.

SEC. 18. 2,240 pounds shall constitute a ton.

SEC. 19. That in case of disagreement between the workmen and the foreman the appeal shall be to the mill superintendent. In case of no agreement, the workmen shall appeal to their committee, who shall submit the matter to the local management. In case no local settlement can be effected, the question shall be referred to the district executive committee of the Tin Workers' Union, who shall confer with the district manager. Should no settlement be reached and a strike be deemed necessary by the party of the second part, before such strike is declared the question shall be finally submitted by the Tin Workers' national executive committee to the manufacturers' executive committee, and in case of disagreement ten days' notice of intention to strike shall be given, and work shall be continued in the interim, it being distinctly agreed that no strike shall occur unless aforesaid mode of procedure be followed. Should a strike occur, without such procedure having been followed, this entire agreement shall be considered null and void.

SEC. 20. That foremen and assistant foremen of all departments governed by this contract, including head annealers, picklers, and cold rollers, shall not be eligible as members of the Tin Plate Workers' International Protective Association of America.

SEC. 21. That the parties of the second part shall appoint a mill committee on each turn, who, in connection with the superintendent or manager, shall investigate all complaints and will be allowed in all departments of the works for such purpose.

### FOOTNOTES.

(a) That in all mills where timmers do not run their own patches and same are collected and run on certain stacks the rates shall be 27½ cents per hour for timmers and 20 cents per hour for risers, the management of the works of the American Tin Plate Company reserving the option of requiring the timmers and risers to work all of their own patches on their own tinning machines at the box rate as fixed and agreed in the scale for year commencing July 16th, 1901.

<sup>1</sup> Letter of July 9, 1901.

(b) In cases where the employees under the jurisdiction of this association are required to stay in the mill longer than two and one-half hours on account of breakage or shortage of material they shall be paid 16½ cents per hour after that time.

(c) Tinner, rehippers, and risers shall be paid for all primes and wasters.

THE AMERICAN TIN PLATE COMPANY,  
By WARNER ARMS, *Second Vice President*

TIN PLATE WORKERS' INTERNATIONAL PROTECTIVE ASSOCIATION,  
By GEORGE POWELL, *President*

## APPENDIX

The following are the verbal agreements entered into by and between the representatives of the American Tin Plate Company and the representatives of the Tin Plate Workers' International Protective Association of America.

It is understood by both parties to this contract that the advances named in clause 12 are to apply to employees only who are members of the Tin Plate Workers' International Protective Association.

## III. STOVE FOUNDRY TRADE.

One of the most effective systems of collective bargaining and arbitration to be found in any trade is that between the Iron Molders' Union and the Stove Founders' National Defense Association, which has been in existence since 1891.<sup>1</sup> According to the testimony of witnesses representing both the employers and the employees, it appears that prior to the adoption of the system of conciliation the relations between the iron molders and the stove manufacturers were usually very hostile. Strikes were numerous, and the employers declare that the Iron Molders' Union was arbitrary and extreme. Finally, in 1886, after a great strike, involving 8 or 9 large stove foundries in Troy, N. Y., the manufacturers, as a measure of self-defense, organized the Stove Founders' National Defense Association. This organization made provision for the mutual protection of manufacturers in case of strikes by the levying of assessments, the performance of work by other establishments for factories in which strikes were in force, and by various other methods. The organization is one of the strongest ever established among manufacturers in the United States for mutual aid in dealings with labor. For several years after the organization of the new association disputes with the Iron Molders' Union continued, but the manufacturers were much more commonly successful than before. A strike at St. Louis shortly after the formation of the Defense Association led ultimately to the shutting down of all the factories connected with that association throughout the country, and to the defeat of the strikers. In various other strikes the manufacturers were successful, and some made then shops nonunion. It was about this time that one of the manufacturers, who had risen from the ranks and had formerly been a prominent member of the Iron Molders' Union, proposed a system of joint agreements and arbitration. This led to a conference between the representatives of the organizations of employers and employees, which met in 1891, and which adopted an agreement declaring in favor of the principle of arbitration. The clauses of this agreement relating to the settlement of disputes have remained unchanged to the present time, but later conferences have added further regulations, especially with regard to the specific conditions of labor.

The agreement, which is printed in full below, provides for conciliatory methods of settling disputes locally, with appeal to a central board in case of failure to agree. In addition to the settling of disputes, the system provides for collective bargaining and joint annual agreements fixing wage scales for the entire country.

Representatives both of the employers and of the employees lay great stress upon the importance of the provision in the joint agreement of 1891, which requires the parties to any dispute themselves to attempt to settle it by conciliatory methods, and that neither party shall discontinue operations pending investigation and adjudication. It is held that the spirit of mutual toleration which is thus developed prevents friction, and usually renders appeal to the higher authorities unnecessary. If, however, the parties can not reach an agreement, they may refer the dispute to the respective presidents of the Iron Molders' Union and the Stove Founders' National Defense Association, who shall themselves, or by deputies, give it due consideration. If these two can not agree, they may summon the conference committee, which consists of 3 members elected by each organization annually. The decision of the presidents by agreement or of the conference committee by a majority vote is binding upon each party for 12 months.

No provision is made for referring matters as to which the representatives of the two organizations can not agree to any outside authority. The officers of both

<sup>1</sup> See testimony of officers of these two organizations in reports of the Industrial Commission, vol. vii, p. 866, and vol. xiv, p. —.

organizations insist that it is an essential feature of the system that the settlement of disputes be intrusted to those who are expert in the trade and who can decide it equitably. As a matter of fact, very nearly all disputes which are not settled locally are satisfactorily disposed of by the presidents of the two organizations or their representatives without summoning the conference committee. Only once since 1891 has the conference committee been called upon to act on a local dispute. There is a strong motive to bring about early settlement without appeal to the committee since it is known that if the committee fails to act by majority vote a fight must ensue.

This system of arbitration applies not only to shops where exclusively union men are employed, but also to shops employing even less than a majority of union men. Of course, while in such cases the action of the officers in reaching an agreement is binding only upon the members of the Iron Molders' Union, the provisions of the agreement apply equally to union or nonunion employees.

There is no distinct provision in the existing permanent articles of agreement between the stove founders and the iron molders requiring the holding of annual conferences to determine the conditions of labor, but in practice such conferences are held by the joint committee already described—perhaps in conjunction with a few other members acting without formal authority in advisory capacity—and general wage scales for the entire year are adopted each year. Indeed, one clause of the permanent agreement adopted in 1892 provides that "the general rate of molders' wages should be established for each year without change." The payment of wages is largely based on the piecework system. The establishment of uniform wages in all the different establishments is considered a great advantage to employers in equalizing the conditions of competition, as well as an advantage to the workmen.

Great satisfaction is expressed by officers of the organizations, both of the employers and of the employees, with the working of the system of joint agreements and conciliation. It is declared on both sides that strikes have been entirely eliminated since 1891, and that there has been a growing spirit of friendliness. Emphasis is laid on the fact that mutual respect is enforced by strong organization on each side, and that in the absence of such organization it would be impracticable to enforce joint agreements and wage scales or the decisions of arbitrators. It is noteworthy that during the depression from 1893 to 1897, when wages were cut in many other trades, they remained unchanged in the stove-foundry trade. In 1899 the iron molders asked for an advance of 15 per cent and succeeded in obtaining an advance of 10 per cent by the joint agreement of that year. In 1900 another demand for an advance of 15 per cent was compromised by an advance of 5 per cent.

The present permanent articles of agreement in the stove foundry trade are as follows:

AGREEMENTS AT PRESENT EXISTING BETWEEN THE STOVE FOUNDERS' NATIONAL DEFENSE ASSOCIATION AND THE IRON MOLDERS' UNION OF NORTH AMERICA

*Conference, 1891*.—Whereas there has heretofore existed a sentiment that the members of the Stove Founders' National Defense Association and the members of the Iron Molders' Union of North America were necessarily enemies, and in consequence a mutual dislike and distrust of each other and of their respective organizations has arisen, provoking and stimulating strife and ill-will, resulting in severe pecuniary loss to both parties, now this conference is held for the purpose of cultivating a more intimate knowledge of each other's persons, methods, aims, and objects, believing that thereby friendly regard and respect may be engendered, and such agreements reached as will dispel all inimical sentiments, prevent further strife, and promote the material and moral interests of all parties concerned.

*Clause 1, conference 1891—Resolved*, That this meeting adopt the principle of arbitration in the settlement of any dispute between the members of the I. M. U. of N. A. and the members of the S. F. N. D. A.

*Clause 2, conference 1891*.—That a conference committee be formed, consisting of six members, three of whom shall be stove molders appointed by the Iron Molders' Union of North America and three persons appointed by the S. F. N. D. A., all to hold their offices from May 1 to April 30 of each year.

*Clause 3, conference 1891*.—Whenever there is a dispute between a member of the S. F. N. D. A. and the molders in his employ (when a majority of the latter are members of the I. M. U.), and it can not be settled amicably between them, it shall be referred to the presidents of the two associations before named, who shall themselves or by delegates give it due consideration. If they can not decide it satisfactorily to themselves, they may, by mutual agreement, summon the conference committee, to whom the dispute shall be referred, and whose decision by a majority vote shall be final and binding upon each party for the term of twelve months.

Pending adjudication by the presidents and conference committee, neither party to the dispute shall discontinue operations, but shall proceed with business in the ordinary manner. In case of a vacancy in the committee of conference it shall be filled by the association originally nominating. No vote shall be taken except by a full committee or by an even number of each party.

*Clause 4, conference 1892*.—Apprentices should be given every opportunity to learn all the details in the trade thoroughly, and should be required to serve four years. Any apprentice leaving his employer before the termination of his apprenticeship should not be permitted to work in any foundry under the jurisdiction of the I. M. U. of N. A., but should be required to return to his employer. An apprentice should not be admitted to membership in the I. M. U. of N. A. until he has served his apprenticeship and is competent to command the average wages. Each apprentice in the last year of his apprenticeship should be given a floor between two journeymen molders, and they, with the foreman, should pay special attention to his mechanical education in all classes of work.

*Clause 5, conference 1892*—The general rate of moulders' wages should be established for each year without change.

*Clause 6, conference 1892*—When the members of the defense association shall desire a general reduction in the rate of wages or the Iron Moulders' Union advance, they shall each give the other notice at least thirty days before the end of each year, which shall commence on the first day of April. If no such notice be given the rate of wages current during the year shall be the rate in force for the succeeding year.

*Clause 7, conference 1892*—The present established price of work in any shop should be the basis for the determination of the price of new work of similar character and grade.

*Clause 8, conference 1892*—Any existing inequality in present prices of moulding in a foundry or between two or more foundries should be adjusted as soon as practicable upon the basis set forth in the foregoing paragraph, by mutual agreement or by the decision of the adjustment committee provided by the conference of March, 1891.

*Clause 9, conference 1896*—Firms composing the membership of the S. F. N. D. A. should furnish in their respective foundries a book containing the piece prices for moulding, the same to be placed in the hands of a responsible person.

*Clause 10, conference 1896*—New work should always be priced within a reasonable time and under ordinary circumstances two weeks is considered a reasonable time and such prices, when decided upon, should be paid from the date the work was put in the sand.

*Clause 11, conference 1896*—The members of the S. F. N. D. A. shall furnish to their moulders shovels, riddles, runners, brushes, facing bags, and strike off, provided however that they charge actual cost of tools so furnished, and collect for the same, adopting some method of identification, and when a moulder abandons the shop, or requires a new tool in place of one so furnished, he shall, upon the return of the old tool, be allowed the full price charged, without deducting for ordinary wear, any damage beyond ordinary wear to be deducted from amount to be refunded.

*Clause 12, conference 1896*—When there is a bad heat, causing dull iron, the foreman's attention shall be called to it, and payment shall be made for work that is lost from this cause only when poured by foreman's order, or person next in authority.

If sufficient iron is not furnished the moulder to pour off his work, and such work has to remain over, he shall be paid for such work remaining over at one half the regular price.

These rules shall apply excepting in case of break down of machinery or other unavoidable accident, when no allowance shall be made.

*Clause 13, conference 1896*—Whenever a difficulty arises between a member of the S. F. N. D. A. (whose foundry does not come under the provisions of clause 3, 1891 conference) and the moulders employed by him, and said difficulty can not be amicably settled between the member and his employees, it shall be submitted for adjudication to the presidents of the two organizations, or their representatives, without prejudice to the employees presenting and giving a case.

*Clause 14, conference 1898*—In pricing moulding on new stoves when there are no comparative stoves made in the shop, the prices shall be based upon competitive stoves made in the district, thorough comparison and proper consideration being given to the merits of the work according to labor involved.

#### IV. FOUNDRY TRADE.

The system of arbitration or conciliation established by the Stove Founders' National Defense Association and the Iron Molders' Union has become the basis for the system between the National Founders' Association and the Iron Molders' Union.

**1. The National Founders' Association.**—The National Founders' Association is composed of employers in foundries of various classes, exclusive of stove foundries. The organization dates from 1898. It has followed in a general way the plan of the Stove Founders' National Defense Association. Probably in no other trades have organizations of employers established such vigorous and definite methods for mutual assistance in dealings with organized labor as in these two. The system, therefore, merits somewhat detailed description.

The National Founders' Association admits to membership any person, firm, or corporation operating a foundry where castings of iron or other metals are made. Each member is entitled to one vote, while those employing more than a certain number of men are entitled to additional votes. The organization covers the entire country, which for its purposes is divided into eight districts. In each district the chief executive power falls to a committee of 5 members, elected by the national association at its convention from names suggested by the members of each district. The chairman and vice-chairman of each of these district committees, together with the president, vice-president, and treasurer of the national organization, constitute a central administrative council.

The fact that the main purpose of this organization is to protect its members in dealings with labor is evidenced by the statement of objects in the constitution as follows:

*First*—The adoption of a uniform basis for just and equitable dealings between members and their employees, whereby the interests of both will be properly protected.

*Second*—The investigation and adjustment, by the proper officers of the association, of any question arising between members and their employees.

The nature of the organization is further shown by the contents of the obligation into which members are required to enter, which is as follows:

All members of this association shall make, execute, and acknowledge in writing an agreement, or obligation, in words and manner following, to wit:

"We, the undersigned, being foundry operators, do hereby covenant and agree to and with each other, and every person composing the membership of the National Founders' Association, as follows:

"*First*.—In consideration of fair dealing being a cardinal principle of this association, we pledge

ourselves to protect any of our fellow-members who may require our support against any unjust demands of labor organizations, and to endeavor to settle all disputes amicably.

"*Second*—We bind ourselves to obey the constitution and by-laws, and all proper rules made in conformity with the same, provided they do not conflict with the laws of the country, State, or province in which we do business."

No person may withdraw from membership unless after four weeks' notice and payment of all dues, nor may any member resign during the existence of a strike or pending the settlement of one between any member and his employees.

The by-laws provide for the collection of assessments and the establishment of a reserve fund as a means of conducting labor disputes effectively. Each member, aside from the annual dues of \$50, is required to pay 10 cents per month for each molder employed by him. Contributions to the fund may be suspended by action of the association for a definite time. The administrative council may levy additional assessments when necessary, and has full power to act in such manner as effectually to fulfill the objects of the association.

In case of a dispute between any member of the association and his workmen, the district committee is summoned and negotiates with the employees. In practice, especially in view of the joint arbitration agreement hereafter described, this negotiation amounts to conciliation of a more or less formal character, at least in so far as the workmen are members of the Iron Molders' Union, between the employers' committee and that of the union. In case, however, of a failure to reach a settlement, whether on the part of the district committee or of the national conference committee hereafter described, the employers' organization takes vigorous measures to assist the member in the conduct of his dispute. The district committee may select either of the three following methods:

1. Procure men who will make such work as is required in the shop of the member.
  2. Afford him compensation for loss of production.
  3. Make such work as he may require, or take other action desirable.
- The by-laws also provide for combating boycotts and for prosecuting the leaders of mobs or other workmen who are guilty of lawless actions. The provisions on this subject in full follow:

#### ARTICLE IX

SECTION 1. If the district committee determine to protect the attacked member by procuring for him men to work in his shop, they shall immediately inform the president, secretary, and administrative council.

The other members of the association shall be required to supply such member and keep him supplied, until the district committee shall declare the trouble ended, with competent workmen to the extent of seventy per cent of the maximum number he employed, according to his last report. The proportion to be supplied by each member shall be determined by the president and secretary upon the ratio that the number employed by him bears to the total number employed by the whole membership of the association. If after five days from the date of notification any member shall not have supplied his quota, he shall then be assessed and shall pay into the reserve fund at a rate to be determined by the administrative council (but which shall not exceed two dollars per day) for each man not supplied until he shall have filled his quota. Should the number of men required be less than one man for each of the members of this association, or if it be impossible to otherwise formulate an equitable requirement, the president and secretary shall group together in a fair and reasonable manner certain members and require them to supply the man or men, in default of which they shall severally pay their proportionate assessments for man or men not furnished.

SECTION 2. If the other members of the association shall not supply the member whose men have struck with competent workmen to the extent of seventy per cent of the maximum number he employed, according to his last report, the association shall compensate such member, and the administrative council shall determine the amount of the compensation which shall be paid to the member out of the reserve fund of the association. Such compensation shall in no case exceed the sum of two dollars (\$2.00) per man per day for every man not furnished him after the expiration of seven days from the date of the committee's decision. Such compensation shall terminate or be varied at the discretion of the administrative council.

SECTION 3. The administrative council shall have power to exempt a member sustaining a strike or recovering from its effects from the operation of section 1 of this by-law.

#### ARTICLE X

SECTION 1. If the district committee determine to protect a member by compensating him for the loss of production, instead of having his goods made or men supplied him, the administrative council shall determine the amount of such compensation to be paid out of the reserve fund of the association.

SECTION 2. Such compensation shall in no case exceed \$2.00 per man per day to the extent of seventy per cent of the maximum number he employed, according to his last quarterly report. Compensation shall commence seven days from the date of the committee's decision and terminate or be varied at the discretion of the administrative council.

#### ARTICLE XI

SECTION 1. During the existence of a boycott against the product of any member of this association, none of the workmen originating the trouble from which the boycott proceeded shall be countenanced or encouraged by any other member until such boycott shall have been removed.

## ARTICLE XIII

SECTION 1. All expenses for police or other protection of the property of any member threatened with injury or destruction by combinations of strikers and their sympathizers shall be paid by the association, provided the district committee and administrative council shall have approved of such protective measures.

SECTION 2. It shall be the duty of the district committee, subject to the approval of the administrative council, to authorize, order, and conduct the prosecution of the leaders of mobs or persons threatening or doing injury to the property of the members, also those instrumental in establishing so-called boycotts against their production, and the expenses of such prosecution shall be paid by the association out of the reserve fund.

**2. The national arbitration system.**—Early in 1899 the National Founders' Association and the Iron Molders' Union held a joint conference with a view to establishing a peaceful method for the settlement of disputes. The system adopted was very similar to that in the stove foundry trade, providing that, if reasonable efforts by the parties to a dispute to reach an adjustment should fail, it should be referred to a committee consisting of the presidents of the respective national organizations and two other representatives of each association. The committee can act by a majority vote. There is no arrangement for calling in an impartial umpire. This agreement in full follows.

## NEW YORK AGREEMENT

[In force and ruling between the Iron Molders' Union of North America and National Founders' Association.]

Whereas the past experience of the members of the National Founders' Association and the Iron Molders' Union of North America justifies them in the opinion that any arrangement entered into that will conduce to the greater harmony of their relations as employers and employees will be to their mutual advantage. Therefore be it

*Resolved*, That this committee of conference endorse the principle of arbitration in the settlement of trade disputes and recommend the same for adoption by the members of the National Founders' Association and the Iron Molders' Union of North America on the following lines:

That in the event of a dispute arising between members of the respective organizations, a reasonable effort shall be made by the parties directly at interest to effect a satisfactory adjustment of the difficulty, failing to do which, either party shall have the right to ask its reference to a committee of arbitration, which shall consist of the presidents of the National Founders' Ass'n and the Iron Molders' Union of North America, or their representatives, and two other representatives from each as appointed by the respective presidents.

The finding of this committee of arbitration, by a majority vote, shall be considered final in so far as the future action of the respective organizations is concerned.

Pending adjudication by the committee on arbitration, there shall be no cessation of work at the instance of either party to the dispute.

The committee of arbitration shall meet within two weeks after reference of the dispute to them.

This agreement contains no provision regarding collective bargaining and the adoption of national scales of wages. There is, however, no restriction upon the nature of the disputes which may be settled by the conference committees. Not merely minor matters of interpretation may come up, but also questions as to wages and the general labor contract. It follows that there is likely to be a tendency toward the establishment of uniform conditions of labor, differences as to local conditions being referred from time to time to the central authority, which will act in view of conditions throughout the entire country. As indicated below, moreover, there is a growing disposition to favor the establishment of formal national scales of wages.

**3. Working of the arbitration system.**—It appears that the system of conciliation for the settlement of disputes in the foundry trade has not, on the whole, worked as satisfactorily as in the stove foundry trade. The workmen hold that some of the members of the National Founders' Association are less favorably disposed toward organized labor, and less willing to establish a fair uniform basis of competition among themselves, than in the case of members of the Stove Founders' National Defense Association. Nevertheless, the president of the National Founders' Association declares that "innumerable differences have been settled, always by virtue of conciliation. There has not been a single case where an umpire has been called in." The last sentence implies that a disposition to call in an umpire might conceivably appear, although there is no provision in the joint agreement for an umpire. This officer says further that the joint board of conciliation, however, has often failed to settle differences. He attributes this fact largely to the great diversity in the conditions of the general foundry trade, as distinguished from the simplicity and uniformity of conditions in the stove industry. He also holds that the fundamental agreement is somewhat crude, although its work is growing more and more potent. "It is confidently believed that after two or three years more, the general features of successful conciliation will be worked out, and all conflict on either side become a thing of the past."<sup>1</sup>

<sup>1</sup> Letter from H. W. Hoyt, president N. F. A., June 15, 1901.

The most serious dispute which has arisen since the joint agreement in the foundry trade was established was that in the foundries of Cleveland and Lorain, which lasted from July 2, 1900, to February 15, 1901.

The ostensible matter of dispute was a difference of 10 cents a day in wages. There were, however, underlying causes which were more serious. The editor of the *Iron Molders' Journal* said, writing after the settlement of the dispute:

Our national executive board reluctantly concluded that before any substantial good could come from the agreement between the Molders' Union and the Founders' Association to arbitrate the differences of their members a conflict was inevitable. It often so happens that before mutual respect can be established, a fight must be undertaken. That thought influenced the executive board to grant the molders of Cleveland the support of the organization in upholding their demand for a continuance of the 10 cents per day advance.

At the Detroit conference of 1900, between the National Founders' Association and the Iron Molders' Union, the members of the employers' organization had submitted a series of resolutions, which the representatives of the union had refused to accept. These resolutions especially insisted upon the right of the employer to employ nonunion men, to operate machines and his plant generally as he should see fit, and to elect between piecework and time-work as a basis for the payment of wages. These demands in full were as follows:

That inasmuch as the individual molder's capital is represented principally by his labor, we recognize his right and privilege to work for whom and where he pleases, and the justice of his being a party to the agreement determining what compensation shall be paid him for such capital or services, and that in any and every agreement relating to the question of compensation the molder shall be accorded the right of deciding, in connection with the employer, what shall be the amount of such compensation, that in his failure to secure what he believes to be just compensation, the question of such compensation shall be submitted to a committee of arbitration, composed of an equal number of representatives of the Iron Molders' Union of North America and the National Founders' Association, and the finding of such committee as to the amount of such compensation shall be accepted by both interested parties.

That inasmuch as it is the employer's capital alone that is invested in his business, there shall be accorded to him the right to determine the manner and method in which such capital so invested shall be operated, and to him shall be accorded the right and privilege of employing whom he may please, at such price as may be mutually agreed upon, and at such work or class of work as he may decide, and for such length of time as he may elect, provided that he does not in any such arrangement do an injustice to the individual rights of his employees as American citizens.

That inasmuch as it is the employer's money that is being paid for such compensation, there shall be accorded to him the right to elect the method by which such compensation shall be determined, whether by the time worked or by the amount of work performed, which latter is commonly known as piecework, with the proviso that should this latter system of compensation be adopted, in any case in which the molder believes that either improper compensation, unjust accounting, or any other irregularity in connection with the system is being practised, he shall have the right to ask for a hearing before an arbitration committee as provided for in Article II.

That inasmuch as the molding machine is the product of the machine shop and not of the foundry, it is not under the jurisdiction of the molder, but having been produced at the expense of the employer, there shall be accorded to him the right to operate it in whatever manner he may elect, the same as his right to operate his power plant, cranes, or any other mechanical devices which have been brought into the foundry for the better prosecution of the employer's and molder's joint interest.

It appears that the Cleveland dispute virtually grew out of the attempt of the employers in that city to enforce the principles laid down in the resolutions above described. According to the statement of the editor of the *Iron Molders' Journal*, "representative members of the association openly stated that the chief issue of the struggle was whether the foundrymen of Cleveland could hire whom they pleased and at such wages as was agreeable to the employer and the individual employee without dictation from any outside organization, and for the principle of 'open' shops. That was exactly the issue as we recognized it, and on those lines we were willing to fight it out."

The fight was taken up by the National Founders' Association, and the most vigorous measures were taken to win it. Money raised by the association was used to pay bonuses to nonunion molders who took places in the Cleveland foundries. These bonuses, which were added to the regular wages of \$2.75 a day, are understood to have been regularly \$2 a day, and are alleged in some cases to have been considerably greater. Under these strong inducements the number of nonunion molders steadily increased. But it was an expensive way of fighting. At the end of seven months and a half the matter was compromised, and a written agreement was reached. The molders did not get the 10 cents a day which was the nominal cause of the strike. They did secure the exclusion of nonunion molders from the shops, and the principle of a fixed minimum rate of wages, with the further condition that no man should receive less than he was receiving before the strike, excepting the 10 cents a day in question. The minimum rate of wages established by this agreement was 27½ cents, and it was provided that the further adjustment of wages should be made by an agreement to be negotiated in June, 1901. Apparently the purpose of further negotiation was to establish wages, so far as possible, on a national basis. The Cleveland agreement further provided that the arbitrary limitation of output on the part of molders, as well as the

arbitrary demand for an increase in output on the part of employers, "not being in accord with the spirit of equity which should govern the relations of employer and employee," should be viewed with disfavor. A further clause provided that the right of the employer to introduce molding machines should not be questioned, and that in determining who should operate such machines regard should be given to the question of how their best possibilities can be brought out and how the work can be most economically produced.

It appears probable that the result of this dispute was to establish the system of conferences, as regards future differences, even more firmly than before. The Cleveland agreement above described was itself negotiated by the national conference committee provided for by the general agreement between the two national organizations, and it especially declared that further details as to differences should be settled by this conference committee, while the provision for the further conference in June regarding wages also pointed toward the desire for the perpetuation of the system of friendly conferences.

**4. Local agreements as to conditions of labor.**—While the National Founders' Association and the Iron Molders' Union have not yet introduced a system of national agreements fixing the conditions of labor by collective bargaining, the policy of both organizations seems directly to favor the establishment of written agreements of a local character and the gradual extension of the system in the future until national agreements become possible. There is as yet no uniformity in the various local agreements which have been made. Often they consist of only a brief provision fixing the minimum wage rate. In some instances differentials between bench molders and floor molders are established, and provisions regarding overtime are very common. None of the local agreements provides for the exclusive employment of union men.

Among the most important of these local agreements may be mentioned those in New York and Philadelphia. The New York agreement system was introduced in 1899. The various iron molders' unions in New York have established a joint conference board, which negotiates with the employers of the city. The agreement of June 1, 1899, fixed wages (floor molders \$3 and bench molders \$2.75 per day as a minimum), provided for time and a half rates for overtime work, granted Saturday holidays for fortnight during the summer, and provided for the continuance of the system of joint annual agreements to be adopted by joint conferences between the foundry men and the iron molders' conference board.

The Philadelphia agreement of March 4, 1901, is much more elaborate. It is in the form of an agreement between the two national organizations themselves on behalf of their local members. The demand for the exclusive employment of union men and the operation of foundries in accordance with strictly union rules was withdrawn by the molders under this agreement. Wages were fixed at 27½ cents per hour, and differentials provided for. The same provision regarding arbitrary limitation of output or demands for excessive output as was introduced in the Cleveland agreement is found also here. A further clause declares that all unfair or unjust shop practices on the part of either party are to be viewed with disfavor by the national organizations, respectively, and that any differences regarding such practices, or any future disputes of any kind which can not be amicably settled by the parties in interest, shall be submitted to an arbitration in accordance with the general agreement first described. This Philadelphia agreement in full follows:

PHILADELPHIA, *March 4th, 1901*

AGREEMENT BETWEEN THE NATIONAL FOUNDERS' ASSOCIATION (ON BEHALF OF ITS PHILADELPHIA MEMBERS) AND THE IRON MOLDERS' UNION OF NORTH AMERICA (ON BEHALF OF ITS PHILADELPHIA MEMBERS):

ARTICLE I. In view of the fact that there has been an agreement entered into at the recent conference in Cleveland, Ohio, between representatives of both associations, on the question of equitable wage rates for molders, and in view of the mutual understanding that there is to be a further conference on the subject within a reasonable time—as may be agreed upon by the presidents of the respective associations—for the purpose of further perfecting the details regarding the regulation of wages of molders,

It is agreed that the temporary agreement, entered into July 16th, 1900, shall be null and void, and that the agreement herein contained shall supersede the above mentioned temporary agreement.

ARTICLE II. The iron molders' members of the Philadelphia union of the Iron Molders' Union of North America agree to withdraw their demands that the foundrymen of Philadelphia should operate their foundries under the rules and regulations of the union.

ARTICLE III. In accordance with the national agreement entered into at the recent conference in Cleveland on the regulation of molders' wages, the foundrymen of Philadelphia who are members of the National Founders' Association, and the molders of Philadelphia who are members of the Iron Molders' Union of North America, agree to the following wage scale:

The standard minimum wage rate for bench and floor molders who have learned the general trade of molding shall be twenty-seven and one half (27½) cents per hour, or sixteen dollars and fifty cents

### 354 THE INDUSTRIAL COMMISSION:—COLLECTIVE BARGAINING.

(\$16.50) per week of sixty (60) hours, it being understood that when a molder has completed his work before regular shop-closing time such time shall not be deducted in computing the week of sixty (60) hours.

ARTICLE IV. The standard minimum wage rate shall be subject to the following DIFFERENTIALS:—  
1st. The young man who has completed his apprenticeship and who, by reason of his mechanical inferiority or lack of experience, or both, in either branch of the trade of molding shall be entitled to receive the full wage rate provided for above, shall be free to make such arrangements as to wages with his employer for a period mutually satisfactory as may be agreeable to himself and employer.

2nd. The molder who, by reason of his physical incapacity or physical infirmity, can not earn the standard minimum wage rate is to be free to make such arrangements as to wages as may be mutually satisfactory to the employer and himself.

3rd. There being in some foundries a grade of work calling for less skill than is required by the ordinary molder, this grade of work being limited in quantity, it is agreed that nothing in this agreement shall be construed as prohibiting the foundryman from employing a molder to make such work and paying for same in a rate that may be mutually agreed upon between the molder and foundryman. It is understood that a molder who is working for and receiving a rate of wages of twenty-seven and one-half (27½) cents per hour or over, is not to be asked or expected to make the grade of work referred to above for any less wage rate than he is regularly entitled to under this agreement. This does not give the molder the right to refuse to make the work if it is offered to him at his regular wage rate.

ARTICLE V. It is agreed that nothing in the foregoing shall be construed as prohibiting piece or premium work, and when it is desired on the part of the foundryman that his work shall be done under the piecework or premium system, it is agreed that the wages of the molder shall be based so that he may earn a wage not less than if working by the day. This is understood as applying to molders who are competent to do an equal amount of work and of equal quality to the average molder in the foundry in which he is employed.

Where the foundryman and molder can not agree on the piece price for a certain piece of work, the foundryman is to have the work done by the day for a period of a day or more, according to the nature of the work, in order to establish a fair and equitable wage rate on the work in question.

It is further agreed that nothing in this agreement shall be construed as preventing a molder from agreeing with his employer on a piece price as soon as he is given a pattern.

ARTICLE VI. Time and half time shall be paid for all overtime excepting in cases of accident or causes beyond control consuming not more than thirty (30) minutes, and double time for Sundays and legal holidays, to wit: Fourth of July, Labor Day, Thanksgiving Day, and Christmas. It being further understood that when foundries do not make a practice of running beyond bell or whistle time and are occasionally late, the "give and take" system shall apply in all such cases, it being understood that both sides should show a spirit of fairness in adjusting matters of this kind.

ARTICLE VII. Arbitrary limitations of output on the part of the molders, or arbitrary demands for an excessive amount of output by the molders on the part of the foundryman, being contrary to the spirit of equity which should govern the relationship of employer and employee, all attempts in that direction by either party, the molder or foundryman, are to be viewed with disfavor and will not receive the support of either of the respective associations party to this agreement.

It being further agreed that the wage rates specified herein are to be paid for a fair and honest day's work on the part of the molder and that in the case of a molder feeling that a wrong has been done him by his employer, and that his treatment has been at variance with the terms of this agreement, he shall first endeavor to have the same corrected by a personal interview with his employer, and, failing in this, then he shall report same to the proper channel of his local union for its investigation. If there is any objectional action on the part of the molder which is in conflict with this agreement or the spirit thereof, then the employer is to endeavor to point out to the molder where he is wrong, and failing in this, he may discharge the man for breach of discipline, or else return him in his service and submit the case to the National Foundrymen's Association for investigation.

In order that there may be no misunderstanding as to wages a molder is to receive under the above agreement, it is understood that a molder must agree with the employer on the rate of wages that he is to receive at the time he is engaged, it being further agreed that neither the molder nor the foundryman is to deviate from the terms of this agreement as to wages or department.

ARTICLE VIII. In conformity with the agreement adopted at the recent conference in the city of Cleveland, the National Foundrymen's Association and the Iron Molders' Union of North America, deprecate strikes and lockouts, and desire to discourage such drastic measures among the members of their respective associations.

It is therefore agreed that all union or union shop practices on the part of the molders or foundrymen are to be viewed with disfavor by the Iron Molders' Union of North America and the National Foundrymen's Association, and any attempt on the part of either party to this agreement to force any union or union shop practice upon the other is to be the subject of rigid investigation by the officers of the respective associations, and if upon careful investigation such charges are sustained against the party complained of, then said party is to be subject to discipline—according to the by-laws of the respective associations.

And it is further agreed that all disputes which can not be settled amicably between the employer and molder shall be submitted to arbitration under the "NEW YORK AGREEMENT."

ARTICLE IX. When the words "employer" or "foundryman" are used, it is understood that their foremen or representatives may carry out the provisions of this agreement and act for them.

ARTICLE X. It is further agreed that nothing in the foregoing shall be construed as applying to operators of molding machines who have not learned the general trade of molding, and the right of a foundryman to introduce or operate molding machines in his factory shall not be questioned.

ARTICLE XI. This agreement shall continue in force to July 16th, 1901, and thereafter to June 3rd, 1902, and to continue from year to year, from June 3rd, 1902, unless notice be given on May 1st of any year by either party to this agreement signifying their desire to change or modify the conditions of this agreement.

And it is further agreed that should any agreement be reached by a conference of representatives of the National Foundrymen's Association and the Iron Molders' Union of North America upon the question of wage rates for molders, and in conflict with the terms of this agreement, that a conference of the parties hereto shall be called immediately to conform the terms of this agreement to those of the national agreement, otherwise this agreement is to continue in force as above provided.

[Copy of "New York agreement" referred to in "Article VIII" here inserted.]  
This agreement to go into effect Monday, March 18th, 1901.

## V. MACHINISTS AND ALLIED TRADES.

**1. History of adoption of agreement of machinists and employers.**—The subject of the strikes of the International Association of Machinists at Chicago and other cities during 1900 was made a special topic of investigation by the Industrial Commission, and the final settlement of these difficulties by arbitration within the trade, together with the permanent arbitration agreement entered into between the International Association of Machinists and the National Metal Trades Association, have been fully described in the testimony before the commission.<sup>1</sup> A brief summary of the conditions leading to the arbitration agreement will, however, be desirable in this place, especially because the agreement reached is one of the few which are of national significance.

From the testimony before the commission, it appears that the first proposal for the establishment of a national arbitration system for the settlement of disputes relating to the machine trades came from the manufacturers, and that they were influenced by the examples in the closely related stove and foundry trades. The employers had formed during 1899 an association known as the National Metal Trades Association, one of whose principles was to attempt to secure the settlement of trade disputes on national lines. When the strike at Chicago was inaugurated early in 1900 the International Association of Machinists appears to have been unwilling at first to arbitrate on national lines, either from doubt as to the ability of the National Metal Trades Association to control its members, or from doubt of the ability of the machinists' organization itself to bind the local unions. The demand of the representatives of the National Metal Trades Association that all strikes should be declared off before the questions in dispute should be arbitrated was also rejected at the outset. Representatives of the two associations finally signed an agreement on March 31 for the settling of the Chicago strike and of other difficulties by national arbitration, but this agreement was for some time inoperative. Finally in May the representatives of the two national associations met in New York, and after some hesitation the officers of the International Association of Machinists acceded to the demand that all strikes should be declared off pending the adoption of a general agreement as to arbitration and as to the conditions of labor. After further negotiation such a general agreement was adopted and signed by the representatives of the two organizations. An additional agreement as to some details of the arbitration process was adopted November 16, 1900.

**2. Contents of arbitration agreement.**—These agreements did not apply to all the manufacturers employing machinists throughout the country, but only to those who are members of the National Metal Trades Association. The Machinists have since been attempting to secure somewhat similar agreements with individual firms which are not members of the employers' association. This latter form of agreement however, contains no provisions regarding recognition of the machinists' organization as such nor regarding the arbitration of disputes. The more general agreements between the National Metal Trades Association and the International Association of Machinists provided that thereafter in all disputes between members of the respective organizations the parties should first make every reasonable effort among themselves to secure an adjustment. Failing in this it should be submitted to the district chairman of the Metal Trades Association and some person selected by the employees. If these should not effect a settlement the dispute should be referred to a committee consisting of the presidents of the two associations and two other representatives from each association appointed by the respective presidents. The finding of this committee, by a majority vote, should be considered binding. It will be observed that there was no provision for referring the matter to an umpire in case of equal division in the arbitration board. The agreements also define the qualifications for machinists, but granted to the employers the right to judge of the competency of their employees. Provision was made for the payment of extra wages for overtime. The number of apprentices was limited. The hours of labor, which have usually been 60 a week, were to be reduced to 57 at the expiration of 6 months from the date of the agreement and to 54 after 12 months.

The text of the three agreements between the National Metal Trades Association and the International Association of Machinists omitting a few paragraphs of temporary and local application, follows.

<sup>1</sup> See Vol. VIII of Reports of Industrial Commission.

## 356 THE INDUSTRIAL COMMISSION:—COLLECTIVE BARGAINING.

### CHICAGO AGREEMENT

This agreement made this 17th day of March, 1900, between said committee acting for and representing said National Metal Trades Association and said committee acting for and representing said International Association of Machinists.

Witnesseth: The parties hereto believing in the principle of national arbitration in settling contentions that arise between employers and their employees, instead of resorting to lockouts and strikes, do hereby recommend for ratification by the two organizations known as the National Metal Trades Association and the International Association of Machinists the following joint agreement:

Whereas the past experience of the National Metal Trades Association and the International Association of Machinists justifies the opinion that mutual agreements conducing to greater harmony in their relations as employers and employees will be of advantage. The relate

*Resolved*, That this committee of conference endorse the principle of national arbitration in the settlement of trade disputes and recommend the same for adoption by the members of the National Metal Trades Association and the International Association of Machinists. Be it further

*Resolved*, That in all pending disputes, and in disputes hereafter to arise between members of the respective organizations, i. e., an employer and his employees, every reasonable effort shall be made by the said parties to effect a satisfactory adjustment of the difficulty, failing in which, either party shall have the right to ask its reference to a committee of arbitration, which shall consist of the presidents of the National Metal Trades Association and of the International Association of Machinists, or their representatives and two other representatives from each association appointed by their respective presidents. The findings of this committee of arbitration by a majority vote, shall be considered as final as regards the case at issue, and as making a precedent for the future action of the respective organizations. Pending adoption by the committee of arbitration there shall be no cessation of work at the instance of either party to the dispute. The committee of arbitration shall meet within two weeks after the reference of the dispute to them.

This agreement shall take effect from the date of its ratification by the two said associations, notice of which ratification shall be promptly given to each other by the respective secretaries.

And it is further agreed that during the time necessary for the ratification hereof, as above provided, and the time needed to consider and act upon the above-proposed joint agreement, there shall be no lockout or strikes in either association, and all lockouts or strikes that now exist and are participated in by the members of either of the parties to this agreement shall be immediately and officially called off wherever they may exist.

Signed on behalf of the administrative council of the National Metal Trades Association by the following subcommittee, duly authorized by said administrative council:

H. W. HOYT,  
F. W. PULSLEY,  
W. J. CHAMBERS.

Signed on behalf of the International Association of Machinists:

JAS. O'CONNELL,  
*International President*,  
STUART BLISS,  
*General Organizer*.

### NEW YORK AGREEMENT

At a meeting of the joint board of arbitration of the National Metal Trades Association and the International Association of Machinists, appointed under the Chicago agreement of March 17, 1900, signed March 31, 1900, held at the Murray Hill Hotel, New York City, May 10 to 18, 1900, the following resolutions were adopted and agreements entered into, to take effect from this date:

*Resolved*, That the strikes be declared off in the factories of the members of the National Metal Trades Association in the city of Cleveland and Paterson, the National Metal Trades Association, members of this board, to wire the members of their association in these two cities to meet a committee from each shop of their former employees to arrange for the return of as many men as their present necessities require, and that subsequent requirements of men shall be filled from their former employees when they may not be able to restate at the present time.

The intent of this last clause is, that if, within the next six months, former employees make application for reinstatement they shall be reinstated, provided there are vacancies for them.

Where strikes exist in those cities in firms other than the members of the National Metal Trades Association, who will agree to the settlement herein entered into, after the same has been adjusted by this joint body, such strikes shall be declared off also.

Whereas doubts have been expressed by members of this board, representing both parties to this conference, as to the ability of their respective organizations to control their members. Now, therefore, be it

*Resolved*, That the members of this board pledge themselves each to the other that in case of the refusal of any member of the respective organizations represented to observe and carry out in an honorable manner the findings and decisions of this board in regard to strikes and lockouts, based upon a fair, just, and liberal interpretation as to what is known as the Chicago agreement, we will report such member or members to our respective organizations for discipline, suspension, or expulsion, as the merits of the case may justify.

### MACHINIST

A machinist is classified as a competent general workman, competent floor hand, competent lathe hand, competent vise hand, competent planer hand, competent shaper hand, competent milling-machine hand, competent slotting-machine hand, competent the skinner, competent boring-mill hand, competent toolmaker, and competent linotype hand. To be considered a competent hand in either class he shall be able to take any piece of work pertaining to his class, with the drawings or blue prints, and prosecute the work to successful completion within a reasonable time. He shall also have served a regular apprenticeship or have worked at the trade four years.

It is understood that the question of competency is to be determined by the employers. Since the employers are responsible for the work turned out by their workmen, they shall, therefore, have full discretion to designate the men they consider competent to perform the work and to determine the conditions under which it shall be prosecuted.

This last paragraph does not in any way abridge or destroy the right of appeal from any apparent or alleged unjust decision rendered by an employer of labor, or his representative, in conformity with the powers vested in him by this paragraph.

## OVERTIME

All overtime up to 10 o'clock p. m. shall be paid for at the rate of not less than time and one-quarter time and all overtime from 10 p. m. until 12 midnight shall be paid for at a rate of time and one-half time and that after 12 o'clock and legal holidays and Sundays shall be paid for at a rate of not less than double time.

In cases of emergencies where shop machinery breaks or runs down and it is absolutely necessary to repair the same so that the factory can run on Monday, this time shall be paid for at a rate of time and one-half time. The repairs above referred to apply only to the machinery of the employer.

The foregoing rates not to interfere in any way with existing conditions, that is, where a higher rate than the above is paid now, no reduction will take place.

Such rates for overtime shall not apply to men regularly employed on night gangs.

## APPRENTICES

There may be one apprentice for the shop and in addition not more than one apprentice to every five machinists. It is understood that in shops where the ratio is more than the above that no change shall take place until the ratio has reduced itself to the proper number by lapse or by the expiration of existing contracts.

## EMPLOYMENT AND HOURS

No discrimination shall be made against union men and every workman shall be free to belong to a trade union should he so wish. Every employer shall be free to employ any man, whether he belong or not to a trade union. Every workman who elects to work in a shop will be required to work peacefully and harmoniously with all fellow employees, whether they belong to a trade union or not. He shall also be free to leave such employment, but no collective action shall be taken until any matter in dispute has been dealt with under the provisions for avoiding disputes, as per the then engagement dated March 17, 1900 signed March 1, 1900. The National Metal Trades Association does not advise its members to object to union workmen or give preference to nonunion workmen.

Fifty-seven hours shall constitute a week's work from and after six months from the date of the final adoption of a joint agreement and fifty-four hours shall constitute a week's work from and after twelve months from date of final adoption of a joint agreement, the hours to be divided as will best suit the convenience of the employer.

In consideration of this concession in working hours, the International Association of Machinists will place no restrictions upon the management or production of the shop and will give a full day's work for a full day's wage.

Note.—This is not to interfere in any way with shops where a less number of hours per week is already in operation. \* \* \*

*Resolved* That the resolutions and agreements heretofore adopted by this board be now approved as a whole, to take effect from this date.

For and on behalf of the National Metal Trades Association

(Signed) D. McLEAREN, *President*

(Signed) EDWIN RYANOLDS,

(Signed) WALTER L. PHIPPS,

For and on behalf of the International Association of Machinists

(Signed) JAS. O'CONNELL, *Pres't*

(Signed) D. DOUGLAS WILSON,

(Signed) HUGH DOBBS,

*Joint Board of Arbitration*

Dated New York, May 18, 1900

## RESOLUTION, NOVEMBER 16, 1900

Copy of resolution adopted by the administrative council of the National Metal Trades Association and the officers and board of trustees of the International Association of Machinists in joint session at the Murray Hill Hotel, New York City, November 16, 1900.

Whereas in the joint agreement adopted by the administrative council of the National Metal Trades Association and the International Association of Machinists it was agreed that all pending disputes and disputes hereafter to arise between members of the respective organizations—that is, between an employer and his employee or employees—should be settled by arbitration, and

Whereas it was further agreed that, pending such arbitration, no strike or lockout should occur

*Be it further resolved*, That for the purpose of providing means by which the employer or employee may derive the benefits of this agreement the following methods shall be pursued:

When a dispute shall arise between an employer and his employee or employees, every reasonable effort shall be made by the said parties to effect a satisfactory adjustment of the difficulty, and in case such difficulty can not be settled between the employer and his employee and employees it shall be referred on the part of the member of the National Metal Trades Association, to the chairman of the district in which he is located, and by the employee or employers to such representative as he or they may select, who shall by all means in his or their power endeavor to adjust the difficulty to the satisfaction of both parties.

Should this committee fail to make such adjustment, then either party shall have the right to ask for a conference between the presidents of the two associations or their representatives. In the event of their being unable to adjust the differences satisfactorily, then it shall be referred to arbitration, as provided in the agreement of May 18, 1900. The findings of this arbitration, by a majority vote, shall be considered as final as regards the case at issue.

Pending adjudication by arbitration there shall be no cessation of work at the instance of either party to the dispute.

**3. Break-down of agreement system, 1901.**—The arbitration agreement between the International Association of Machinists and the National Metal Trades Association was destined to be short lived. It will be remembered that the National Metal Trades Association includes by no means all of the establishments employing machinists. The international officers of the Machinists' Union decided in 1901 that the time was ripe to inaugurate a general demand on the part of all the

members of the organization for the 9-hour day. The New York agreement, providing for the reduction of hours to 9 per day, to take place one year from the date of the agreement, contained nothing regarding the rate of wages to be paid after the reduction of hours. The Machinists determined to demand that the rate of wages per hour be so increased as to make the pay under the 9-hour day the same as had been received for 10 hours' work.

After the International Association of Machinists had given notice to employers, both those belonging to the National Metal Trades Association and those outside, that a general demand for the 9-hour day, with the same pay as before, would be made on May 20, a conference was held between the administrative council of the Metal Trades Association and Mr. O'Connell, president, and Mr. Wilson, secretary, of the International Association of Machinists. It appears that the representatives of the workmen's organization demanded that the question as to the rate of wages to be paid after the reduction of hours should be settled by a conference between the national representatives of the respective organizations of employers and employees. The officers of the Metal Trades Association declared that they had no authority to settle this question of wages. They stated that the national conference held in May, 1900, had specifically refrained from attempting to fix wages on the ground that this was a local matter. It was pointed out that the arbitration system, as amended by the resolution of November, 1900, provided that in case of dispute between any member of the National Metal Trades Association and his employees local arbitration should first be attempted before reference to national arbitration, and it was maintained that this question as to wages under the 9-hour day must be referred to local arbitration in accordance with these rules. The administrative council of the Metal Trades Association also passed a resolution to the effect that the arbitration of local boards on this question should be carried out as promptly as possible, and that the findings should date back to May 20. President O'Connell, of the Machinists' Association, however, refused at this conference to concede to the proposition that the demand regarding wages should be taken up in the first instance locally, and the conference broke up without a settlement. Each party appears to have stood thereafter strictly upon its position, the Metal Trades Association insisting on local settlement of the question of wages, and the machinists' organization insisting upon settlement on national lines. The employers asserted that the union men had broken the agreement since it required the reference of all disputes to local arbitration. The International Association of Machinists asserted that the very implication of the agreement of May, 1900, providing for a reduction of hours to 9 per day in May, 1901, was that wages should not be reduced, but that the change should represent a real gain to them; and that the only question at issue was the interpretation of this national agreement, which accordingly should be settled by the national organizations directly.

Another point made by the officers of the National Metal Trades Association, was that the machinists had violated the agreement of May, 1900, in some instances by insisting upon restrictions of output and of methods of operating shops, in direct violation of the terms of the agreement. It was asserted that a garbled copy of the agreement, in which these provisions were omitted, had been circulated by the machinists, and that the attempt had been made even to secure the signatures of members of the National Metal Trades Association to this abbreviated agreement. The machinists declare that the full text of the agreement, as adopted, was published in the Machinists Journal, and that the abbreviated agreement, which was used only by some of the local organizations, was intended for presentation to employers not members of the National Metal Trades Association, in the hope that terms even more favorable to the union could be secured from these employers. The officers assert that there was no deception or violation of agreement in this regard on the part of the International Union. There seems little doubt, however, that some of the members of the local unions did not fully understand or approve the concessions made on these points in the agreement with the Metal Trades Association.

The position of the respective organizations regarding the strike of 1900 is more fully set forth in the statements printed in full below.

#### STATEMENT OF NATIONAL METAL TRADES ASSOCIATION

The National Metal Trades Association in convention assembled, defines its position and the issues it is defending in the present machinists' strike to be as follows:

1. No further back than March, 1900, an agreement was made in Chicago between our association and accredited officers of the International Association of Machinists, declaring that arbitration should for good and all be adhered to as the primary principle for deciding disputes between employers and employees, and that 2 months later a joint committee from the 2 International Associations entered into a formal contract binding themselves and each other to follow peaceful arbitration of disputes through all possible phases and officially condemning strikes and lockouts.

Within 1 year, at the first test to which this contract was subjected, the president of the International Association of Machinists ignored the direct request of the National Metal Trades Association for an arbitration committee to interpret disputed clauses of the contract and to take up any matter of dispute between the 2 associations, and he, James C'Connell, president of the International Association of Machinists, without attempt to arbitrate, officially called a strike against shops of our members which did not accede to certain arbitrary demands by a specified date. We declare that we urged President C'Connell to arbitrate any and all matters of dispute, and reiterated our willingness to abide by arbitration, and used our best efforts to avoid a strike. We deplore the fact that the general officers of the International Association of Machinists have seen it violate their contract and thrown dishonor on the association for which they stand and so make it impossible for our association to place any faith in the responsibility of the Machinists' Union.

2. The clause in the agreement secondary only to that of arbitration bound the machinists to—

"Place no restrictions upon the management of production of the shop," and in exchange for the above the employers granted a 41 hour week beginning May 20, 1901 so that every member of our association was compelled and bound to run his shop on a schedule of 41 hours after that date. We therefore declare that the 41 hour week was not an issue for the machinists to strike upon.

We assert in addition emphatically that the Machinists' Union, through their credited general and local officers, did not key in with us on our unquestioned right to run our shops without restriction, but that they from the start violated the spirit and the letter of their agreement. Immediately after the signing of the joint agreement of May 18, 1900, the International Association of Machinists issued a document purporting to be the agreement as entered into between the International Association of Machinists and the National Metal Trades Association, which document was sent to the local lodges of the Union throughout the United States and Canada and by their walking delegates, business agents or shop committees was broadly presented to the machinery manufacturers for their signature, and further that this document was published in the official journal of the International Association of Machinists. This document left on every point which might be construed in favor of the employer and so was entirely misleading to the individual union workman and the manufacturers not members of this Association. The principal points omitted in this garbled statement are verbatim as follows:

#### EMPLOYMENT AND HOURS

"No discrimination shall be made against union men and every workman shall be free to belong to a trade union should he see fit. Every employer shall be free to employ any man, whether he belongs or not to a trade union. Every workman who elects to work in a shop will be required to work peacefully and harmoniously with all fellow employees, whether he or they belong to a trade union or not. He shall also be free to leave such employment, but no collective action shall be taken until any matter in dispute has been dealt with under the provisions for avoiding disputes as per the Chicago agreement, dated March 17, 1900, signed March 31, 1900. The National Metal Trades Association does not advise its members to object to union workmen or give preference to non-union workmen.

In consideration of this concession in working hours, the International Association of Machinists will place no restrictions upon the management of production of the shop and will give a fair day's work for a fair day's wage.

Moreover, in numerous cases and through widely scattered localities the union machinists have flagrantly frustrated the production of the shops denied fully the right of the employer to govern his own affairs, and have interfered with the management and methods of our shops, and it is this point which we declare to be the issue which we defend in this contest.

3. As regards wages, this association has from the start declined to take any national action and has made no agreements, actual or implied, with the International Association of Machinists on this point, reports to the contrary notwithstanding. We believe that the question of wages is a commercial one between the individual employer and his employee, governed only by natural economic laws and varying with conditions and localities and a subject which is not proper or possible that an association such as ours should deal with. This question of wages was discussed at great length when the contract of May, 1900, between our association and the International Association of Machinists was made, and the verdict as given above was concurred in unanimously by both parties to the agreement, as the records of said meeting and the joint agreement shows. We therefore decline to admit wages as a national issue and declare it a local question.

4. Our position therefore is as follows. We declare that the Machinists' Union has through its national and local officers broken faith with us and proven themselves to be an irresponsible body, with whom we can make no contracts that will be binding upon them. We recognize the right of any man to belong or not to any religious, political, or economic sect as he may see fit, also his right to leave our employment at his free will, and his right to sell his labor at the best price he can command. We maintain our inalienable rights to employ a man whether he belongs or not to any organization and at wages mutually satisfactory, and also to discharge him at our discretion. We insist that the management of a shop is in the hands of the employer and is not to be interfered with by the employee. We insist that a fair day's work shall be given for a fair day's wage, and we will give a fair day's wage for a fair day's work. We believe that a shortening of the working hours or an increase of wages can only be brought about by the hearty cooperation of employer and employee in advancing and not in retarding production, and by introducing and not fighting improved methods. We deny strikes and lockouts as unbusinesslike and unnecessary, and believe that all disagreements can be adjusted by other means, and the condition of employer and employee both benefited more by harmonious progress than by strife and discord.

#### THE NATIONAL METAL TRADES ASSOCIATION

By order of The Administrative Council

EDWIN REYNOLDS, *President*

#### RESOLUTIONS OF ANNUAL CONVENTION OF THE INTERNATIONAL ASSOCIATION OF MACHINISTS

Whereas, according to press dispatches bearing date of the 24 instant, and emanating from New York, and this body having no evidence of notice to the contrary, it would seem that the officials of the National Metal Trades Association have declared war upon the International Association of Machinists and defiance to and repudiation of every principle for which that association stands, and in doing so they, it is alleged, have stated their reasons for so doing is that our international body, through its officials, has violated the agreement entered into with the National Metal Trades Association on May 18, 1900, by refusing to arbitrate the question of wages when the 9-hour day went into effect on the 20th ultimo, and

Whereas, seeing that the question is not mentioned in the said agreement, and that certain officials of the National Metal Trades Association and other members of that body have put the 9-hour day schedule into effect in accordance therewith, and made no reduction in pay, it is but fair to assume that by implication and in spirit no reduction was intended, and

Whereas the International Association of Machinists, through its president, did all that could be done with honor to get a satisfactory adjustment by pacific means, offering to accept any decision reached by an arbitration that would cover the question nationally, and

Whereas the said efforts proving futile, and the proffered offer of peace being brutally refused. Be it therefore

*Resolved*, That we, the delegates assembled at the ninth convention of the International Association of Machinists, after due and mature deliberation, and in the name of the membership that we represent, do hereby accept the challenge forced upon us by the National Metal Trades Association, etc.

The result of the machinists' strike was the complete abandonment of the system of agreements and arbitration between the National Metal Trades Association and the International Association of Machinists. It is stated that many employers not belonging to the Metal Trades Association conceded the demands of the union, and that some of the members of that association did the same, with the consent of the council of the association. Statements of representatives of the organizations of employers and of employees differ as to the proportion of the members of the National Metal Trades Association who were successful in resisting the demand for an advance in wages per hour coincident with the reduction in the number of hours. The administrative council of the National Metal Trades Association on May 28, 1901, issued a declaration of principles. It declared the agreement of May 18, 1900, null and void. It asserted that the employers would not admit any interference with the management of their business, that they would themselves be the judges of the competency of their men and of the proper methods of production, and that they would require a fair day's work for a fair day's pay. The employer, it was asserted, has the right to elect whether payment shall be by the hour, by the premium system, by piecework, or contract, and to determine the number of apprentices. The resolution declared further that the National Metal Trades Association disapproves absolutely of strikes and lockouts and will not arbitrate any question with men who strike. The principles thus enunciated were declared to be essential and not subject to arbitration, but the association recommended that other questions should be submitted to local arbitration. The association declared that no discrimination would be made against men because of membership in labor organizations.

It is by no means impossible that, despite the temporary breaking up of the agreement system, it will again be established, perhaps even more firmly than before. It has repeatedly been asserted by employers and employees who have had experience with similar systems, that it is necessary that each side should learn, perhaps by one or more prolonged conflicts, to fear the strength of the other side. The movement in the direction of an affiliation of the various labor organizations in the allied metal trades, and the apparent desire of the promoters of this movement to establish a system of joint agreements and arbitration with national organizations of employers, gives reason to hope that in course of time such a system may be fairly established in all of these allied trades.

4. *Attempt of pattern workers and allied organizations to secure national agreements.*—The annual report of President Thomas, of the Pattern Makers' League, presented at the convention of that organization in June, 1900, declared that it would be necessary in the future that there be more of conferences and arbitration in settling trade disputes than in the past. He expressed the hope that the growing strength of the organization may force such recognition of it by employers as will make these methods possible. He declared that the great strikes of the Pattern Makers in Boston, New York, and Philadelphia during the year 1899 were the chief cause of the organization by the employers of the National Metal Trades Association.

In March, 1900, the local Pattern Makers' Union at St. Louis petitioned for support in a strike for the 9-hour day. The president of the league then recommended that no action be taken until after the meeting between the National Metal Trades Association and the International Association of Machinists in May. President Thomas of the Pattern Makers, together with President Lynch of the Metal Polishers and President Mulholland of the Bicycle Workers (now Allied Metal Mechanics), were present at New York at the time of this conference, and jointly requested the National Metal Trades Association to make the same agreement with their respective organizations as with the International Association of Machinists. A courteous reply was received, stating that the matter would be laid before the proper officers.<sup>1</sup>

In November, 1900, Messrs. Lynch, Mulholland, and Thomas, together with President O'Connell, of the Machinists, and President Gompers, of the American Federation of Labor, had another conference with the administrative council of the National Metal Trades Association, and tried to arrange for an agreement

<sup>1</sup> Proceedings of Ninth Regular Session of Pattern Makers' League, pp. 7, 24, 25.

between the association and the several trade unions. Though the local employers' association at St. Louis had referred the local unions to the national association, the administrative council took the ground that it could not enter into such an agreement until it had received authority from a convention of the body. The representatives of the unions have hoped that an arrangement may be reached after the organization of the proposed metal trades' federation, arrangements for which were begun at a meeting in July, 1901. The break-up of the agreement system between the Machinists and the National Metal Trades Association will, of course, delay, if not altogether prevent such a result.

## VI. GLASS TRADES.

The workmen in the various branches of the glass trades are, to a very great extent, organized into strong national unions. The comparatively small number of glass factories and the high degree of skill required of the workers has specially facilitated close and vigorous organization on their part. The employers are also organized, though in no such strong and formal fashion as in the foundry trades. In all branches of the glass industry the conditions of labor have for a considerable number of years been established, as regards those factories which recognize the unions at all, by conferences between representatives of the organizations of employers and of employees, which adopt written agreements and scales annually. The systems in the various branches are all quite similar.

**1. Flint glass trade.**—The flint-glass trade is divided into a number of fairly well-defined branches, although some factories include several of the different branches. There are several organizations of employers corresponding roughly to the different branches of the trade, while all of the workmen in the flint-glass trade are organized in one body—the American Flint Glass Workers' Union. The joint agreements are made for each of the different branches of the trade separately.

If any local union of the employees desires a change in the scale of wages or in the conditions of labor, notice must be sent to the secretary of the national organization by February 1. The secretary is directed to notify the various local unions of the proposed changes, and secure their action regarding them before the conference with the manufacturers. For each of the various branches of the trade the employees elect a conference committee of 5 members, and the manufacturers elect a corresponding number. The members of the conference committees of the employees are nominated by the local unions and voted upon by a referendum vote of all the unions, the 5 receiving the highest number of votes in each branch being declared elected.

The joint committee of each branch thus constituted usually holds a preliminary conference in May or June, in which the demands of each side are presented and discussed, and agreements on some of the points at issue are generally reached. It appears, however, that these preliminary conferences are not always held by all of the branch committees. Thus, in 1899, the pressed-ware department failed to provide for a preliminary conference, and several conferences which were dependent upon this one also were postponed. The annual convention of the Flint Glass Workers' Union is held in July, and to this the propositions of manufacturers and employees, as brought out in the preliminary conferences, are submitted for discussion. In some instances the preliminary conferences have practically settled points of disagreement and the conventions content themselves with approving the action of the conferees. More generally, however, there is a discussion. The president of the union appoints for each branch of the trade a relatively large committee to take up the terms of the proposed agreement and report to the convention. On the basis of this report the conference committees are instructed as to the position which they shall take in the final conferences with the manufacturers' committees which are held in the latter part of July or in August. While, according to the statements of the representatives of the employers, the conference committees of the men often hold that they have no final authority to reach agreements except by the approval of the general organization, it is seldom the case that the agreements made in the final conference fail to meet the approval of the union men.

It appears that in the preliminary and final conferences action is taken by majority vote. In practice it is probably usually the case that the representatives of each side act virtually as a unit, and that a unanimous agreement is finally reached by mutual concessions on each side.

<sup>1</sup> See also testimony of Messrs. Thompson and Fry, Reports of Industrial Commission, Vol. VII, pp. 828-841, 895-906.

The joint agreements reached as the result of this process include a very elaborate system of piecework scales. Most glassworkers are paid by the piece, though some are paid by the day. The price of each article is based upon a "move," representing a certain number of pieces which a group of workmen is supposed to be able to make in a turn of 4 or 4½ hours. The "move" was formerly the limit of the number of articles which the men were permitted to make in the allotted time, but the limitation has now been removed in 3 of the departments. In addition to the provisions regarding prices for piecework, the joint agreements contain numerous regulations as to the hours of labor, apprenticeship, the methods of work, and similar matters. (Further information as to the conditions of labor in this trade under the joint-agreement system will be found in volume vii of the reports of this commission, pages 160-171 of digest.)

There are also some provisions in the flint-glass trade for the settlement of minor disputes arising as to the interpretation of agreements or as to other matters. In some of the departments of the trade the joint agreements provide that any dispute which can not be settled between the parties directly interested shall be referred to an arbitration committee, consisting of equal numbers of manufacturers and workmen. In other cases the general joint wage committee of the department acts as a committee of conciliation for the settlement of misunderstandings and disputes. Such differences are especially likely to arise as to the price lists for new articles which are introduced in the interval between the adoption of the annual scales. The constitution of the Flint Glass Workers' Union also provides for a factory committee in each factory whose duty it is to negotiate with the manufacturers as to all matters in dispute. Such factory committees, in conjunction with the management, act in the first instance concerning the establishment of piecework prices for new articles introduced in the factory.

**2. Glass-bottle trade.**—The system of collective bargaining in the glass-bottle trade is very similar to that in the other glass manufacturing trades. It has been in existence 12 or 15 years. The organization of workmen, on the one hand, is known as the Glass Bottle Blowers' Association of the United States and Canada, while the employers are united into the National Green Glass Vial and Bottle Manufacturers' Association. All manufacturers are eligible to membership in the manufacturers' association, which includes at present between 60 and 75 persons. The membership of the workmen's organization is about 4,500. As in other glass trades, there is a period of about 2 months during each summer in which the works close down. The joint agreements are made for the year beginning about September 1. One of the features of the system is the preliminary conference which is held between the representatives of the manufacturers and the workmen in May. The wage committee of the Glass Bottle Blowers' Association consists of the executive board, which includes the president, vice-president, and 6 members elected at each annual convention. The wage committee of the manufacturers has an equal number of members. At this preliminary conference each side suggests any changes in the scale which it desires, and presents its arguments, but nothing is then finally determined. So complicated are the price lists and so numerous are the questions arising that this preliminary conference makes it possible for a clearer understanding to be reached as to the respective positions of the manufacturers and the employees, so that in the discussions at the separate conventions of the two organizations which follow, a more intelligent point of view may be taken. On this point President Hayes, of the Glass Bottle Blowers' Association, said in his annual report to the convention of 1900:

"The amount of work done at the May conference this year in the way of listing bottles and discussing important questions, proves that this preliminary meeting of the two wage committees has become a vital necessity, unless, indeed, we are desirous of a protracted wage conference later on, or possibly two or three separate ones, which may be prolonged to such an extent as to delay or hamper the beginning of work in the fall. At the May meeting we hear the manufacturers' side of the story, and are, therefore, enabled to lay it before the convention for discussion and counsel. This is right and proper, as it is a matter of duty for us to view all questions from both sides, and it would be neither just nor safe for us to legislate with only a one-sided knowledge of matters upon which the trade depends so much for successful operation."

The wage committee of each organization presents its report to a convention held during the latter part of June or July. It makes recommendations for changes in the scales of wages, taking into consideration the points brought up by the other side at the May conference. The reports of the wage committee are discussed and instructions are given by each convention to its committee as to the position which it is to take and the concessions which it is authorized to make. It is usually true, however, that some discretion is left to the wage committee in

reaching the final agreement at the second conference, which follows shortly after the conventions of the separate bodies. At these final conferences the points at issue are thrashed out and mutual concessions are made until agreements are reached. At times the sessions are prolonged. There is no provision for calling in outside arbitrators to settle points of disagreement, but the spirit of mutual fairness which has been developed by the system and the desire to avoid strikes and lockouts usually lead ultimately to a peaceful compromise.

Joint agreements adopted in this way include, in the first instance, an exceedingly elaborate system of piece prices. In the manufacture of bottles there are scores of different shapes for ordinary uses, and in addition almost every manufacturer of patent medicines, spirits, or other special articles contained in bottles, adopts peculiar shapes and sizes, for each of which the wage scale provides a piece price. The scale of 1900-1901 consists of 55 pages of such items.

In addition to the wage scale the joint agreement covers numerous practices and conditions of labor. Aside from rules as to technical details, especially such as serve to interpret the piecework scales, the most important provision of the agreement is that regarding apprentices. The joint agreement of 1900-1901 provides that there may be 1 apprentice for every 10 journeymen employed. There are a number of other somewhat complicated regulations to prevent employers from reducing the number of skilled men who shall be employed to perform different classes of work. Another rule requires that all members of the union must receive not less than \$20 per week in wages, and that there shall be no deduction for private accounts or bills against members, all settlements being in cash.

There is no direct provision in the joint-agreement system in the glass-bottle trade for the settlement of local disputes, but the rules are so detailed that, in connection with the provision declaring that the price rules and regulations shall not be changed or deviated from in any manner by any local branch, individual, or manufacturer, occasions for disputes seldom arise so long as the annual agreement remains in force. An officer of the manufacturers' association states that misunderstandings which sometimes arise are usually settled by the general wage committee in special session.

The manufacturers who enter into this system of conferences and joint agreements agree to employ only union labor. Nearly all of the manufacturers in Pennsylvania and the more western States have for some time past belonged to the employer association, and have employed union men. In "south Jersey" there are a number of establishments which long refused to recognize the Glass Bottle Blowers' Association and which employed exclusively nonunion men. During 1899 a vigorous effort was made to organize the employees of these companies and a prolonged strike resulted. Finally, nearly all of the manufacturers surrendered and permitted the organization of their employees, agreeing to abide by the joint agreement and to enter into the conferences of manufacturers and employees in the future. The result of this settlement was to unionize very nearly all glass-bottle factories in the United States and to bring them under the system of joint conferences and agreements.

There seems to be very general satisfaction on the part of both the employers and the employees in the glass-bottle trade regarding the working of the joint-agreement system. A statement by Mr. Dennis A. Hayes, president of the Glass Bottle Blowers' Association, regarding the system is printed in volume vii of the reports of the Industrial Commission, pages 102-112; 920-922. In this statement the witness declared that the system was probably the most perfect one in the country. "We regard our contracts as binding as though they were sustained and could be enforced by the courts." Mr. Hayes said further: "I believe such a system is a long step forward toward removing most of the doubt and suspicion which exists between the workman and his employer." (In connection with this statement of Mr. Hayes, a copy of the leading provisions of the joint agreement, aside from wage scales, is printed—page 921.)

A prominent representative of the employers' organization, the National Green Glass Vial and Manufacturers' Association, asserts that the effect of the system is very beneficial. Each side has learned that the other is not so arbitrary as formerly supposed, "and knows that if any good reason is advanced for a change of any kind it will be given consideration and granted, provided conditions justify. This comes from years of intercourse. \* \* \* In our organization we have found the working of joint agreements very satisfactory and know of nothing better. \* \* \* Our relations are very harmonious and becoming more so each year, owing to our regular meetings and conferences."

**3. Window-glass trade.**—The system of annual conferences and joint agreements is found in the various branches of the window-glass trade in very similar form to that in which it exists in the glass-bottle trade and the flint-glass trade. Prior

to 1900 there were three organizations in the window-glass trade, those of blowers, of cutters, and of flatteners, the two latter organizations having seceded from the blowers at an earlier date. At present, after a contest between the blowers and the cutters, the latter have been forced to become amalgamated once more with the blowers, these two classes of workmen being organized in what is known as Local Assembly 300 of the Knights of Labor. Prior to this amalgamation each of the three organizations of workmen elected a committee to meet in separate annual conferences with representatives of the employers. There was formerly a general organization of the manufacturers in the window-glass trade, establishing a uniform scale throughout the entire country, subject to some minor variations on account of differences in conditions. After the formation of the American Window Glass Company, which brought into combination more than half of the window-glass companies of the country, that organization withdrew from the association with other manufacturers and made separate agreements with the different organizations of employees. It appears that there has been, to some extent, an attempt on the part of the combination to prevent the independent manufacturers from obtaining a sufficient supply of labor. The independent manufacturers formed a new organization in the summer of 1900. The relations between the American Window Glass Company and the independent manufacturers, and between those two parties and the labor organizations, have been greatly complicated during the past year and the conditions are not normal. In the past, however, joint annual agreements have been very systematically adopted, and the plan has done much to establish peaceful relations between employers and employees. A representative of the Window Glass Cutters' League, testifying before the Industrial Commission in 1900, asserted that the manufacturers had in general been fully as fair in their dealings as the men. In some cases, he admitted, there had been hard struggles over the agreements and strikes had ensued at times, but for the most part they had been avoided by the system of joint agreements. Another witness, formerly connected with the window glass blowers' organization, said that the manufacturers seemed to prefer dealing with the union because uniform conditions of cost as regards labor were thus secured and each manufacturer could compete on more certain terms.<sup>1</sup>

The following is a copy of the agreement of the window glass cutters for the eastern district covering the year 1900-1901. It will be observed that provision is made for arbitration of disputes by the officers of the organizations of employers and employees, with reference to an impartial umpire if necessary. The method of selecting an umpire is especially interesting. Only union men are to be employed.

SCALE OF WAGES AND RULES FOR WORKING OF THE WINDOW GLASS CUTTERS' LEAGUE OF NORTH AMERICA, FOR THE YEARS OF 1900 AND 1901 FOR EASTERN DISTRICT.

1. Manufacturers will not be required to cut sizes 6 x 8 to 12 x 18 double strength.
2. Cutters shall set out a limited number of stock sheets, but the amount of stock sheets set out shall not exceed six (6) one hundred foot boxes. This to apply to both single and double, for any blower, pot, or place, for any one settlement of four weeks, and no cutter shall set out more than six (6) one hundred foot boxes for any blower, pot, or place in any four weeks' settlement during the period of this agreement. All single-strength sheets set out for this purpose must be booked to the blower for what, in the judgment of the cutter, it is worth.
3. No double-strength sheets shall be set out for less than third bracket, third quality, except grinders.
4. Grinder glass.—A limited quantity of poor quality double-strength glass may be set out for the purpose of grinding, obscuring, etching, chipping, etc., but for no other purpose.
5. The amount thus set out and known as grinders, must not exceed ten (10) one hundred foot boxes for any blower, pot, or place for any four weeks' settlement during the period of this agreement.
6. There shall be a settlement every four weeks, and the workmen paid in full not longer than three weeks thereafter.
7. Cutters are instructed to allow an extra light in each fifty (50) foot box of 13½ x 26 and 13½ x 28, that is, twenty (20) lights of 13½ x 28 and twenty one (21) lights of 13½ x 26, in booking in the blower, however, they must be booked in the same brackets as formerly.
8. The following list to govern cutters when setting out single sheets: 36 x 50 to 36 x 52, 8 lights per hundred feet; 36 x 51 to 38 x 54, 7½ lights per hundred feet; 38 x 56 to 40 x 56 7 lights per hundred feet. In setting out double sheets, cutters to be guided by the number of lights in price list.
9. That the manufacturers be compelled to furnish bills of glass made and money earned at least seven days before settlement day.
10. That all cutters must, in setting out sheet glass of all kinds mark on their slips both to the company and the blowers, the number of boxes set out for each blower, pot, or place. They must also specify in what brackets they book their sheet glass.
11. Cutters shall furnish blowers (whether regular or spare,) with a slip of their glass once a week.
12. The manufacturers to employ no cutter who is not a member of Cutters' League. Seven days' written notice to be worked out faithfully before any workman shall be entitled to receive a clearance card, and the manager of the works to assist the preceptor in the enforcement of the clearance card.
13. In case of wilful neglect of duty on the part of the cutter, or drunkenness said workmen subject to immediate discharge.

<sup>1</sup>See Reports of the Industrial Commission, vol. vii, pp. 166-169 of digest, and pp. 43-54 and 922-931 of testimony.

14. The manufacturer of each factory shall adopt a system by which the glass booked can be properly checked, so as to avoid any and all mistakes.
15. It is hereby understood and agreed that in settlement in the western and northern districts, the same latitude difference as now exists shall be maintained, and if any lower wages are made in these districts, or either of them, the same reduction shall be allowed on this scale.
16. The amount of market money to be paid in the eastern district shall be as follows: Cutters shall receive not less than \$15 per week, provided they have the amount earned.
17. Final settlement and payment in full at the end of the fire releases both employer and employee from further engagements.
18. In case of any controversy arising in any factory in reference to wages, rules, or usages, it shall be referred to the chairman of the wages committee for settlement. Should it be necessary to have more than one trade represented the manufacturers shall be allowed an equal number of representatives. They failing to agree a referee shall be selected, and if the arbitrators can not agree on the referee, then each arbitrator shall write two names of disinterested parties not in any way connected with the glass business on slips of paper and all names put into a bag, and the first name drawn out shall be the person selected as the referee. The decision of this committee to be final and binding on all parties. Pending the rendering of a decision by this committee, factories to remain in operation.
19. Cutters must have their glass cut up four days after it is in the cutting room.
20. That the rules and usages of the manufacturers and of Cutters' League be printed for the use of both parties, and be in force at all works.
21. The cutters shall furnish slips giving size and quality of boxes set out as they book their cuttings under the various brackets.
22. Cutters are to be relieved of carrying out glass.
23. Cutters shall receive for single strength 25 cents per 100-foot box, for double strength 40 and 18 100 cuts per 100-foot box, which includes assorting and booking glass to blower.
24. The cutters shall receive price and one-half for all fractional sizes above 14 x 14, excepting 13 1/2 x 20 and 14 1/2 x 25, and double price for all fractional sizes booked 15 x 15 and under, and double price for all sizes under 14 under inches.
25. Cutters shall be paid for number of boxes booked to blower.
26. That the manufacturers deduct from members' wages when requested to do so by the president, secretary, or executive board, and the Window Glass Cutters' League of North America agrees to collect from its members money advanced to them by any manufacturer as market money or otherwise, it evidenced by a written request of said member or members.
27. No cutter shall be allowed to cut more than 25 pots, or 180 boxes of single strength, nor more than 15 pots, or 360 boxes of double strength. The boss cutter shall be directed to see that cutters short in their quantity shall have space cutting in preference to cutter who have their full quota.
28. When a blower makes nine rollers or more in any place other than his own, the glass shall be cut by the cutter who cuts regularly for that place.
29. No person shall serve as boss cutter unless he be a member of Cutters' League.
30. Manufacturers to furnish chalk, oil, and ice for drinking water.
31. No glass shall be cut on Thanksgiving, Christmas, or Decoration Day.
32. No other rules and usages shall govern except those above printed.

## VII. PRINTING TRADES.

1. **Typographical union.**—The varying conditions of the printing trade in different sections of the country make it impracticable to establish national agreements fixing uniform wages, hours, and other terms of employment for all sections and cities. The local unions of the International Typographical Union have long made it a practice to seek to secure written agreements regarding the conditions of labor with individual employers so far as possible. Very recently a system has been established by an agreement between the International Typographical Union and the American Newspaper Publishers' Association by which these local contracts are virtually guaranteed on both sides by the central organization, with provision for arbitration of disputes which may arise under them, so far as the parties agree to accept the arbitration system.

The constitution of the International Typographical Union declares that "Subordinate unions are recommended to adopt a conciliatory method of making important changes in their scale of prices, etc." They "are recommended to annually present their scale of prices for the employers to sign, which scale, when signed, shall be binding on both parties during the year." In practice it seems that these local agreements usually take the form of requests or demands by the union which are conceded and signed by the employers. In other words, they are often agreements by employers to abide by the uniform union scale and rules which the unions establish for each locality. Of course there is likely to be more or less conference between employers and men and mutual concession, in the adoption of scales, especially where employers in a given locality are organized and in a position to bargain more effectively. Wherever such agreements are in force only union men may be employed. The following is a typical form of agreement as regards the exclusive employment of union members:<sup>1</sup>

\* \* \* Witnesseth That from and after Wednesday, March 22, 1899, and for a term of five years ending March 22, 1904, and for such a reasonable time thereafter (not exceeding thirty days) as may be required for the negotiations of a new agreement, the newspaper represented by the said party of the first part binds itself to the employment in its composing room and the departments thereof of

<sup>1</sup> Proceedings of The International Typographical Union, 1899, p. 77.

mechanics and workmen who are members of Chicago Typographical Union No. 16; in its stereotyping room to stereotypers who are members of Chicago Stereotypers' Union No. 4, in its mail room to mailers who are members of Chicago Mailers' Union No. 2, in its photo-engraving department to photo-engravers who are members of Chicago Photo-Engravers' Union No. 5, in its press room to pressmen and assistants who are members of Chicago Newspaper Web Pressmen's Union No. 81 and Chicago Assistant Web Pressmen and Helpers' Union, and agrees to respect and observe the conditions imposed by the constitutions, by-laws, and scales of prices of aforesaid organizations.

It appears that this system of local agreements has done much to improve the relations of employers and employees in the printing trades. It has made the conditions of labor for a given period certain.

Thus, in December, 1900, the several locals of the typographical union in Des Moines, Iowa, made an agreement with the principal employing printers of that city to run for 4 years. A 9-hour day was provided for, with time and one fourth for overtime and time and a half for holidays. Scales of wage for all union employees were fixed, with provision in most cases for an increase in the latter part of the period. Disputes are to be submitted to a standing committee of 2 representatives of the allied printing trades and 2 representatives of the employers. If this committee can not agree in any case, the matter is to be referred to a board of arbitration, of which the representatives of each side choose 1 member and these 2 choose a third.—*Typographical Journal*, January 1, 1901, p. 22.

On the whole, it seems there has been an increasing resort to the practice of adopting agreements. Nevertheless, the system has not been universally introduced in union offices, and even where it exists it has not always been successful in preventing disputes. The secretary-treasurer of the union reported to this commission that "some employers violate agreements whenever they think it to their financial advantage to do so." On the other hand, the president of the Typographical Union admitted at the convention of the organization in 1900 that complaints were sometimes justifiably made of violations of agreements by the local unions. It was largely for the sake of making the local agreement system more effective that the plan of national arbitration was introduced in 1901.

This system of arbitration was established by a joint agreement made by the International Typographical Union and the American Newspaper Publishers' Association. The agreement in full follows:

ARBITRATION AGREEMENT BETWEEN THE AMERICAN NEWSPAPER PUBLISHERS' ASSOCIATION AND THE INTERNATIONAL TYPOGRAPHICAL UNION

Section 1. On and after ———, 1901, and until ———, 1902, any publisher who is a member of the American Newspaper Publishers' Association, employing union labor in any department or all departments, of his office, under an existing contract or contracts, either written or verbal, with a local union, or unions, chartered by the International Typographical Union, shall be protected under such contract or contracts by the International Typographical Union against walkouts, strikes, boycotts, or any other form of concerted interferences with the peaceful operation of the department or departments of labor so contracted for by any union or unions with which he has contractual relations. *Provided*, Said publisher shall enter into an agreement with the International Typographical Union to arbitrate all differences that may arise under said existing verbal or written contract or contracts between said publisher and union employees in said department or departments, in case said differences can not first be settled by negotiation.

Sec. 2. If negotiation between the publisher and a local union fails, then provision must be made for local arbitration. If local arbitration or arbitrators can not be agreed upon, all differences shall be referred, upon application of either party, to the national board of arbitration. In case a local board of arbitration is formed and a decision rendered which is unsatisfactory to either side, then an appeal may be taken to the national board of arbitration by the dissatisfied party.

Sec. 3. In cases of appeal from a local board of arbitration the national board of arbitration shall not take evidence except by a majority vote of the board, but the appellant and appellee may be required to submit record and briefs and to make oral or written arguments (at the option of the board) in support of their several contentions. The parties to the controversy may submit an agreed statement of facts, or a transcript of testimony properly certified to before a notary public by the stenographer taking the original evidence or depositions.

Sec. 4. Pending decision under such appeal, work shall be continued in the office of the publisher, party to the case, and the award of the national board of arbitration shall, in all cases, include a determination of the issues involved, covering the period between the raising of the issues and their final settlement, and any change or changes in the wage scale of employees may, at the discretion of the board, be made effective from the date the issues were first made.

Sec. 5. If, in any case, any number of the newspaper publishers of any city, forming a local publishers' association, enter into contract, verbal or written, with any of the subordinate unions belonging to or affiliated with the International Typographical Union, then and in that case such associations shall enjoy all the rights and be subjected to all the obligations hereby applying to any individual publisher as noted above.

Sec. 6. Employers whose offices are union in all mechanical departments under the jurisdiction of the International Typographical Union, and in whose offices disputes arise affecting one or all of those departments, which can not be settled locally, shall have the right to demand the services of the national board of arbitration. Employers whose offices are union in one or more mechanical departments under the jurisdiction of the International Typographical Union shall have the right to demand the services of the national board of arbitration as to disputes which may arise in any of these union departments, which can not be settled locally.

Sec. 7. Local unions of the International Typographical Union becoming involved in disputes with a publisher concerning the union departments of the offices heretofore described shall have the right to demand the services of the national board of arbitration, if such disputes can not be settled locally.

Sec. 8. The words, "union department" as herein employed shall be construed to refer only to such departments as are made up wholly of union employees, in which union rules prevail, and in which the union has been formally recognized by the employer.

Sec. 9. It is understood that this agreement shall apply to individual members of the American Newspaper Publishers' Association, or local associations of publishers accepting it and the rules drafted hereunder, at least 30 days before a dispute shall arise.

See 10. The national board of arbitration shall consist of the president of the International Typographical Union, and the commissioner of the American Newspaper Publishers' Association, or their proxies, and in the event of failure to reach an agreement, these two shall select a third member in each dispute, the member so selected to act as chairman of the board. The finding of the majority of the board shall be final and shall be accepted as such by the parties to the dispute under consideration.

See 11. In the event of either party to the dispute refusing to accept and comply with the decision of the national board of arbitration, all aid and support to the firm or employer or local union refusing acceptance and compliance shall be withdrawn by both parties to this agreement. The acts of such recalcitrant employer or union shall be publicly disavowed, and the aggrieved party to this agreement shall be furnished by the other with an official document to that effect.

See 12. The said national board of arbitration must act when its services are desired by either party to a dispute as above, and shall proceed with all possible dispatch in rendering such services.

See 13. All expenses attendant upon the settlement of any dispute, except the personal expenses of the commissioner of the American Newspaper Publishers' Association and of the president of the International Typographical Union, shall be borne equally by the parties to the dispute.

See 14. The conditions obtaining before the initiation of this dispute shall remain in effect pending the making of the local or of the national board of arbitration.

See 15. The following rules shall govern the national board of arbitration in adjusting differences between parties to this agreement:

1. It may demand duplicate typewritten statements of grievances.
2. It may examine all parties involved in any differences referred to it for adjudication.
3. It may employ such stenographers, etc., as may be necessary to facilitate business.
4. It may require an affidavit on all disputed points.
5. It shall have free access to all books and records bearing on points at issue.
6. Equal opportunity shall be allowed for presentation of evidence and argument.
7. Investigations shall be conducted in the presence of representatives of both parties.
8. The deliberations of the board shall be conducted in executive session, and the findings, whether unanimous or not, shall be signed by all the members of the board in each instance.
9. In the event of either party to the dispute refusing or failing to appear or present its case after due notice, it may be adjudged in default and findings rendered against such party.
10. All evidence communicated to the board in confidence shall be preserved inviolate and no record of such evidence shall be kept.

See 16. The form of contract to be entered into by the publisher and the International Typographical Union shall be as follows:

#### FORM OF CONTRACT

It is agreed between ——— publisher(s) or proprietor(s) of the ——— of ———, duly authorized to act in its full, part, or the first part, and the International Typographical Union, by its president, duly authorized to act in its full, part, and also in behalf of ——— union(s) of ——— as follows:

That any and all disputes that may arise under the existing contract(s), verbal or written, between ——— publisher(s) or proprietor(s) and the ——— union(s) or any member thereof, now operating in the ——— department(s) of the ——— shall first be settled by conciliation between the publisher and the authorities of the local union, if possible. If not the matter shall be referred to arbitration, each party to the controversy to select an arbitrator, and the two thus chosen to select a third, the decision of a majority of such board of arbitration to be final and binding upon both parties, except as hereinafter provided for.

If local arbitration or arbitrators can not be agreed upon, all differences shall be referred, upon application of either party, to the national board of arbitration, consisting of the president of the International Typographical Union and the commissioner of the American Newspaper Publishers' Association, or their proxies, and if the board thus constituted can not agree it shall be authorized to select an additional member, and the decision of a majority of this board, thus constituted, shall be final and binding upon both parties.

Pending arbitration and decision thereunder, work shall be continued as usual in the office of the publisher party to this agreement, and the award of the arbitrators shall, in all cases, include a determination of the issues involved, covering the period between the raising of the issues and the final settlement, and any change or changes in the wage scale of employees, or other ruling, may, at the discretion of the arbitrators, be made effective from the date the issues were first made.

In case a local board of arbitration is formed and a decision rendered which is unsatisfactory to either side, then an appeal may be taken to the above-described national board of arbitration by the dissatisfied party.

Pending decision under such appeal from a local board of arbitration, work shall be continued as usual in the office of the publisher party to the case, and the award of the national board of arbitration shall, in all cases, include a determination of the issues involved, covering the period between the raising of the issues and their final settlement, and any change or changes in the wage scale of employees may, at the discretion of the board, be made effective from the date the issues were first made.

In consideration of the agreement by the said publisher(s) or proprietor(s) to arbitrate all differences arising under existing verbal or written contract(s) with the ——— union(s), the International Typographical Union agrees to underwrite the said existing contract(s) and guarantees their fulfillment on the part of ——— union(s).

It is expressly understood and agreed that the sections numbered from 1 to 17, inclusive, of the agreement between the American Newspaper Publishers' Association and the International Typographical Union, herewith attached, shall be considered an integral part of this contract, and shall have the same force and effect as though set forth in the contract itself.

This contract shall be in full force and effect from ——— day of ———, 190—, to ——— day of ———, 190—, unless terminated sooner by mutual consent.

In witness whereof the undersigned publisher(s) or proprietor(s) of the said newspaper and the president of the International Typographical Union have herewith affixed their respective signatures this ——— day of ———, 190—.

This covenant between the International Typographical Union and the American Newspaper Publishers' Association shall remain in effect from ——— day of ———, 190—, to ——— day of ———, 190—, unless terminated sooner by mutual consent.

This agreement does not provide for the universal application of the principle of conciliation. It provides virtually for the establishment of a court which may be resorted to by any employer who employs exclusively union men in a given department, or by any union with regard to disputes with employers employing

exclusively union men. It declares that if any publisher shall enter into an agreement with the union to arbitrate all differences that may arise, the International Union shall guarantee the performance of any existing contract or contracts as to the conditions of labor, preventing strikes and boycotts or other forms of interference. The president of the Typographical Union, commenting upon this system, declares that it goes little further than the Typographical Union had gone before.<sup>1</sup> The rules of the union have long contained a provision in favor of arbitration: "When disputes arise between subordinate unions, or subordinate unions and employers, which can not be adjusted after conference between the parties at issue, the matter may be settled by arbitration." "The union has never in the past," continues President Lynch, "guaranteed the contracts of local organizations, but surely no member has favored the breaking of these contracts." There should be no uncertainty as to the validity of the contracts, so far as the action of the national organization is concerned. The president further points out that it should hereafter be necessary for the local contracts to receive the approval of the international officers, in order that the international organization may not bind itself to uphold any agreement of which it disapproves.

The arbitration agreement contains a form of contract which may be entered into by local publishers and the International Union. Under this contract each party agrees, in case any dispute can not be settled by consultation between the publisher and the authorities of the local union, to submit it to arbitration. Each party is to select one arbitrator and the two thus chosen are to select a third. If such local arbitrators can not be agreed on, all differences must be referred, on application of either party, to the national board of arbitration. An appeal may also be made to this board if either party is dissatisfied with the result of local arbitration. The national board of arbitration is to consist of the president of the International Typographical Union and the commissioner of the American Newspaper Publishers' Association, or their proxies. If they fail to reach an agreement these two are to select a third member, and the finding of a majority of the board is to be final.

Pending a decision by the national board of arbitration, work is to be continued in the office of the publisher, and final decision may be made to take effect from the date when the issues first arose. If either party to the dispute refuses to comply with the final decision of the national board of arbitration, all support is to be withdrawn from such recalcitrant employer or union, and his or its act is to be publicly disavowed. There is no other provision for enforcing the awards of arbitrators.

While this agreement was under discussion, prior to the referendum vote of the local unions by which it was adopted, it was pointed out by certain members of the union that the agreement would permit an employer or association of employers to make contracts and provide for arbitration with the compositors alone, excluding the members of the pressmen's organization and of the bookbinders' organization, with which the Typographical Union has an agreement providing for joint action and joint disputes in many cases. It is possible that some difficulty may arise on this account, but a satisfactory solution will probably ultimately be reached, possibly by provision for arbitration on the part of all three of the organizations. In any case, the arbitration agreement was confirmed by the members of the Typographical Union by the large majority of 12,544 to 3,530.

The relations of the Typographical Union with the United Typothetae of America, the great organization of master printers, which includes especially book and job printing offices, aside from newspapers, are less friendly than with the American Newspaper Publishers' Association. It is true that in 1898 a joint committee of the Typothetae, of the International Typographical Union, the International Printing Pressmen's and Assistants' Union, and the International Brotherhood of Bookbinders met at Syracuse and entered into an agreement regarding the hours of labor. This agreement provided that from November 21, 1898, to November 21, 1899, the employers belonging to the organization would require only 57 hours of labor per week, and after November 21, 1899, 54 hours per week. The committees of the workmen's organizations, in return for this concession, agreed to attempt to equalize the scale of wages in the competitive districts where there were at that time serious inequalities. It appears, however, that the Typothetae are disposed to antagonize organized labor in general rather than to deal with it in a conciliatory manner.

**2. The International Printing Pressmen's and Assistants' Union.**—This organization follows the example of the Typographical Union, from which it was originally formed, in securing local agreements with employers regarding the conditions of

<sup>1</sup> See Typographical Journal, March 1, 1901.

labor, and practically all that has been said with regard to such local agreements in the case of the Typographical Union applies to this organization as well. As yet the pressmen have made no general provision of a national scope for arbitration.

The constitution forbids any local union or member to enter into negotiations in the name of the international union for the purpose of making any contract which will affect its interests, without the sanction of the board of directors. It is further declared that all contracts or agreements which encroach upon or surrender "any of the powers or rights claimed by or vested in the I. P. U. and A. U., or which may be detrimental to the interests or welfare of any union deriving its charter from this international union, or individual affiliated with the same, is hereby declared null and void." But the restriction on the making of agreements is explained not to apply to negotiations as to the adoption of a scale of wages.

The pressmen undertake to enforce agreements with employers by providing that whenever a subordinate union or its representative agrees upon a basis of settlement for a strike, lockout, or any other difference with employers, and the union fails or refuses for 2 weeks to proceed on the basis agreed on, the international president "may proceed to a final settlement," and if the union does not abide by the terms so agreed on it may be disciplined as the president may direct. There is an appeal in such cases to the board of directors but none to the convention or the general membership.

The president, in his report to the convention of 1900, gave an account of a difficulty in St. Louis in which one of the local unions, after agreeing to arbitrate, refused to abide by the decision. "Realizing the fact that no labor organization could afford to stultify itself by refusing to abide by an arbitration fairly entered into," he undertook to investigate and settle the matter. He found that the union "had been most unfortunate in their selection of an arbitrator, as the individual chosen was utterly ignorant of the technical and mechanical features of their work, also, being somewhat involved in politics, was appreciative of the fact that the good will of the newspapers was a good thing to have. Anyhow, every point that the men had contended for was given away by the arbitrator whom they had selected to represent them, with the result that they could scarcely be blamed for refusing to abide by it." The president succeeded in having the matter reopened and in arranging a compromise, which was agreed to by both parties.<sup>1</sup>

**3. Lithographic trade.**—The secretary of the Lithographers' International Protective and Beneficial Association reports that the attitude of employers toward the organization is usually friendly, but that no general effort is made to obtain specific written agreements. "There is a written agreement concerning the union label in Chicago, and written agreements are sometimes made at the end of a strike. Differences with employers are habitually settled by direct negotiation between union officers and either individual employers or officers of employers' organizations. There are no formal boards of conciliation or arbitration, though the secretary considers that such a system might be advantageous.

The constitution of the Lithographers' Union formerly contained a provision relating to arbitration, but it was stricken out in 1897, after the death of the employers' body, known as the National Lithographers' Association. The president, recommending this action under existing circumstances, adhered to the principle of arbitration, and said: "If a satisfactory agreement can be arrived at, in any, or, for that matter, all of our cities, whereby the question in dispute will be referred to arbitration, it seems to me a progressive step to accept it."

## VIII. LONGSHOREMEN.<sup>2</sup>

**1. Organization of Longshoremen.**—The workers on the docks of the Great Lakes are quite generally organized into the International Longshoremen's Association, although this body has comparatively little strength as yet along the coast of either ocean. The organization of longshoremen on the Great Lakes is a comparatively new thing, but it has already resulted in great improvements in the conditions of labor and in the character of the workmen themselves. An evidence of the conservatism and strength of the International Longshoremen's Association is found in the fact that the leading employers on the lakes recognize the organization and make formal contracts with it. The constitution of the association cautions all local unions not to make exorbitant charges for their work, and

<sup>1</sup> American Pressman, September, 1900, p. 48.

<sup>2</sup> See also testimony of Mr. Henry C. Barter, secretary of the Longshoremen's Association, in reports of Industrial Commission, vol. IX, p. 306.

to employ all honorable means to effect peaceful settlement of disputes before striking.

**2. Agreements with ore and coal dock managers.**—According to the testimony of the secretary of the Longshoremen's Association before the Industrial Commission, it has either a written agreement or a general understanding regarding the conditions of labor with the dock managers in practically all of the lake ports. The most extensive and important of these agreements are those regulating the handling of ore and coal at the Lake Erie ports. In March, 1900, for the first time, a conference was held between the leading dock managers of Lake Erie and the representatives of the International Longshoremen's Association, and an agreement was reached regarding the conditions of labor for the navigation season. Similar conferences were held in the fall of 1900 to adopt joint agreements regarding labor on the docks in the winter months when large amounts of ore stored at the ports are shipped away by railroad. Again, in March, 1901, a conference adopted a "summer agreement" for the year. It appears probable that the system is thus fairly well established, and that it is likely to be extended. There is no formal organization of the joint conferences, and the agreements are as yet comparatively simple. The principle of arbitration of disputed questions has been introduced, however, and it seems probable that the system will more and more tend to maintain friendly relations between employers and employees in the ports of the Great Lakes.

The managers of the coal and ore docks on the lower Lake Erie ports are organized into the Dock Managers' Association, which includes members from Sandusky, Lorain, Huron, Cleveland, Fairport, Conneaut, Ashtabula, and Toledo, Ohio; Erie, Pa., and Buffalo, N. Y. The first conference between the officers of this association and the International Longshoremen's Association was held in March, 1900, and lasted 11 days. The representatives of the workmen were chiefly from the local unions of coal and ore handlers in the Lake Erie ports, but the general officers of the International Association also took part. An agreement was finally reached covering the season of navigation of 1900. It provided separate scales of wages and regulations for the conditions of labor of the ore shovellers and trimmers, the coal handlers and other workmen on coal docks, and the hoisters and engineers. The general agreement, applicable to all these classes of workmen, provided that labor not specified in the separate schedules should be advanced 16½ per cent above the closing rates of 1899. The managers also agreed to employ exclusively members of the local unions of longshoremen whenever such members satisfactory to the dock managers could be provided, although in case of shortage other persons might be employed. As a matter of fact, in most ports where the Longshoremen's Association is strongly organized the old system of stevedores or contractors for loading and unloading vessels has been done away with and the members of the union work directly for the dock managers or the vessel owners. This method virtually takes the form of a cooperative contract. The local union arranges to load or unload the vessel, charging so much per ton, and divides the proceeds among the members of the union who are engaged in the work, while the different members are allowed work in rotation.

Another important feature of the agreements between the Longshoremen's Association and the Dock Managers' Association is the provision for arbitration of disputed points. Clauses of the summer agreement of 1900, which have been reproduced in the winter agreement of 1900 and the summer agreement of 1901, provide that, in the case of unusual work not covered by the terms of the agreement, the compensation shall be adjusted by the representatives of the local organization or organizations and the dock managers, with arbitration of the differences if they can not agree. In the event of any controversy arising from such a cause or for any other reason, work shall continue and the differences shall be settled in an amicable manner. If possible, the representatives of the local organization of longshoremen and of the dock managers shall reach a settlement. Failing to do so, the respective representatives shall choose a third person and the three shall constitute a board of arbitration. If the respective representatives can not agree upon a third man then each party shall choose a disinterested man and these two shall choose a third. The decisions of boards of arbitration thus constituted, by a majority vote are to be final.

Testifying in February, 1901, the secretary of the International Longshoremen's Association asserted that under the terms of these agreements practically all disputes had been settled by friendly negotiation between the local organizations and the local dock managers, resort having been taken to arbitration in only a single instance. Strikes have been entirely prevented in the ports covered by the agreement system. The full text of the general joint agreement of 1901, together

with the special clauses regulating the labor of ore shovelers and trimmers, which may be taken as typical of the other detailed provisions, follow:

Agreement made and entered into at Cleveland, Ohio, the fifteenth day of March, 1901, by and between the International Longshoremen's Association, by its officers duly authorized and the respective local organizations thereof, by their duly authorized representatives, who have attached their names to this agreement as first party, and the Dock Managers, owning docks at the lake ports, who have attached their names to this agreement as second party.

#### WITNESSETH

1. This agreement is made for the season of navigation of 1901.

2. There are attached hereto as a part of this agreement, schedules of wages marked Exhibits "A," "B," "C," "D," and "E," and made part hereof. Said schedules of wages and all provisions therein contained are to be respected by all the parties hereto, and are hereby agreed to for the year 1901, as set forth in said respective schedules.

The scale of wages for hoisters and engineers to begin, as stated in the schedule relating thereto, on May 1st, 1901.

3. All employees employed by the Dock Managers for the purpose of performing the work set forth in the schedules hereto attached shall be members of the local organizations, whenever such men can be had who can perform the work as called for in the contract, when such men can not be had, the Dock Manager is to have the right to secure any other men who can perform the work in a satisfactory manner until such time as members of the International Longshoremen's Association can be secured, that no man shall be discharged without just cause and be notified of the cause of the discharge.

4. The Dock Managers or Owners shall at all times give to the men interested an opportunity to inspect bills of lading or orders for receiving cargoes for the purpose of learning or verifying the tonnage to be loaded or unloaded.

5. It is understood that occasionally, when any unusual work arises in isolated cases not covered by this agreement the men when called upon, shall perform such labor, and the compensation therefor shall be determined and adjusted between the representatives of the local organizations and the Dock Managers or Owners, and in the event of any disagreement, shall be arbitrated as hereinafter provided for the arbitration of differences, controversies or grievances.

6. All it is not mentioned in this contract or the schedules hereto attached shall be performed, and all payments shall be made for work done under this agreement in accordance with the usual custom in port of the prevailing upon the respective docks.

7. In the event of any controversy arising between the men or local organizations and the Dock Manager or Owners, or in the event of any of the men or local organizations having any grievances, the men shall continue to work, and any and all such controversies and grievances shall be settled, if possible, by the representative of the local organization and the representative of the Dock Managers or Owners. If such controversies and grievances can not be so settled, then they shall be arbitrated, by choosing a third disinterested man upon whom the representative of the local organization and the Dock Managers shall agree, and the decision of any two shall be final. If the representative of the local organization and the representative of the Dock Managers or Owners can not agree upon a third man, then each side shall choose a disinterested man and the two disinterested men thus chosen to choose a third disinterested man, and said three men shall constitute a board of arbitration, and their decision of majority of said three shall be final and all parties shall abide thereby.

8. It is expressly agreed that said arbitration board shall meet within ten days after the occurrence of the difference requiring arbitration.

9. It is distinctly understood between the Dock Managers and the representatives of the International Longshoremen's Association that no beer, whiskey, or other intoxicating liquors shall be brought upon the property of the Dock Managers.

10. It is also distinctly understood that no men in an intoxicated condition or under the influence of liquor shall be permitted upon the premises of the Dock Managers.

11. That none of the companies' employees employed by the hour or month shall be permitted to leave the dock during working hours without permission, nor tonnage men when labor is to be performed.

12. Pure and fresh drinking water with oatmeal and rice shall be provided on the dock where the men are employed.

13. When a Local at any dock quits or refuses to work on a vessel, it shall be considered a violation of contract and the vessel may be sent to any other dock or port governed by this agreement, where she shall be discharged or finished under the rules of this contract in the same manner as though she had originally been consigned there, and the men so finishing the cargo shall receive the entire pay for discharging or loading all of the cargo of said vessel and the men so refusing to work on said vessel shall be discharged, with the provision that this section applies only to docks covered by this agreement.

#### EXHIBIT A

We, the representatives of the Locals of Ore Shovelers, do hereby agree and accept the scale and conditions for the navigation season of 1901.

1st. From the opening of navigation to September 15th twelve hours shall constitute a day's work, and from September 15th to the close of navigation eleven hours shall constitute a day's work.

2d. That the price to be paid for unloading ore, pig iron, limestone, and alabaster rock from vessels shall be 13 cents per ton.

3d. That 25 cents per hour shall be paid for overtime.

4th. That the price that shall be paid for loading ore from dock by machine shall be 7 1/2 cents per ton at all ports, except T. and O. C. Dock, Toledo, where 10 cents shall be paid.

5th. That the price that shall be paid for loading ore from dock by hand shall be 9 1/2 cents per ton, except at Sandusky, 12 cents, and T. and O. C. Dock, Toledo, 11 cents.

6th. That the price that shall be paid for transferring ore and pig iron from cars to dock shall be 19 cents per hour.

7th. All day work shall be paid for at the rate of 19 cents per hour, overtime 25 cents per hour additional.

8th. That gang bosses shall be selected by the superintendent of the dock. It is understood that they be members of the I. L. A.

9th. Where vessels come to the dock with water in the hold, and it is necessary for some men to lay off on account of water, such men shall be paid at the rate of 50 cents per hour until such water is freed, the understanding being that no boat shall be considered wet unless the water is 1 1/2 inches deep in the center of the majority of the hatches being worked, after room has been made to take

care of three buckets on the bottom; and where boat is being worked on the wing, water must average 4 feet or more from the wing before any action shall be taken in regard to vessel being considered wet. The idle men shall be distributed over batches to enable vessel to work to the best advantage. The men shall return to work at regular rate as soon as water is below skin. Where it is impossible to free a vessel from water in two hours after the water has been discovered, double tonnage shall be paid on balance of cargo.

10th. Legal holidays shall mean Decoration Day, Fourth of July, Labor Day, and Thanksgiving Day. No other holidays to be recognized.

11th. That there shall be no work on Sundays or legal holidays unless vessels are in a wrecked condition and water in the hold, and then double tonnage shall be paid and overtime at the rate of 25 cents per hour to each man employed.

12th. In cases where men are taken from the boat when working in vessel to load cars on dock, they shall receive the same scale as earned on the boat.

13th. The turn of the gangs shall be as follows: First gang unbolled shall be first gang in. The time to be taken by the superintendent of the dock or his representative, as to the finishing of the vessel. His decision shall be final and binding on the gang.

14th. That 25 cents per hour shall be paid to the gang doing the work for moving machinery over turntable from the time first leg gets within 100 feet from turntable until last leg has passed over turntable.

15th. At all ports where business of the dock is greater than day gang can handle, double shifts can be worked at the regular scale of wages for day work.

16th. Overtime shall be worked on all docks where required by the superintendent.

**3. Agreement with Buffalo grain elevators.**—There is another important organization of employers on the Great Lakes, known as the Lake Carriers' Association, which has to do not only with the operation of vessels, but also with the management of the docks in some instances, especially in the handling of grain at Buffalo. There have been various difficulties at Buffalo as to the management of labor upon the grain docks and in the grain elevators. The workmen especially opposed the continuance of the old contract system under which many abuses had arisen. There was a prolonged strike on this account during 1899, in which through the mediation of ex-Congressman Rowland B. Mahany, of Father Cronin, and of Bishop Gungley, of Buffalo, and with the aid of the international officers of the Longshoremen's Association, an agreement was finally reached which virtually made the Longshoremen's Association the contractor for the handling of grain at Buffalo during the season of 1900. Under this agreement, Mr. T. W. Kennedy was appointed superintendent of grain shoveling, as an employee of the Lake Carriers' Association; and boss scoopers, taking the place of the old contractors, were made appointable by Mr. Kennedy in conference with the president of the local union, with provision for reference to Mr. Keefe, president of the Longshoremen's Association, in case of failure to agree. The agreement further provided that the workmen should be paid \$2 per thousand bushels of grain, except for Sunday work, when the price should be \$3 per thousand bushels. It was understood, although not definitely stated in the agreement, that only union men should be employed, a clause providing that the International Longshoremen's Association should at all times furnish a sufficient number of men to handle the business offered. As throwing light upon the previous conditions of employment, under the stevedore system, the following section of the agreement is interesting: "It is further mutually understood by and between both parties that no saloon or political influences shall be allowed or practiced by representatives or the employees of either party."

The agreement at Buffalo for the season of 1901 provided that only union men should be employed, if they could be obtained, and established a system of arbitration, in case of disputes, similar to that under the ore-handlers' agreement.

A movement is also on foot to secure a general agreement establishing uniform conditions of labor, so far as practicable, in the handling of package freight along the Great Lakes. Indeed, the general effort of the International Longshoremen's Association seems to be to extend the system of joint agreements and to make uniform agreements covering labor of a given class in all the different ports.

**4. Agreement with lumber carriers.**—The longshoremen have also an agreement with the organization of lumber carriers, covering the loading of lumber. The following are its chief provisions:

ASHLAND, WIS., Feb. 26th, 1901

Memorandum of agreement by and between the Lumber Carriers' Association of the Great Lakes, and the Lumber Loads of Lake Superior. The agreement being made to cover the loading of all lumber, bldg and shingles, and such other commodities as being understood under the head of "Forest Products" for the year of 1901, on boats of the said Lumber Carriers' Association.

#### ARTICLE I

The captain shall have the privilege of hiring and discharging men, providing he has just cause, always giving union men the preference. Whenever there are not union men enough, the captain shall have the privilege of hiring non-union men, excepting in cases where union men have been discharged or refused work on the same condition, then only union men can be hired. There shall be no restriction placed by the Longshoremen upon the amount of work each man shall perform.

## ARTICLE II

In all cases of dispute the loading of the boat shall continue uninterruptedly, and the matter in question shall be referred to arbitration. The president of the Lumber Carriers' Association shall represent the vessels, and the president of the International Longshoremen's Union shall represent the Longshoremen.

## ARTICLE III

The rate of wages shall be fifty (50) cents per hour for the entire season of 1900.

**5. Agreements with individuals.**—As an illustration of the policy of securing agreements with individual employers, in the absence of general agreements, may be mentioned the agreement between the local union of the Longshoremen at Sheboygan, Wis., and the C. Reiss Coal Company of that city for the season of 1900. This provides for the exclusive employment of union men, fixes the hours and wages, and requires that disagreements which can not be satisfactorily adjusted shall be referred to arbitration, each party to appoint two arbitrators and these to select a third. (See proceedings of the Ninth Annual Convention of the International Longshoremen's Association, pp. 13-23.)

IX.—THE POTTERY TRADE.<sup>1</sup>

The pottery business in the United States is confined to a few centers, especially Trenton, N. J., and East Liverpool, Ohio, and the surrounding region. The workmen are quite strongly organized. Most of them have, for several years, belonged to the national organization known as the National Brotherhood of Operative Potters. The manufacturers in the various localities and throughout the country are also associated more or less firmly. The conditions of labor in the separate pottery centers have for a long time been determined largely by negotiations between committees of the unions and the manufacturers acting collectively. In 1900 an attempt was made to establish a uniform agreement regarding the conditions of labor with a uniform wage scale for the entire country. A conference was held at Pittsburg between the representatives of the National Brotherhood of Operative Potters and manufacturers representing practically the entire industry. This conference was not conducted under any formal rules, or by virtue of any agreement for the establishment of a permanent system of collective bargaining, nor did it formally establish such a permanent system. A general agreement as to conditions of labor was adopted. This was, however, unsatisfactory to most of the workmen in the Trenton potteries, and they broke away from the national organization altogether. It appears that wages have in general been higher in Trenton than in East Liverpool and other more Western centers of the pottery industry. The manufacturers in the East complained that they were unable to compete on an equality because of the higher wage scale. One Trenton pottery workman testified before the Industrial Commission that the wage scale for making a certain class of articles in East Liverpool was 5½ cents per dozen while in Trenton the rate was 11 cents. The uniform wage scale adopted by the conference above described represents, therefore, a lowering of the wages of most, if not all, classes of pottery workmen in the Trenton establishments.<sup>2</sup>

The general agreement of 1900 contains piece rates for many hundreds of articles. It further provides that the rate of day wages for dish makers working on machines shall be \$3 per day, and for jiggersmen the same, or for workmen using the larger jiggers \$3.50. Wages are not, however, ordinarily paid on the per diem basis, and with regard to some classes of workmen the scale particularly provides that day wage rates shall apply only pending the settlement of piece prices. The only other important matter regulated by the agreement is the employment of apprentices. In the dish-making branch of the trade there shall be 1 apprentice to every 3 journeymen, who shall serve 5 years. When new men are put on as jiggers they shall be selected from among the jiggersmen's helpers, and shall be paid regular journeymen's wages. In the case of kiln work, the agreement provides that when it becomes necessary to put on an apprentice he shall serve 3 years. The first 6 months he shall be paid \$1.25 per day, the second year, \$1.50 per day; the last year, 15 per cent less than journeymen's wages. Not more than 1 apprentice is allowed to 8 journeymen, but when a scarcity of kiln

<sup>1</sup> See testimony of pottery manufacturers and operatives of Trenton, Reports of Industrial Commission, Vol. XIV, pp. 636 ff.

<sup>2</sup> The uniform wage scale adopted by the National Brotherhood of Potters and the manufacturers in 1900 is printed in full in Vol. XIV of the reports of the Industrial Commission, p. 613.

men exist, the manufacturers are given the privilege of putting on an additional apprentice who shall be paid regular journeymen's rates, while the excess of these rates above his wages as a regular apprentice is to be divided among the kiln men of the crew for the first year. This concession is made with the understanding that the kiln men are to be responsible for the instruction of the apprentices.

Two witnesses representing the Trenton pottery workmen maintained before the Industrial Commission that it was perfectly justifiable for them to break away from the national organization and to deal with the local manufacturers exclusively, but another took opposite ground. It appears that the conditions of labor in the Trenton establishments are generally determined by conferences of an informal nature. The organizations of the different classes of workmen are not of equal strength, and the different organizations act to a large extent independently of one another.

A representative of the Trenton pottery manufacturers stated that nearly all disputes of an ordinary character in the pottery trade of that city were settled by conferences between committees of the union on the one hand and the individual manufacturers on the other hand. If, however, a dispute can not be thus adjusted, it is ordinarily referred to a committee of the manufacturers' organization in conference with a committee of the local union. The matter is usually adjusted by conciliation and compromise, rather than by arbitration.

## CHAPTER II.

### LOCAL COLLECTIVE BARGAINING; AGREEMENTS AND ARBITRATION.

#### I. BRICKLAYING TRADE.

**1. Agreements and arbitration generally.**—Perhaps more has been accomplished in the way of establishing peaceful relations between employers and employees in the bricklaying trade than in any other of the building trades. It is impossible to know to whom to assign the chief credit for this fortunate condition of affairs. Probably representatives of both employers and workmen have contributed toward promoting the establishment of such friendly relations. The most thoroughgoing system of collective bargaining and arbitration in the bricklaying trade is that in Boston, which owes its origin, at least in part, to the efforts of Mr. W. H. Sayward, who has been for many years the secretary of the Mason Builders' Association of Boston and vicinity.<sup>1</sup> The system of joint agreements in Boston dates from 1886. Largely through the influence of Mr. Sayward the National Association of Builders was organized in 1887, the chief purpose of which was to further friendly relations between employers and employees in the building trades. This organization recommended a form for joint agreements between local organizations of employers and employees, providing for arbitration of disputes. This form has been adopted in its entirety by the Mason Builders' Association of Boston and certain labor organizations in that city. (See below.) The National Association of Builders, however, has not grown or greatly extended its system of arbitration directly. It has undoubtedly exercised no little influence in various cities in furthering the establishment of local organizations and the joint agreement and arbitration system, but the traces of its work are not always distinctly visible, and the extension of the joint agreement and arbitration system is by no means altogether due to the efforts of this employers' organization. It seems that the officers of the Bricklayers' and Masons' International Union have also for a considerable number of years been disposed to favor peaceful methods of dealing between employers and employees. Doubtless the success of the arbitration system in Boston has had something to do with the favor with which the bricklayers' union has looked upon these methods.

The constitution of the Bricklayers' International Union adopted in 1893, contained a recommendation, amounting practically perhaps to a decree, that subordinate unions should adopt laws providing for boards of arbitration. The constitution as now in force is more imperative. Its provisions deserve quotation in full:

<sup>1</sup>See testimony of Mr. Sayward, Reports of Industrial Commission, vol. vii, pp. 841-860.

## ARTICLE X

SECT. 6. *Agreements and arbitration*.—Desiring to keep pace with the progress of the times after profit-  
ing by many years of experience, and believing that most all labor troubles can be settled and  
rectified through the channels of reason and conciliation without having recourse to strikes, the  
International Union ordains that all subordinate unions under its jurisdiction must embody in their  
constitution or by laws a general law, providing for a form of agreement with employers, and the  
establishment of a joint committee of arbitration for the purpose of establishing a means whereby all  
questions in dispute between themselves and employers can be peacefully settled.

2. The form and nature of such agreement shall govern such matters of interest as is most likely to  
form subjects of dispute, such as the regulation of the rate of wages per hour for general work, the  
rate per hour for extra or overtime, specifying the rate and hours for such, the rate for holidays, and  
specifying the same, the number of hours worked per day, the government and regulation of apprentices  
and such other questions or rules as may be of joint benefit to employers and employees represented  
by such agreement. Such agreement shall remain in effect and force for one year from date  
agreed upon or until changed by subsequent agreement. All questions to be settled by this committee  
must be referred to it without being exclusively acted upon independently by either association.

3. The formation of these articles of agreement shall be the work of the joint committee of arbitration,  
which committee shall consist of not less than three members from each of the associations  
represented, and it should be expressly agreed that all questions pertaining to the mason trade  
should be settled by those connected therewith, and none others, and it shall consider all matters of  
mutual interest to employers and workmen as may be referred to it, and its decisions and findings  
shall be conclusive and binding upon all parties concerned.

4. It should also be understood and agreed upon by both parties that pending all differences sub-  
mitted to the committee for action that work shall proceed without stopping. The subordinate  
unions shall, in their laws, specify when the members of this joint committee shall be elected, state  
their duties, and they shall be governed by such rules of procedure as such joint committee may  
adopt for its government.

It will be seen that the constitution provides for the formation, wherever possible,  
of annual agreements by joint committees of not less than 3 members on  
each side; and that pending settlement of differences, either those relating to the  
adoption of agreements or those arising under agreements, work shall proceed  
without stopping. Of course it may readily happen that the employers will refuse  
to negotiate or will break off negotiations before an agreement is reached, in  
which case a local strike is legitimate.

In reply to a schedule of questions sent out by the Industrial Commission the  
international secretary of the Bricklayers' Union states that this system of annual  
agreements has been quite generally introduced and has worked very satisfactorily.  
In nearly all places employers recognize the unions and deal with them in a  
friendly manner. Occasionally where new unions have just been organized, and  
where the system is not thoroughly understood, friction arises; but when once it  
has been understood it is usually supported by the employers as much as by the  
unions. The effect, continues the secretary, in preventing strikes and promoting  
harmony has been most beneficial. There have been few open violations or secret  
evasions of the terms of these agreements, and those mostly on the part of unscrup-  
ulous individuals rather than of the parties as organizations. The secretary  
declares that there have been during the past few years a few strikes of a local  
nature, but that these have been invariably settled after a short time by concilia-  
tion and arbitration. The employers are satisfied with the agreement system  
because a uniform rate of wages is established which all must pay, so that con-  
tractors can estimate fairly what their competitors can do, in making bids for the  
construction of buildings. (For a further account of strikes in this trade and of  
the methods of the international officers regarding negotiations with employers  
see this volume, p. 121.)

The agreements in the bricklaying trade are almost all with associations of  
employers rather than with individuals. They usually continue for a year. They  
prescribe the rate of wages, hours of labor on full days and on Saturdays, the time  
of payment, the rights of the officers of the unions to visit men employed, etc.  
It is a very frequent clause of the agreement that only union men shall be  
employed by the contractors. It is often also provided that no laborer shall be  
allowed to do any mason's work in any manner. In not a few cases the members  
of the union have agreed to work for no employer who is not a member of the  
contractors' association, and to use all efforts to prevail upon contemplating  
builders to recognize only union contractors. In March, 1900, however, the exec-  
utive board sent a circular to the local unions declaring strongly against this  
practice. The board declared that it had rejected all such agreements, and would  
reject all that might be forwarded to it in the future. It is said that the audacity  
of the masters' associations in making such demands "is simply monstrous, and  
the union that enters into such an agreement is equally guilty of the crime of  
union wrecking and attempted slavery."

Practically all of these local agreements contain provisions that there shall be  
no strike before attempt at settlement by a joint arbitration committee has been  
made. All matters of dispute are to be brought before this arbitration committee.  
Often the agreements also contain provisions for their own renewal by negotia-

tions between these joint committees. The committees usually consist of 3 or 5 members representing the union, and an equal number representing the employers' association. In no instance outside of Boston and Chicago, so far as can be ascertained, is there a provision for the reference of matters as to which these joint committees can not agree to an outside party as umpire. The policy of the Bricklayers' Union is distinctly to settle differences by negotiation between those actually interested in the craft. Difficulties which the local joint boards can not settle are usually brought to the attention of the national executive board, which in most instances succeeds in bringing about a settlement. The policy of the union in regard to the settlement of disputes by members of the trade is clearly shown by a provision in the constitution that, so far as possible, questions involving only stone masons shall be settled by persons connected with that branch of the craft only.

**2 Joint agreement and arbitration system in Boston.**—The following is the form of arbitration agreement recommended by the National Association of Builders, which has been adopted by the Mason Builders' Association of Boston, in its agreements with the Bricklayers' Unions of that city, the Stone Masons' Union, the International Union of Steam Engineers and the Building Laborers' Union:

FORM OF AGREEMENT ADOPTED AND RECOMMENDED BY THE NATIONAL ASSOCIATION OF BUILDERS TO SECURE THE ESTABLISHMENT OF ARBITRATION COMMITTEES, WITH PLAN OF ORGANIZATION OF THE SAME, FOR THE USE OF ASSOCIATIONS OF EMPLOYERS AND ASSOCIATIONS OF WORKMEN IN ALL BRANCHES OF THE BUILDING TRADE.

#### AGREEMENT

For the purpose of establishing a method of peacefully settling all questions of mutual concern [name of organization of employers] and [name of organization of employees] severally and jointly agree that no such question shall be conclusively acted upon by either body independently, but shall be referred for settlement to a joint committee, which committee shall consist of an equal number of representatives from each association, and also agree that all such questions shall be settled by our own trade, without intervention of any other trade whatsoever.

The parties hereto agree to abide by the findings of this committee on all matters of mutual concern referred to it by either party. It is understood and agreed by both parties that in no event shall strikes and lockouts be permitted, but all differences shall be submitted to the joint committee, and work shall proceed without stoppage or embarrassment.

The parties hereto also agree that they will incorporate with their respective constitutions and by-laws such changes as will make recognition of this joint agreement a part of the organic law of their respective associations. The joint committee above referred to is hereby created and established, and the following rules adopted for its guidance:

#### ORGANIZATION OF JOINT COMMITTEE AND RULES FOR ITS GOVERNMENT

1. This committee shall consist of not less than six members, equally divided between the associations represented, and an umpire, to be chosen by the committee at their annual meeting and as the first item of their business after organization. This umpire must be neither a journeyman craftsman nor an employer of journeymen. He shall preside at meetings of the committee when necessary.

2. The members of this committee shall be elected annually by their respective associations at their regular meetings for the election of officers.

3. The duty of this committee shall be to consider such matters of mutual interest and concern to the employers and the workmen as may be regularly referred to it by either of the parties to this agreement, transmitting its conclusions thereon to each association for its government.

4. A regular annual meeting of the committee shall be held during the month of January, at which meeting the special business shall be the establishment of "working rules" for the ensuing year, these rules to guide and govern employers and workmen, and to comprehend such particulars as rate of wages per hour, number of hours to be worked, payment for overtime, payment for Sunday work, government of apprentices, and similar questions of joint concern.

5. Special meetings shall be held when either of the parties hereto desire to submit any question to the committee for settlement.

6. For the proper conduct of business, a chairman shall be chosen at each meeting, but he shall preside only for the meeting at which he is so chosen. The duty of the chairman shall be that usually incumbent on a presiding officer.

7. A clerk shall be chosen at the annual meeting to serve during the year. His duty shall be to call all regular meetings, and to call special meetings when officially requested so to do by either body party hereto. He shall keep true and accurate record of the meetings, transmit all findings to the association interested, and attend to the usual duties of the office.

8. A majority vote shall decide all questions. In case of the absence of any member, the president of the association by which he was appointed shall have the right to vote for him. The umpire shall have casting vote in case of tie.

#### CLAUSES TO BE INCORPORATED WITH BY-LAWS OF PARTIES TO JOINT AGREEMENT

A. All members of this association do by virtue of their membership recognize and assent to the establishment of a joint committee of arbitration (under a regular form of agreement and governing rules), by and between this body and the ———, for the peaceful settlement of all matters of mutual concern to the two bodies and the members thereof.

B. This organization shall elect at its annual meeting ——— delegates to the said joint committee, of which the president of this association shall be one, officially notifying within three days thereafter the said ——— of the said action and of the names of the delegates elected.

C. The duty of the delegates thus elected shall be to attend all meetings of the said joint committee, and they must be governed in this action by the rules jointly adopted by this association and the said ———.

D. No amendments shall be made to these special clauses A, B, C, and D, of these by-laws, except by concurrent vote of this association with the said ———, and only after six months' notice of proposal to so amend.

This agreement, which is a permanent one, not annual, provides that there shall be no stoppage of work in case of disputes, but that all differences shall be submitted to the joint arbitration committee. This committee shall consist of not less than 6 members equally divided between the associations represented. In the case of the agreement with the bricklayers' unions, there are 10 members of the joint committee. An umpire is to be chosen by the committee itself annually. In practice he is called in only where the other members of the committee fail to agree. The committee acts by majority vote. It is especially important to observe that this permanent agreement specifically provides for the adoption of annual agreements fixing the detailed conditions of labor by negotiation of the joint committee itself. One of the chief weaknesses of the joint-agreement system ordinarily is that each agreement lasts for a single year only, and contains no provision for its own renewal by conciliatory methods.

Another important provision of the Boston agreement is that all questions shall be settled by the trade itself without intervention of any other trade. This excludes the sympathetic strike. Mr. Sayward, secretary of the Mason Builders' Association, testified before the Industrial Commission that while the association had been unable to induce other organizations of employers and employees in Boston to introduce the arbitration system, the refusal of the important trades which have joint agreements with the mason builders to enter into sympathetic strikes has virtually done away with the sympathetic strike altogether in the building trades, and has done much to promote harmony in the relations of employers and employees in all of the trades.

As a result of this system of joint agreements, there have been no strikes in the bricklaying trade in Boston for fully 15 years. Representatives of both employers and employees in the trades covered by this agreement system speak very highly of it.<sup>1</sup> They say especially that the bringing together of employers and employees in friendly conference has increased the respect of each for the other, and has introduced a spirit of conciliation which makes it very improbable that any dispute will arise as to which the parties fail to agree. It has happened in only three instances in the past that the joint committees have failed to reach an agreement within themselves, and in those instances the decisions of the umpire were loyally accepted. For 3 years Mr. John D. Long acted as umpire, for 2 years Mr. William Lloyd Garrison, for 2 years the Rev. Edward Connelly, a Catholic priest, for the last year or more Mr. George S. Adams, judge of one of the superior courts. Mr. Long was never called in during the 3 years of his service. Mr. Garrison had to settle one dispute, as to raising the wages of the bricklayers from 40 cents to 42 cents an hour. He decided in favor of the workmen, partly on Mr. Sayward's recommendation. Mr. Connelly had to decide one similar question, and he also decided in favor of the workmen. Judge Adams has had one question to decide, relative to a demand by the hoisting engineers for a large increase of wages. He decided against the workmen, largely on the ground that their demand was made so late in the year that the employers were already bound by many contracts based upon the existing rate of wages.

The following is a copy of the rules adopted by the joint committee on arbitration of the Mason Builders' Association and the bricklayers' unions of Boston for 1900, which may be taken as typical of the form of the joint annual agreements reached, under the terms of the provisions of the permanent agreements above described, with the several organizations of workmen above named. This annual agreement is also very similar to those adopted in many other cities in the bricklaying trade:

Boston, February 8, 1900.

The Mason Builders' Association of Boston and vicinity has, through the joint committee on arbitration, made the following agreement with Bricklayers' Unions Nos. 3 and 27 of Boston and vicinity, as follows:

#### RULES FOR THE YEAR 1900

1. *Hours of labor*—During the year not more than eight (8) hours labor shall be required in the limits of the day, except it be as overtime, with payment of same as provided for.

2. *Working hours*—The working hours shall be from 8 a. m. to 12 m. (one hour for dinner during February, March, April, May, June, July, August, September, and October). During November, December, and January it shall be optional with the men on jobs whether they work half hour at noon and quit at 4:30 p. m.

3. *Night gangs*—Eight hours shall constitute a night's labor. When two gangs are employed, working hours to be from 8 p. m. to 12 m. and from 1 a. m. to 5 a. m. Where regular night gangs are employed, from 1 a. m. to 5 a. m. Sunday morning, the minimum rate shall be paid.

4. *Overtime*—Except in cases of emergency no work shall be done between the hours of 5 and 8 a. m. and 5 and 6 p. m. Overtime to be paid for as time and one-half, except the hour between 5 and 6 p. m., which shall be paid for as double time, but this section as to double time is not to be taken advantage of to secure a practical operation of a 9-hour day.

<sup>1</sup> See Digest of statements of witnesses in reports of Industrial Commission, vol. vii, p. 144 ff.

5. *Holiday time.*—Sundays, Fourth of July, Labor Day, and Christmas Day are to be considered as holidays, and work done on either of these days is to be paid for as double time
6. *Wages.*—The minimum rate of wages shall be forty-five (45) cents per hour
7. That the bricklayers shall be paid their wages on or before 5 p. m. on the regular pay day
8. If an employe is laid off on account of a lack of material, or for other causes, or is discharged, and if said employe demands his wages, intending to seek other employment, he shall receive his money
9. The business agent of the Bricklayers' Union shall be allowed to visit all jobs during working hours to interview the steward of the job
10. In the opinion of the joint committee the best interests of the employing masons demand that all journeymen bricklayers shall belong to the Bricklayers' Union. Therefore preference of employment shall be given to union bricklayers by the members of the Mason Builders' Association

Issued by order of the joint committee on arbitration

JOHN T. HEALY, *Secretary of Committee*

It will be observed that this agreement does not provide for the exclusive employment of union men by contractors, nor does it require the members of the union to work exclusively for the employers' organization. The agreement does declare that preference shall be given to union bricklayers by members of the Mason Builders' Association, stating that this is believed to be to the best interest of the employers. It appears that when the joint agreement system was first introduced in Boston the union men tried to secure a provision for their exclusive employment. This was finally waived, and nonunion men are now employed from time to time without objection, although in many instances nonunion men have joined the organization. In general, employers state that they prefer union men. While there is no clause in the joint agreement providing that the union men shall exercise their influence to compel contractors outside the employers' organization to conform to the terms of labor prescribed in the agreement, it appears that in practice outside employers are, in almost all instances, virtually compelled to live up to those conditions.

The question of apprenticeship has been one of special difficulty in the bricklaying trade throughout the country, and not less so in Boston. The National Builders' Association has frequently discussed the matter, and, under the influence of Mr. Sayward largely, has recommended a uniform system of apprenticeship. This system has been put in force by permanent agreement between the Mason Builders' Association of Boston and the bricklayers' unions of that city. The supervision of the entire system of apprenticeship is placed in the hands of the joint committee of arbitration. There is no limitation as to the number of apprentices whom the employer may take, but all details regarding the instruction of apprentices, their pay, their graduation, etc., are carefully provided for. The apprenticeship agreement is so novel, and furnishes such an excellent model for other trades, that it is here quoted in full:

#### SYSTEM OF APPRENTICESHIP ADOPTED BY THE MASON BUILDERS' ASSOCIATION AND THE BRICKLAYERS' UNIONS OF BOSTON AND VICINITY

##### TIME OF BEGINNING AND TERM OF APPRENTICESHIP

To prevent the taking of apprentices at an immature age, when they may be considered, on the average, as physically unfit for such laborious work and not sufficiently educated to warrant leaving school, and to discourage the beginning of apprenticeship at a time when the individual may be considered, on the average, as having passed that period when the faculties of mind and body are in that condition which is most receptive of instruction and most readily adaptive to the requirements of a trade, the following time and terms are fixed:

- No individual shall be taken as an apprentice who can not read and write the English language
- No individual shall be taken as an apprentice until he is 16 years of age
- No individual shall be taken as an apprentice after he is 21 years of age
- An apprentice taken under 18 years of age shall serve until he is 21 years of age
- An apprentice taken at 18 years or over shall serve 3 years

##### AGREEMENT OF APPRENTICE

No individual shall be taken as an apprentice unless he shall agree to serve the time fixed by these rules and abide by other conditions and requirements herein set forth

##### AGREEMENT OF EMPLOYERS

No member of the Mason Builders' Association shall take an individual as an apprentice unless he will agree to keep him under legitimate instruction as such for the full term comprehended in these rules and will otherwise comply with the conditions and requirements herein set forth

##### REGISTERING APPRENTICES

When any member of the Mason Builders' Association is about to take an individual as an apprentice, he shall immediately notify the secretary of the association to that effect, giving name, age, and term for which he is taken

The secretary of said association shall then immediately notify the clerk of the joint committee and also the secretary of the bricklayers' unions, and a record shall be kept by both associations and by the joint committee, so that a complete registry of all apprentices shall be available

A card shall be issued to each apprentice by the joint committee, which he shall hold during his term as evidence that he is properly registered as an apprentice.

All members of the Mason Builders' Association shall file, as soon as practicable after the adoption of these rules, a list of the apprentices in their employ, giving name, length of term for which they are taken, and date of expiration of term.

#### SUPERVISION BY JOINT COMMITTEE

The joint committee of the two bodies hereto shall have general supervision of all matters pertaining to the apprenticeship system under the rules herein defined and established, and shall have authority to settle all questions in relation to the same, and give judgment in any appeals that may be made to it by either employers or apprentices. It shall have authority to terminate or cancel the apprenticeship of any individual for cause.

It shall have authority to place an apprentice for an unexpired term with a new employer, should his original employer die, or from any other cause fail to give him opportunity to complete his term with him.

It shall have authority to prepare blank graduation papers for apprentices and to approve and sign the same when the employer has certified thereon that the apprentice has satisfactorily completed his term.

#### RIGHTS OF EMPLOYER

An employer shall have the right to appeal to the joint committee to terminate or cancel an apprenticeship when there are evidences of incapacity on the part of the individual under instruction, or when he shall be insubordinate, or be addicted to idle or dissolute habits or in any other way fail to carry out his agreement with his employer.

#### RIGHTS OF APPRENTICES

An apprentice shall have the right to appeal to the joint committee should his employer fail to keep him under legitimate instruction or to keep his agreement with him in any other respect.

He shall have the right also to appeal to the joint committee and secure through them opportunity to complete his apprenticeship should his original employer die, or from any other cause fail to give him opportunity to complete the same.

#### PAY OF APPRENTICES

Apprentices shall be paid at the rate of 11 cents per hour during the first year, 12 cents per hour during the second year, 13 cents per hour during the third year, and 15 cents per hour for any additional years they may be obliged to serve under these rules. These sums to be paid weekly.

Deduction may be made from the above mentioned pay for absence from work without sufficient cause, or the apprentice may be required to work beyond the stipulated term to the extent of double the time of absence, at the choice of his employer.

No deduction from the pay of an apprentice, however, shall be made, provided he report for duty at proper times but is unable to work because of weather or failure of his employer to provide work.

In addition to the pay above stipulated, each apprentice shall have an allowance of \$50 the first year and \$75 for every additional year, payable in quarterly installments.

Each apprentice shall be entitled to 1 week's vacation each year without loss of pay, or 2 weeks with 1 week's loss of pay, but shall not be allowed more than 2 weeks' vacation each year.

#### GRADUATION OF APPRENTICES

When an apprentice shall have completed his term his employer shall certify the same upon blanks provided for the purpose by the joint committee, and transmit the same, through the secretary of his association to the joint committee. The joint committee shall then consider the same, and upon approval its clerk shall attach the official seal and signature of the committee, notifying both associations of this action, that the record of the apprentice may be complete upon books of record, which must be kept by the secretaries of each body.

The certificates thus signed and approved shall be accepted as evidence that the apprentice has properly graduated and is entitled to recognition as a journeyman, and he shall not be eligible to membership in the Bricklayers' Unions until he has such certificate.

#### DEPARTMENT OF INSTRUCTION

Recognizing the fact that special instruction in the fundamental features of the bricklaying trade (which instruction shall comprehend education of both mind and hand, so that the individual shall gain a proper knowledge of quantity and strength of materials, and of the science of construction) is of as much importance as special instruction in other trades or professions, and realizing that the chances of an apprentice to get as much instruction as he is entitled to while at work on buildings is necessarily limited, the parties to these rules agree that they will join in an effort to establish an institution in this city where all the trades shall be systematically taught, that when such school is established they will unite in the oversight and care of the same and will modify these rules so that a reasonable deduction shall be made from the term of an apprentice by virtue of the advantage gained through instruction in said school.

**3. Agreements in the bricklaying trade in New York.**—The system of joint annual agreements, with reference of disputed questions to a committee of conciliation or arbitration, has been in existence in the bricklaying trade of New York City for fully as long as in Boston, although the system is not so highly elaborated in the larger city as in Boston. There is no permanent agreement providing for the establishment of an arbitration committee. The annual agreements themselves do not specifically define the method of organizing the joint arbitration committee, but they do provide for their own renewal by the action of such committee. In practice each of the local bricklayers' unions, 8 or 9 in number, selects one representative on the joint committee and the Mason Builders' Association selects as many representatives as all of the unions combined. The representatives of the employers are always actual members of the Mason Builders' Association, engaged in building enterprises, while the workmen upon the board are actual

bricklayers and members of the union. No provision is made, as in Boston, for the reference of disputes, as to which the committee can not agree, to any outside person. Below is given the text of the agreement for 1900:

AGREEMENT BETWEEN THE MASON BUILDERS' ASSOCIATION AND THE BRICKLAYERS' UNIONS OF THE BOROUGH OF MANHATTAN AND BRONX, CITY OF NEW YORK, FOR 1900

MAY 31, 1900

It is hereby agreed to by the Mason Builders' Association of New York City and the Bricklayers' Unions, Nos. 1, 7, 11, 33, 34, 35, 37, and 47, of New York City, boroughs of Manhattan and Bronx, members of the Bricklayers' and Masons' International Union

I

That the wages of the bricklayers from May 1st, 1900, to May 1st, 1901, be fifty-five cents per hour eight hours, five days in the week, and that the hours of labor be from 8 a. m. to 5 p. m., with one hour for lunch, except on Saturday, when the hours of labor shall be from 8 a. m. until 12 m.

II

The unions, as a whole or single union, shall not order any strike against the members of the Mason Builders' Association, collectively or individually, nor shall any member of union men leave the works of a member of the Mason Builders' Association before the matter in dispute is brought before the joint arbitration committee for settlement.

III

That no member of the unions shall be discharged for inquiring after the cards of the men working upon any job of a member of the Mason Builders' Association, nor will the walking delegate be interfered with when visiting any building under construction.

IV

Except in cases of extreme necessity, no work shall be done between 7 and 8 o'clock a. m. and 5 and 6 o'clock p. m. on five days in the week, nor between 7 and 8 o'clock a. m. on Saturday, and no work shall be done on Saturday from 12 o'clock m. to 6 o'clock p. m. unless to leave the work would endanger life or cause destruction of property, and all overtime shall be paid at double rate. Overtime means all time between 1 p. m. on Saturday and 8 a. m. on Monday, also all time between 5 p. m. and 8 a. m. on other days, and the following legal holidays: Washington's Birthday, Decoration Day, Independence Day, Labor Day, Thanksgiving Day, Christmas Day, and New Year's Day.

V

That the members of the Mason Builders' Association shall do their own fireproofing, preference being given to the men employed on the construction of the wall. Fireproofing shall mean hollow tile dense or porous partitions, tiring or arch blocks, none of which shall be lumped or sublet. Each bricklayer shall provide himself with a kit of tools consisting of a trowel, brick hammer, hand hammer, level, plumb rule, bob and line, and chisel, for which a suitable tool house shall be provided.

VI

That all cutting of masonry be done by those best fitted for the work, and that the members of the Mason Builders' Association make the selection, but cutting of all brickwork, fireproofing, or terra cotta shall be done by bricklayers.

VII

That the bricklayers be paid every week before 12.30 p. m. Saturday, pay time to close the Thursday before pay day.

VIII

Bricklayers when laid off shall be paid upon request, either by cash or by order on the office, if the latter, he shall receive one half hour in addition to actual time. In case of failure to receive his money at the office within one hour from the time of his off, he shall receive waiting time up to receipt of his pay. If discharged, he shall be paid at once on the job, failure of which will entitle him to waiting time as above.

IX

That any member of the unions of the boroughs of Manhattan and Bronx, upon showing his card of membership, be permitted to go upon any job when seeking employment, unless notified by a sign, "No Bricklayers Wanted," and that employment be given to members of the unions of the boroughs of Manhattan and Bronx only. The shop steward or delegate of these unions shall determine who union bricklayers are. It shall not be the duty of the foreman to ask any man to what union he belongs. If the shop steward be discharged for inspecting the cards of the bricklayers on a job, he shall at once be reinstated until the matter is brought before the joint arbitration committee for settlement.

X

That no laborers be allowed upon any wall or pier to temper or spread mortar, which shall be delivered in bulk, and mortar to be spread with a trowel by the bricklayers, who shall work by the hour only. Nor shall any member of the bricklayers' unions work for anyone not complying with all the rules and regulations herein agreed to.

XI

If a building shall be abandoned for any cause on which the wages of union bricklayers are unpaid, no member of the Mason Builders' Association shall contract to complete the same until this debt is paid by the original or subsequent owner or provided for in the contract. If a member of the Mason

Builders' Association is prevented from carrying out his contract on a building, through insolvency of the owner or any other cause, no union bricklayer shall work on said building until the mason builders' contract has been equitably adjusted. Notice in writing stating amounts in dispute must be filed with the secretary of the Mason Builders' Association within two weeks of the stoppage of work, giving full particulars. The secretary to give proper notice to the unions and their representative at the beginning and ending of the question in dispute.

## XII

That the arbitration committee meets on the fourth Thursday in every month, or at the call of the chair on either side, and that the fourth Thursday in January be a special meeting for the consideration of the yearly agreement, which must be signed on or before March 1st to take effect from May 1st to May 1st.

*For Mason Builders' Association*  
FRANK M. WELLS, *Chairman*,  
THOMAS TONI HOFFER,  
GEORGE VASSAR, JR.,  
GEORGE W. RUDDELL,  
CHARLES ANDRUS,  
FRANK C. SCHAEFFER,  
FRANK D. GARNSEY,  
M. E. O'CONNOR.

*For Bricklayers' Union*  
No. 31 JOSEPH FORRESTER, *Chairman*,  
No. 4 THOMAS T. NOLES,  
No. 7 JAMES A. WOODFALL,  
No. 11 FREDERICK HERFELDER,  
No. 13 SWIFT LORDE,  
No. 45 ERIC LAKSEN,  
No. 47 HARRY EAST,  
No. 47 WILLIAM J. DAVIS.

It will be observed that this agreement prohibits the ordering of strikes before the matter in dispute is brought before the joint arbitration committee for settlement, that the committee must meet every month and at the call of either party, and that it shall meet in January to consider the yearly agreement, which must be signed on or before March first. The employers agree to hire only members of the local unions of the boroughs of Manhattan and the Bronx, while the workmen on the other hand agree to work only for employers who comply with all the requirements of the joint agreement. This provision is almost as effective in protecting the employers against the competition of those outside their organization who are disposed to secure cheaper labor, as an agreement on the part of the union men to work only for the members of the employers' organizations.

For 16 years, prior to 1901, this system of joint agreements and arbitration in the bricklaying trade of New York City practically prevented entirely the stoppage of work in the trade on account of strikes and lockouts. At times there was discussion within the arbitration committees, which almost came to the point of breaking the agreement system, but differences were always finally adjusted. In 1901, however, a dispute arose which led to a short strike of all the bricklayers. An account of this dispute is interesting, as showing how a little question may, by misunderstanding, cause a serious difficulty.<sup>1</sup>

In the agreement between the Mason Builders' Association and the Bricklayers' Unions for the year ending May 1, 1901, there was a provision, "that the members of the Mason Builders' Association shall do their own fire-proofing, preference being given to the men employed on the construction of the walls," and that "fire-proofing shall mean hollow tile, dense or porous partitions, burning or arch blocks, none of which shall be lumped or shelled." The mason builder who had the brickwork contract on a large structure at Broadway and West Seventy-third street, and who was a member of the Mason Builders' Association, did not contract for the fire-proofing, that part of the work being let by the owner to a Western concern, which was not connected with the local employers' organization, and which did not engage the bricklayers who were employed in constructing the walls. This violation of the yearly compact was brought to the attention of the Joint Arbitration Committee, composed of eight union bricklayers and eight members of the Mason Builders' Association, and that board unanimously decided that work on the job should cease until the matter could be adjusted. The time fixed for cessation of labor was Wednesday, April 24. Pay day was on Saturday at noon, and the workmen received their wages up to and including April 24. They remonstrated, claiming that they were entitled to three and one-half days' waiting time, from Wednesday until Saturday noon, under a section of the agreement to the effect that when laid off they should be paid immediately, and in case of failure to receive their money within one hour from the time of the lay off they should be compensated for waiting time up to the receipt of their wages. Their contention was that the conclusion of the arbitration committee actually dismissed them from the job, and as "a lay off meant an immediate pay off," they were within their rights in demanding payment for waiting time. On April 25 the board of arbitration decided the original matter of dispute in favor of the union men. The whole matter finally turned upon the question of payment for time lost by the men during the controversy, the unions adhering to the claim of three and one-half days, while the eight representatives of the employers' association decided that the workers were entitled to only two days' pay. Thereupon the eight union arbitrators pleaded for the selection of an umpire, but the employers refused to entertain this proposition. The agreement that would have expired on May 1st was extended for a week. A session of the joint committee was to have convened on May 1st, but the employers' representatives failed to attend. Next day each of the eight unions received notice that unless their members lined up to the agreement there would be no further use for a meeting of the Joint Arbitration Committee. The Mason Builders' Association met on the 11th, and passed a resolu-

<sup>1</sup> Condensed from Bulletin of New York Department of Labor, June, 1901.

tion that if the journeymen did not man the job at Broadway and West Seventy-third street by the 16th all bricklaying work on the building operations of the association's members would be suspended. In response to this ultimatum the unions resolved that "no bricklayer shall resume work on the job until the dispute is settled satisfactorily," and that in the event of the builders' association carrying out the threatened lockout "no members of our organizations shall resume work unless paid at the rate of sixty cents per hour"—an advance of five cents.

While the lockout was pending, the subjoined statement, signed by the president and secretary of the Mason Builders' Association, presenting its side of the controversy, was given to the public:

"In April a strike occurred on the work of a member of the Mason Builders' Association. The grievance was submitted to the joint arbitration board, which is a standing committee consisting of eight members of the bricklayers' unions and eight members of the Mason Builders' Association, and is empowered to settle all differences between the two organizations. The grievance of the bricklayers was amicably adjusted by the unanimous action of said board. The ruling was that the grievance having been removed the bricklayers should man the job at once. The bricklayers through their delegate refused until they should be paid for the time they were on strike, and while their grievance was being adjusted by the arbitration board. The Mason Builders' Association felt that acquiescence in this demand would be placing a premium on strikes, and establishing a dangerous precedent. They realized that the position of the bricklayers was more than unjust in that they refused to abide by the decision of the joint board, and insisted that the so-called waiting time must be paid, and that the payment of same was not a subject for arbitration. Therefore, at a meeting held on Saturday, May 11th, the Mason Builders' Association passed the following resolution:

"*Resolved*, That Thursday, May 16, 1901, all work of journeyman bricklayers on the building operations of the members of the Mason Builders' Association be suspended, unless in the meantime the members of the bricklayers' unions live up to the annual agreement existing between the Mason Builders' Association and the bricklayers' unions, and abide by the decision of the joint arbitration board, to man the works of this member of our association."

"For sixteen years no rupture has occurred between the two organizations and an annual agreement has been signed. The Mason Builders' Association has always stood, and always will stand first and last for arbitration and an amicable adjustment of differences, but the unusual and most arbitrary stand taken in this issue compels the above action."

In a statement issued by the unions it was denied that they were the aggressors; they asserted that they had favored the arbitration of the difficulty at the beginning, and pointed to the fact that they had persistently urged the appointment of an umpire when the deadlock occurred over the question of payment for waiting time, concluding as follows:

"We, as an organization, claim that the employers attempted to coerce us in every form to do something for which we were not responsible. They agreed to enter into the question of the payment of the men, and thus created a deadlock. When the deadlock was created they refused to accept the suggestion of the unions, calling for an umpire to decide the dispute, which is a law governing arbitration and a standing rule of this committee. We were then ordered locked out, an action which they have attempted to carry into effect. The employers of the city of New York have received our decision, which was endorsed by all our unions within the city. We deny that we have broken any agreement."

The emergency committee of the Mason Builders' Association addressed a communication to the unions' representatives on May 22d, asking for a conference. This was agreed to by the men's committee. At a meeting held on the 27th peaceful relations were restored between the belligerents, and this agreement, declaring the incident closed and granting the requests of the unions for an umpire and for an increase of wages, was entered into.

"Resolution adopted by the joint arbitration board of the Mason Builders' Association and bricklayers' unions, held at the Building Trades Club, 1123 Broadway, New York City, on Monday evening, 27th May, 1901:

"In consideration of the bricklayers at once fully manning all the works of all the members of the Mason Builders' Association, including Seventy-third street and Broadway, and submitting all questions in dispute to a joint board of arbitration, an umpire to be appointed if necessary, whose decision shall be final and binding, we, the Mason Builders' Association, agree that the wages of bricklayers for the year ending May 1, 1902, shall be at the rate of sixty cents per hour, beginning on June 28, 1901."

An umpire was selected on June 6th, and on the 14th the matter of waiting time was argued before him, but at the close of this report he had not rendered a decision.

Mr. Cowen, secretary of the Mason Builders' Association of New York City, speaks very highly of the working of the conciliation board in the bricklaying trade. He emphasizes especially the spirit of fairness and toleration which has been developed on both sides. The employers find that the union men are human, and that they try to sell their goods for the highest market price. They claim all the rights and privileges to which they are entitled under the law. On the other hand, they usually endeavor to carry out whatever agreements they enter into faithfully.

Mr. Cowen especially commends the practice of settling differences exclusively by members of the trade without calling upon outside persons. To be sure, he says, the system is a business one, not one of philanthropy.

He thinks that State arbitration methods are much inferior to the voluntary system as it exists in the bricklaying trade. He holds that one of the chief causes of strikes and disputes in the building trades and in other lines of business is that trade unions or union officers having no direct interest in the matter at issue, frequently control the action of those who are directly interested. The joint organizations of trade unions—central labor unions, building trades' councils, boards of walking delegates, etc.—often bring it about that the settlement of differences is in the hands of men who are wholly ignorant of the particular class of business involved, and who have less interest than those actually in the trade in bringing about a peaceful settlement. If each trade should settle its own differences by joint committees of employers and employed, strikes might be almost altogether avoided. It would be wise if the legislature should recommend, or by some enactment should further the establishment of trade unions and employers' associations

in every trade and the settlement of all differences by representatives of these respective organizations actually engaged in the trade.

Commenting on the failure of certain other building trades in New York City to establish the system of joint agreements, Mr. Cowen expresses the opinion that the difficulty has been quite as much due to the attitude of the employers as to that of the employees. The employer often loses sight of the fact that the workingman has only his labor to sell. It is a duty of the workingman to himself and to his family to sell that labor at the highest price the market will afford. The employers constitute the market. If any employer does not want labor at the price offered, he need not employ it. If he buys it at too high a price, he will not be able to find customers for his product, just as in the case of the merchant. If wages become too high, some capitalists must stop work and cease the investment of capital until the reduced demand for labor lowers wages to their natural level. No matter how strong labor organizations may be they can not tyrannize over employers permanently. Supply and demand will determine the value of labor as it does with every other commodity.

Mr. Cowen says further that the system of agreements in the bricklaying trade has not prevented increase of wages and improvement of conditions at a rate fully equal to that in any of the other trades. The system has in fact been highly beneficial to the workingman. The trade is kept in steady condition. The yearly contracts with the employers prevent them from cutting down wages suddenly. Moreover, the strong character of the national organization of bricklayers, and the relative uniformity of the rates of wages under the contracts in the different parts of the country, prevents unfair competition in any city by contractors from other cities. There is, accordingly, little tendency to cut down the rate of wages as the result of outside competition.

**4. Arbitration in the bricklaying trade in Chicago.**—For 10 or 12 years prior to the great building trades strike in Chicago in 1900 the system of joint agreements had been firmly established between the association of contracting masons and builders and the bricklayers' unions of that city. These annual agreements provided for the arbitration of disputes and virtually did away with strikes. Changes in the working rules from year to year were regularly made by this committee. One of the judges of Cook County was chosen to act as an umpire in case of failure of the representatives of the two sides in the committee to agree, but it did not prove necessary to call in the umpire more than two or three times during the entire period.<sup>1</sup>

The bricklayers' unions of Chicago were finally drawn into the Building Trades Council and took part in the sympathetic strikes ordered by that body. They also joined in the great dispute of 1900, but were the first trade to withdraw from the Building Trades Council and to make an agreement with the employers. This agreement provided for a method of arbitration in accordance with lines laid down by the Building Contractors' Council. The system, which was very similar to that of the carpenters, whose agreement is described on page 884, prohibits stoppage of work and requires the submission of all disputes to an arbitration committee, consisting of 5 members from each side elected annually, together with an umpire to be selected by the other members of the arbitration board. The board acts by majority vote, the umpire being called in when necessary to cast the deciding vote, and decisions are binding on both parties. Violations of the agreement or of the decisions are punishable by fine, which, if not paid by the offender himself, shall be paid by the organization to which he belongs.<sup>2</sup>

**5. Arbitration in Rochester.**—A member of the Mason Contractors' Association, of Rochester, N. Y., states in reply to a schedule of questions that that organization has for 13 years maintained a system of joint agreements with the unions of bricklayers and masons. Each year the joint arbitration committee meets for the adoption of the scale of wages and rules, and at no time has it failed to agree. The best results have followed from the system. Apparently no strikes have arisen in the intervals between the adoption of the annual agreements.

## II. CARPENTRY TRADE.

**1. Organizations and joint agreements generally.**—The journeymen carpenters are quite strongly organized. Aside from a number of important independent local unions there are many locals affiliated with the United Brotherhood of Carpenters and Joiners, which has an aggregate membership of over 40,000, while a small

<sup>1</sup> See testimony of Thomas Nicholson, Reports of the Industrial Commission, volume viii, page 88.

<sup>2</sup> The bricklayers' agreement is printed in full in the Reports of the Industrial Commission, volume viii, page 525.

number of local unions are affiliated with the British organization known as the Amalgamated Society of Carpenters and Joiners. Employing carpenters in the larger cities are quite commonly organized into exchanges or associations, sometimes in connection with other classes of master builders.

The system of formal collective bargaining and agreements appears to be somewhat less general in the carpentry trade than in the bricklaying and some of the other building trades, while in places where joint agreements exist they seem to have proved on the whole less successful in establishing harmony, and less frequently to provide for arbitration of disputes than in some other building trades. At the same time it is difficult to draw generalizations in view of the impossibility of obtaining information from all of the important cities.

**2. One-sided character of certain agreements.**—It appears that in not a few cases the joint agreements in the carpentry trade virtually represent mere written concessions on the part of the employers, individually or in association, to demands made by the workmen. This, for example, has been true of such agreements as have existed in the trade in New York City, as is more fully pointed out below. In Chicago, also, employing carpenters asserted that the system of joint agreements, prior to the great building-trades strike of 1900, was entirely one-sided. Thus in April, 1899, the Carpenters' Executive Council submitted to individual master carpenters a form of agreement, in which practically every clause was a covenant on the part of the employer to do certain things. The unions placed themselves under virtually no obligations, and the only penalty clause in the contract was one declaring that any violation of its provisions by the employer should be considered a just cause for the ordering of a strike. A copy of this agreement, which may be considered typical of other agreements in which the demands of the unions are the most important feature, is printed below:

CARPENTERS' EXECUTIVE COUNCIL OF CHICAGO AND VICINITY,  
*Chicago, April 1, 1899*

ARTICLES OF AGREEMENT

Between T. Nicholson & Sons Co., contracting carpenters and builders, party of the first part, and the Carpenters' Executive Council of Chicago, party of the second part

The party of the first part covenants and agrees, in consideration of the strict observance by the party of the second part of certain rules, regulations, and obligations herein set forth, that he or they will faithfully keep and strictly observe the following rules:

ARTICLE I. Eight (8) hours shall constitute a day's work between the hours of 8 a. m. and 5 p. m., except Saturday, when work shall cease at 12 o'clock noon.

ART. II. The minimum rate of wages for a journeyman carpenter shall be forty-two and one-half (42½) cents per hour, from April 1, 1899, to March 31, 1900.

ART. III. Double time shall be allowed on all overtime, Sunday work, New Year's Day, Decoration Day, Fourth of July, Thanksgiving Day, Christmas Day, or days celebrated for the foregoing. No work shall be allowed under any pretense on Labor Day, which shall be the first Monday in September, or after 12 o'clock noon on Saturday. But if two or more shifts of men are employed, the same men shall not be allowed to work on more than one shift under any circumstances, and six (6) hours shall constitute a night shift, and the wages for such six (6) hours shall be equivalent to eight (8) hours during day.

ART. IV. Every journeyman carpenter shall receive his pay in full each week on Tuesday, not later than 5 p. m., but in case of discharge he must be paid at once on the job or waiting time paid. In case of a temporary lay off for any cause whatever he shall be paid in full if he so demands.

ART. V. All apprentices shall belong to the union and carry the current working card, but no one shall be allowed to work as an apprentice after having attained the age of twenty-one (21) years.

ART. VI. There shall be a steward appointed by the carpenters on each job, whose duty it shall be to see that all carpenters employed shall carry the current working card issued by the Carpenters' Executive Council, and report any violations of the articles contained in this agreement.

ART. VII. The foreman controlling any job shall belong to the union, carry the current working card issued by the Carpenters' Executive Council, and see that all provisions of this agreement are strictly enforced.

ART. VIII. The properly credentialed agents of the party of the second part shall have access to any work under construction by the parties of the first part during working hours.

ART. IX. The party of the first part agrees to hire none but union carpenters in good standing, carrying the current working card issued by the Carpenters' Executive Council. In cases of a company of contractors only one member of the firm will be allowed to work with tools.

ART. X. A sympathetic strike when ordered to protect the union principles herein laid down shall not be a violation of this agreement.

ART. XI. The party of the first part shall not be allowed to lump, piece out, or sublet any of his carpenter work, neither shall any journeyman who is a member of any association represented in the Carpenters' Executive Council be permitted to take piecework in any shape or manner.

ART. XII. Any violation of the provisions of this agreement by the party of the first part shall be considered a just cause by the party of the second part for ordering all carpenter work to cease.

T. NICHOLSON & SONS CO.,  
715-167 Dearborn street, City  
CARPENTERS' EXECUTIVE COUNCIL,  
T. CRUISE, President  
LUKE GRANT, Secretary.

[SEAL.]

As further illustrating the one-sided character of the agreements formerly existing in Chicago, it may be noted that the Carpenters' Executive Council of

Chicago, in January, 1900, addressed the following letter to the contractors, with reference to the adoption of the new agreement for the current year:

DEAR SIR: We beg to inform you after April 1, 1900 the demands of the carpenters will be for a minimum wage scale of fifty (50) cents per hour.

We will be prepared to receive signatures to our new agreement after March 1.

Respectfully yours,

CARPENTERS' EXECUTIVE COUNCIL,  
PET LUKE GRANT, Secretary

**3. Cincinnati agreement.**--In other cities, however, the relations between employers and employees in the carpentry trade are more friendly than they have been in Chicago and New York, and the system of joint agreements represents the result of negotiations between committees of both sides, while provision is made for arbitration of disputes. In Cincinnati, for instance, the Master Carpenters' Exchange and the Hamilton County Carpenters' District Council have in recent years signed annual agreements providing for a system of arbitrating disputes and also regulating the general conditions of labor. The two agreements for 1900 were as follows:

#### AGREEMENT

It is hereby agreed by and between the undersigned, "The Master Carpenters' Exchange of Hamilton County," parties of the first part, and "The Hamilton County Carpenters' District Council," parties of the second part, and by each for all its members, that, in order to prevent any violation of the agreement relative to hours, wages, and conditions, as agreed to and signed by both parties as aforesaid, there shall be a permanent committee appointed by the above-named exchange and council, consisting of an equal number from each, whose duties shall be to mutually adjust all matters of differences of violation of the agreement that may occur from time to time.

It is also agreed that, should any member of any carpenters' union offer his services as a journey man carpenter to any member of the exchange for less than the rate of wages already agreed on between the exchange and council, or shall rebate, or offer to rebate any part of his wages to his employer, or anyone acting for his employer, the employer shall secure the name and address of the offender and submit it, with the evidence in the case, to the committee of his exchange. The committee of the exchange shall as soon as possible call a meeting of the combined committee of the exchange, together with the committee of the council for the purpose of consultation, after which the case shall be left to the committee of council for settlement.

It is also agreed that should any member of the parties of the second part know of any members of the parties of the first part using any effort or offering to employ any parties of the second part for less than the rate of wages agreed on, that the council office of the council shall immediately notify the committee of the exchange of the violation, with the evidence in the case, and call a meeting of the joint committee for the purpose of adjusting the matter as soon as possible.

It is also agreed by and between the members of the exchange and council, to work together for the mutual benefit of their membership both, and it is hereby agreed that the members of the exchange and council members of our boards connected with our council, or those who are satisfied to join them.

The council on its part agrees to furnish men to the members of the exchange at all times in quantities desired whenever possible to do so.

#### AGREEMENT

It is hereby agreed by and between the undersigned, "The Master Carpenters' Exchange," parties of the first part, and "The Hamilton County Carpenters' District Council," parties of the second part, and by each and all of its members:

1st. That from March seventeenth (17th) to June first (1st), 1900, nine hours shall constitute a day's work, and that the minimum rate of wages shall be twenty five (25) cents per hour.

2nd. That from June first (1st) 1900 to March first (1st) 1901, eight (8) hours shall constitute a day's work, and that the minimum rate of wages shall be thirty (30) cents per hour, and that the better class of men are to receive a higher rate of wages.

3rd. That time and one-half shall be allowed for overtime, and double time for Sundays, 4th of July and Christmas, or days that may be celebrated for them. No work shall be allowed on Labor Day, which shall be the first (1st) Monday of September.

4th. That working hours shall be from eight (8) o'clock a. m. to twelve (12) o'clock p. m., and from one (1) o'clock p. m. to five (5) o'clock p. m. Except, that during the months of November, December, January, and February, the hours shall be from seven-thirty (7:30) a. m. to twelve o'clock a. m., and from two-thirty (2:30) o'clock p. m. to four (4) o'clock p. m.

5th. That the parties of the second part hereby agree and bind themselves to faithfully enforce the above conditions as to hours and wages, and any building firms that may not be members of the organization of the first part, and that any proven violation of this part of the agreement shall lay all contracts in this connection liable to be declared void.

It will be observed that the first agreement provides for a permanent committee, consisting of an equal number of representatives from the organizations of employers and employees, respectively, with power to adjust all differences and to ascertain violations of the agreement. As is very commonly provided in the joint agreements in the building trades, the employers agree to hire only union labor. One of the chief advantages to the employers from the Cincinnati agreement is found in the fifth clause of the second agreement, which provides that the union shall compel building firms, not members of the employers' organization, to comply with the same conditions of labor as are prescribed in the agreement.

The secretary of the Master Carpenters' Exchange of Cincinnati reported in the fall of 1900 that no violation of this agreement had occurred since it was made in the preceding March, except a trifling one on the part of some employers, which was readily corrected on appeal to the joint committee. He added that the employers found it of advantage to make annual agreements with the men, and that they were also in favor of a joint committee to which any violations of agreements could be submitted.

**4. Chicago agreement after lockout of 1900.**—Perhaps the most elaborate joint agreement now in force in the carpentry trade is that which was adopted at the close of the Chicago building trades strike between the Carpenters' Executive Council and the Association of Master Carpenters of that city, and which remains in force from 1900 to 1903.<sup>1</sup>

While the employers in this great strike were largely successful, the joint agreements reached, especially that with the carpenters, represent many concessions from the original demands of the Building Contractors' Council. The unions were forced to agree to abandon some of their restrictive practices, to give up resort to the sympathetic strike, and to withdraw from the Building Trades Council, although the organization of a new central body in the building trades, composed solely of organizations in the mechanic trades actually employed on buildings, was permitted. It was also agreed that employers should be at liberty to hire and discharge whomsoever they should choose. The carpenters, however, are not required to work on the same job with other carpenters who are not affiliated with the Carpenters' Executive Council, but they agree not to leave their work because nonunion men in other trades are employed on the same job, nor because nonunion men of any trade, even their own, are employed by the same master on any other job. There is no restriction of the number of apprentices. It is required, however, that apprenticeship shall last for not less than 3 years, and that no apprentice shall be over 21 years of age. It is provided that there shall be no limitation of the amount of work that a man shall perform during his working day, and no restriction of the use of machinery or tools or of nonunion-made material. The 8-hour day is maintained, with a half holiday on Saturday, time and a half for overtime (including all work done between 5 p. m. and 8 a. m., except when two shifts of men are employed on the job), and double time for work on Sundays and Saturday afternoons, and on Decoration Day, Fourth of July, Thanksgiving Day, Christmas, and New Year's Day. Work on Labor Day is forbidden, except by consent of the two presidents. Wages are to be 42½ cents an hour until April 1, 1902, and 45 cents an hour thereafter until the expiration of the agreement, April 1, 1903.

The agreement provides an elaborate system for the settlement of differences by a joint arbitration board, consisting of an equal number of representatives from the employers and from the employees. A disinterested umpire is chosen annually. Any disputed question must be submitted in writing to the presidents of the two organizations, and, if they can not agree, then to the joint arbitration board. If the board can not agree, the umpire must be called in. The joint board must be composed of members who are actively engaged in the trade, and no one who holds any public office, either elective or appointive, under the municipal, county, State, or National Government is eligible to it. The umpire must be in no wise affiliated or identified with the building industry; he may not be an employer of labor nor an employee, nor an incumbent of a political office. The arbitration board has the right to summon any member of either of the organizations concerned, either to answer charges of violation of the agreement or the working rules, or to appear as a witness. Failure to appear when notified is punishable by a fine of \$25 for the first offense, \$50 for the second, and suspension for the third. Especially important are the provisions for enforcing the agreement and the decisions of arbitrators, since it is always one of the chief difficulties in the arbitration system that violations can not be effectively prevented. If a member of either organization is found guilty of any violation of the agreement or the working rules, he is subject to a fine of from \$10 to \$200. If he fails to pay it his organization must pay it or suspend him from membership. Fines assessed by the joint board are divided equally between the two parties to the agreement.

These provisions as to the infliction of penalties by the joint board seem to be inconsistent with a decision of the national executive board of the Brotherhood of Carpenters, made in 1897, to the effect that a joint arbitration committee of contractors and journeymen can not be allowed to try a member of the brotherhood for a violation of trade rules. Of course such an agreement is not enforceable at

<sup>1</sup>This is printed in full in volume viii of the Reports of the Industrial Commission, page 527.

law, but neither party is disposed to incur the odium and the loss of a complete dissolution of the relationship between the two organizations.

**5. Exclusive agreements.**—As in other building trades, it occasionally happens that the carpenters' joint agreements provide that members of the union shall work only for the employers' organization. Thus it is stated that at two different times in recent years the Carpenters' Executive Council of Chicago had an agreement with the associated employers to work for no one else. The president of the workmen's organization declared that the result of this alliance was to build up the employers' association and enable it ultimately to dictate over the employees. The practice of making such exclusive agreements with employers' associations is now prohibited by the constitution of the United Brotherhood of Carpenters and Joiners. This rule was first promulgated in 1897, as a mere decision of the executive board, but the convention of 1900 submitted it to a general referendum vote as a constitutional amendment, and it was adopted by a vote of 10,379 to 1,765.<sup>1</sup>

**6. The attitude of carpenters in New York toward joint agreements.**—A representative of the Master Carpenters' Association of New York City stated to this commission in 1900 that it has never been the practice in that trade in New York to make regular annual agreements between the employers' association or the individual employers and the organizations of workmen. From time to time the trade unions have made demands upon the employers, and the latter have at times been forced to sign agreements, indefinite in duration, conceding all or a part of the demands of the workmen. As a matter of fact, this employer holds, the unions do not wish to establish fixed agreements which shall be binding upon themselves as well as upon the employers, and in negotiations looking toward the establishment of such agreements the employers find the men irresponsible and vacillating.

As illustrating this responsibility on the part of the carpenters' associations this employer describes the strike in the trade during September and October, 1899.<sup>2</sup> He states that the unions took advantage of the unusual demand for the labor of carpenters caused by the preparations for the Dewey celebration. On September 6 a joint committee representing the carpenters' unions of New York City addressed a demand to the Master Carpenters' Association that from September 18 wages, which had been 43½ cents per hour, be advanced to 50 cents per hour, and that Saturday afternoon be declared a half holiday, so that the hours of labor should be reduced from 48 to 44 per week. The employers considered these demands excessive, especially since so little warning was given of the proposed change and since many of them had contracts on their hands. A committee of the Master Carpenters' Association was appointed to meet a committee of the men. The men's committee appeared, and when questioned stated that they had power to make an agreement. The employers proposed that wages should be 45 cents per hour until February 1, 1900, and that all questions as to conditions thereafter should be submitted to a joint committee of arbitration. A compromise was finally reached fixing wages at 47 cents per hour, establishing the Saturday half holiday, and referring the conditions of the trade after February 1, 1900, to a joint committee appointed by the respective organizations. This compromise was signed by 4 representatives of the employees and 7 representatives of the employers. At the bottom was written the statement, "The compromise proposition was unanimously adopted by both committees."

On the next day, despite this agreement, the secretary of the joint committee of the carpenters' organizations of New York City sent notice that he was instructed to inform the employers' committee that no proposition other than the original demands made in the circular of September 6 could be entertained by the unions. This action the employers denounced as showing bad faith on the part of the labor unions. The employers persisted in refusing the demands of the men and a general strike was inaugurated. Finally, however, on October 4 the Master Carpenters' Association was forced to yield and to grant all the demands made. The representatives of the association signed the agreement formerly presented, while a large number of individual employers also signed it. The men got a Saturday half holiday and an increase of wages from \$3.50 a day to \$4. The strike cost the union about \$16,000.

This agreement was exceedingly brief, merely establishing the rates of wages and hours, and it did not contain any definite limit for its operation. Negotia-

<sup>1</sup>The Carpenter, November, 1900, p. 1; January, 1901, p. 8.

<sup>2</sup>The statements in the text are chiefly based on correspondence. But see also the testimony of Mr. Lewis Harding, Reports of the Industrial Commission, vol. xiv, pp. 110-113.

tions still continued between the committees of the employers' association and of the joint carpenters' organizations with a view to establishing a more formal agreement. The representative of the employers, however, complains that no committee of the men appeared with power actually to reach an agreement. Each would refer back the propositions discussed in committee to the carpenters' organizations, and these would invariably refuse to act. New committees would be appointed by the men having different members from the former committees, so that continuity in the negotiations was impossible. Up to August, 1900, all attempts to reach a permanent settlement of the conditions had failed. At that time the committee of the Master Carpenters' Association reported the failure of its negotiations, and the association voted to discontinue these conferences and to terminate the agreement of October 4, 1899. It was not the intention that a general lockout should be inaugurated, but that the individual employers should be left to their own discretion as to whether they would continue to live up to the conditions prescribed by the former agreement. Some of them have reduced wages, and strikes have followed wherever union men have been employed. Up to March, 1901, the union still expressed the expectation that it would again effect a settlement on its own terms.

The master carpenters declare that the effect of the high wages and short hours which have been forced upon them has been greatly to interfere with the prosperity of the trade in New York City. Formerly the greater proportion of the material used in carpentry work was actually prepared in the city. Large numbers of men were employed in the shops of the contractors as well as upon the buildings themselves. At present it is declared that nearly all material is prepared outside the city in districts where the rates of wages are lower. This has not only reduced the aggregate amount of employment available in New York, but has greatly increased irregularity of employment, since the work on any particular building is comparatively short in duration and the intervals between jobs can not be filled up by shop work, as was formerly the case. There are hundreds of men, it is stated, out of employment. Many have at times been working secretly for less than the union scale of wages fixed by the agreement.

Commenting upon the above statements of the employers, a representative of the Amalgamated Society of Carpenters and Joiners states that it is not true that the committee who signed the agreement of September 21, 1899, had power to bind the carpenters' unions. The action of the unions in rescinding the agreement was therefore justified. The employers, in fact, he says, knew perfectly well that such an important matter as the fixing of the rate of wages for the entire carpentry trade could not be left by the labor organizations to the decision of a committee but that any action of the committee would have to be reported back to the organizations. It is even stated that the employers told the committee of the men that it was not understood that their signatures to the compromise arrangement bound their organizations, but that the men were urged to sign in order that the employers might have evidence of the action of the committee simply. Nevertheless, as soon as the men had been cajoled into signing the agreement the employers had a large number of copies of it printed and circulated, and endeavored to make it appear that it was an ultimate settlement of the dispute.

One of the New York employers, in testifying before the Industrial Commission, while expressing the greatest dissatisfaction with the course of the journeymen, expressed also his regret that there was no longer a definite agreement between the journeymen and the employers. His regret was based, not so much on any consciousness of the need of better feeling between the employers and their men, as individuals, as on the need of definitely fixed terms of employment to insure equality in competition between contractors. Under the existing condition of things, in which everyone hires men at such rates as he can get, his feeling was that some employers outside the employers' organization obtained an unfair advantage. Furthermore, he pointed out that a carpenter contractor must make his estimate of the cost of the work upon a given building at the time when the general contract is let, which may be a year or more before the carpenter work is begun. A definite scale of wages and hours, fixed for a definite period by agreement between the employers and the journeymen, would give a contractor a definite basis for his calculations. In the absence of such an agreement he must take his chances on what the cost of the work will be.<sup>1</sup>

<sup>1</sup> Testimony of Lewis Harding, Reports of the Industrial Commission, vol. XIV, p. 113.

### III. PLUMBING AND ALLIED TRADES.

1. **Organizations of employers and employees.**—The workmen in the plumbing, gas, steam, and hot-water fitting, and allied trades are quite strongly organized. Aside from numerous local unions not affiliated with national organizations, there are two national unions, the United Association of Plumbers, Gas-fitters, Steam-fitters, and Steam-fitters' Helpers, and the National Association of Steam and Hot-water Fitters and Helpers. The employers in these trades are also very generally organized. In some cities contractors representing all these different allied lines are grouped in a single organization, but in the larger cities an attempt is made to draw sharper distinctions between the different allied trades, and separate organizations, both of employers and employees, are common. There is, moreover, a National Association of Master Plumbers, which includes a large number of local organizations. Almost every State is represented by a vice-president in this national organization, and in most of these States there are State organizations of master plumbers. The National Association of Master Steam and Hot-water Fitters is a somewhat less extensive organization than that of the Master Plumbers, its membership being found chiefly in the Eastern and Central States. The prime object of this organization is stated to be the protection of its members against unjust demands by workmen.<sup>1</sup>

2. **Joint agreements.**—In view of the strong organizations of both employers and employees in these trades it is to be expected that the system of collective bargaining should be highly developed, and such is the case. In a large majority of the more important cities the conditions of labor in these industries are regulated by joint annual agreements, and in a considerable number of instances these agreements provide for the settlement of disputes by arbitration. The localized nature of the work and the differences in local conditions naturally make unnecessary and undesirable agreements of a general or national character.

The secretary of the United Association of Journeymen Plumbers, etc., however, says, in reply to a schedule of questions, that he considers the value of such agreements very questionable. He complains that they are constantly violated. The organization has repeatedly submitted disputes to arbitration, but "all cases of dispute so far settled by arbitration have been more or less unsatisfactory to both parties."

The officers of the national organization of steam fitters also appear somewhat skeptical as to the agreement system. About August 1, 1900, the secretary reported that only 6 locals then had agreements with employers, but that almost all the locals had had them. Such agreements are desirable, he says, and the organization tries to secure them. The secretary asserts, however, that 9 agreements out of 10 have been violated or declared void by employers. The association leaves all matters of general interest, says the secretary, to arbitration.

It has been somewhat more common in these than in the other building trades for the associations of masters and employees to form exclusive alliances by which the employers' organization agrees to hire only members of the union and union men promise to work for none others than members of the employers' organization. This was formerly the case, for example, with the joint agreements in the steam-fitting trade and the plumbing trade of Chicago, while the present joint agreements in the hot-water and steam-fitting trade of New York provide that members of the employers' association shall employ only union men and that union members shall work only for employers in the association or for such as sign the rules provided in the joint agreement.<sup>2</sup> It is stated, however, that the workmen's organizations, particularly those affiliated with the United Association of Journeymen Plumbers, Gas Fitters, etc., are disposed to refuse to enter into these exclusive alliances, and that they are somewhat less common than formerly. The president of the last-named organization testified in 1900 that there were still 15 or 20 cities in which agreements providing for exclusive employment on both sides existed, but that as rapidly as they expired the union men refused, so far as possible, to agree longer to work only for members of the contractors' associations. This witness asserted further that these exclusive alliances in the past had been used to force the community to pay higher prices for plumbing work.<sup>3</sup> The president also declared in his report to the plumbers' convention of 1900 that in each case where the journeymen had helped the Master Plumbers' Association to completely organize a place, the masters had returned the kindness by using the

<sup>1</sup> See testimony of Mr. Gomers, secretary of the association, Reports of the Industrial Commission, vol. vii, pp. 938 ff.

<sup>2</sup> See Reports of the Industrial Commission, vol. vii, p. 943, vol. viii, p. 1xvii.

<sup>3</sup> See Reports of the Industrial Commission, vol. vii, p. 265.

strength of their organization to fight the journeymen. He advised that locals should not be permitted "to promiscuously expel our members who may chance to be working in a shop whose proprietor declines to join the Master Plumbers' Association."<sup>1</sup>

The association formerly had a general rule for the defense of master plumbers, forbidding any member to work on any job where the material had been furnished directly to the owner or general contractor, except on work for the Federal, State, county, or municipal governments. The rule was abolished by the convention of 1900.

**3. Agreement in the plumbing trade of St. Louis**—Below is a copy of the joint agreement of the master plumbers and journeymen plumbers, of St. Louis, now in force. This may be considered typical of the plumbers' agreements in other cities, although it is doubtless one of the most elaborate in existence. It is especially noteworthy that this agreement covers a 5-year period. Indeed, it is quite common in the plumbing trade to make agreements for more than a single year. It will be observed also that this is an exclusive agreement by which members of the union work only for members of the Masters' Association. Another provision prohibits the journeymen from working in any building where any person or firm proposes to set up any plumbing material not furnished by the employer. This endeavor to limit the handling of supplies to actual plumbing contractors is by no means an uncommon one. Contracting plumbers in many instances have made agreements with associations of dealers in plumbing materials by which the latter either refuse altogether to furnish plumbing supplies to persons outside the contractors' association, or charge them higher prices.

The prohibition upon the employment of additional apprentices under this agreement is noteworthy.

The St. Louis agreement provides for the settlement of disputes by a joint conference committee, consisting of 3 members from each side, together with the presidents of the respective organizations. There is no provision for the calling in of an outside umpire in case of failure to secure a decision by a majority of the committee.

The secretary of the St. Louis Master Plumbers' Association states in reply to a schedule of questions that many disputes come up before the conference board, but that they are always settled peaceably. Refusal to arbitrate by either party would not be tolerated, and refusal to abide by decisions of arbitrators is rare and usually only temporary. This officer declares that the best results are obtained and the slightest loss is sustained when work is carried on under the joint-agreement system.

#### AGREEMENT BETWEEN THE MASTER PLUMBERS AND JOURNEYMEN PLUMBERS OF ST. LOUIS

1 The hours of labor will be from 8 a. m. until 5 p. m., with one hour for dinner. Saturdays, from 8 a. m. to 12 m. It is expressly understood that the employee will not quit work before the time specified herein.

The wages will be \$1 per day for journeymen, except Saturdays, for which the wages will be \$2 for the half day. Wages are due and payable on each Saturday at office of employer within one hour after quitting time. This clause to go into effect the first day of January, 1900.

2 All overtime to be paid for at time and one-half. Overtime after 12 o'clock in and all Sundays and the following holidays to be paid for as double time: January 1, July 4, Labor Day, Thanksgiving Day, and Christmas Day.

3 Journeymen sent outside the city to work shall be subject to all the conditions of this agreement, and in addition thereto shall receive their railroad fare and board paid, and when traveling at night over 100 miles, sleeper is to be furnished. Travel during Sundays and week days to be at single time (regular rate), and no pay for night traveling. It is further agreed that master plumbers may hire plumbers belonging to a local union, in the place they may have work, at the local union wages.

4 All car fare in excess of what it would cost to go to and from shop to be paid by employer. It is expressly understood that journeymen shall go direct from their homes to their work, except on such occasions as when material is required, or for consultation with employer.

5 No general strike shall be ordered in a shop by any officer of the Journeymen Plumbers' Association without first submitting grievance to the joint conference committee. The decision of a majority of said committee shall be binding on both parties. The chairman of conference board shall call a meeting at some regularly appointed place within twenty-four hours of the time that grievance is submitted to him.

6 It is expressly understood that no member of the Journeymen Plumbers' Association will work in any building where any person or firm proposes to or does set up any plumbing material or plumbing fixture not furnished by their employer.

7 It is expressly understood and agreed that the parties to and of this agreement will not handle or put in the following goods, viz:

Drum traps with outlets or screws attached, lead pipes with ferrules or soldering nipples, lead-pipe couplers, rubber vent connections, long traps with ferrules attached, same to cover all sizes. Joints on couplings and ferrules to be wiped in all cases. All soil-pipe joints to be caulked with oakum and lead in all cases. A rust joint may be used. All bath-tub traps that are placed under floor to be drum traps, same to be made by plumber.

8 The members of the Journeymen Plumbers' Association will not work for anyone under any

circumstances for less than the regular rate of wages agreed upon in this agreement. All violations of this article shall be in charge of the joint conference committee of both associations.

9. A sympathetic strike when ordered by the Building Trades Council will not be considered a violation of this agreement; the master plumber to have sufficient notice to protect his material.

10. There will be no more new apprentices or juniors hired during the term of this agreement, but all apprentices who are registered by the joint association shall be permitted to complete their time, which will be five and a half years, and at the expiration of same shall receive journeymen's wages, but in no case shall there be more than one apprentice employed in a shop at one time. It is also expressly understood that the employer shall have complete control of the apprentice during his term of apprenticeship.

The joint association pledge themselves to do all in their power to advance the mental, moral, and mechanical education of its enrolled apprentices. This clause may be changed or modified when the national joint apprenticeship committee passes a national apprenticeship law.

11. In no case shall a plumber be employed without having a clear card, or provisions made to one, by employer.

In no case shall an apprentice be employed where journeymen are not employed.

In no case shall apprentices be in a majority.

12. It is agreed that when joint conference board is not satisfied that this agreement is being strictly lived up to, said board shall have power to cause such investigation as they see fit. The finding of said board on all matters shall be final and binding on both associations.

13. Only one (1) member of a firm will be allowed to handle tools, and he shall have in his possession when engaged in work a card issued by the joint conference board.

Any master plumber working on job where men have been called out, unless he shall have received permission from the conference board, shall be declared unfair.

14. No member of the Journeymen Plumbers' Association shall work for any one other than a member in good standing of the Association of Master Plumbers, and no member of the Association of Master Plumbers shall employ others than members in good standing of the Association of Journeymen Plumbers.

15. The conference board shall consist of three members of each association and the presidents of same who shall be also empowered to vote. Whenever a member of the conference board becomes a prosecutor or a defendant, he shall temporarily vacate his seat and his place shall be filled by some other member of his organization or by a proxy vote placed with one of his colleagues.

16. This agreement in duplicate form shall receive the signatures of the officers and seals of both associations, and shall become effective when so signed and remain so for a period of five years, until the 18th of September, 1901.

17. A copy of this agreement shall be conspicuously displayed in each shop where said board has jurisdiction.

4. **Failure to establish agreements in San Francisco.**—The secretary of the Association of Master Plumbers of San Francisco reports that about 10 years ago an attempt was made to establish a system of joint agreements between the Master Plumbers' Association and the journeymen plumbers in that city. It was proposed to require master plumbers to employ only union men and union men to work only for members of the Masters' Association. The secretary of the Masters' Association considers such exclusive agreements un-American and undesirable. The parties failed to agree on the terms of labor and the system of written contracts has never been introduced. On the other hand, the organizations of masters and of men each maintain a committee of conference, and without any formal agreement to submit disputes to 2 committees acting jointly, most differences are, in fact, considered by them, and in many instances peaceful settlements have been reached. A considerable proportion of the employers in the trade in San Francisco employ only union men and comply with union terms, subject to such negotiation between the committees of conference. Other contractors employ exclusively nonunion men.

The secretary expresses the belief that arbitration is the only proper method of settling disputes, but that both employers and employees are disposed to be strongly prejudiced, so that conference committees composed exclusively of representatives of the two sides are by no means sure to reach an agreement. There is a strong disposition, he thinks, on the part of labor organizations to place the incompetent upon a level with the competent, to exclude youth from apprenticeship, and to restrict the amount and methods of work, while on the other hand employers are often disposed to grind and drive their employees. For this reason he favors compulsory arbitration under Government officers in case of failure of the parties to agree among themselves.

5. **The New York pipe fitters' agreement.**—The Master Steam and Hot Water Fitters' Association of New York City on the one hand, and the Enterprise Association of Steam, Hot Water, and other Pipe Fitters, and the Progress Association of similar workmen have maintained the system of joint agreements for a number of years. Each of the unions named has a separate agreement, but most of the

provisions are identical. The system has not altogether done away with strikes. Thus, in 1897, the steam fitters struck on the Columbia College buildings on account of a difference with the plumbers' organization as to which trade was entitled to put in certain classes of work of a minor character. An agreement was made in 1898 between the master and journeyman steam fitters which was to last for 2 years, and in 1900 agreements running until 1903 were adopted. A copy of the last-named agreement with the Enterprise Association is printed in connection with the testimony of Mr. Gomers, of the Master Steam Fitters' Association.<sup>1</sup> It represents, doubtless, a somewhat more highly elaborated form than exists in most other cities in the steam and hot water fitting trade. The masters agree to employ only union men and the union men will work only for members of the Masters' Association or for others who sign the rules and agreements. The provisions for arbitration of disputes are quite carefully drawn. No strike or lockout is permitted so long as the rules are conformed to, and in case of difference as to the interpretation of the rules, or of alleged violation of the rules, the matter must be submitted to a board of arbitration composed of 4 members chosen by each organization. If these fail to agree after 3 consecutive meetings they shall select an umpire, who shall render a binding decision within 24 hours. It is difficult to understand the motive for limiting the time allowed the umpire in reaching his decision in such a strict manner.

The secretary of the National Association of Master Steam Fitters, who is also secretary of the New York local association, expresses the belief that the system of working agreements between employers and employees is a good thing if honestly entered into and conscientiously lived up to. If agreements are kept by the workmen they are especially advantageous to contractors who can count ahead upon the cost of labor in undertaking work. This officer, however, complains of the impossibility of holding the workmen to strict compliance with their agreements. There is no legal method by which the contracts can be enforced as regards the workmen. In the opinion of this gentleman the system of joint agreements should be recognized by law and they should be made legally binding upon both labor organizations and employers' associations. For this purpose the legal incorporation of such organizations would be necessary.

#### IV. MINOR BUILDING TRADES.<sup>2</sup>

Much of what has been said regarding the system of joint agreements and conciliation in the more important building trades, such as the carpenters and bricklayers, applies to the minor building trades as well. In some of these trades the workmen are quite strongly organized, especially in the large cities. The painters and plasterers have somewhat strong national associations, while a national organization has recently also been formed in the mosaic and tile trade. Local organizations of contractors and employers in these trades are also quite common, and joint written agreements are in many instances made between the respective associations of employers and employees. Typical agreements in force in various trades are printed below, together, in certain cases, with some discussion as to their work. It will be observed that in not a few instances, as in the case of the marble cutters' agreement in New York and the roofers and sheet-metal workers' agreement in the same city, provision is made for arbitration committees for the settlement of disputes. In other instances the agreements contain no such provision, while some of them are virtually one-sided arrangements representing concessions on the part of the employers to demands of the workmen.

Highly elaborate agreements are in force in most of the minor building trades of Chicago since the great dispute of 1900. The Building Contractors' Council, which had the advantage in that struggle, drew up a general form of agreement. Owing to the greater strength of some of the workmen's organizations, such as the carpenters, they were able to secure concessions from these terms. The weaker unions accepted them with little or no change. All the agreements contain elaborate provisions for arbitration. An account of the bricklayers' agreement, which follows closely the draft presented by the contractors, is given above, p. 383; while the carpenters' agreement, whose terms are more liberal, is described on p. 384. See also Reports of Industrial Commission, volume viii (The Chicago Labor Disputes), pages xliii ff.

<sup>1</sup> Reports of the Industrial Commission, vol. vii, p. 941.

<sup>2</sup> Several of the following agreements are taken from the quarterly Bulletin of the New York Bureau of Labor, June, 1900.

### 1. New York (Manhattan Borough) marble cutters and carvers.

An agreement made and entered into on the 13th day of April, 1900, by and between the Marble Industry Employers' Association of New York City and Vicinity, parties of the first part, and the Journeymen Marble Cutters' Association of New York City and Vicinity, parties of the second part, Witnesseth: That the parties hereto agree to and with each other as follows:

First: That from the first day of May, 1900, until the first day of May, 1901, eight hours shall constitute a day's work on Monday, Tuesday, Wednesday, Thursday, and Friday, and four hours shall constitute a half day's work on Saturday of each week. Work to commence at 8 a. m., with noon hour for dinner.

Second: That the minimum rate of wages for cutters shall be \$1 per day and the minimum rate of wages for carvers shall be \$1.00 per day.

Third: That all labor performed in excess of the regular working days enumerated above on legal holidays shall be entitled to an advance of 100 per cent, whether in the shop or building.

Fourth: That all employees shall be paid on Friday before 5 o'clock p. m. of each week up to and including the preceding Thursday.

Fifth: That the members of the Marble Industry Employers' Association agree to employ no cutters in New York City or Brooklyn excepting those being members of the Journeymen Marble Cutters' Association, or such others as will be recognized by them through admission.

Sixth: That all members of both associations hereto, during the term of this agreement, shall be subject to all its provisions and any member failing to comply shall forfeit his membership in the association of which he is a member.

Seventh: All persons employed to run or work the marble cutting machine known as the "Richt" machine or any planing machines, shall either belong to the Reliance Labor Club or Marble Machine Workers' Union, and the minimum wages shall be \$1 per day, but hereafter any person employed to learn to run or work said machines shall be a journeyman in marble cutter.

Eighth: That the members of the Journeymen Marble Cutters' Association will not be required to work with any person as superintendent or foreman in shop or building other than a marble cutter.

Ninth: That all disputes are to be arbitrated. They shall be referred to a joint board of arbitration, consisting of six members of the Marble Industry Employers' Association not interested in the matter under discussion, together with six members of the Reliance Labor Club. This board failing to agree, shall select an umpire, whose decision shall be final and binding on both parties.

Tenth: That on and after May 1, 1900, the parties of the second part will refuse to work for any firm in any way interested in convict-manufactured marble or manufactured marble imported into the United States, or marble cut or copied outside of New York or vicinity, excepting marble tiles from the State of Vermont or white marble tiles imported from Italy.

Eleventh: One apprentice shall be allowed to every shop, and one additional to every ten cutters employed, based on yearly average, until the number of apprentices shall amount to ten, which shall be the limit in any shop. They shall start between the ages of 16 and 18 years, and serve four years, and be given work and proper instruction during term of apprenticeship in all the branches of marble cutting and setting, or carving, failing which the Employers' Association shall be notified, and the offending employer shall not be allowed any other apprentice, unless the apprentice should leave or be discharged for just cause or inability, when said apprentice shall not be again allowed to work at the trade. When an apprentice shall have served three years his employer shall be entitled to an additional apprentice.

Twelfth: That this agreement is to continue in force from the first day of May, 1900, until the first day of May, 1901, and if any change is contemplated by either party, a notice in writing shall be given by the party contemplating such change, stating fully what the proposed change is, at least three months prior to the expiration of this agreement, viz, May 1, 1901.

### 2. New York (Manhattan Borough) marble polishers, rubbers, and sawyers.

An agreement made and entered into this 13th day of April, 1900, by and between the Marble Industry Employers' Association of New York and Vicinity and the Whitestone Association, Nos. 1 and 2, of New York and Vicinity.

First: That from the first day of May, 1900, until the first day of May, 1901, eight hours shall constitute a day's work on Monday, Tuesday, Wednesday, Thursday, and Friday, and four hours shall constitute a half day's work on Saturday of each week, work to commence at 8 a. m., with noon hour for dinner.

Second: That the minimum rate of wages for polishers shall be \$3.25 per day.

Third: That all labor performed in excess of the regular working days enumerated above and all labor performed on legal holidays shall be entitled to an advance of 100 per cent, whether in shop or building.

Fourth: That all employees shall be paid on Friday before 5 o'clock p. m. of each week up to and including the preceding Thursday.

Fifth: That the members of the Marble Industry Employers' Association agree to employ no polishers in New York City and vicinity excepting those being members of the Whitestone Association.

Sixth: That the members of the Whitestone Association agree that they will not work for any person or persons doing business in New York and vicinity not members of the Marble Industry Employers' Association of New York and Vicinity.

Seventh: That one apprentice polisher shall be allowed to every shop where three polishers are employed on the average per annum, and one additional apprentice polisher for every twelve polishers employed, based on yearly average, until the number of apprentices shall amount to four, which shall be the limit in any shop. They shall start between the ages of 16 and 18 years and serve four years, and receive for the first year \$5 per week, second year \$7 per week, third year \$10 per week, and fourth year \$14 per week.

Eighth: That on and after May 1, 1900, the Whitestone Association will refuse to work for any firm in any way interested in convict-manufactured marble, or manufactured marble imported into the United States, or marble cut or copied outside of New York or vicinity, excepting marble tiles from the State of Vermont or white marble tiles imported from Italy.

Ninth: That none but members of the Whitestone Association be allowed to do any cleaning, rubbing, or polishing of marble in shop or building.

Tenth: That none but members of the Whitestone Association be permitted to work on rubbing or polishing machines.

Eleventh: That the members of the Whitestone Association will not be required to work with any person as foreman in shop other than a practical marble polisher. This article does not apply to shops employing less than an average of six polishers.

Twelfth. That the delegate may, during working hours, visit and enter the shops of the members of the Employers' Association as well as all buildings where members of the White-stone Association are employed, to examine the cards of said members.

Thirteenth. That all disputes shall be arbitrated and shall be referred to a joint board of arbitration consisting of three members of the Employers' Association not interested in the matter under discussion and three members of the White-stone Association. This board, failing to agree, shall select an umpire, whose decision shall be final and binding on both parties.

Fourteenth. That this agreement is to continue in force from the first day of May, 1900, until the first day of May, 1901, and if any change is contemplated by either party to this agreement a notice in writing shall be given by the party contemplating such change, stating fully what the proposed change is, at least three months prior to the expiration of this agreement, viz, May 1, 1901.

Fifteenth. That on and after May 1, 1900, the union label be used on all plumbing, marble work, and facings.

### 3. New York roofers and sheet metal workers.

AGREEMENT ENTERED INTO BETWEEN THE AMALGAMATED SHEET METAL WORKERS' PROTECTIVE AND BENEVOLENT ASSOCIATION OF NEW YORK AND VICINITY AND THE EMPLOYERS' ASSOCIATION OF ROOFERS AND SHEET METAL WORKERS OF GREATER NEW YORK AND ADJACENT CITIES.

I. On and after May 1, 1899, a working day shall consist of eight hours, performed between 8 o'clock a. m. and 5 o'clock p. m., the same to be known as regular time. During the months of June, July, and August forty-four (44) hours shall constitute a week's work, the week ending at 12 o'clock noon on Saturday (Saturday to be considered as one half day). Men to receive their wages at said time.

II. Regular time shall be paid at the rate of not less than three dollars and fifty cents (\$3.50) per day for sheet metal workers. Any excess of this amount shall be at the option of the employer.

III. All apprentices shall be under the control of the employer, until his time expires as such in regard to his wages, actions, etc. When the employer takes on a boy as an apprentice, he shall notify the union, and the date of his four years' term of apprenticeship shall commence from that date.

IV. All work done between the hours of 5 o'clock p. m. and 8 o'clock a. m., and Sundays, New Year's Day, Lincoln's Birthday, Washington's Birthday, Decoration Day, Fourth of July, Labor Day, Election Day, Thanksgiving Day, Christmas Day, shall be paid at double rates of regular time.

V. All members shall be paid at 5 o'clock on Saturday, payments to be made at the option of the employer, either on the job or at the shop.

VI. Every shop shall have the privilege of employing one apprentice for five men or less, and one additional apprentice for each additional five men or majority fraction thereof, but not more than four apprentices shall be allowed in any shop. On corrugated iron jobs, where ten or more mechanics are employed, in such cases, the employer shall be permitted to have two apprentices to assist each five mechanics on corrugated iron work only. If the union is unable to furnish the number of apprentices called for in this section, the employer shall be permitted to employ laborers instead of apprentices. Laborers employed in accordance with this section shall be allowed to hold the dolly for mechanics.

VII. The employer shall be permitted to employ as many laborers as occasion may require to do laboring work, but no laborer shall be allowed to handle tools or assist any journeyman in doing mechanical work, excepting as above. On buildings where derricks are already in place, which are the property of other employers, and which have been used for hoisting material not pertaining to the sheet metal trade, employers to use said derricks and their attendants for hoisting only.

VIII. All corrugated iron or other sheet metal work, except roofing, shall be made and applied by members of the Amalgamated Sheet Metal Workers' Protective and Benevolent Association only, as above provided. On corrugated iron roofing the employer shall use such union mechanics as he sees fit.

IX. That all work for out of town shall be made and applied by members of the aforesaid union, except when outside of the jurisdiction of the union. When such mechanics shall be employed to erect same as employers see fit, but on all such work at least one mechanic, a member of the aforesaid union, shall be employed.

X. All foremen who work at the bench, or do mechanical work other than actual pattern cutting, shall be members of the aforesaid union.

XI. The business agents shall have access to the shops at all times upon application at the office.

XII. Each member shall be paid for the time at which he arrives at his work on Manhattan Island, south of 155th street, Brooklyn (old city line), Jersey City, or Hoboken, and the districts embraced in the places named above shall be known as the city district.

XIII. In going to jobs outside of the city district, as defined in clause XII, each member shall be at the limit of said district at 8 o'clock a. m., and from there shall proceed as rapidly as possible to his work.

XIV. Any member working out of the city district shall receive from his employer traveling expenses to and from the place at which the work is located for as many trips as he is directed by his employer to make. He shall also receive board, and he shall receive regular wages for all regular time consumed in traveling.

XV. On all work within the city districts where employees would have to pay more than one fare to get from the shop to the job the employer shall pay the extra fare. Members sent from shop to job or from job to shop, the employer shall pay all necessary car fares.

XVI. Each member working outside of the city district shall, at the option of his employer, board at the place where his work is located or go to and from his home daily. If the former plan is adopted, it shall be in accordance with Rule XIV, if the latter plan is adopted, he shall receive from his employer all traveling expenses outside of the city in which his employer's shop is located.

XVII. Members going to their work out of the cities named above shall take the boat or railroad train leaving either of the cities named above, as directed by their employers, going on train or boat leaving nearest 8 o'clock a. m., and returning taking the boat or train leaving nearest 5 o'clock p. m.

XVIII. And it is further agreed that the members of the Employers' Association of Roofers and Sheet Metal Workers of Greater New York and Adjacent Cities will not employ, either directly or indirectly, to do sheet metal work within the radius of twenty miles from New York City Hall, any person who is not a member in good standing of the Amalgamated Sheet Metal Workers' Protective and Benevolent Association of New York and Vicinity. A member's standing to be ascertained by his working card.

XIX. It is further agreed that the members of the Amalgamated Sheet Metal Workers' Protective and Benevolent Association of New York and vicinity will not work for employers not members of the Employers' Association of Roofers and Sheet Metal Workers of Greater New York and Adjacent Cities who do not agree to conform to this agreement.

## AGREEMENT

It is hereby mutually agreed by and between the Employers' Association of Roofers and Sheet Metal Workers of Greater New York and Adjacent Cities, parties of the first part and the Amalgamated Sheet Metal Workers' Protective and Benefvolent Association of New York and Vicinity, parties of the second part.

That whenever a strike or lockout against any member of either association shall be ordered without first submitting the grievance or question at issue to an arbitration committee, consisting of three members of the party of the first part and three members of the party of the second part, the first meeting of the arbitration committee to take place within two days after notification, such notice to be sent by the secretaries of the respective associations.

Should the arbitration committee fail within three working days of its first meeting to agree upon a settlement of the question at issue, then each side shall make its argument before an impartial umpire selected by the full arbitration committee, and said umpire shall within twenty-four hours thereafter render his decision, which shall be final and binding upon all the parties thereto.

This agreement shall take effect on May 11, 1897, and shall continue until September 1, 1900, and no change shall be made in any article of said agreement unless notice be given on or before March 1st, next preceding, by the association asking for such change, such notice to be given in writing to the secretaries of the associations.

We, the committees of the respective parties, hereby and on their behalf subscribe to the aforesaid agreement this 11th day of May, 1897.

## 4. Tile setters

An official of the National Association of Master Tile Setters, and also of the local association of New York City, states that there is no system of agreements between the national organizations of employers and employees in the tile-setting trade. Indeed, the difference in the conditions in the various cities naturally makes it undesirable to attempt to establish uniform rates of wages, hours, etc. Local agreements between employers' associations and trade unions at present exist, or have existed, in Chicago, Boston, New York, and one or two other cities.

The last formal agreement between the New York Master Tile Setters and the Tile Setters' Union was made in 1897. It fixed the rate of wages and hours, providing for overtime, etc. In case of dispute as to any matter arising under the agreement, a joint committee of arbitration was to be established. A significant feature of the contract was that only union men should be employed by members of the Master Tile Setters' Association, and that members of the union should work only for the members of the association. The agreement was to stand for one year, and longer unless 3 months' notice should be given of the desire to change it.

Since 1897 the workmen in the tile-setting trade in New York have been unwilling, according to the statement of this employer, to bind themselves by annual contracts, and even if they had consented to do so the employers would scarcely be willing to enter into such agreements, on account of the irresponsibility of the employees' organizations. The difficulty arises, he says, mainly from the influence of agitators in the trades union. There are many good workmen who are members of the union, but who seldom, if ever, attend the meetings. If men of this class do attend the meetings and attempt to oppose the will of the agitators, the business will be postponed until late at night, when the more conservative men have left the meeting or are wearied with opposition. Even during the period when annual agreements were being made it was difficult to treat satisfactorily with the representatives of the men or to ascertain what their real desires were.

The provision requiring arbitration which existed under the former agreements was, in practice, so this employer states, of little importance. In one instance, 5 or 6 years ago, an attempt was made at arbitration. During the construction of a large hotel the marble was furnished by a dealer who employed nonunion cutters and polishers. He was one of the largest and best dealers in New York, and paid

his men fully as high wages as the union rates. Nevertheless, the union tile and marble setters at work on the building refused to let the nonunion marble be set. The contractors had the marble put in on Sunday, but the union tile and marble setters struck the building. The matter was referred to the Master Tile Setters' Association. They threatened a general lockout of the tile setters throughout the city unless those on the hotel should return to work. Meantime the Masters' Association suggested that the dispute be referred to an arbitrator, in accordance with the terms of the existing agreement between the organizations of employers and employees. The men accordingly went back to work, and negotiations were entered into for arbitration. Two representatives of each party were chosen, and as a fifth the union suggested the Reverend Father McGlynn, which was agreed to by the Masters' Association. It was anticipated that he would decide against the employers, since his sympathies generally had been with the working classes, but the employers wished to show their willingness to arbitrate and to commit the men to the policy of submitting questions to arbitration. His decision turned out to be in favor of the employers. He declared that the strikers were entirely wrong in their action. The union nominally accepted the decision, but within 24 hours it presented demands for a large increase in wages throughout the city, and when this was refused a general strike, lasting several weeks, was begun.

Another experience somewhat later, says the representative of the employers, finally led to the abandonment of the annual agreement system. The agreement provided that union men would work only for members of the employers' association. A very large building was being erected in the city. The manufacturer of the tiles to be used in the building wanted to set them himself instead of leaving it to the regular tile-setting contractors. He was of course not a member of the Contractors' Association and refused to become one. Fifty of the union men, in violation of their contract, worked for him in setting this tile. After this action the employers abandoned the contract system altogether.

The Tile Setters' Union of New York still requires, it is stated, individual employers or the employers' association to sign one-sided agreements of an indefinite duration, granting higher wages or shorter hours. Thus during 1899 the demand for \$1.50 per day and 8 hours' labor was presented and an agreement allowing these terms was signed.

This official of the master tile-setters' organization believes that it would be possible to secure great advantages from the system of joint agreements if both parties could be held thoroughly responsible. Strong organizations are desirable on both sides. If the employees' organization could be incorporated, so as to become financially responsible, it would perhaps make the system more effective. He especially believes in the justice and desirability of the policy of agreements by employers to employ only union men, and by employees to work only for members of employers' associations. At present the courts are inclined to consider agreements by which men shall work only for employers' associations illegal. This is especially true where employers' associations attempt to make agreements with associations of manufacturers or dealers to supply material only to their members. There was formerly a tacit agreement of this nature between the master tile setters and the manufacturers of tile in New York City. A suit was brought for conspiracy and, although the person who brought this suit was by no means a responsible employer, the Tile Setters' Association felt it necessary to compromise the case and to abandon thereafter the attempt to make these exclusive agreements.

This gentleman declares that there are frequently irresponsible contractors in the tile-setting trade, as in many others, who are unfamiliar with the business and could not possibly do good work. They hire incompetent men at low wages and put in unsatisfactory jobs. The result is that persons building houses become dissatisfied with the use of tile generally and the entire trade is injured. As a protection against such irresponsible persons it would be desirable that strong organizations of employers should be established. It should be provided by law, if necessary, that in case any person could give evidence that he was skilled in the trade and responsible, it should be obligatory upon the employers' association to admit him to membership. In the plumbing trade it is now the practice in New York and many other cities to require an examination by a public board before the person is permitted to work as a journeyman or master plumber. A part of the members of the examining board in New York City are chosen by the Master Plumbers' Association. Some such device might be introduced in other trades so that disinterested public officials could have some control over the right to be admitted to the authorized practice of the trade. In this way injustice from the exclusion of any employer from membership would be avoided.

### 5. Mosaic workers, New York.

The former secretary of the Master Mosaic Workers' Association, in New York City, states that the system of annual signed agreements was formerly in vogue in the mosaic trade in New York City.

The last agreement made between the employers' organization and the Mosaic Workers' Association was dated January 1, 1899, and was to continue in effect for 1 year. This agreement fixed the hours of labor at 8, and wages at from \$2.75 to \$3.25, according to skill. Special provisions were made requiring or allowing the employment of mosaic mechanics in different classes of work, a card with the names of the men of the different classes being furnished by the union. The employers agreed to employ only members of the union, and the union men agreed to work only for employers signing the agreement. Any difficulty arising between an employer and his men was to be settled by arbitration, although no definite method was provided for.

Separate agreements were also made with the Marble and Mosaic Workers Helpers' Association. The last such agreement was for the year 1898. It fixed the hours at 8 and the wages at \$2.30 per day. Provisions were made concerning the employment of mosaic workers and helpers, respectively, on various classes of work. Exclusive employment of union members and exclusive work for employers signing the agreement were required. No mention was made of arbitration.

Both of these agreements have been allowed to expire by limitation, but the rates of wages and general conditions prescribed by them are, for the most part, still in force in the mosaic trade. It is stated by the employers that some changes have been made at the demand of the unions, the employers being forced individually to sign agreements. These later agreements are without limitation; they are merely concessions obtained from employers and do not correspond in character with the more systematic agreements, binding both parties, which were formerly employed. The employers also complain that even while the agreements were in force the unions were irresponsible, and there was no certainty that they were living up to the agreement.

The former secretary of the employers' association of mosaic workers in New York City states that practically only union men are employed in mosaic work there. Nonunion men going to work will very soon be discovered by the walking delegates of the union and a strike will be threatened unless they are discharged. Sometimes nonunion men are admitted to the union by paying the initiation fee of \$100, but in other cases they are refused admittance. At one time a suit was brought against one of the unions for conspiracy on the ground that it prevented a nonunion man from getting employment and refused to admit him to the union. The matter was compromised by admitting him to the union, and there was no final adjudication of the case.

### 6. Structural iron workers, New York<sup>1</sup>

On November 1, 1899, the United Housesmiths and Bridgemen's Union of New York City, ordered strikes of its members against all firms composing the iron league, to compel the acceptance of the following agreement:

This agreement made and entered into this \_\_\_\_\_ day of \_\_\_\_\_ A. D. eighteen hundred and ninety-nine, between the firm of \_\_\_\_\_ of the first part and the United Housesmiths and Bridgemen's Union of New York and Vicinity, of the second part, to go into effect on the first day of November, eighteen hundred and ninety-nine, to cover the incorporated limits of New York and Vicinity:

#### ARTICLE I

SECTION 1. Witnesseth that the party of the first part agrees that on and after November 1, 1899, eight hours shall constitute a day's work. That time and half time shall be paid for all overtime, double time for Sundays and the following holidays or days observed as such: January 1, February 22, Decoration Day, July 4, Labor Day, Thanksgiving Day, and December 25. Work shall commence at 8 o'clock a. m. and end at 5 o'clock p. m. The noon hour may be curtailed by agreement between the foreman and a majority of the workmen.

SEC. 2. The party of the first part agrees to pay a minimum scale of 40 cents per hour for all iron work.

SEC. 3. The party of the first part further agrees to employ only members of the union or those who will become members, providing they meet all the requirements of the union.

SEC. 4. The party of the first part further agrees to allow the business agents of the party of the second part to visit all jobs at all times, also to allow a steward on each job, who shall attend to the business of the union without expense or inconvenience to the employer.

#### ARTICLE II

SECTION 1. The party of the second part agrees to perform in a faithful and workmanlike manner all duties required of them by the party of the first part.

SEC. 2. The party of the second part further agrees that in case of trouble or any misunderstanding between the parties of this agreement the difference shall be arbitrated. Work shall proceed pending the arbitration, under the conditions of this agreement. The arbitrators shall be three entirely

<sup>1</sup>Report New York Board of Mediation and Arbitration, 1899, p. 162.

disinterested parties, one selected by each party to this agreement, and the third selected by these two, and the decision of these arbitrators shall be binding to both parties. But none of the definite agreements of this contract shall be subject to arbitration, and the decision of arbitrators shall be rendered within six working days. A sympathetic strike by other trades, or called by the central bodies, where it is necessary for the parties of this agreement to take part to protect union principles, shall in no way be considered a violation of this agreement.

Sec. 3. This union strictly forbids piecework of any kind.

Sec. 4. In case it is desired by the party of the first part, two separate shifts may be employed on the same work, paying each shift only the regular single scale of wages provided for above. In such case the hours of work of the day shift may be changed by consent of the employer and his men, but the hours of employment of said shift shall not be more or less than eight. But no member of the union will be allowed to work two shifts unless he be paid the overtime rate for all over eight hours.

Sec. 5. The party of the second part further agrees that no change shall be made in this agreement unless the party of the first part shall be notified ten months previous of such changes going into effect.

About 500 men obeyed the strike order, a like number gaining then demands without striking. The principal firms affected were the Post & McCord Company, the New Jersey Steel and Iron Company, the Berlin Bridge Company, the New Amsterdam Construction Company, Rapp & Spedel, the Trieste Construction Company, and J. M. & J. B. Cornell, and work on some 45 buildings throughout the city was interrupted. The above-named firms held out against their employees, and there was no change in the condition of the strike during November except that several general strikes were ordered in sympathy with the ironworkers and many trades became involved. On December 30 it was announced that the strike was practically at an end, all but two or three of the contractors having, during December, signed the agreement. Many nonunion ironworkers joined the strike and held out for the same terms as were demanded by the union.

## 7 Painters

The secretary of the Brotherhood of Painters and Decorators of America said, in reply to a schedule of questions, that the local unions in that organization try to secure written agreements with employers as to wages, hours, and other conditions, and have obtained them in most cities where they exist. The results have been found altogether favorable.

On April 1, 1899, the union painters of Troy went on strike to compel the employing painters to sign an agreement providing for a new scale of wages. Several conferences were held, and on April 10 the strike was settled under the following agreement.<sup>1</sup>

Articles of agreement by and between the Master Painters' Association of Troy, N. Y., and vicinity, and local union No. 12, Brotherhood of Painters and Decorators of America, at Troy, N. Y.

ARTICLE 1. The undersigned master painters do hereby agree not to employ anyone as a painter, decorator, or paper hanger who is not a member in good standing of the Brotherhood of Painters and Decorators of America, except as herein provided.

ARTICLE 2. Any painter, decorator, or paper hanger securing employment in this city must immediately make application for membership in the Brotherhood of Painters and Decorators, after being notified by the shop committee from the Brotherhood of Painters and Decorators of America.

ARTICLE 3. That 8 a. m. to 9 p. m. shall constitute a day's work the same to be performed between 7 a. m. and 6 p. m., and that after 6 p. m. overtime must be paid.

ARTICLE 4. The minimum rate of wages shall be 30 cents per hour for working hours.

ARTICLE 5. That all overtime shall be paid for at the rate of time and one-half, except Sundays and holidays, such as New Year's Day, Washington's Birthday, Decoration Day, Fourth of July, Labor Day, Election day, Thanksgiving Day, and Christmas Day, when it shall be paid for at the rate of double time.

ARTICLE 6. When work is located so far away that workmen have to take the cars or ferry, the fare shall be paid both ways by the employer, and if the workman can not get back home after his day's work is done the employer shall pay his full board with transportation each way once, and no part of it shall be charged to the workman.

ARTICLE 7. That each shop be allowed one apprentice to every eight men so employed.

ARTICLE 8. Shop committees appointed by the union shall be recognized by their respective employers, as hereinafter mentioned and provided.

### DUTIES OF SHOP COMMITTEE

ARTICLE 9. The sole duties of the shop committee herein mentioned shall be to see that the foregoing articles of agreement are in all respects lived up to, fulfilled, and complied with by both employers and employees, and it shall be unlawful for said shop committee to interfere with any business of said employer, except as heretofore stated.

ARTICLE 10. The above rules shall go into effect April —, 1899, and shall continue in effect until April 1, 1900.

ARTICLE 11. That the parties to this agreement do further agree to meet at a time, not later than January 15th of each year, to perfect articles of agreement for the year 1900 and each succeeding year.

ARTICLE 12. That any man at present working for any member of the Master Painters' Association of Troy and vicinity at the time of the signing of these articles be permitted to join Local Union No. 12 at the same rate of initiation fee in force March 15, 1899, providing such application is made in writing addressed to the president or secretary of Local Union No. 12 within three (3) days after the signing of these articles of agreement.

ARTICLE 13. If at any time either party to this agreement shall in any way violate any part of this agreement, the question must be submitted to an arbitration committee consisting of three members

<sup>1</sup> Report New York Board of Mediation and Arbitration, 1899, p. 97.

of each body to the parties of this agreement, unless that nonunion men are brought to work on such jobs.

ARTICLE 14. Local union No. 12, or any of its members, hereby agree to take no work or to do any work in the line of painting, decorating, or paper hanging before or after working hours, or for anyone in the city of Troy and vicinity who are not members of the Master Painters' Association of Troy, N. Y., and vicinity except as herein provided.

ARTICLE 15. That the members of local union No. 12 reserve the right to work for the following-named gentlemen who have signed an agreement with their union on or about April 1, 1899.

But all in future must be for members of the Master Painters' Association of Troy, N. Y., and vicinity. This exemption of the above-named gentlemen is for this year only.

ARTICLE 16. That the Master Painters' Association agree to admit members of the Local Union No. 12 to membership in their association who may in the future wish to become employers.

ARTICLE 17. The undersigned Master Painters' Association and local union No. 12, Brotherhood of Painters and Decorators, do hereby agree to fulfill all requirements herein contained.

Troy, N. Y., April 1, 1899.

Signed on behalf of the Master Painters and Decorators' Association of Troy and vicinity.

### 8 Granite cutters

The secretary of the Granite Cutters National Union reports that the union tries to secure written agreements with employers as to wages and other conditions of labor, and generally succeeds. The agreements generally run for one year. Experience is favorable on the whole to such agreements. They often contain provisions for arbitration. The secretary asserts, however, that employers do not like arbitration, "then stock in trade weapon being—starve them into submission." The working of agreements for arbitration is said to have been very fair in some places and a total failure in others. The experience of the organization with State boards of arbitration is reported as unsatisfactory. The reason given is that men unacquainted with the trade can not comprehend trade technicalities. "Grievances going to arbitration are usually settled within trade lines, but the cases which go to a seventh or disinterested party are usually unsatisfactory and in many cases impracticable." In some cases, apparently, agreements are merely bills of prices drawn up by the union and presented to employers for signature.

A typical example of the more elaborate agreements between employers and employees in the granite-cutting trade is that in force in Concord, N. H. The chief feature of this agreement is the complex scale of prices for different classes of work. This fills no less than 16 pages. There is also an elaborate series of diagrams illustrating the different classes of work and explaining the price lists. The remaining part of the agreement is printed in full below. It will be observed that it provides for arbitration of any dispute arising under the agreement, by a joint committee consisting of 3 members elected by the local branch of the Granite Cutters' National Union, and 3 elected by the Concord Granite Manufacturers' Association, who, if they fail to agree by a majority vote, shall select a disinterested person to act as an umpire. The provision at the end, permitting granite cutters over 50 years of age to work for less than the minimum rate of wages, is also interesting. The limitation of apprentices, 4 to 13 journeymen, is quite strict. In addition to the signatures of the committee representing the Concord Granite Manufacturers' Association, the agreement is signed by more than 30 individual firms and establishments, doubtless as a precaution on the part of the union to increase the binding obligation of the agreement.

#### [Agreement of granite cutters.]

##### MISCELLANEOUS

It is hereby agreed by the Concord Granite Manufacturers' Association, and other manufacturers of Concord, and the Concord branch of the Granite Cutters' National Union, that this agreement and scale of wages shall continue until May 1, 1902. Should either party desire any change at the expiration of said period, three months' notice shall be given prior to May 1, 1902. If no notice of change is given by either party, as above provided, then this agreement and scale of wages shall continue from year to year after May 1, 1902.

It is also agreed that any contention which may arise during said period as to the performance in good faith of said agreement by either party shall be referred to a committee consisting of three members each, to be selected from the Granite Cutters' National Union and the Concord Granite Manufacturers' Association, which committee of six shall act as a board of arbitration, and, failing to agree by a majority vote, shall select a disinterested person who shall act as umpire, and the board thus constituted shall hear the parties and make an award within seven days, and such award shall be final. Pending such arbitration, in reference to the above bill of prices, it is mutually agreed that there shall be no strike, lockout, or suspension of work from any cause whatever, except when a manufacturer fails to pay at the time agreed on.

Eight hours shall constitute a day's work, to be worked between the hours of 7 a. m. and 4 p. m. The working hours may be changed, from November 1 to February 1, to allow the men to work 8 hours per day.

Granite cutters working by the hour to be paid not less than 35 cents per hour.

All overtime work done at the request of the employer shall be paid once and one half, whether working by the day or piece. Sunday work to pay double.

A diagram, with the price marked on it, shall be given out with each stone when the stone is taken up by the piece.

One hour shall be allowed each day for dinner.

All men shall be governed by this bill.

When a man is working by the hour the contractor assumes all risk. He shall be paid for work done according to the man's rate per hour, but if a defect appears in a stone after cutting is commenced, the cutter shall not be paid for any work done after the defect is discovered, unless directed by the employer to continue cutting after the defect is reported.

All stone measuring less than 8 feet, superficial measurement, to be cut by the hour.

All leather edge stone and croppers to be cut by the hour.

Wages shall be paid in cash on or before the 10th of the month and be paid during working hours.

Every stone cutter shall demand of his employer payment for his work according to the terms of the foregoing price list and rules.

Any violation of the same coming to the knowledge of any employer or employee shall be reported by him forthwith.

When a stone is condemned for any cause other than the fault of the cutter, he shall be paid for the work actually done according to his average rate of wages per hour.

On all stone, with over 2 inches of rough on first side, to be paid 40 cents per superficial foot in addition to the foregoing price list.

One apprentice to be allowed for every thirteen journeymen, or fraction thereof, each year, and to sign an agreement for three years' service at terms to be agreed on by parties interested, but should a dispute arise as to the second and third years' wages it shall be settled as follows: One member to be chosen by the employer, one by the apprentice from the Concord branch of the Granite Cutters' National Union, the third by the two so chosen, and their decision to be final.

Should the apprentice run away before his term of service expires, all other employers agree not to employ him, and the granite cutters' branch will not recognize or encourage him, but in all cases the employer to give him a fair chance to learn the trade and give him a certificate after his time is out, which will entitle him to be employed as a journeyman.

Any man taking up a stone shall have the privilege of finishing it.

Notice shall be given a stone cutter previous to a reduction in his pay.

Any workman discharged shall be paid at once.

Any cutter working out of town, exposed to the sun or working in the quarries, to be paid not less than 25 cents extra per day and out fare and loss of time.

All stone covered by this bill to figure by this bill. All stone not covered by this bill to be cut by the hour.

When a stone is 6 inches or over, above the working dimensions, or a slab is required anywhere on any stone, 3 cents shall be allowed the cutter for each hole so drilled.

The foreman shall see that the cutter gets a stone in his turn. Day men shall not have the preference, and there shall be a fair distribution of work to piece men.

During the winter months a suitable stove and fuel shall be furnished to each gang of men or fraction thereof employed.

All granite cutters over fifty years of age, who are not competent to earn the minimum rate of 35 cents per foot, shall make application in writing to the regular grievance committee, who shall establish their pay with the manufacturer, but in no case shall individual agreements be made under the minimum rate.

## V. RAILWAY EMPLOYEES.

**1. Organizations of employees.**—The employees on the steam railways of the United States are organized into seven orders or brotherhoods. Those embracing the more skilled employees are very strong organizations, including a large proportion of the entire number of persons employed in the respective branches of the service. These stronger organizations are the International Brotherhood of Locomotive Engineers, the Order of Railway Conductors, the Brotherhood of Locomotive Firemen, and the Brotherhood of Railroad Trainmen. Their aggregate membership is no less than 160,000. The organizations among the less skilled employees are much weaker. They include a smaller proportion of the total number of employees, and are able to exercise much less influence over their conditions of labor. These weaker organizations are the Order of Railroad Telegraphers, the Brotherhood of Railroad Trackmen, and the Brotherhood of Railway Carmen. The stronger brotherhoods have been able to force practically all of the railway companies to recognize them officially and to deal with their officers.

While there are no central organizations of railway companies embracing all the railways of a given section of the country, each of the great railway systems is itself so extensive and has such numerous employees that it is in by no means an inferior position in its negotiations even with the strongest of the organizations of employees. We should expect, therefore, to find the conditions of labor, at least as regards those branches of the service where the workmen are strongly organized, largely determined by collective bargaining between the railway officers and the officers of the brotherhoods.

**2. Description of collective bargaining system.**—The methods of negotiation with employers which are used by the four strong brotherhoods of engineers, con-

ductors, firemen, and trainmen are all very similar. As before pointed out most railway companies recognize these bodies and deal with their officers. In no case is there any formal system of joint boards of employers and employees, with equal representation, and with definite constitution and rules. Nevertheless, on most railway systems frequent conferences are held between officers of the brotherhoods and those of the railways. By these conferences, not merely minor disputes are settled, but to a large extent the general conditions of labor are determined. Each side recognizes the strength of the other and prefers by making mutual concessions to reach an agreement rather than to precipitate a strike or a lockout. The officers of the brotherhoods are in most instances men of no little ability and of long experience in negotiations with employers. If local officers fail to reach settlements appeal is usually made to the national officers, who are especially experienced and conservative. The result is that disputes seldom find of settlement and that strikes of the more skilled classes of railway employees are comparatively rare. The very conspicuous character of those strikes which have occurred in recent years must not be permitted to conceal the fact that peaceful methods of negotiation have very largely replaced on our railway systems the method of dictation of the conditions of labor by the employer on the one hand and the method of deciding those conditions by direct conflict on the other hand.

Such negotiations between officers of the railways and of the unions, as regards the general conditions of labor, frequently result in written agreements usually running for an indefinite time, but subject to modification by future negotiations. Many of these agreements are of a highly elaborate character. Few, if any, of them contain provisions for the settlement of disputes by arbitration. The railway companies which recognize the unions seem usually to be willing, without a formal agreement, to negotiate with the officers of the brotherhoods regarding such minor disputes, in accordance with the practice established by the rules of the brotherhoods themselves. In some instances there are provisions for hearings regarding the discharge of employees, and in a few instances the railway companies formally agree to receive delegations or officers of unions making complaints. In the absence of such provisions, however, informal conciliation is the usual method of settling minor disputes.

In the case of many railways the conditions of labor are not determined by joint agreements signed by both parties, but are laid down in written rules nominally prescribed by the employer. In a large proportion of these instances, however, the terms thus prescribed are in fact the subject of negotiation between the representatives of the brotherhoods and the officers of the railways.

While, as already pointed out, formal methods of arbitration, whether by joint boards composed of employers and employees alone, or by such boards in conjunction with impartial umpires, are not provided for by the constitutions and rules of the railway brotherhoods nor by the agreements which they make with employers, it appears that disputes are not infrequently settled by such more or less formal methods of arbitration. Thus the secretary of the Order of Railway Conductors declares that the order is committed to the principle of arbitration (apparently using the word without necessarily implying the calling in of an impartial umpire). It will not resort to extremes until arbitration has been refused by the other side. The experience of the organization has been such as to give it faith in this principle. Many cases, continues this officer, have been arbitrated and the organization has always secured most or all of what it contended for. The decisions of arbitrators have never been violated by the organization, it is asserted, and in only one case by an employer.

The constitutions of the railway brotherhoods have rather elaborate provisions regarding the methods of negotiation with employers. These rules are quite similar in the case of all the brotherhoods and orders, though the systems among the weaker brotherhoods are somewhat less elaborate than those provided by the organizations of engineers, conductors, firemen, and trainmen. In general, with some modifications in details, the system is as follows: Each local lodge or division of a brotherhood has a local grievance committee of three or more members. For each railway line a general committee or general board of adjustment is established, composed of one or more delegates from each local division on the line. In the case of great composite systems of railways, some of the brotherhoods provide also for a still higher committee of adjustment, composed of the chairmen of each of the committees on the separate lines or branches of the system. These chairmen of general committees of adjustment are in many instances salaried officers, devoting their whole time to the interests of the members employed on the railway. It is their duty, in conjunction with local committees, to adjust, if possible, all differences of a local character that may arise. Failing

to reach a settlement in this way a meeting of the general committee of adjustment is called and it proceeds to negotiate with the higher officers of the railway companies. The action of such a general committee of adjustment is binding upon all members employed upon the railway line (unless reversed, in the case of some of the organizations, by referendum vote of the members so employed). On occasion of special need the national officers of the brotherhood are called in to negotiate with employers. The general conditions of labor are usually determined from time to time by conferences between these general committees of adjustment and the officers of the railway company, or in the case of the more extensive systems, between the higher committees above referred to and the officers of the system.

**3. Rules of Brotherhood of Locomotive Engineers.**—As typical of the methods of adjustment employed by the railway brotherhoods, the rules on this subject of the International Brotherhood of Locomotive Engineers are here presented in full:

#### STANDING RULES OF THE G. I. B. OF L. E.

**SECTION 1.** On any system of railroad where two or more subdivisions are organized, there shall be a standing general committee of adjustment, whose members shall be elected biennially at the regular election of officers of subdivisions. Only those members of a division whose grievances he might be required to adjust shall be entitled to a vote for member of general committee of adjustment.

On any line or system of railroad, under or controlled by one president, or by an executive board under whom are one or more presidents or general managers, where a road or branch constitutes a separate department of the system, and on which the B. of L. E. have separate and distinct schedules of pay, there may be on each such line a standing board of adjustment, composed of a delegate from each subdivision located upon that line or distinct part of the system; such delegate shall be the chairman of the local committee of his division, and these delegates shall meet biennially and select a chairman and secretary, and transact such other business as may be referred to them by subdivisions on their distinct and separate part of the system to which they belong. On these composite systems there shall be an executive board of adjustment, composed of the chairman of each general committee of adjustment of the separate lines or branches comprising the system, who shall meet biennially or annually, as they may decide, elect a chairman and secretary, and such other business as may be referred to them by the general committees of adjustment of the different lines. These committees to be governed by the law of the G. I. B. of L. E.

**SEC. 2.** Each subdivision on said system shall be entitled to one representative and one vote in said committee. Provided, that on systems whereon are located but two subdivisions the subdivision having the most members employed on such systems shall have two representatives and two votes in the committee named.

**SEC. 3.** It shall be the duty of the general committee of adjustment of each system to meet biennially at such time and place as may be determined by a majority of its members and adjust the grievances on the system, if any exist.

**SEC. 4.** The chairman and secretaries of general committees of adjustment shall be elected at the opening of each biennial session.

**SEC. 5.** The chairman may be elected from any subdivision on the system, even though not a delegate to the committee.

**SEC. 6.** The chairman of the general committee of adjustment may be made a salaried officer, provided two-thirds of the members on the system so elect.

**SEC. 7.** A salaried chairman shall devote his whole time to the interests of the members on his system, visit their subdivisions, exemplify the work, and give all necessary instruction. The salaries of such chairman shall be raised by an equal assessment on all members employed on the system represented, and shall be collected three months in advance and paid monthly.

**SEC. 8.** Any chairman of a general committee of adjustment, when called upon by one or more subdivisions on his system, shall be empowered, in conjunction with local committees, to adjust, if possible, all differences that may arise between members and their employers without convening the general committee of adjustment; and in case the local committee can not be convened readily, the chairman shall have power to select one or more members to assist him. If unsalaried, his pay for such services shall be raised by an equal assessment on all members who are employed on said system. General committee of adjustment shall make such assessment as is deemed necessary, to be paid quarterly in advance to the general secretary and treasurer, who will pay the general chairman for his services, and any surplus in the treasury after payment of salaried chairman shall be applied to expenses of general committee, when called in session.

**SEC. 9.** It shall be the duty of the chairman of the general committee of adjustment of each system to meet his committee on transportation for delegates to the G. I. B. of L. E. immediately after each election of officers, and report the result to the grand office. Provided, that where it is not advisable for the chairman to act in person, he may appoint some member on his system to act in his stead.

**SEC. 10.** At any time between biennial sessions, should a majority of the subdivisions on a system instruct the chairman to convene the general committee of adjustment, he shall do so without delay.

In case of an emergency, the chairman is empowered to convene the committee, when, in his judgment, it is absolutely necessary.

Any action taken by a general committee of adjustment on any system shall stand as law for all members and subdivisions on said system until repealed by said committee or by a two-thirds vote of the members on the system.

An appeal may be taken from the decision of the general committee of adjustment or the chairman to the members on the system, if made within 90 days from the date of such decision, and a two-thirds majority vote of members on said system shall be final. This vote to be taken in the same manner as in the election of division officers.

**SEC. 11.** Any member refusing to sustain the action or to carry out the instruction of the general committee of adjustment of the system on which he is employed shall, upon conviction by his subdivision, be expelled for violation of obligation.

Any member who, by verbal or written communication to railroad officials or others, interferes with a grievance that is in the hands of a committee, or at any other time makes any suggestion to any official that may cause discord in any division, shall be expelled when proven guilty.

**SEC. 12.** Should a subdivision on any system refuse to sustain an action of the general committee of adjustment of said system, or to enforce the laws passed by the G. I. B. of L. E., it shall be the duty

of the member of said committee from such subdivision to make a written statement of the facts concerning such refusal to the chairman of said committee, who shall submit the same to the G. C. E., and if in the judgment of the G. C. E. such subdivision is at fault, he shall at once suspend its charter.

Sec. 13. It shall be the duty of the general committee of adjustment on any system to exhaust its efforts to effect a settlement of any difficulty that may arise on said system between the management of the system and members of the B. of L. E. before sending to the G. C. E. Failing, they shall notify the G. C. E. of the facts in detail and may call upon him for assistance.

Sec. 14. Receiving such call the G. C. E. shall give it precedence over all other business. Shall at once visit such system and use all honorable means to prevent trouble between members and their employers. When it becomes necessary to defend any of our existing agreements between members of the B. of L. E. and railway companies in the hands of the court, the grand chief in conjunction with the general committee of adjustment, may employ a competent attorney to defend our interests, and the expense shall be paid from the treasury of the Brotherhood.

Sec. 15. The expenses of members of a general committee of adjustment when convened for any purpose, together with pay for time they lose in such service, shall be taxed by an equal assessment on all members of the B. of L. E. employed on the system represented. The secretary of the general committee of adjustment shall furnish all divisions on the system a copy of the minutes of the meeting of said committee.

Assessments levied by the general committee of adjustment shall be paid within sixty days after the date of notice, and any division not square on the books of the secretary and treasurer of the G. C. of A. at their annual or biennial meetings, their delegates will not be entitled to a seat.

The chairman of the general committee of adjustment shall, on any division may, prior to changes against any division failing to pay their G. C. of A. assessments within sixty days to the grand chief engineer, who shall investigate said charges, and if no reasonable excuse is found, such division shall have their charter suspended until they pay said assessments.

Each division will furnish a credential to each member of general committee of adjustment, and it shall state the number of assessable members. Divisions will pay for the number of members seated on the credential. Divisions will be responsible to their members of general committee of adjustment for his pay for serving on said committee.

The bill for amount due to any member of a subdivision for serving on such general committee shall, when regularly presented and accepted, be paid, if possible, without delay, from the general fund of the subdivision and said amount, when so paid, shall be again restored to said fund as soon as collected by assessment, as per this article.

All general committees of adjustment shall have power to fix the rate of pay for members serving on such committee.

When the general committee of any system is called on duty to attend to affairs of a general nature the time and expenses of said committee shall be paid from the general fund of the G. B. of L. E., provided they call only on the grand executive officers in authority.

No new business will be entertained by a general committee of adjustment unless sent under the seal of a subdivision, and that no resolution that has for its purpose the changing of existing rights to unions as understood by engineers will be entertained by any committee of adjustment until it has been first submitted to all divisions interested, they to vote on the question and send their member to the G. C. of A. instructed how to vote. In case any matter pertaining to the welfare of the Brotherhood should come to the notice of the G. C. E. he shall have power to call a committee of two or more members and they may make any arrangement of agreement they may deem best for the interest of the Brotherhood, and all expense so incurred shall be paid out of the general treasury.

Sec. 16. Should any member of the employ of a railroad company, while in the line of his duty as a locomotive engineer, meet with any accident of any kind, he shall be required to make out a complete and true report of the same to his division, in writing, for the benefit of the committee of adjustment, and the division shall keep such report together with a copy of the judgment of the company's officials concerning such accident. Failing to do so he shall not have his case handled by the general chairman unless so ordered by a two-thirds vote of his division. Should an engineer willfully misrepresent facts in his statement for the guidance and information of the committee, he shall be considered as having violated his obligation, and on conviction at a regular trial shall be suspended or expelled, as the division may determine.

Sec. 17. Members are prohibited from signing any contract with a railroad company, or making any verbal agreement, without the consent of the general committee of adjustment of the system by which they are employed.

Sec. 18. It shall be the duty of the chairman of any general or local committee of adjustment to meet with or go before the general manager, superintendent, or master mechanic of any railway, road, or system for the purpose of adjusting any grievance, or making or giving consent to any contract, without first consulting with other members of the general or local committee of adjustment, and said chairman shall be accompanied by one or more members of said general or local committee whenever he visits the general manager, superintendent, or master mechanic to adjust the grievances of the members of the road by which he is employed. When engineers of any railroad are using joint tracks on foreign roads, and through the movement of such engines the engineer is charged with any offense that would cause his dismissal or in any way affect his welfare, upon request of the division of which he is a member, the division located on the railroad or tracks of such foreign railroad shall, upon proper notification, take up such grievances and adjust the same in the same manner as if it were a grievance of their own member, and at the expense of the division making such request.

#### 4. Agreement on Louisville and Nashville Railroad—The following is a typical form of joint agreement regarding wages and conditions of labor:

*Agreement between the Louisville and Nashville Railroad Company and its trainmen, taking effect November 1, 1891, with revised rates in effect May 1, 1900*

1. There shall be established on each division a board of inquiry to consist of the superintendent or assistant superintendent (or both), the master of trains, and the master mechanic, or his representative (or both), whose duty it shall be to investigate accidents.

In case employees are suspended to appear before this board they will be given a hearing within 5 days, and will receive prompt notice of the result of the investigation. All punishment shall consist of suspension or discharge.

It shall not be necessary to convene the board except for the investigation of accidents.

If the parties punished by the board, or otherwise, desire it, they may appeal, first, through the master of trains to the superintendent, and then through the superintendent of transportation to the general manager.

All appeals must be presented to the superintendent or master of trains within 30 days after the decision of the board shall have been made known.

Should the employees suspended be found innocent, they will be paid for the time the suspension was in effect—conductors \$2.85 per day, and brakemen, baggage-men, and yardmen \$1.75 per day.

To enable the division officers to make investigation, reports must be made to the proper officer at the end of each trip.

2. Road delay time will be allowed conductors and brakemen after the schedule of the train shall have been exceeded 2 hours at the rate of 30 and 18 cents, respectively, per hour for every hour and fractional part thereof. When a train has been delayed to exceed 2 hours, the first 2 hours will be counted.

In case schedules are changed on the road, road delay time will be computed from schedule departed on.

Wages shall be computed from 1 hour after the men are called, or the time that the train departs if earlier.

Road delay time for extra trains shall be arrived at by taking the average time of the schedule trains on the division, passenger or freight, as the case may be, except that on the Pensacola and Atlantic road the schedule of extra freight trains running between terminals shall be computed at the rate of 1 1/2 miles per hour.

3. Yard delay time at terminals shall be allowed at the rate of 30 and 18 cents, respectively, per hour, for each hour or fractional part thereof, after a train shall have been delayed within the yard limits beyond 30 minutes. Running time of the train within the yard limits shall not be considered. When delayed immediately outside of the yard limit board, trainmen shall be allowed yard delay time at same rate, when delay exceeds 30 minutes.

(Colored brakemen will be paid for delay time 10 per cent less than white men.)

4. Trainmen will be called not to exceed 1 hour before leaving time of their trains, as at present. The caller shall be furnished with a book, which must be signed by the men, showing the time that they are called, and the time the train is to depart. Failing to respond promptly, whether it is his turn or not, the party at fault shall be suspended or discharged at the discretion of the master of trains.

When trainmen come in on their runs, and are not able for duty, they must so notify the master of trains or his representative. If, afterwards, on account of sickness, they can not go out, they must send a written notice to the master of trains or his representative at least 2 hours before they are needed.

They must not lay off except by permission of an authorized officer, unless they, or a member of their immediate family, are suddenly taken sick, in which event they must give at least 2 hours' notice.

5. When trainmen are called to go out between the hours of 7 p. m. and 7 a. m., and the train is afterwards annulled, they shall be allowed 3 hours, at the rate of 30 and 18 cents per hour, respectively. Provided, they are not notified they will be required for another schedule train within 1 hour. When called to go out at other hours, in case train is annulled, they shall be paid at the same rates per hour, but time shall be computed from 1 hour after they are called until they are notified that train is annulled. Trainmen thus called will stand first out. Provided, it does not interfere with men who have regular runs.

6. For attending court or appearing before proper persons to give evidence, conductors, baggage-men, and brakemen, having regular crews, and yardmen having regular work, shall be paid the amount that they would have made had they performed their usual duties.

This shall not prevent the company from using these men on any run after they are through attending court, and before their regular crews are due to leave.

Other conductors and brakemen shall be paid \$3 and \$2 per day, respectively, computed from the time they leave their homes, or the time they are marked to go out, until they return.

They will be furnished with transportation to and from court. No pay shall be allowed in cases where the time so consumed does not interfere with the men making their regular trips and having 8 hours' rest, if they require it.

7. Conductors and brakemen of wrecking train shall be paid, respectively, 35 and 20 cents per hour, or fractional part thereof, time to be computed from time train starts, or 1 hour after the men are called, until return to starting point.

In case the train is laid up in line returning, for the purpose of attending the men necessary time for rest and sleep, such proportion of the time shall be deducted from the whole, and only the actual time on duty will be paid for. A minimum of 6 hours will be allowed, but no mileage will be paid.

8. Conductors and brakemen when deadheading on a freight train will be allowed the rate of pay given the same class of men that are in charge of the train. When deadheading on passenger train they will be paid 12 and eight tenths of a cent, respectively, per mile for the distance traveled.

When a man is traveling over the road for the purpose of relieving a man who has asked for leave of absence, he will not receive any compensation for the distance traveled.

9. After a continuous service of 16 hours, or more, conductors and trainmen shall be entitled to and allowed 8 hours for rest at terminals, if they give proper notice of such desire, except in case of wrecks or similar emergencies.

10. Conductors will be notified when time is not allowed as per their trip reports.

11. Any trainman drinking intoxicants on duty, or being under their influence on or off duty, will be dismissed from the service of the company.

12. All crews assigned to regular runs at a monthly rate that are not provided for in the accompanying rate sheet, will be paid extra for all service performed in addition to their regular duties at established rates for class of service performed except regular crews now performing extra duty without compensation.

13. Local grievances and differences of opinion as to construction of this agreement shall be taken up with division officers, failing to be adjusted, they will be referred to the general officers, as per article 1.

## VI. BAKERS AND CONFECTIONERY MAKERS.

A large proportion of the bakers and confectionery makers in the large cities are organized, and most of the local unions are affiliated with the Journeymen Bakers and Confectioners' International Union. It is the practice of this organization to seek to secure written annual agreements with employees regarding the conditions of labor. These agreements seem to be largely in the nature of concessions to the demands of the unions for union conditions. The secretary of the international organization reports that about three-fourths of the local unions have secured such agreements, usually with individual employers. The international executive board will not approve an agreement which does not provide for the use of the union label, or which requires more than 10 hours labor. Agreements usually provide for the settlement by arbitration of disputes which may arise. In some instances the employer appoints one arbitrator, the local union another, and these two are to select a third. In one agreement which has been submitted to the Industrial Commission there is a clause providing that disputes should be referred "to the local union No. 56 for arbitration, and both parties shall abide by its decision." This appears to be a somewhat one-sided form of arbitration; it probably amounts practically to an agreement that the employer will deal with the union officials in case of disputes, and not merely with his own employees.

The secretary reports that the use of written agreements is said to have decreased strikes one-half. According to the statement of the secretary the union does not believe in arbitration, "as the laboring men lose 9 times out of 10."

The following is the text of such an agreement between the local Bakers' Union of Richmond, Va., and the individual employers in that city:

AGREEMENT OF THE JOURNEMEN BAKERS AND CONFECTIONERS' INTERNATIONAL UNION OF AMERICA,  
LOCAL UNION NO. 61, RICHMOND, VA.

This agreement, entered into this \_\_\_\_\_ day of \_\_\_\_\_, 1901, between \_\_\_\_\_, of Richmond, Va., party of the first part, with \_\_\_\_\_, Secretary of the Journeymen Bakers and Confectioners' International Union of America, local union No. 61, Richmond, Va., party of the second part, witnesseth:

It is hereby agreed as follows: That I, \_\_\_\_\_, party of the first part, will, at all times, in the conduct of my business, employ only members of the Journeymen Bakers and Confectioners' International Union of America, local union No. 61, of Richmond, Va., who are in good and regular standing.

1. Work shall only be allowed six days in the week, and working time shall not exceed ten (10) hours per day or night, except on Friday night and Saturday, on which said day and night twelve (12) hours are allowed, if necessary.

2. Overtime is only allowed in cases of necessity, and shall be paid for at the rate of twenty-five (25) cents per hour. But whenever this privilege shall be abused by the party of the first part, the shop committee, with the advice and consent of the officers of the aforesaid local union, shall stop it.

3. Bakers shall not board or lodge with their employers, or accept the same instead of wages.

4. No employees shall be required to load or unload any wagons, or to do any work other than that for which he was employed.

5. A. The party of the first part also agrees to place the union label on every loaf of bread made in his bakery, said label to be furnished by the party of the second part, at the rate of ten (10) cents per thousand (1,000) labels.

B. For each bakery there shall be issued as many labels at a time as shall be consumed in fourteen (14) days.

C. The foreman of each department shall have the custody of the labels, and account for them to the party of the second part.

D. In case of noncompliance with this agreement the union reserves the right to withdraw the labels.

6. No employee shall be allowed to work on the following three (3) holidays, viz., 4th day of July, Labor Day, and Christmas Day. The day men to have the day and the night men to have the night of the aforesaid holidays. Not to require his employees to begin work until 5 o'clock a. m. in the day following the aforesaid holidays.

7. Should any dispute arise between employer and employees, the difference is to be settled by a board of arbitrators, one to be selected by local union No. 61, of Richmond, Va., one by the party of the first part, and the third by the two first arbitrators mentioned.

8. Not to employ more than one apprentice in each department.

9. A copy of this agreement shall be placed in a conspicuous place in each shop, and it shall not be allowed to be torn down or defaced.

10. And we, the Journeymen Bakers and Confectioners' International Union of America, local No. 61, of Richmond, Va., agree in consideration thereof at all times to assist the party of the first part, in every way which may be in our power, to successfully conduct and increase his or their business.

This agreement shall take effect as soon as signed by the aforesaid parties, and expires \_\_\_\_\_, 1902.

In witness whereof the parties have hereunto set their hands and seals the day and year first mentioned above.

[L. S.]

[SEAL.]

### VII. BLACKSMITHING TRADE.

The secretary-treasurer of the International Brotherhood of Blacksmiths reports that the organization tries to get written agreements with employers as to wages and hours and other conditions of labor, and has secured them in several instances. Violations of such agreements rarely occur. As to the general attitude of employers toward the organization, the secretary says, "Employers, as a rule, will not recognize a trade union until the fact of its existence has been branded on their memories." The union tries to get an arbitration clause inserted in its agreements. The agreements usually provide for the exclusive employment of union men. An agreement of this general character is given below. The union has also an agreement with the Black Coal Operators of Indiana, an organization which has similar arrangements with the United Mine Workers. (See p. 332.)

OTTUMWA, IOWA, April 1, 1901

This agreement, entered into between the firm of Hardzog Mfg. Co., mining tool manufacturers, Ottumwa, Iowa, and the International Brotherhood of Blacksmiths, local No. 162, of the same place, witnesseth:

That in consideration of being allowed to use the Tool Makers' label of the International Brotherhood of Blacksmiths, the said firm agrees to operate a union factory from the first day of April, 1901, to the first day of April, 1902, subject to the following conditions:

That all eligible employees shall be members in good standing in the International Brotherhood of Blacksmiths. All other employees shall be members of some other bona fide labor organization. It shall be the duty of the shop committee appointed by said local No. 162 to examine the working cards of all employees once a month, and to insist that same be kept up.

That their factory shall be kept in as clean and healthy a condition as the nature of the work will permit, and that as far as practicable suitable provisions be made to take off all smoke and gas arising from forges or furnaces, and that otherwise all reasonable measures be taken to provide for the health of their employees.

Any differences that may arise between the firm and their employees shall be, if possible, adjusted between the firm and the shop committee appointed by the union. If they fail to agree, the dispute shall be submitted to a disinterested third party agreed upon by mutual consent, and whose decision shall be final and binding on both parties.

Employees will remain at work during the time consumed by such arbitration, and all final decisions on matters of dispute shall be rendered within 15 days after being placed in the committee's hands.

No employee shall be dismissed without reasonable and just cause for same.

Labels will be supplied at a uniform price of fifty (50) cents per thousand in sufficient numbers to cover the output of the factory, and no more. Labels must only be applied to goods manufactured by the concern in their factory at Ottumwa, Iowa, and only on such goods manufactured there as properly come within the province of the International Brotherhood of Blacksmiths.

They must also be applied to goods before leaving the factory only, and shall at no time or under any circumstances be supplied to agents or other persons, either directly or indirectly. Violation of this section shall immediately render this contract invalid.

The International Brotherhood of Blacksmiths agree to all times protect their labels against infringement or use by unauthorized parties whatsoever.

### VIII. BOOT AND SHOE INDUSTRY.<sup>1</sup>

The boot and shoe industry offers a considerable number of illustrations of the use of arbitration and conciliation for the settlement of labor disputes. These methods have met, in some cases, with a very marked degree of success, although there has been considerable difficulty in keeping them in regular operation. At present there is a growing use of the system of collective bargaining joint agreements with individual employers in connection with the use of the union label, with provision for arbitration.

**1. Early experiments.**—As far back as 1870 a joint board was established in Lynn, the leading shoe manufacturing center of the country, for the settlement of a general dispute which threatened to result in a strike or lockout. A committee of 5 representatives of the laborers belonging to the organization known as the Knights of St. Crispin was appointed to confer with a like number of manufacturers, and after 2 days a list of prices for different kinds of piecework was agreed upon, to continue for 1 year. A year later another agreement was made in the same manner, but the manufacturers did not abide by it faithfully and the system soon broke up. The branch of the Knights of St. Crispin in Lynn was abandoned altogether in 1873. The organization was reestablished in 1875

<sup>1</sup>See, for many of the facts here presented, an article by T. A. Carroll—"Conciliation and arbitration in the boot and shoe industry"—Bulletin, Department of Labor, vol. 2, pp. 1-38.

and endeavored to induce the manufacturers to establish a board of conciliation and arbitration, but in vain. Finally, in 1885, the workers, who had become organized as a district assembly of the Knights of Labor, began a movement for higher wages. One of the leading manufacturers suggested that the dispute be left to a joint committee, and, after some conferences, such a board was organized, to consist of 7 members from each side, serving for 1 year. It was provided that in case of a tie vote of this board as to any matter, each side should select a disinterested person and these 2 should select a third, and that the decision of these 3 should be final. This board, after long deliberation, established a new price list for the various departments of the industry; but the workmen became dissatisfied with the prices fixed and protested against the continuance of the board, and it soon broke up altogether.

During 1885 a joint board, similar to that in Lynn, was established in Brockton, Mass. This board succeeded in settling a serious strike by establishing a general price list, which has served as a basis for subsequent changes, although the board itself soon went out of existence.

In Haverhill, Mass., a joint board was established in 1892, on the initiative of the Central Labor Union of that city. It consisted of 2 delegates from each affiliated labor organization and an equal number of delegates from the manufacturers' organization. The officers were a president, chosen from the manufacturers, a vice-president, chosen from the workmen, and 2 secretaries, 1 chosen by each side. These officers constituted a standing executive committee. It was the duty of this board to attempt to settle all disputes by conciliatory means; but in case of failure to do so, provision was made for reference to a board of arbitration, to be formed in such a manner as should be mutually agreed upon by the parties interested in the particular dispute, while, in case they should fail to agree as to the formation of the board, the board of conciliation itself should decide as to the method of arbitration. This board settled a number of important cases during the first year of its existence. It fell into disuse during 1894, but was reestablished early in 1895 for the purpose of settling a general dispute as to prices. It then succeeded in settling the prices for all kinds of work except machine-lasting, and this matter was, by agreement, referred to the State board of arbitration and conciliation. Later on, however, the manufacturers' delegates refused to attend the meetings of the board, and it has since been in abeyance. The manufacturers claim that the competition and jealousy among themselves make it impossible for a majority to be induced to join such a board and to be bound by its rules and decisions. The workmen also point out that no considerable number of manufacturers actually adopted the price lists approved by the joint board.

**2. The Philadelphia system.**—Philadelphia has been the seat of a system of arbitration which is differently regarded from different points of view. During the period from 1880 to 1884 the shoe operatives in that city had become thoroughly organized under the Knights of Labor. The shoe manufacturers' association of that city in 1884 demanded that a joint board of arbitration should be established to settle all questions of dispute, and threatened a lockout if this was not agreed to. On account of this somewhat hostile tone the employees refused to accede to the proposition, and 22 factories were actually closed. Before long, however, a meeting of the executive committees of the respective organizations was brought about, and a scheme for arbitration was agreed to, which was reported to have worked satisfactorily for some time. The agreement provided that none but Knights of Labor should be employed. It was claimed on the part of the manufacturers, however, that each factory should settle the question of wages with its own employees, unless there was an appeal to the joint board. The workingmen desired uniformity in the scale of wages in the different factories. There was finally, in 1887, a protracted controversy as to this point, and the board of arbitration broke up temporarily. Later in the same year, however, the manufacturers' association framed a set of rules by which the manufacturers should have the right to employ or discharge employees as they saw fit, agreeing, however, not to discriminate against any person because of membership in any organization. The manufacturers were to recognize grievance committees in their shops, and there was to be no lockout or strike without discussion of the matters of dispute. A joint board of conciliation, consisting of 7 representatives of each side, was proposed, with provision for the settlement of cases as to which the board could not agree by 3 arbitrators, 1 to be chosen by each side, and these 2 to select a third. The employees of the separate establishments accepted these terms, and soon afterwards the Central Convention of Shoe Workers was formed, and appointed 7 delegates to the joint board in conformity with the proposition of the manufacturers. This board has been in existence ever since.

The following table is made up from two statements of the results of arbitration before the joint board, one of which appeared in the bulletin of the Department of Labor for January, 1897, page 22, and the other was submitted to the Industrial Commission by the secretary of the joint board on December 21, 1900:

	Up to 1896	Up to 1900
Cases presented to board for adjustment	15	69
Settled favoring the employee	17	38
Settled favoring the employer	4	3
Rejected under the rules	5	6
Withdrawn and settled by employer and employee	16	22
Compromised	3	...

It will be seen that these two statements of results are somewhat inconsistent. At the end of 1896 it was reported that 4 cases had been decided in favor of the manufacturer and 3 had been compromised. At the end of 1900 there is no mention of any compromise, and all cases but 3 are asserted to have been decided in favor of the employee. In each case, all decisions made since the establishment of the system are supposed to be included.

The Philadelphia manufacturers seem to be unanimously gratified with the working of these arrangements during the past 13 years. Some of them, and also some representatives of the working people who have been prominent in the Central Convention of Shoe Workers, testified before the Industrial Commission and spoke in high terms of the existing system. It was admitted, however, that the feeling of satisfaction was not universal among the working people. It was admitted that some of the working people say that it is a one-sided organization, that the heads of the Central Convention are "bosses' men and all hold fat jobs, and that the bosses use them." The opponents of the system assert that the election of delegates to the Central Convention is dictated, at least in some cases, by the manufacturers. It is stated by both sides that the manufacturers compel their employees to join the Central Convention, but this joining consists in nothing more than a promise to abide by the rules, and a trifling contribution, said to be one cent a member a month, to cover the expenses. It is not understood to be denied that the rules of the joint organization and of the Central Convention were framed by the manufacturers and accepted by the employees when they could hardly avoid acceptance.<sup>1</sup>

The following extracts will indicate the tone of the rules, and will sufficiently show that they were written from the standpoint of the employer rather than of the employee:

In reading these rules the rule and comment should be read together.

**RULE 1**—The right of the manufacturer to employ or discharge employees must be acknowledged.  
*Comment*—This rule means that the right to employ and to discharge laborers belongs to those who own the business. There could be no other rule. No prudent man would invest capital in business if he could not control it by employing the laborers he thought necessary and proper for conducting it. This is the inalienable incident of capital.

**RULE 2**—Employers or employees must not discriminate for or against any individual because he or she is not a member of any organization.

*Comment*—No employer shall discharge or refuse to hire a man or woman because he or she is not a member of any organization. Nor shall any man or woman refuse to work with or for any person because he or she is not a member of any organization. This is but equal justice to all, and will promote the freedom of conscience we boast of as American citizens.

**RULE 7**—There shall be no interference with the employment or wages of hands hired by the week, when the wages are satisfactory to the employer and employees, so that competent workmen may be protected.

*Comment*—Business requires that some "hands be hired by the week," and that wages are paid to the skill of the hand. It is the object of the rule to protect both the laborer and the manufacturer.

It is to give to the manufacturer the advantage of skilled labor, and to give to skilled labor a just remuneration. Of course the manufacturer may employ inferior skill and give it inferior remuneration. This may be important at some times and for some purposes. It is the right of the manufacturer to determine how his business shall be conducted. Capital and labor should each receive its equitable reward.

If the wages are not satisfactory the hand may quit work, and if not satisfactory to the employer he may dismiss him.

With any other rule business could not be safely carried on.

Whatever may be the merits or defects of the Central Convention of Shoe Workers, and whether its effects upon the condition of its members are better or worse than the effects of a labor organization of the usual type, it is to be expected that such labor organizations will not look upon it with favor. The general secretary-treasurer of the Boot and Shoe Workers' Union wrote, under date of September 29, 1900:

<sup>1</sup>See testimony of various witnesses on this subject in Reports of Industrial Commission, vol. xiv pp. 220-310, 321-319.

"The Philadelphia plan of arbitration is a fraud, and always so recognized by bona fide labor organizations. The arrangement there is such that if any employee is dissatisfied or has a grievance he must report it to the shop committee, who are in every case in league with the employer, and it has come to be accepted as a fact that for an employee to seek the aid of this board was equivalent to asking for his own discharge.

"The proof that this system is not what is claimed for it by the manufacturers (and no one else claims anything for it) lies in the fact that there have recently been two branches of the craft in Philadelphia organized quite thoroughly and independent of the Central Convention of Shoe Workers, so called. The branches I refer to are the lasters and the cutters. Last month the lasters struck in four factories in Philadelphia, cleaning two of them out completely and the other two partially. Whereupon the Central Convention of Shoe Workers expelled the lasters and declared the shops fair, thus breaking up a bona fide strike for better conditions. I may add that neither of these unions, namely, the cutters or lasters, are affiliated with this body."

The assertions that work people do not expect justice from the board, and that they are afraid to bring complaints there, were both affirmed and denied in testimony before the Industrial Commission. The table of results, given above, does not seem to indicate a bias against the employees, but if the board be of the character claimed by its opponents, the table itself may be misleading.

**3. Union label agreements and arbitration.**—A considerable number of the employees in boot and shoe factories, especially in Massachusetts, are organized into a national body, known as the Boot and Shoe Workers' Union. This organization has adopted a label for use on goods manufactured in establishments where only union men are employed, and has recently adopted a policy of seeking to obtain contracts with individual employers providing for its use. These contracts consist chiefly of regulations regarding the use of the union stamp. In return for the privilege of using the stamp, the employer agrees to hire only union labor and to submit all questions as to wages and conditions of labor to arbitration. In States where there is a State board of arbitration, the contract regularly provides for the reference of matters as to which the parties can not agree to the State board. In other cases the contract provides that the employees shall name one arbitrator, the employer making the contract another, and that these two shall name a third. The union agrees not to sanction any strike and to assist the employer in procuring competent workers in the place of any who may insist upon striking, while the employer agrees not to lock out his men.

Agreements of this sort are now being made with such manufacturers as are willing to recognize the union and employ the union label. The number of firms which have signed such agreements is at present nearly 100, including several very important ones. The full text of the union stamp contract of the Boot and Shoe Workers' Union follows:

#### BOOT AND SHOE WORKERS' UNION.—UNION STAMP CONTRACT

Agreement entered into this \_\_\_\_ day of \_\_\_\_\_, 190\_\_\_\_, by and between \_\_\_\_\_, shoe manufacturer of \_\_\_\_\_, hereinafter known as the employer, and the Boot and Shoe Workers' Union, with headquarters at 620 Atlantic Avenue, Boston, Mass., hereinafter known as the union, witnesseth:

First. The Union agrees to furnish its union stamp to the employer free of charge, to make no additional price for the use of the stamp, to make no discrimination between the employer and other firms, persons, or corporations who may enter into an agreement with the Union for the use of the union stamp, and to make all reasonable effort to advertise the union stamp, and to create a demand for the union-stamped products of the employer in common with other employers using the union stamp.

Second. In consideration of the foregoing valuable privileges, the employer agrees to hire, as shoe workers, only members of the Boot and Shoe Workers' Union, in good standing, and further agrees not to retain any shoe worker in his employment after receiving notice from the Union that such shoe worker is objectionable to the Union, either on account of being in arrears for dues, or disobedience of Union rules or laws, or from any other cause.

Third. The employer agrees that he will not cause or allow the union stamp to be placed on any goods not made in the factory for which the use of the union stamp was granted.

Fourth. It is mutually agreed that the Union will not cause or sanction any strike, and that the employer will not lock out his employees while this agreement is in force.

All questions of wages or conditions of labor, which can not be mutually agreed upon, shall be submitted to

The decision of this board of arbitration shall be final and binding upon the employer, the Union, and the employees.

Fifth. The Union agrees to assist the employer in procuring competent shoe workers to fill the places of any employees who refuse to abide by section four of this agreement, or who may withdraw or be expelled from the Boot and Shoe Workers' Union.

Sixth. The employer agrees that the union collectors in the factory shall not be hindered or obstructed in collecting the dues of members working in the factory.

Seventh. The employer agrees that the general president, or his deputy upon his written order, may visit the employees in the factory at any time.

Eighth. The employer agrees that the union is the lawful owner of the union stamp.

Ninth. The Union agrees that no person except the general president, or his deputy upon his written order, shall have the right to demand or receive the union stamp from the employer.

Tenth. Should the employer violate this agreement, he agrees to surrender the union stamp or stamps in his possession to the general president, or his deputy upon his written order, and that the said general president, or his deputy, may take said stamp or stamps, wherever they may be, without being liable for damages or otherwise.

Eleventh. In case the said employer shall for any cause fail to deliver the said stamp or stamps to the general president, or his deputy, as provided in this agreement, the employer shall be liable to the general president in the sum of two hundred (\$200) dollars, as liquidated damages, to be recovered by the general president in an action of contract, brought in the name of the general president, for the benefit of the Union, against the employer.

Twelfth. This agreement shall remain in force until — — —

Should either party desire to alter, amend, or annul this agreement, it shall give a written notice thereof to the other party three months before expiration of the agreement, and if the parties fail to give such notice, the agreement shall continue in force for another year, and so on from year to year until such notice is given.

Thirteenth. In case the employer shall cease to do business, or shall transfer its business, or any part thereof, to any person or persons or corporation, this agreement shall be ended, and the stamp or stamps shall be returned to the general president forthwith without demand from the Union, when a new agreement of similar tenor as this may be entered into.

## IX. BREWERY WORKMEN.

**1. Agreements with employers generally.**—The National Union of Brewery Workmen makes it a practice to obtain annual or biennial agreements with employers, if possible, wherever local unions are organized. Separate agreements are made for brewers and maltsters, for drivers, and for engineers and firemen. These agreements usually, if not uniformly, provide for the exclusive employment of union men. In other words, the union undertakes to completely unionize those establishments in which it gains a footing. Rates of wages and hours of labor are prescribed, and although these are not uniform throughout the country, approximately the same condition are established in each case. This is the natural result of the requirement that agreements shall be approved by the national executive board of the union. Provision is made for the laying off of men in turn, for not longer than one week at a time, during the dull season. Regulations are frequently made regarding apprenticeship, limiting the number of apprentices and fixing the duration of apprenticeship. Many agreements provide for the settlement of grievances arising from violations of the contract, by an arbitration committee, consisting of two representatives of the union and two of the employers, the four so chosen to appoint a disinterested fifth member.

The secretary of the union states that this system of agreements "works wonders when both parties live up to it." The national officers urge the local unions not to bring cases before the arbitration board unless they are sure they are in the right. Nevertheless the secretary declares the decisions of arbitrators have been generally in favor of employers, even where the right was clearly on the side of the union.

**2. St. Louis agreement.**—The following agreement between some of the great breweries of St. Louis and the Brewers' and Maltsters' Union of that city is typical of the agreements in the brewery trade.

### AGREEMENT OF BREWERS AND MALTSTERS' UNION NO. 6, ST. LOUIS, MO.

SECTION 1. From and after the date of this agreement no brewers or maltsters shall be employed who are not members in good standing of Brewers and Maltsters' Union No. 6, and the Brewery Workmen's National Union, and all such brewers and maltsters shall, as heretofore, be engaged through the labor bureau of the above-mentioned organization.

SEC. 2. Hours of labor. Nine (9) consecutive hours shall constitute a day's work. With the exception of loading beer, work shall not commence before seven o'clock in the morning and last not longer than till five o'clock p. m. Fifteen (15) minutes shall be allowed for lunch and one (1) hour for dinner. No Sunday work shall be done, excepting loading beer.

Each maltster shall have one day off weekly. For maltsters fifty-four (54) hours shall constitute a week's work.

The following shall be considered as brewer's work. All work in the malt house, brewhouse, fermenting room, cellars, and washhouse, also the handling of all full and empty cooperage inside of the brewery buildings (dragging kegs, making new hoops, and repairing cooperage shall be considered as cooper's work).

All raw materials used in the manufacture of beer shall be handled by brewers after they have been carried out of the cists and come into the brewery buildings. Union malt shall be given the preference.

No man stamping or labeling the kegs who is not a member of L. U. No. 6 shall be allowed to do the work of men in the racking room, as racking and handling kegs, or cleaning the racking room, tanks, and implements in the same. Work in the racking room shall be considered as cellar work, shall be paid for as such, and be under the control of the first man in the cellar.

SEC. 3. Wages payable weekly. The wages for washhouse men shall not be less than fourteen dollars (\$14.00) per week. The wages for men employed in the cellars, kettling room, mill house, and kettle department shall not be less than fifteen dollars (\$15.00) per week, and overtime shall be paid to the above-named workmen at the rate of fifty (50) cents per hour. Overtime shall only be worked in case of emergency, and shall not be taken out.

Night work in the mill house shall alternate monthly or shall be paid for at the rate of sixteen dollars (\$16.00).

SEC. 4. During the dull business season no workmen shall be discharged, but the men, including the apprentices, shall be laid off in turn without any partiality and for not longer than one (1) week. This does not apply to the first man of each department, provided he has steady work in his department.

The workmen shall, as heretofore, receive their beer free of charge during working hours.

No workman shall lose his position on account of sickness.

All workmen shall have the liberty to live and board where they choose.

Work on Labor Day and the first of May shall be considered as Sunday work, and shall be paid for as such.

No member shall be discriminated against for doing committee services. The positions of first men shall be filled in the future by union men only.

SEC. 5. One (1) apprentice shall be allowed for the first fifteen (15) workmen and one (1) for every additional twenty-five (25) workmen. No apprentice shall at the time of his engagement be under sixteen (16) or over twenty (20) years of age, and his term of apprenticeship shall be three (3) years. All apprentices shall make applications for membership to the Union at the time of their employment.

SEC. 6. All grievances and violations of the above shall be decided by an arbitration committee, consisting as follows: Two men to be chosen by Brewers and Maltsters Union No. 6, and two to be chosen by the representative union, and in case of disagreement the four (4) sections shall appoint a disinterested person as a fifth member, and whose decision shall be binding on both parties.

It is understood that the decision of the executive committee of the Trades and Labor Union of July 3d, 1899, shall form part of this agreement.

This agreement to continue and remain in force and effect for the term expiring June 1st, 1901.

Witness our hands and seals

St. Louis, Mo., July 3d, 1899.

J. M. FRIEDRICH, *President*

The same employers in St. Louis, together with certain others, have a joint agreement with the local union of brewery firemen, affiliated with the National Union of Brewery Workmen. This is somewhat less detailed than the brewers' agreement, but is broadly similar in character, fixing wages, hours and causes of discharge, regulating the laying-off system, and providing for the arbitration of grievances.

Another important agreement is that between the employing brewers of Cincinnati, Ohio, and Covington and Newport, Ky., and the Brewers and Maltsters' Union of that vicinity. This is nearly identical with the St. Louis agreement, both as to hours, wages, apprenticeship, arbitration, etc. In the same cities there is also an agreement covering the drivers and stable men. This contains no provision for arbitration. An important provision in it is that an employee injured by an accident, through no fault of his own, shall receive half his wages until he is well.

**3. New York City lager beer brewers.**<sup>1</sup>--Agreement of Brewers' Union No. 1 of the National Union of United Brewery Workmen of the United States, and employing brewers of Manhattan, Bronx, and Richmond boroughs, New York City.

First. Only members of the National Union are to be employed, with the exception of foreman, assistant foreman, and apprentices. The foreman and assistant foreman shall be prohibited from performing work appertaining to the workmen.

Second. Workmen recommended by saloon keepers are not to be employed. Every workman shall be at liberty to reside or board where he chooses.

Third. Only members holding a working card of Brewers' Union No. 1 shall be employed.

Fourth. Workmen shall be discharged only for good reasons. Sickness is no excuse for a discharge upon convalescence.

Fifth. To avoid discharges during the winter season the workmen shall be laid off in rotation impartially for one week, (or all the men shall stop for one day in the week).

Sixth. No member will be permitted to perform work appertaining to driver, foreman, or engineer. The coopers shall not do any brewery work unless they are members of Brewers' Union No. 1.

Seventh. One apprentice will be allowed to every twenty-five workmen, but he must not be above the age of 21 years.

Eighth. (a) Ten hours, in twelve consecutive hours, including two hours for meals, constitute a day's work. (b) In case overtime is necessary this must be paid extra at the rate of fifty cents per hour, and all such time can not be made up at a later date. (c) Six working days shall be a week, while necessary work on Sunday must not exceed two hours, for which extra and double compensation is to be paid, watchmen who work seven days per week shall be allowed a free day every month, and receive full pay for same. (d) On Labor Day three hours of labor, ending at 7 o'clock a. m., shall

<sup>1</sup>Bulletin New York Bureau of Labor, June, 1900.

be performed, on May 1st work shall not exceed five hours. Full wages shall be paid for both of these days. All labor performed after these hours must be paid extra.

Ninth The wages are to be paid weekly, as follows: First man in washhouse, \$18, all others, \$16. Workmen in the fermenting room, cellar, kettle, or malt miller shall receive \$18 per week.

Tenth During the working hours the workmen shall receive beer free of charge, and where the ticket system prevails the tickets are to be distributed in sufficient quantities.

Eleventh. This agreement is valid for one year, commencing April 16, 1900, and ending April 16, 1901.

## X. BUTCHERS AND MEAT CUTTERS.

The secretary of the Amalgamated Meat Cutters and Butcher Workmen says that the organization gets written agreements with employers whenever it is possible, and that about 15 per cent of the locals have them. Experience with them has been favorable. They often include agreements for arbitration of all differences, and differences have been arbitrated under them in many cases with satisfactory results. Among others the Armour Company, the S and S. Company, and Jacob Dold have submitted differences to arbitration, with results satisfactory to the workers. The Retail Protective Association of Utica, New York, has furnished another instance. The following is the form of agreement which the union seeks to secure from individual retail dealers. It does not provide for arbitration.

CONTRACT BETWEEN THE RETAIL BUTCHERS OF THE TOWN OF \_\_\_\_\_, STATE OF \_\_\_\_\_, AND THE AMALGAMATED MEAT CUTTERS AND BUTCHER WORKMEN OF NORTH AMERICA A F O F L, LOCAL UNION No. \_\_\_\_.

1. All employees, except bookkeepers, agents, trimmen, and delivery boys, not cutting meat, must be members of local union No. 12, A. M. C. and B. W. of N. A.

2. When a vacancy occurs only members of the Union are to be employed, extra help for short periods excepted.

3. Working days shall not exceed 12 hours, six working days to be considered a full week, except as otherwise provided in this contract. Saturdays and two evenings before Thanksgiving and Christmas, and one evening before every other holiday excepted.

4. This to apply to markets only.

5. From 6.30 a. m. to 10 a. m. shall be considered a full day when it occurs on a holiday.

6. Shortening of hours shall not cause a reduction of wages.

7. All overtime must be paid at the rate of time and a half, Sunday work at the rate of double time, and Sunday work to be done only when absolutely necessary.

8. Markets to be kept open from 6.30 a. m. to 6.00 p. m. from January 1st to July 1st, and from July 1st to January 1st from 6 a. m. to 7 p. m.; men to start cleaning up at 6.30 p. m.

9. I do further agree that my market shall be kept closed on Sundays and legal holidays, except as otherwise provided in this contract.

10. This agreement to go into effect \_\_\_\_\_ and expires \_\_\_\_\_.

(Signed) \_\_\_\_\_

[SEAL]

\_\_\_\_\_, President

\_\_\_\_\_, Secretary

## XI. CLOTHING AND TAILORING TRADES.

The agreements in the clothing trades do not usually cover any except the higher branches of the trade, or if agreements are made in the more poorly paid branches they are usually of little strength.

The more highly skilled workers in these trades largely belong to the Journeymen Tailors' Union of America. Agreements are frequently made between local branches of this organization and individual employers or organizations of employers. For example, an agreement adopted by the merchant and journeymen tailors of Springfield, Ill., on April 7, 1900, fixes the prices for making different classes of garments, and for doing extra work, in detail. The employers signing this agreement promise to employ only union workmen and not to employ more than one man by the week. The secretary of the Tailors' Union says that it is the policy of the union to obtain written agreements with employers, and that the effects of the custom are excellent. Such agreements are not often violated. The attitude of employers toward the organization is reported as generally friendly. Conciliation and voluntary arbitration are favored by the rules of the union, and hundreds of cases are settled every year by these methods. The union appealed to the State board of arbitration of Illinois in 1900 for help in settling a dispute in Chicago, but arbitration was refused by the employers.

The secretary of the Garment Workers of America, an organization including many unions of less skilled workers, reported in October, 1900, that the organization had written agreements with 92 manufacturers, employing 12,000 members. Experience had been favorable to the use of such agreements, and there had been no important violations or evasions of them. They usually provide for the exclusive employment of union men, and the use of the union label. The organization

has made frequent use of arbitration (i. e., usually conciliation), which is usually provided for in these agreements, and the results have been satisfactory to both sides. No failure to abide by the decisions of arbitrators is reported. The secretary mentions a single case of appeal to a State board of arbitration, in which the award called for recognition of the union, as demanded by the members, and for a compromise upon the question of wages. The following is a blank form of agreement used by the Garment Workers

## AGREEMENT

This agreement, entered into by and between the firm of \_\_\_\_\_, party of the first part, and the United Garment Workers of America, party of the second part,

Witnesseth, that in consideration of the use of the union trade label of the party of the second part the party of the first part agrees to abide by the following rules and conditions governing the same:

1st. All employees engaged in the manufacture of garments for the party of the first part must be good-standing members of the party of the second part.

2nd. All proper sanitary conditions shall be observed in all shops manufacturing goods for the party of the first part, who especially agrees to comply with all the requirements of the State laws relating to workshops.

3rd. The said label shall be in charge of a responsible member of the Union employed in said shop, who shall keep an account of the same.

4th. The party of the first part shall abide by the Union conditions observed in the respective branches of the trade.

5th. Should any differences arise between the firm and the employees, and which cannot be settled between them, the said differences shall be referred to the general officers of the U. G. W. of A. for mediation and arbitration.

6th. The party of the second part agrees to exert all its power as a labor organization to advance the goods and otherwise benefit the business of the party of the first part.

7th. The party of the first part agrees to return all union trade labels that may be in its possession in the event of the termination of this agreement or discontinuance of business.

This agreement shall go into effect on the \_\_\_\_\_ day of \_\_\_\_\_, 190\_\_\_\_, and terminate one year from said date.

Signed by the party of the first part \_\_\_\_\_

Signed by the party of the second part \_\_\_\_\_

[SEAL]

Agreements have been made from time to time between the various garment workers' organizations in New York City and Brooklyn, some of which are affiliated with the Garment Workers of America and others not, and the employers and contractors in these trades. These agreements have frequently been the outcome of long strikes and have not prevented the occurrence of similar strikes at the opening of the next regular season of work. They are often violated by the contractors, who are themselves in many instances very irresponsible. Nevertheless the system has resulted in somewhat greater stability than formerly existed. The text (with some condensations) of one of the most elaborate of these agreements follows:<sup>1</sup>

Memoranda of agreement made by and between \_\_\_\_\_, composing the firm of \_\_\_\_\_, of the Borough of Manhattan (or Brooklyn) City of New York, parties of the first part, and the United Brotherhood of Cloak Makers No. 1 of New York and Vicinity, a cooperative association of cloak makers, duly incorporated under the laws of the State of New York, party of the second part, to wit:

Whereas the said parties of the first part want to secure for their cloak factory the help and services of skilled mechanics, and,

Whereas the said party of the second part undertakes to render to the said parties of the first part such services,

That the said parties of the first part do hereby engage the said party of the second part to perform the informing, opening, finishing, and pressing work required in their cloak factory, occupying the premises known as \_\_\_\_\_, in the City of New York, for the term commencing on the date hereinafter mentioned and ending on the 1st day of July, 190\_\_\_\_, and that the said party of the second part does hereby agree to do all said work and to keep the said parties of the first part at all times fully supplied with help required to do their work, at the prices hereinafter mentioned. *Provided*, That all the work aforementioned shall be given by the parties of the first part to the party of the second part. And the parties of the first part agree that no part of the said work required to be done in their said cloak factory shall during the continuance of this agreement, be given away by them to any other person or persons but to the said party of the second part.

And it is expressly understood and agreed by and between the said parties that, in order to carry out this agreement, the party of the second part shall engage a sufficient force of its members, for the full term of these presents, to perform the work of the parties of the first part so that at all times whenever a sign or bill reading "Help Wanted," or substantially the like, shall be posted on the exterior of the said factory, as many of the members of the party of the second part as may not at such times be otherwise employed shall and will, without further notice, call at the said factory to do the work therein required at the prices hereinafter mentioned.

[Wages to be paid.—For pressing \$16 a week to men, \$12 to women, no helpers to be employed by parties of the first part. Other work to be paid for according to scale of prices embodied in the agreement, but too long and technical to be here reproduced. Prices on new styles or garments not therein included to be determined by employer and committee of the operators and tailors employed in his factory.]

[Provides for individual record books to be furnished to workers by employer, who is to enter prices of work and check off same when delivered.]

[Provides that employer shall credit the Union with work performed by its members, with whom, however, he may contract individually and directly.]

[Provides for weekly payment of wages.]

<sup>1</sup>Bulletin of the New York Bureau of Labor.

[Provides that no members of the Union shall be laid off in dull season, but that work shall be equally distributed among all employees.]

[Provides that employer may discharge any employee for poor workmanship or bad behavior, but for no other reason, it being expressly stipulated that no dismissal shall follow participation in an organized movement to advance or maintain the rate of wages.]

[Permits employees to give orders to contractors, who shall, however, employ only members of the organization, and in case of their failure or refusal to make compensation for work done, the employer becomes responsible. The employers shall not be held responsible for any other breaches of contract on the part of contractors, but they shall upon notice from the Union discharge a contractor for a violation of his agreement.]

[Working hours to be from 8 a. m. to 6 p. m. with one hour's intermission for luncheon, overtime to be allowed in the month of March up to 9 p. m., one day each week to be a day of rest.]

[Work to be done on employer's premises and none given to the employees to take home.]

[Samples to be made by inside hands at the rate of \$18 a week to each workman.]

And the party of the second part agrees that during the continuance of this agreement there shall be no strikes nor any similar troubles or interruptions, through the fault of its members, in the business of the party of the first part. *Provided*, that the party of the second part shall have the privilege to have a shop delegate selected from among the hands therein employed, to preserve order among them, and that a duly authorized officer, representative or committee of the said party of the second part shall have access, once a week, or, in case of disputes, on any day, to the said factory to confer with the hands therein employed.

That this agreement shall take effect at once and continue until the last day of July, 1901.

That the fees of counsel retained by the party of the second part to draw this agreement shall be paid by both parties equally.

And furthermore this agreement witnessed.

That whereas it is understood and agreed by and between the said parties that in the event of a breach of this agreement by the parties of the first part the said party of the second part would suffer great losses and damages, the amount whereof is incapable of exact ascertainment by computation or otherwise.

Now, therefore, it is mutually agreed by and between the said parties.

That in the event of a breach of any of the covenants, conditions or provisions of this agreement by the said parties of the first part, they shall pay to the said party of the second part the sum of dollars as liquidated damages, it being, however, understood and agreed that the damages which may be sustained by the parties of the first part in the event of a breach of contract by the party of the second part, shall not be liquidated hereunder, and they shall be entitled to recover the full amount of damages in each case actually sustained.

That the faithful performance of this agreement by the parties of the first part shall be secured by a bond of the sum of dollars.

It should be noted as a remarkable feature of the foregoing agreement that the labor organization requires from the employer a bond for the faithful performance of his agreement. In the agreements made by the vest makers the contract gives a promissory note, negotiable upon violation of the agreement in the sum, usually, of \$10 for each machine operated. This requirement of notes and bonds is a very general practice among the unions of this trade in New York City. The conditions are peculiar. They are an outgrowth of the sweating system, wherein the employers are small contractors without property or reputation, and where, on the other hand, the unions themselves are composed of a class of people peculiarly unadapted to continuous organization, namely, the Russian Jews. The union hopes by means of a contract to compel the employer to carry out by legal enforcement what they themselves hardly expect to accomplish by organization.

As an evidence of the weakness of this form of agreement, which depends upon the courts, is the decision of one of the New York courts of inferior jurisdiction holding that a contract like the foregoing is not binding upon the employer, since it was obtained under duress. The union, therefore, which, owing to its own weakness, was unable to enforce its contract, found that also the extraneous help of legal character could not be relied upon. In order to meet this decision of the New York court the agreements of the vest makers' union have attached an affidavit of the contractor to the effect that he acknowledges that the agreement is made freely and voluntarily and not under duress. It is questionable whether the court would not also go back of this affidavit and declare that it, too, had been given under duress. In some cases, however, the New York City courts and intermediate State courts have held these contracts binding and legal despite provisions for exclusive employment of union men, which courts sometimes hold to be unlawful. The matter has not been carried to the highest court of the State. Following is a copy of the affidavit signed by a contractor to an agreement of this kind made with the vest makers' union:

CITY AND COUNTY OF NEW YORK, ss.

On this 18th day of August, 1901, before me personally appeared ——— and ——— [employing contractors], and, being duly sworn, acknowledged to me that they are the individuals who executed the within agreement freely and voluntarily for the purpose of obtaining and affording the employment of skilled hands, and for no other purpose whatsoever other than herein enumerated.

(Signed) ———,

Notary Public, New York County.

It will be observed that the damages which the union may collect under the contract last above quoted is liquidated at \$500. If the contractor breaks the agreement in any way, this fixed amount, and no more, can be collected. While the contractor is subject to no limit as to the damages collectible, he also has no fixed amount which he can demand for any violation, but must affirmatively prove the amount of damages actually suffered—a thing very difficult to do.

## XII. ELECTRICAL WORKERS.

The secretary of the National Brotherhood of Electrical Workers reports that employers are generally friendly toward his union, and that it has, in many cases, secured written agreements with them, usually as individuals. The effect of such agreements is found to be good, and he knows of no violations of them. The brotherhood habitually deals with employers through committees or members of the executive board, and seldom finds it necessary to resort to outside arbitrators. Agreements appear, however, often to provide for reference of minor disputes to a board consisting of one or more members chosen by each side, with an odd member selected by them if necessary. Agreements often provide for exclusive employment of union men.

An agreement made between the local lodge of the electrical workers at Washington and the various individual employers, for the year 1899, provides for an 8-hour day, for minimum wages of \$3 a day, and for the payment of overtime at 1½ times the regular rate, with double time for Sundays and holidays. The number of apprentices and helpers is limited to one for every four journeymen employed. No employer signing the agreement is allowed to employ any except members of the union. All differences arising under the agreement are to be referred to an arbitration committee, consisting of one member of the union, one contractor, and a third party not directly interested, selected by the first two.

### New York City electrical workers<sup>1</sup>

AGREEMENT BETWEEN CONTRACTOR AND BROTHERHOOD OF ELECTRICAL WORKERS  
No. 1

It is hereby agreed, by and between \_\_\_\_\_ (contractor's) party of the first part, hereinafter called the contractor, and the Brotherhood of Electrical Workers No. 1 of New York, party of the second part, hereinafter called the union:

First. That this agreement shall apply only to all electrical work undertaken by \_\_\_\_\_, the contractor, within the territory covered by a radius of twenty-five miles, with New York City Hall as its center.

Second. That this agreement shall go into effect May 1, 1900, for a period of two years, to May 1, 1902, and if any change is contemplated by either party at its termination, notice in writing shall be given by the party contemplating the change, stating fully what the proposed change is, at least three months prior to the expiration of the agreement, such notice to be legally served upon the other party, and that if no such notice is received at least three months prior to the expiration of this agreement it shall continue in force for another year, subject to another similar three months' notice.

Third. Any contractor signing this agreement shall employ no less than exclusively on all electrical construction work undertaken by said contractor within the twenty-five mile limit.

Fourth. In the event of a dispute, a conference shall be held by a committee within twenty-four hours after notice is served, consisting of three union electrical contractors employing no less than three chosen by the contractor, and three members of the union who shall endeavor to adjust same. A failure to attend conference within twenty-four hours shall be considered a violation of this agreement. Expenses of this committee shall be borne by the party against whom the decision is rendered. A fine of \$50 shall be imposed upon the party found guilty at the conference or on decision of umpire.

Fifth. All applicants for membership or for helper's examination for journeyman, shall be obliged to pass an examination by a board of examiners, composed of union journeymen.

Sixth. That as all differences under this agreement are to be settled by arbitration, no strike or lockout shall be ordered by either party hereto, it being understood, however, that any sympathetic strike or lockout in which either party is obliged to take part on account of its affiliation with any central body of employees or employers, shall not be considered a violation of this agreement. It is also agreed that the contractor shall during such sympathetic strike hire no new men until the striking men are employed first. The union reserves the right to refuse to work on any job where other than members of this union are employed on electrical work.

Seventh. That no rules or by-laws shall be made or continued in force by either party which in any way conflict with the provisions of this agreement.

Working rules to be observed by both parties:

Rule 1. The hours of labor shall be eight hours per day, to be performed between the hours of 8 a. m. and 5 p. m. for five days per week, and from 8 a. m. to 12 noon on Saturdays.

Rule 2. That all work done between 12 m. and 5 p. m. on Saturdays be paid for at double the rate of wages.

Rule 3. Any labor performed before 8 a. m. or after 5 p. m. shall be paid for at double the regular rate of wages. All labor performed on Sundays and all legal holidays shall be paid for at double the regular rate of wages.

Rule 4. Workmen shall be classified as follows:

Journeyman—A man who has worked five years at the trade and who has successfully passed examination provided herein and has been admitted to the union.

A helper is a member who has passed an examination for work specified by the union and has worked two years at the trade.

An apprentice is a boy registered by the union, who is employed to do errands, carry material to or on job, attend lockers, and assist journeymen in testing, but for no other purpose, apprentices must not encroach on the work of helpers or work with tools.

An applicant for apprentice card must be under 19 years of age. He must serve with union apprentice card for two years, or equivalent thereto, satisfactorily to the union.

All apprentices must report to the union quarterly for renewal of cards, or to the executive board.

<sup>1</sup> Bulletin of the New York Bureau of Labor, June, 1900.

of the union in case of change of employer. Any failure to comply with above rule forfeits apprentice card. Each shop is entitled to one apprentice. Shops having more than ten journeymen are entitled to one apprentice additional for each additional ten journeymen.

Rule 5. Each contractor is entitled to place one helper to each two journeymen on each job.

Rule 6. Helpers may do journeyman's work while actually helping such journeyman, but must never work alone on any job or part of a job.

Rule 7. All members of the union shall be paid weekly in United States currency and before 5 p. m., and when pay day is on Saturday before 12 m. noon, and not more than three days' pay shall in any case be held back in any one week.

Rule 8. In going from the shop to his work, or from his work to the shop, or from job to job, each workman shall receive from his employer the necessary car fare.

Rule 9. Manhattan Island south of One Hundred and Fifty-fifth Street and Brooklyn within the old city line shall be known as the city district. Outside of the city district workmen shall be allowed traveling time and expenses.

Rule 10. From May 1, 1900, to May 1, 1902, the wages of journeymen shall be \$4 per day of eight hours, from 8 a. m. to 5 p. m., for five days in a week, and \$2 for four hours on Saturday, from 8 a. m. to 12 noon.

Rule 11. The foreman shall receive fifty cents per day in excess of the pay of a journeyman.

A foreman. Any member having charge of construction shall be classed as a foreman.

Rule 12. The pay of the helpers shall be at the rate of \$2.50 per day of eight hours, five days in a week, and \$1.25 for four hours on Saturday, from 8 a. m. to 12 noon.

Rule 13. When employees are laid off they shall receive their wages in full on job at time of laying off, or at the office before 5 o'clock, in the employer's time.

### XIII. HATTERS.

The secretary of the United Hatters of North America reports that arbitration is constantly used for the settlement of disagreements, and the results of it are described as excellent. The hatters agree with their employers upon written bills of prices, usually for 6 months, but sometimes for longer periods. Each shop has power to regulate its own prices with the consent of the local executive board, and the constitution forbids the annulling of any agreement before its expiration, provided the employer lives up to it.

### XIV. HOTEL EMPLOYEES AND BAR TENDERS.

In answer to an inquiry as to the attitude of employers toward the organization, the secretary of the Hotel and Restaurant Employees International Alliance replies: "As a general thing they must be friendly." The majority of the locals make annual agreements with employers, usually as individuals, and such agreements are believed to be advantageous to both sides. These local agreements frequently contain provisions for arbitration of disputes arising under them. The organization is well satisfied with the results of arbitration. The question of hours has been arbitrated in several cities with satisfactory results. A typical agreement follows. It will be seen that it represents chiefly demands on the part of the union.

#### AGREEMENT

SEATTLE, WASH., —, 190—

In consideration of the signing of this agreement by —, —, part— of the first part, in the city of Seattle and State of Washington, the Cooks and Waiters' Union No. 239, party of the second part, in the city of Seattle and State of Washington, agree to furnish reliable help —, —, part— of the first part, in turn agreeing to abide by the scale of prices and hours of labor of the aforesaid Cooks and Waiters' Union No. 239, party of the second part.

And be it further agreed by —, —, the part— of the first part, and the Cooks and Waiters' Union No. 239, party of the second part, that the hours of labor shall not exceed ten (10) hours per day for waiters and eleven (11) hours per day for cooks.

This agreement shall be binding on both parties and shall only be terminated on written notice of at least thirty (30) days.

No changes or alterations in this scale shall be made without due notice of at least thirty (30) days being given by the Cooks and Waiters' Union No. 239.

It is further agreed that none but members of this union shall be employed in any department of the aforesaid part— of the first part.

Be it further agreed that —, —, the part— of the first part, shall secure all help through the business agent of the Cooks and Waiters' Union No. 239, who has an office and telephone.

And it is further agreed that the business agent of the Cooks and Waiters' Union No. 239, party of the second part, shall have access to all departments in the establishment of —, —, part— of the first part.

#### SCALE OF PRICES

WAITERS	
Short shifts of five hours, per shift, .....	\$1.00
First-class houses, per week .....	12.00
Second-class houses, per week .....	10.50

The following scale of prices of the Hotel and Restaurant Employees' Union No. 239 will go into effect May 1, 1901. The classification following only governs cooks and waiters.

One-hour lunch or dinner, .....	\$0 50
Banquets, full dress, .....	5 00
Banquets, plain dress, .....	3 00
Extra shifts, by hour, .....	.35
All commission work, .....	per cent. 15
First class hotels, per month, .....	35 00
Second-class hotels, per month, .....	35 00

The following is the minimum scale for cooks. This does not prohibit superior workmen from receiving a larger wage.

FIRST CLASS HOTELS		Per month
Head cook (chef), .....	..	\$100 00
Second cook, .....	..	75 00
Third cook, .....	..	50 00
Broiler cook, .....	..	60 00
Vegetable cook, .....	..	40 00
Fry cook, .....	..	50 00
Dish washer, .....	..	30 00
Pan washer, .....	..	30 00
Pastry man, .....	..	35 00
Yard man, .....	..	30 00
SECOND CLASS HOTELS		
Head cook, .....	..	\$75 00
Second cook, .....	..	50 00
Fry cook or broiler, .....	..	40 00
Vegetable cook, .....	..	30 00
Dish washer, .....	..	30 00

[Other details omitted.]

## XV. LEATHER WORKERS.

The attitude of employers toward the United Brotherhood of Leather Workers on Horse Goods is described as generally friendly. The union tries to secure written agreements with employers as to wages, hours, etc., and the secretary reports that it succeeds in nearly every instance. The working of such agreements is found to be satisfactory. The policy of the organization is to settle all disputes by arbitration, when an agreement can not be reached by mutual discussion. Agreements for the use of arbitration have been made in many cases, and have been found valuable. The secretary says that 4 employers have refused to arbitrate. The organization has never appealed to a State board of arbitration.

## XVI. METAL POLISHERS, BUFFERS, AND PLATERS.

The president of the national organization of Metal Polishers (since amalgamated with the Allied Metal Mechanics) states that his organization tries to get written agreements with individual employers fixing wages and other conditions, and has got them in about 300 cases. They result in a more friendly feeling between the men and their employers. In many instances the agreements provide for the arbitration of disputes. Such agreements exist with the chandelier makers and the job shops in Boston, and with the chandelier makers in Chicago. The following is a copy of the form which the organization seeks to introduce. It is especially interesting to note the provision for reference of disputes to the State board of arbitration in States where such boards exist.

[Metal Polishers, Buffers, Platers, and Brass Workers' International Union of North America. E. J. Lynch, secretary, 25 Third Ave., N. Y. City.]

This agreement made and entered between ———, party of the first part, and the undersigned representing the Metal Polishers, Buffers, Platers and Brass Workers' Union of N. A., party of the second part.

ARTICLE I. The party of the first part hereby agrees to employ none but members of the above named organization, in good standing, who carry the regular working card of the organization, or those who agree to join the organization, if employed, within thirty days.

ARTICLE 2. The minimum rate of wages shall be as follows: Polishers \$—— for —— hours, buffers \$—— for —— hours, platers \$—— for —— hours, molders \$—— for —— hours, chandelier makers \$—— for —— hours, finishers \$—— for —— hours. However, should the majority of employers in our line of business consent to allow a nine-hour day in their respective shops, I hereby agree to do the same without reduction of pay. And it is further agreed and understood that all employees receiving more than the foregoing scale shall not be subject to any reduction in their wages by reason of the adoption of this minimum scale.

ARTICLE 3. Time and one-half shall be paid for overtime and double time for Sundays and the following legal holidays: Decoration Day, Fourth of July, Thanksgiving, and Christmas, but under no circumstances shall work be done on Labor Day.

ARTICLE 4. Apprentices shall belong to the organization and carry the regular working card of their craft.

ARTICLE 5. Apprentices shall be given every opportunity to learn all the details of their respective trades and shall serve three years. Any apprentice leaving his employer before the termination of his apprenticeship shall not be permitted to work under the jurisdiction of the organization, but shall be required to return to his former employer.

ARTICLE 6. It is mutually agreed that the Union will not cause or sanction any strike, and that the employer will not lock out his employees while this agreement is in force until submitted to a board of arbitration.

ARTICLE 7. All questions of wages or conditions of labor which can not be mutually agreed upon shall be submitted to the State board of arbitration for settlement, or to a board of arbitration, which board shall be composed of one person to represent the employer, one to represent the Union, and the two thus chosen to select a third. The decision of the board to be final and binding upon the employer, the Union, and the employees.

ARTICLE 8. This organization agrees to furnish, free of cost to any manufacturer signing this agreement, union labels, the same to be in the possession of a member of the organization. They shall be supplied from the headquarters through the different locals.

ARTICLE 9. The organization agrees to use all legitimate means to further the interest of the manufacturing workers who sign this agreement.

ARTICLE 10. This agreement shall remain in force until ———— Should either party desire to alter, amend, or annul this agreement, it shall give a written notice thereof to the other party three months before the expiration of the agreement, and if the parties fail to give such notice the agreement shall continue in force for another year, and so on from year to year until such notice is given.

President  
Secretary

The Metal Polishers have been trying to establish a national arbitration agreement with the National Metal Trades Association, the same organization which, in 1900, entered into a general agreement with the International Association of Machinists for the arbitration of disputes. President Lynch, of the Metal Polishers, was present at the conference between the National Metal Trades Association and the International Association of Machinists, in May, 1900, and, together with the officers of the Bicycle Workers, proposed to establish a similar agreement to that made by the Machinists. The National Metal Trades Association, doubtless feeling a desire to test the experiment with the Machinists before extending the system of arbitration agreements, postponed action on the proposition of the Metal Polishers and the Bicycle Workers. Further conferences, looking in the same direction, had also no result. In the meantime a movement has been instituted for the establishment of a federation between the Machinists, the Metal Polishers, and several other allied trades, under the name of National Metal Trades Federation. It is the avowed hope of those who are promoting this federation that it may ultimately enter into a system of agreements and arbitration with the employers of these allied trades. The breaking up of the agreement system between the Machinists and the National Metal Trades Association in the summer of 1901, has for the time postponed further movements in this direction. (See above, p. 357.)

## XVII. STATIONARY FIREMEN.

The secretary reports that the Brotherhood of Stationary Firemen tries to secure written agreements with employers as to wages and other conditions of labor, and that 50 per cent of the members are working under such agreements. In all cases where arbitration has been necessary, the secretary reports that it has been used with satisfactory results. The attitude of employers toward the organization is described as friendly in most cases.

## XVIII. STAGE EMPLOYEES.

The secretary of the National Alliance of Theatrical Stage Employees reports that the union undertakes to secure written agreements with employers as to hours and conditions of work before August 15 of each year. Such agreements have been obtained in about 97 per cent of the cases where the union is established. In many cases the agreements provide for the settlement of disputes by arbitration. The results of such agreements have been highly satisfactory to the union. The organization has appealed to State boards of arbitration in Michigan, Massachusetts, and Colorado, but the employers in each case refused to arbitrate.

### XIX. STOVE MOUNTERS.

The secretary of the Stove Mounters' International Union reports that there exist some 8 or 10 written agreements with employers. The secretary regards the working of such agreements as satisfactory, but seems to feel no considerable enthusiasm for them. He says that the organization is always ready to submit disputes to arbitration or conciliation, and that where arbitration has actually been used the results have been satisfactory to the union.

The convention of this organization of 1900 instructed the executive board to prepare a printed form of agreement to be used between locals and their employers.

### XX. TEXTILE TRADES.

The employees in nearly all of the textile trades are organized only to a very slight extent. The large proportion of female and child labor employed in these mills beyond question interferes with the development of labor organizations. Even where organizations exist they are much less able to control the conditions of labor than is the case in many other trades. We might accordingly expect to find that in the textile mills the conditions of labor are usually fixed practically by the employer rather than by collective bargaining between the employer and his workmen. There are a few special branches of the textile trades requiring unusual skill in which the workmen are more effectively organized and in which the conditions of labor are determined largely by negotiation and conciliation between the union and the employers. In several of these minor trades joint written agreements regulating the conditions of labor are adopted from time to time. These are described more fully below. They appear in general to have exercised a beneficial effect upon the relations between employers and employees.

The only national labor organization which has sought to bring together various different classes of textile workers is the International Union of Textile Workers, an organization as yet of comparatively little strength.

The secretary, however, reports that the attitude of employers is generally friendly to the organization, that in several instances written agreements with employers as to wages and other conditions have been obtained, that the effect of such agreements is always good, and that the organization favors arbitration and conciliation, and has in several instances been able to settle disputes by these means with very satisfactory results.

The secretary of the Cotton Mill Spinners' Association reports that his organization has made no effort to get written agreements with employers. He states that the association is always in favor of conciliation and arbitration, but it has found on many occasions that the idea of arbitration by an outside authority is distasteful to manufacturers. Most differences have been settled by mutual concession. The organization has never appealed to a State board of arbitration, but the Massachusetts State board has sometimes intervened of its own motion and helped in effecting a settlement.

The secretary of the Amalgamated Lace Curtain Operatives, which is a small body in a small trade, reports that the society makes contracts with employers for indefinite periods. Three such agreements have been made in the 8 years that the society has existed, and the last is now in force. They have promoted harmony between employer and employee, and no violations of them are known to have occurred. This society has been able to agree with its employers by methods of conciliation, but has not needed to resort to arbitration.

The secretary of the Association of Elastic Goring Weavers, another small organization, reports that the attitude of employers toward the organization is generally friendly, and that all the employers except one small one have signed the union list of prices, which is understood to carry union conditions. The organization favors arbitration, but has never had occasion to use it. All differences with employers have been settled by negotiation.

### XXI. STREET RAILWAY EMPLOYEES.

The secretary of the Amalgamated Association of Street Railway Employees says that the Association tries to secure written agreements with employers as to wages, hours, etc. In July, 1900, such agreements were in force with about 25 companies, and the number increases yearly. The agreements are found to be very beneficial. They provide for the arbitration of any disputes, and arbitration has in several cases been effected under them.

The most elaborate system of agreements and arbitration so far secured by the Amalgamated Association of Street Railway Employees is that which is in force in Detroit. Mr. McMahon, secretary of the Association, says that formerly the joint agreements between the street railway company and the organization provided for the reference of each matter of dispute to a board of arbitration not composed of actual employers or employees in the business. Each side was to select one arbitrator, and these two were to select a third. In practice each side maintained one arbitrator constantly, and each of these arbitrators felt that he must decide invariably in favor of his own side. Moreover, there were an unduly large number of cases brought before this board of arbitration; as many as 100 in two years. Both sides grew weary of the system. It was next proposed to introduce a large joint board for discussing disputed questions. All of the division superintendents were to represent the company, and an equal number of members of the union to represent the employees. The employees, however, looked upon this scheme with suspicion, and it was abandoned. Now, the agreement provides for a board of review in cases of dispute. If the division superintendent of the road and the business agent of the union can not reach an agreement, the matter is referred to this board of review. So far, every case which has come before it has been satisfactorily decided. The Detroit organization, however, is disposed to refer disputes to outside arbitrators, if necessary.

The system of joint agreements has been introduced in a number of smaller cities, such as Newcastle, Pa., Ann Arbor, Mich., and Houston, Tex. In most of these cases the company agrees to employ only union men. The agreement fixes wages and usually provides for arbitration. The Ann Arbor agreement, which covers the trolley line between Detroit and Ann Arbor, provides that the company may employ any man it sees fit, but that he must join the union within 90 days or be discharged.

## XXII. TOBACCO AND CIGAR WORKERS.

The secretary of the Tobacco Workers' International Union reports that the union tries to secure written agreements with employers as to wages, etc., and has got them in most cases where the attempt has been made. They are believed to promote harmony between employers and employees. They provide for the use of the union label.

The union is not on friendly terms with the two great corporations, the American Tobacco Company and the Continental Tobacco Company, which control a large part of the tobacco trade. These companies have for years been boycotted by the American Federation of Labor because of their disputes with the Tobacco Workers, and the Tobacco Workers' organizers and agents do their best to induce union men to refuse to use "trust" tobacco, and to induce dealers to refuse to keep it.

The constitution of the Cigar Makers' International Union has the following provision.

The executive board shall be empowered to appoint one or two members of the International Union with instructions to arbitrate in conjunction with a committee of local union, any difficulty affecting the members. Should the terms of settlement not be agreeable to the union involved but if approved by the arbitrators appointed the executive board shall have power to submit said terms to a vote of the local unions when it approved they shall be binding upon all the members of the International Union.

The president of the organization says that the cigar makers seldom try to get written agreements with employers as to wages or other conditions of work. "Annual agreements make annual strife." He declares that the cigar makers believe in conciliation and arbitration, but that it should be carried out between the employers and the employees involved if possible.

## XXIII. WOOD AND FURNITURE WORKERS, COOPERS, ETC.

### 1. Woodworkers' International Union

The various local organizations of woodworkers and furniture makers are now for the most part affiliated with the Woodworkers' International Union. The organization is quite strong in many cities, and has very generally succeeded in persuading employers to negotiate with the union officials regarding the conditions of labor. The secretary of the international organization reports that the union tries to secure written agreements with employers regarding the conditions of labor, and that such agreements have been secured in most of the large cities.

In most instances these agreements are made with individual employers, but in a few cases associations of employers exist with which the local unions enter into agreements. These agreements usually provide for the settlement of disputes by arbitration, although there is no arrangement in most cases for the renewal of the agreements themselves by any formal method of conciliation or arbitration. These agreements appear usually to provide for the exclusive employment of union men.

One of the most important agreements in the woodworking trade is that made from year to year between the Mill Men's Club of Cook County, Ill., and the Amalgamated Woodworkers' Council of Chicago. These agreements are formally adopted by the arbitration committees of the respective organizations in a joint meeting. They provide for the use of the union stamp. Piecework is excluded, and rates of wages for day labor are established. The number of apprentices is limited to 1 for every 10 bench men and 1 for every 5 machine men. The joint committee by which the agreements are adopted is constituted an arbitration committee to settle disputes. Should the committee fail to reach an adjustment, it shall name 3 disinterested persons to act with it.

The following is the ordinary form used by the local unions of woodworkers in their agreements with employers. Its provisions are somewhat similar to those in the Chicago agreement just described. It will be observed that provision is made for settlement of disputes by arbitration. The employer is to appoint 1 member of a board, the local union another, and these are to select a third member, the decision of the 3 to be final. The wage rates and details are those of the agreement as in force in Detroit.

Amalgamated Woodworkers' International Union.]

ARTICLES OF AGREEMENT.

Agreement entered into on this, the \_\_\_\_\_ day of \_\_\_\_\_ 19\_\_\_\_, between \_\_\_\_\_, manufacturer of \_\_\_\_\_, of \_\_\_\_\_, of the first part, and the undersigned representatives of Amalgamated Woodworkers' Union, No. \_\_\_\_\_ of Detroit, Mich., parties of the second part.

ARTICLE 1. The parties of the first part hereby agrees to have none but members in good standing of the Amalgamated Woodworkers' International Union who carry the card issued by the above branch of said organization or who shall signify their intention of making application for membership in said Union.

ARTICLE 2. The representative of the Amalgamated Woodworkers' Union, No. \_\_\_\_\_, shall have access to the factory of the parties of the first part at any reasonable time.

ARTICLE 3. The minimum scale of wages for cabinet makers and bench hands shall be 24¢ per hr. for 4 hours, for machine hands, 32¢ for 9 hours and finishers 38¢ for 10 hours, and it shall be understood that all employees who receive more than the foregoing scale shall not be subject to any reduction in said wages by reason of the adoption of this minimum scale.

ARTICLE 4. In consideration of the above the parties of the second part hereby agree that the parties of the first part shall be furnished and have the right to use the union label issued by the Amalgamated Woodworkers' International Union.

ARTICLE 5. Parties of the first part may have one apprentice to every ten bench men or fraction thereof, and one apprentice to every five machine men or fraction thereof. Each apprentice shall serve a term of three years at the following rate of wages: First year, fifty cents per day, second year seventy five per day, and the third year one dollar per day. No one shall be accepted as an apprentice who is over twenty years of age. Apprentices over sixteen years of age shall be obliged to carry the apprenticeship card of the Amalgamated Woodworkers' Union, No. \_\_\_\_\_ of \_\_\_\_\_.

ARTICLE 6. In the event of any dispute arising between the parties to this agreement, then the parties of the first part, along with a representative or representatives of the Amalgamated Woodworkers' Union, shall endeavor to arrive at a settlement that will be satisfactory. In case no settlement is arrived at, then the parties of the first part shall appoint one member, the parties of the second part another member, and the two parties so selected shall appoint a third member of an arbitration committee whose decision in the matter shall be final.

It is further agreed that nine (9) hours shall constitute a day's work.

Overtime to be paid for at the rate of time and one-half. Double time for Sunday work.

ARTICLE 7. This agreement shall be in force from May 1, 1901, until May 1, 1902.

[Strike out objectionable matter and insert special articles not provided for above.]

## 2 Wood carvers.

The secretary of the International Wood Carvers' Association reports that his union seldom undertakes to get written agreements with employers, because such an agreement is not believed to "give a better guaranty." The constitution requires locals to prohibit members from making any contract or agreement with their employers for any specified time. The convention of 1900, however, adopted a resolution reciting that "while the strike as a weapon of defense can not be

abandoned, it has long been apparent that as a means of adjusting grievances it is not the most satisfactory, while on the other hand it is the most expensive; indorsing the principle of conciliation and arbitration as applied to trade disputes, and impressing upon the members the necessity of adhering faithfully to all agreements with employers.

### 3. Box makers.

The president of the United Box Makers states that the system of joint agreements fixing the conditions of wages has been very generally adopted in Chicago, and has to some extent been introduced in other cities. Manufacturers have usually been glad to deal with organized labor and to recognize union scales because of their influence in keeping wages uniform. Nevertheless there are a number of nonunion factories in Chicago paying lower wages. The agreements are made with individual manufacturers, since there is no formal organization of employers. They extend for one year. The last Chicago agreement, adopted in September, 1900, is in force from January, 1901, to January, 1902. This agreement provides a minimum scale of wages per hour and per day, with an elaborate scale for piecework in cases where that system is employed. The manufacturer agrees to employ only members of the union, and in turn has the right to use the Union label. The agreement provides for arbitration. The employer agrees to negotiate concerning any matter of dispute with the representative of the union, and in case no settlement is arrived at each party is to appoint one member of the arbitration committee, and the two so selected shall appoint a third, whose decision shall be final. There has been only one instance in recent years where arbitration in this formal sense has been employed. In that case the members of the union quit work after a failure to agree with the employers, and practically every shop in Chicago was closed. The decision of the arbitrators, according to the statement of this official, resulted in an advance of wages of nearly 50 per cent.

### 4 Coopers.

The general secretary of the Cooper's International Union reports that the coopers have written agreements with the employers, usually individually, in all cities where the workmen are organized, and that both the members and the employers prefer to have them. He says that they promote harmony and that they have prevented numerous strikes. There have been no important violations or evasions of such agreements, according to his statement, though there are occasional misunderstandings as to the meaning of clauses in them. They generally include a provision that disputes over matters not specifically covered in the contract shall be submitted to a board of arbitration, composed of two members selected by each party, and a fifth member selected by these four. It has seldom been necessary to make use of such an arbitration board, but when it has been necessary the action of the board has always been satisfactory. There has been no refusal to abide by the decision of arbitrators.

## CHAPTER III.

### GOVERNMENTAL ARBITRATION IN THE UNITED STATES.

#### DIGEST OF STATE AND NATIONAL LAWS ESTABLISHING STATE BOARDS OF ARBITRATION AND PROVIDING FOR LOCAL BOARDS OF ARBITRATION, WITH SUMMARY OF THE WORKING OF SUCH BOARDS.

##### UNITED STATES

**1 Act of 1888.**—The Congress of the United States has enacted legislation with a view to promoting the peaceful settlement of labor disputes as regards interstate commerce. The first on this subject was passed in 1888. One portion of the act was of a strictly voluntary character, permitting the parties to labor disputes on railways and other transportation lines to agree to the establishment of a board of arbitration for the settlement of that particular dispute. Each party was to appoint one arbitrator, and these were to select a third. A board thus constituted was given power to administer oaths and subpoena witnesses, and to require the production of papers. There was no provision regarding the enforcement of awards, but the arbitrators were directed to announce their findings of facts and decisions in a public manner and to file them with the Commissioner of Labor of the United States for further publication. Publicity was thus the only means of enforcing such decisions under this act. Another provision of the act authorized the President of the United States, in case of any particular controversy, to select two commissioners who, together with the United States Commissioner of Labor, should investigate the controversy, with a view to ascertaining the causes and conditions, and the best means of adjusting the dispute. The result of the examination of such a commission was to be immediately reported to the President and to Congress. These special commissioners were given authority to take testimony and require the production of books and papers. They might advise the parties what ought to be done to adjust the dispute, and might make a written decision, which should be made public.

It does not appear that any use was ever made of the provisions for voluntary arbitration under this act. In connection with the great railway strikes of 1894, however, the President saw fit to appoint a special commission under the authority of this act, and it made an elaborate investigation regarding the Chicago strike and the others growing out of it. Most of the investigations of this United States Strike Commission were made after the dispute had actually been settled, and therefore had no influence in bringing about an adjustment. The investigations of the commission, as well as the direct experience of the public of the evils of the strike, led to a desire to establish more effective means of preventing such disputes in the future. The recommendations of the Strike Commission on this subject are more fully set forth elsewhere. (See Appendix.)

**2 Act of 1898.**—Largely through the influence of the Strike Commission, Congress passed an act in 1898<sup>1</sup> by which it was hoped to secure more effective intervention in strikes and lockouts on interstate carriers. This act provides that whenever any controversy arises either party may request the intervention of the chairman of the Interstate Commerce Commission and the Commissioner of Labor. These officials shall at once use their best efforts by mediation and conciliation to bring about a settlement, and if unsuccessful shall try to persuade the parties to submit to arbitration.

The act provides, as did the law of 1888, for the voluntary establishment of boards of arbitration, differing mainly in the fact that it makes their decisions binding. If the parties agree to establish such a board, one member shall be named by the employer, a second by the labor organization or organizations to

<sup>1</sup> Ch. 1063, 25 Stats. at Large, 501

<sup>2</sup> Acts of 1898, ch. 370

which the employees belong, while a third arbitrator shall be named by the chairman of the Interstate Commerce Commission and the Commissioner of Labor. The recognition of labor organizations in this provision for arbitration is significant. The agreement for submission to arbitration shall contain a provision that pending the rendering of a decision, which must be made within 30 days from the date of the appointment of the third arbitrator, work shall be continued under the conditions existing prior to the dispute. The parties must agree to abide by the decision, and the decision may be enforced by the United States courts by equity process, although a special proviso declares that no injunction or legal process shall be issued to compel the performance by any laborer of a contract for personal service. It is somewhat difficult to reconcile this proviso with the further declaration that employees, if dissatisfied with the award, shall yet not quit the service of the employer before 3 months, without giving 30 days' notice of intention to quit. Similarly the employer may not dismiss any employee because of dissatisfaction with the award without giving 30 days' notice. Subject to these provisions, the award is binding for a year upon the employers and upon the members of the labor organization taking part in the arbitration, or upon workmen who are not members in case they assent to the award. The act provides for appeal to the United States courts from the decisions of arbitrators as regards matters of law.

As yet there has been no case of arbitration under the act of 1898. In one or two instances the chairman of the Interstate Commerce Commission and the Commissioner of Labor have put themselves in communication with the parties to a dispute, but the railway companies have refused to arbitrate. It is by no means impossible, however, that should any dispute of so serious a nature as that of 1894 arise public opinion would virtually force the parties to submit to arbitration in accordance with the provisions of the United States law.

The provisions of the act of 1898, as far as they have to do with arbitration, are in full as follows:

AN ACT Concerning carriers engaged in interstate commerce and their employees

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the provisions of this act shall apply to any common carrier or carriers and their officers, agents, and employees, except masters of vessels and seamen, as defined in section forty-six hundred and twelve, Revised Statutes of the United States, engaged in the transportation of passenger or property wholly by railroad or partly by railroad and partly by water for a continuous carriage or shipment from one State or Territory of the United States or the District of Columbia to any other State or Territory of the United States or the District of Columbia, or from any place in the United States to an adjacent foreign country or from any place in the United States through a foreign country to any other place in the United States.

The term "railroad" as used in this act shall include all bridges and ferries used or operated in connection with any railroad, and also all the road in use by any corporation operating a railroad, whether owned or operated under a contract, agreement or lease, and the term "transportation" shall include all instrumentalities of shipment or carriage.

The term "employees" as used in this act shall include all persons actually engaged in any capacity in train operation or train service of any description and notwithstanding that the cars upon or in which they are employed may be held and operated by the carrier under lease or other contract. *Provided, however,* That this act shall not be held to apply to employees of street railroads and shall apply only to employees engaged in railroad train service. In every such case the carrier shall be responsible for the acts and defaults of such employees in the same manner and to the same extent as if said cars were owned by it and said employees directly employed by it, and any provisions to the contrary of any such lease or other contract shall be binding only as between the parties thereto and shall not affect the obligations of said carrier either to the public or to the private parties concerned.

SEC. 2. That whenever a controversy concerning wages, hours of labor, or conditions of employment shall arise between a carrier subject to this act and the employees of such carrier, seriously interrupting or threatening to interrupt the business of said carrier, the chairman of the Interstate Commerce Commission and the Commissioner of Labor shall, upon the request of either party to the controversy, with all practicable expedition, put themselves in communication with the parties to such controversy, and shall use their best efforts by mediation and conciliation to amicably settle the same, and if such efforts shall be unsuccessful, shall at once endeavor to bring about an arbitration of said controversy in accordance with the provisions of this act.

SEC. 3. That whenever a controversy shall arise between a carrier subject to this act and the employees of such carrier which can not be settled by mediation and conciliation in the manner provided in the preceding section, said controversy may be submitted to the arbitration of a board of three persons, who shall be chosen in the manner following. One shall be named by the carrier or employer directly interested, the other shall be named by the labor organization to which the employees directly interested belong or, if they belong to more than one, by that one of them which especially represents employees of the same grade and class and engaged in services of the same nature as said employees so directly interested. *Provided, however,* That when a controversy involves and affects the interests of two or more classes and grades of employees belonging to different labor organizations, such arbitrator shall be agreed upon and designated by the concurrent action of all such labor organizations, and in cases where the majority of such employees are not members of any labor organization, said employees may by a majority vote select a committee of their own number, which committee shall have the right to select the arbitrator or arbitrators on behalf of said employees. The two thus chosen shall select the third commissioner of arbitration, but in the event of their failure to name such arbitrator within five days after their first meeting, the third arbitrator shall be named by the commissioner named in the preceding section. A majority of said arbitrators shall be competent to make a valid and binding award under the provisions hereof. The submission shall be in writing,

shall be signed by the employer and by the labor organization representing the employees, shall specify the time and place of meeting of said board of arbitration, shall state the questions to be decided, and shall contain appropriate provisions by which the respective parties shall stipulate, as follows:

First: That the board of arbitration shall commence their hearings within ten days from the date of the appointment of the third arbitrator, and shall find and file their award, as provided in this section, within thirty days from the date of the appointment of the third arbitrator, and that pending the arbitration the status existing immediately prior to the dispute shall not be changed. *Provided*, That no employee shall be compelled to render personal service without his consent.

Second: That the award and the papers and proceedings, including the testimony relating thereto, entered under the hands of the arbitrators and which shall have the force and effect of a bill of exceptions, shall be filed in the clerk's office of the circuit court of the United States for the district wherein the controversy arises or the arbitration is entered into, and shall be final and conclusive upon both parties, unless set aside for error of law apparent on the record.

Third: That the respective parties to the award will each faithfully execute the same, and that the same may be specifically enforced in equity so far as the powers of a court of equity permit. *Provided*, That no injunction or other leading process shall be issued which shall compel the performance by any laborer against his will of a contract for personal labor or service.

Fourth: That employees dissatisfied with the award shall not by reason of such dissatisfaction quit the service of the employer before the expiration of three months from and after the making of such award without giving thirty days' notice in writing of their intention so to quit. Nor shall the employer dissatisfied with such award dismiss any employee or employees on account of such dissatisfaction before the expiration of three months from and after the making of such award without giving thirty days' notice in writing of his intention so to discharge.

Fifth: That said award shall continue in force as between the parties thereto for the period of one year after the same shall go into practical operation, and no new arbitration upon the same subject between the same employer and the same class of employees shall be had until the expiration of said one year if the award is not set aside as provided in section four. That as to individual employees not belonging to the labor organization or organizations which shall enter into the arbitration, the said arbitration and the award made therein shall not be binding unless the said individual employees shall give assent in writing to become parties to said arbitration.

SIX: That the award being filed in the clerk's office of a circuit court of the United States, as hereinbefore provided, shall be enforceable in operation and judgment shall be entered thereon accordingly at the expiration of ten days from such filing, unless within such ten days either party shall file exceptions thereto for matter of law apparent upon the record, in which case said award shall go into practical operation and judgment be entered accordingly when such exceptions shall have been finally disposed of either by said circuit court or on appeal therefrom.

At the expiration of ten days from the decision of the circuit court upon exceptions taken to said award, as aforesaid, judgment shall be entered in accordance with said decision unless during said ten days either party shall appeal therefrom to the circuit court of appeals. In such case only such portion of the record shall be transmitted to the appellate court as is necessary to the proper understanding and consideration of the questions of law presented by such exceptions and to be decided.

The determination of said circuit court of appeals upon said questions shall be final, and being certified by the clerk thereof to said circuit court judgment pursuant thereto shall thereupon be entered by said circuit court.

If excepted to an award any finally sustained judgment shall be entered setting aside the award. But in such case the parties may agree upon a judgment to be entered disposing of the subject-matter of the controversy, which judgment when entered shall have the same force and effect as judgment entered upon an award.

SIX: That for the purposes of this act the arbitrators herein provided for, or either of them, shall have power to administer oaths and affirmations, sign subpoenas, require the attendance and testimony of witnesses, and the production of such books, papers, contracts, agreements, and documents material for just determination of the matters under investigation as may be ordered by the court, and may invoke the aid of the United States courts to compel witnesses to attend and testify and to produce such books, papers, contracts, agreements, and documents to the same extent and under the same conditions and penalties as is provided for in the act to regulate commerce, approved February fourth, eighteen hundred and eighty-seven, and the amendments thereto.

SIX: That every agreement of arbitration under this act shall be acknowledged by the parties before a notary public or clerk of a district or circuit court of the United States, and when so acknowledged a copy of the same shall be transmitted to the chairman of the Interstate Commerce Commission, who shall file the same in the office of said commission.

Any agreement of arbitration which shall be entered into conforming to this act, except that it shall be executed by employees individually instead of by a labor organization as their representative, shall, when duly acknowledged as herein provided, be transmitted to the chairman of the Interstate Commerce Commission, who shall cause a notice in writing to be served upon the arbitrators, fixing a time and place for a meeting of said board, which shall be within fifteen days from the execution of said agreement of arbitration. *Provided, however*, That the said chairman of the Interstate Commerce Commission shall decline to call a meeting of arbitrators under such agreement unless it be shown to his satisfaction that the employees signing the submission represent or include a majority of all employees in the service of the same employer and of the same grade and class, and that an award pursuant to said submission can justly be regarded as binding upon all such employees.

SIX: That during the pendency of arbitration under this act it shall not be lawful for the employer, partly to such arbitration, to discharge the employees, partly thereto, except for inefficiency, violation of law, or neglect of duty; nor for the organization representing such employees to order, nor for the employees to unite in, aid, or abet, strike against said employer, nor, during a period of three months after an award under such an arbitration, for such employer to discharge any such employees, except for the causes aforesaid, without giving thirty days' written notice of an intent so to discharge, nor for any of such employees, during a like period, to quit the service of said employer without just cause, without giving to said employer thirty days' written notice of an intent so to do, nor for such organization representing such employees to order, counsel, or advise otherwise. Any violation of this section shall subject the offending party to liability for damages. *Provided*, That nothing herein contained shall be construed to prevent any employer, partly to such arbitration, from reducing the number of its or his employees whenever in its or his judgment business necessities require such reduction.

SIX: That in every incorporation under the provisions of chapter five hundred and sixty-seven of the United States Statutes of eighteen hundred and eighty-five and eighteen hundred and eighty-six it must be provided in the articles of incorporation and in the constitution, rules, and by laws that a member shall cease to be such by participating in or by instigating force or violence against persons or property during strikes, lockouts, or boycotts, or by seeking to prevent others from working through violence, threats, or intimidations. Members of such incorporations shall not be personally liable for

the acts, debts, or obligations of the corporations, nor shall such corporations be liable for the acts of members or others in violation of law, and such corporations may appear by designated representatives before the board created by this act, or in any suits or proceedings for or against such corporations or their members in any of the Federal courts.

SEC. 9. That whenever receivers appointed by Federal courts are in the possession and control of railroads, the employees upon such railroads shall have the right to be heard in such courts up on all questions affecting the terms and conditions of their employment, through the officers and representatives of their association, whether incorporated or unincorporated, and no reduction of wages shall be made by such receivers without the authority of the court therefor upon notice to such employees, and notice to be not less than twenty days before the hearing upon the receivers' petition or application, and to be posted upon all customary bulletin boards along or upon the railway operated by such receiver or receivers.

SEC. 11. That each member of said board of arbitration shall receive a compensation of ten dollars per day for the time he is actually employed, and his traveling and other necessary expenses, and a sum of money sufficient to pay the same, together with the traveling and other necessary and proper expenses of any conciliation or arbitration had hereunder, not to exceed ten thousand dollars in any one year, to be approved by the chairman of the Interstate Commerce Commission and audited by the proper accounting officers of the Treasury, is hereby appropriated for the fiscal years ending June thirtieth, eighteen hundred and ninety-eight and June thirtieth, eighteen hundred and ninety-nine, out of any money in the Treasury not otherwise appropriated.

SEC. 12. That the act to create boards of arbitration or commission for settling controversies and differences between railroad corporations and other common carriers engaged in interstate or territorial transportation of property or persons and their employees, approved October first, eighteen hundred and eighty-eight, is hereby repealed.

Approved, June 1, 1898.

### CALIFORNIA

California enacted in 1891<sup>1</sup> an act providing for a State board of arbitration similar in general nature to the State boards in Massachusetts, New York, and other States. The board was to consist of 3 members, was to have authority to investigate when either or both parties to a dispute should request it, and to render a decision binding for 6 months, if both parties should join in the application. Local boards of arbitration were also authorized.

It is stated, however, by the commissioner of labor statistics of California that, although a board was appointed at first under the act, it does not appear that it ever held a meeting or exercised any functions, and that no successors to the original board were ever appointed. The law seems to be a complete dead letter.

### COLORADO

**1. Statutory provisions.**—*Composition of board.*—The governor, with the consent of the senate, is to appoint a State board of 3 members, one an employer or representative of an employers' association, one selected from some labor organization, and a third appointed upon the recommendation of these two, who shall act as secretary. The term of office is two years.

*Investigation on application of parties.*—In this State there is no provision for investigation on the application of one party only, although perhaps this would be covered by the authority of the board to endeavor to mediate in any strike coming to its knowledge. The law simply provides that it is lawful for the parties to any labor dispute to submit it jointly to its decision. In this case they must agree to abide by the decision of the board and to continue at work pending such decision, provided it shall be given within 10 days after the completion of the investigation. The decision would thus nominally be binding, but the law contains no special provision as to the time in which it shall continue in force or as to the method of compelling obedience.

*Investigation and mediation on initiative of board.*—Wherever it shall come to the knowledge of the board, by notice from a mayor or other local officer or in any other way, that a strike is threatened, or has occurred, it is the duty of the board to communicate with the employer and employees and to try by mediation to effect a settlement. It is the implied duty of the mayor or other local officer to give notice of strikes.

The State board may, if it deems advisable, in default of other settlement, investigate the cause of the controversy and publish a report stating the cause and assigning the responsibility or blame.

*Compensation.*—Two members are paid \$500 each annually, and the secretary \$1,200.

*Power to summon witnesses.*—The board of arbitration is given, without very specific provisions, general power, such as that of a court, to summon witnesses and require the production of books and papers.

*Local boards of arbitration and conciliation.*—The parties to any controversy may agree to submit their dispute to a local board, the composition of which may either be mutually agreed upon or the employer may designate one member, the

<sup>1</sup> Laws of 1891, ch. 51.

<sup>2</sup> Acts of 1897, ch. 2.

employees another, and the two may select a third, who shall be the chairman. This board shall have all the powers of the State board, and its jurisdiction is exclusive, although it may ask advice of the State board. The decision is binding to whatever extent may have been agreed upon by the parties in making the submission. These local arbitrators are paid by the town or county \$3 per day, not exceeding 10 days for any one arbitration.

**2 Work of Colorado board.**—The State board of arbitration of Colorado was established in the latter part of 1896. Its second annual report, covering the period from November 11, 1897, to November 11, 1898, stated that practically no labor difficulties had arisen in Colorado during that time except in the coal-mining industry in the northern part of the State, and in settling the difficulties there the State board took active part. This one district, which comprises a considerable number of mines, has been the scene of several strikes during recent years. In January, 1898, the workmen at one of the mining centers demanded an increase in wages, which finally brought about a suspension at several other points in the northern Colorado coal district, involving about 700 men. The district union of miners applied to the State board for investigation of the difficulty, and about the same time the operators expressed a willingness to submit the dispute to arbitration. Both sides accordingly entered into a formal agreement to arbitrate, and the State board made an investigation, which was completed on February 11. The miners had meantime gone back to work, the strike being only of 9 days' duration. The intervention of the State board probably prevented the continuation of the strike for a long period. The decision, it is to be noted, granted practically all the demands of the men for an increase in wages at the mines particularly involved. (Second Annual Report State Board of Arbitration of Colorado, pp. 3-12.)

## CONNECTICUT

**Statutory provisions.**<sup>1</sup>—It is stated by the secretary of the Connecticut board of arbitration, that while the board is organized the courts have so interpreted the law as to deprive it of all important powers, and that therefore no practical use has been made of the provisions in the Connecticut law. The law is, however, summarized for the sake of completeness.

**Composition of board.**—The board of arbitration is to consist of three members, one being chosen from the political party casting the highest number of votes, one from the party casting the next highest number, and a third from an incorporated labor organization of the State.

**Investigation on application of parties.**—In this State there is no provision for investigation on the application of one party only, although perhaps this would be covered by the authority of the board to endeavor to mediate in any strike coming to its knowledge. The law simply provides that it is lawful for the parties to a labor dispute to submit it jointly to its decision. In this case they must agree to abide by the decision of the board and to continue at work pending such decision, provided it shall be given within 10 days after the completion of the investigation. The decision would thus nominally be binding, but the law contains no special provision as to the time in which it shall continue in force or as to the method of compelling obedience.

**Investigation and mediation on initiative of board.**—Whenever it shall come to the knowledge of the board in any way that a strike is threatened or has occurred, it is the duty of the board to communicate with the employer and employees and to try by mediation to effect a settlement.

The State board may, in default of other settlement, investigate the cause of the controversy.

**Compensation of board.**—Five dollars per day of actual service, and expenses.

**Power to summon witnesses.**—The board of arbitration is given, without very specific provisions, general power, such as that of a court, to summon witnesses and require the production of books and papers.

## IDAHO

**1. Statutory provisions.**—**Composition of State labor commission.**—The governor, with the consent of the senate, is to appoint a State board of three members, one an employer or representative of an employers' association, one selected from some labor organization and a third appointed on the recommendation of these two. The term of office is 6 years.

**Investigation on application of parties.**—The board is bound to take cognizance

<sup>1</sup> Public Laws, 1895, ch. 239.

<sup>2</sup> Laws of 1897, p. 141, 1899, p. 130.

of any dispute between an employer who employs not less than 25 persons and his employees, upon application of either or both parties. The application must be signed by the employer or by a properly ascertained majority of the employees in the department affected, or by a properly chosen representative of such employees. It must contain the promise to continue without lockout or strike until the decision of the board, if made within 3 weeks. The names of the employees making or sanctioning the application are to be kept secret. The board shall make proper inquiry and report to the parties what, if anything, ought to be done to adjust the dispute. This decision shall at once be made public.

*Effect of the decision.*—Where both parties are joined in an application for arbitration the decision shall be binding on them for 6 months, or until either gives notice of 60 days for its termination.

*Investigation and mediation on initiative of board.*—Wherever it shall come to the knowledge of the board, by notice from a mayor or other local officer or in any other way, that a strike is threatened or has occurred, it is the duty of the board to communicate with the employer and employees and to try by mediation to effect a settlement or, provided that the strike or lockout is not actually in force, to persuade them to submit the matters in dispute to arbitration. It is the implied duty of the mayor or other local officer to give notice of strikes.

The State board may, if it deems advisable, in default of other settlement, investigate the cause of the controversy and publish a report stating the cause and assigning the responsibility or blame.

*Compensation of board.*—Six dollars per day of actual service, and expenses.

*Power to summon witnesses.*—The board of arbitration is not given an unlimited power to compel testimony, but is specially authorized to summon as witness any operative affected and any person who keeps the records of wages, and to require the production of books and papers containing the records of wages earned or paid.

*Local boards of arbitration and conciliation.*—The parties to any controversy may agree to submit their dispute to a local board, the composition of which may either be mutually agreed upon, or the employer may designate one member, the employees another, and the two may select a third, who shall be the chairman. This board shall have all the powers of the State board, and its jurisdiction is exclusive, although it may ask advice of the State board. The decision is binding to whatever extent may have been agreed upon by the parties in making the submission. These local arbitrators are paid, by the town or county, \$3 per day, not exceeding 10 days for any one arbitration.

**2. Work of State board.** This board has only been organized, and has not yet been called upon to act in any case.

## ILLINOIS

**1. Statutory provisions<sup>1</sup>.**—*Composition of State board.*—The governor, with the consent of the senate, is to appoint a State board of arbitration composed of 3 members, one an employer or representative of an employers' association, one selected from some labor organization, and a third who is neither employer nor employee. Not more than two shall belong to one political party. The term of office is three years.

*Investigation on application of parties.*—The board is bound to take cognizance of any dispute between an employer who employs not less than 25 persons and his employees upon application of either or both parties. In this State the law contains a further provision that where difficulty concerns several different establishments or employees, the aggregate number of employees being not less than 25, the board has jurisdiction. The application must be signed by the employer or by a properly ascertained majority of the employees in the department affected, or by a properly chosen representative of such employees. It must contain the promise to continue without lockout or strike until the decision of the board, if made within 3 weeks. The names of the employees making or sanctioning the application are to be kept secret. The board shall make proper inquiry and report to the parties what, if anything, ought to be done to adjust the dispute. This decision shall at once be made public.

*Effect of the decision.*—Where both parties are joined in an application for arbitration the decision shall be binding on them for 6 months, or until either gives notice of 60 days for its termination.

In the event of a failure to abide by the decision, where both parties have joined in the application, any person aggrieved may appeal to the circuit court,

which shall grant a rule against the offending party to show cause why the decision has not been complied with. Upon return of the rule the court shall hear and determine the questions presented, and has power to punish for contempt any person refusing to comply with the decision, but such punishment shall in no case extend to imprisonment.

*Investigation and mediation on initiative of board*.—Wherever it shall come to the knowledge of the board, by notice from a mayor or other local officer or in any other way that a strike is threatened or has occurred, it is the duty of the board to communicate with the employer and employees, and to try, by mediation, to effect a settlement, or to persuade them to submit the matters in dispute to arbitration. It is the duty of mayors or other local officers to give notice of strikes. It is also the duty of the officers of labor organizations to give similar notice to the board.

This State is peculiar in having no definite provision for making, on its own initiative, a public investigation and report as to the responsibility for strikes, but it may make such investigation at the instance of either party.

*Compensation of board*.—\$1,500 per year each, and expenses.

*Powers regarding witnesses*.—The Illinois law is especially full as to the power of the board of arbitration to obtain testimony. It may summon any person or require the production of any book or paper deemed necessary, and in case of refusal to attend or to produce such books and papers, it is the duty of the circuit court, upon application of the board, to issue an attachment to enforce the order of the board of arbitration.

**2. Work of Illinois board.**—The Illinois State board of arbitration seems to have been quite active and fairly successful in its work. Like most of the other State boards, it presents no formal statistical records of its work. It reports its action on leading individual cases. The report of 1899 mentions only 6 of these cases, but these were all important ones, in which formal recommendations were made by the board, and in 4 of which it acted as arbitrator on the joint application of the parties. The board has itself pointed out that its more important work lies in bringing together employers and employees informally, and beyond question it has taken action in many less important cases, both of actual strikes and lock-outs and of disputes not leading to cessation of work, which are not described in the report. The following table, compiled from the annual reports of 1895 to 1899, covers all of the cases specifically described.

*Work of Illinois State board of arbitration, 1895-1899.*

	1895	1896	1897	1898	1899	Total
Total cases reported . . . . .	11	7	10	15	6	49
Cases arbitrated . . . . .	1	2	2	2	1	11
Cases investigated with formal recommendation . . . . .				1	2	3
Cases of successful mediation . . . . .	4	4	5	8	.....	22
Cases of unsuccessful mediation . . . . .	1	1	3	1	.....	11
Joint applications . . . . .	1	1	1	1	.....	13
Applications by one party . . . . .	1	2	2	1	.....	12
Action by initiative of board . . . . .	1	1	1	12	.....	21
Arbitration refused by employers . . . . .	1	1	1	.....	.....	7
Arbitration refused by employees . . . . .	1	1	1	2	.....	2

The total number of cases of this more important character reported during the 5 years was 49. Of these there were only 11 cases of formal arbitration on the joint petition of both parties. It is noteworthy, however, that 4 of these formal arbitrations took place during the year 1899. While there seems to be a somewhat more marked inclination on the part of employers and employees in Illinois to apply jointly to the board for investigation of conditions and for authoritative arbitration, it seems that the awards of the board have not always been complied with. In one instance the employers refused to accept the decision, while in 3 cases the workmen refused to abide by it. There have been also 7 cases in which employees have offered to arbitrate disputes, but in which the employers have refused to do so, while in 2 cases the offer of the employers to arbitrate was declined by the employees. In 3 instances the State board has made formal investigations on the application of one party only, in accordance with the authority given to it by statute, compelling the attendance of witnesses and presenting formal recommendations. In 2 of these cases the recommendations were not adopted. In one of them the application for intervention had been made by the employees and they themselves refused to accept the recommendation of the board.

Although the report of the Illinois board for 1899 is entirely occupied with a description of the cases in which it had taken formal action, it is probably true that it informally mediated in a considerable number of other cases. The reports from 1895 to 1898 mentioned 35 cases of mediation, of which 22 seemed to have resulted in a peaceful settlement. As above intimated the board doubtless has acted in many other unreported cases.

The State board has no authority to make a formal investigation and recommendation except on the initiative of one of the parties. It may mediate but it can not require the attendance of witnesses. The report of the board for 1899 recommends that authority be given, such as is found in the laws of Massachusetts and various other States, for formal investigation in extreme cases where neither party makes a movement. On this point the board says:

But, though greatly improved by the recent legislation, it need not be supposed that the Illinois arbitration law is now perfect. Enlarged experience will no doubt suggest further amendment. The jurisdiction of the board, for instance, might be extended advantageously so as to give the board, in certain cases, the power of independent investigation. At present there can be no inquiry into the facts of any case unless one of both sides shall, by petition, request such inquiry. A strike or a lockout frequently involves the public interests to a large extent. It may be continued through a long period of time and entail great loss and inconvenience upon the public. The board may only endeavor to effect a settlement through conciliatory means. Should it attempt of its own motion, to ascertain the facts it must depend entirely upon voluntary testimony.

We are of the opinion that the powers now possessed by the board in cases heard upon application of the parties, with reference to the attendance and testimony of witnesses, should be extended to all cases which, in justice to public interests, would appear to require investigation. The finding of the board in such a case, of course would bind nobody, but it would be a fair and impartial presentation of the facts, it would unquestionably have an important influence on public opinion, and a pronounced and assertive public opinion is no small factor in the settlement of this class of difficulties. This power of investigation should be wholly discretionary, and should be resorted to only in cases involving the public welfare to a marked extent—as, for instance, strikes or lockouts of a widespread character jeopardizing life or property or tending to deprive the public of its supply of food or fuel or of its facilities for communication or transportation.

Prior to 1899 the Illinois board had no power to enforce its decisions even when both parties joined in application. Moreover, it had no power to compel the attendance of witnesses and the production of books. Provisions covering this point were incorporated by amendments in 1899. The board reported at the end of that year that it had not made use of these compulsory provisions. There had been no instance of a witness disobeying a subpoena or refusing to testify or to submit books or papers. Moreover, no use had been made of the authority to compel obedience to awards. The board says:

In every case heard upon joint application during the past year the decision of the board has been faithfully carried out. This statement is subject to one apparent exception, the ineffectual effort at a settlement of the running trolleys at Paris where both sides participated in the proceeding, but this in reality was not a case of arbitration upon a joint petition; it was merely a case of attempted settlement by conciliatory methods, the board bringing about a conference of operators and miners and urging concessions and compromises. Therefore the provision relating to the enforcement of decisions was not applicable to the case, and a resort thereto, had there been any disposition in that direction, must have proven ineffectual.

**3. Illustrations of intervention in mining disputes.**—The most important work of the Illinois State board of arbitration has been in connection with disputes in the coal mines. The adjustment of the rates of wages and conditions of labor in the different coal-mining districts of the State is peculiarly difficult. While, as is pointed out elsewhere (p. 333), most of the differences are peacefully adjusted by conferences between the organizations of employers and employees, there are some mine operators who refuse to be bound by these conferences, and in some cases conferences fail to bring about a settlement. The State board endeavors in such instances to lead the parties to accept its good offices or submit to arbitration by it. It is probable that as the system of conciliation and arbitration by representatives of the coal industry themselves becomes more general in its scope and more successful in its working, the State board will find less call for its services in connection with disputes at the mines. Indeed, this tendency was already manifest during 1900.<sup>1</sup>

One of the most widely known strikes of recent years was that at the mines of the Chicago-Virden Coal Company, beginning in 1898. The State joint committee of operators and miners had fixed the rate for mining coal in this district at 40 cents per ton. The operators at Virden refused to abide by the rate and locked out their men. After about 2 months the operators and miners in the district joined in applying to the Illinois State board for arbitration. The board rendered a decision declaring that the rate of 40 cents per ton should apply. The operators, although they had submitted to arbitration and had agreed to be bound by the award, refused to accept this decision. Other attempts to bring about a peaceful

<sup>1</sup> See testimony of Mr. Justi, vol. XII, p. 687.

settlement failed, and ultimately the difficulty led to violence—the well-known riot of October 12, 1898, caused by the attempt of the Chicago-Virden Coal Company to import negro miners.

On November 15, 1898, a conference was held at Chicago between the operators and the miners, at which a member of the Illinois board presided. An agreement was reached fixing the price for mining run-of-mine coal at 40 cents per ton and determining various other matters of dispute. The agreement, however, proved of short duration. The next year the operators of the Chicago and Alton subdistrict, including those at Virden, declined to participate in the joint conference for establishing scales throughout the State and refused to be bound by its action. They, however, continued at first to operate their mines at the scale rate (40 cents) under protest, offering to submit the question again to the State board of arbitration. The miners refused to arbitrate, alleging that the previous action of the operators had shown bad faith. The Illinois board, however, on the application of the operators, made a formal investigation and report, going exhaustively into the conditions in the different coal-mining districts and recommending that the mining rate in this district be fixed at 35.5 cents, with certain other changes in conditions calculated to be equivalent to a rate of 38 cents. The board found that several of the operators had been working at a loss under the 40-cent rate. This recommendation was not accepted by the miners. They insisted upon the scale price, and the mines were closed until September, 1899, when operations were resumed under an agreement between the owners and the officials of the United Mine Workers. The rate was still retained at 40 cents, but various other changes in conditions were made.

The history of the intervention of the State board in the well-known strike at Pana was somewhat similar to the history of the Virden case. The first intervention of the board, in 1898, was made on the application of the miners only. The operators refused to accept the board's recommendations. Through fear that violence, such as had been experienced at Virden, might follow, the governor sent troops to the mines at Pana in November, 1898. Negro miners were imported and troops had to be retained at the scene of difficulty for many months, no little rioting and bloodshed accompanying the strike. In April, 1899, the State board of arbitration again visited Pana and conferred with operators and miners. "Such was the degree of personal animosity that had been aroused by long months of warfare between operators and union miners that the task of conciliation was one of the greatest difficulty. At length, however, there was brought about a conference of the operators and the official representatives of the miners, in the presence of the board, April 19." The function of the board in this case proved to be mostly one of conciliation. The fixing of the mining rate was ultimately left to the board by agreement of the disputants, but within the narrow limits that it should not be less than 30 cents nor more than 31½ cents. The most difficult question was as to the discrimination in reemployment against union miners on account of alleged acts of violence. The board recommended that 150 union miners be at once reemployed; that nonunion miners then in employment be continued temporarily; that if the operators, for any reason, should decline to reemploy certain union miners, or if the union men should particularly object to certain nonunion miners on account of acts of violence or for other reasons, such undesirable men should be discharged or stricken from the list of those eligible to reemployment. The persons thus to be discharged or dropped should be decided upon by mutual agreement between the operators and the union miners or by reference to the State board.

This decision was not accepted by the miners, who did not wish to have any of the nonunion men retained. The representatives of the miners at the conference apparently had been disposed to go further than the body of the men. The board of arbitration was violently criticised, and the strike continued until October, 1899, when, on account of the improved conditions of business, the operators were willing to pay the scale price and made an agreement with the miners. The company agreed to reemploy those who were in its service at the date of the original suspension as soon as possible and thereafter to employ only union men.

In these two instances the vigorous efforts of the State board of arbitration seemed to be comparatively ineffective, and yet it is by no means impossible that still more bitterness would have been engendered had not the board intervened from time to time.

In several other important mining cases the decisions of the board have been accepted by both operators and miners, and very beneficial results have been accomplished. As illustrating the complexity of the matters coming before the board and the careful nature of its investigations and recommendations, the follow-

ing account of its action in the case of the dispute between the Assumption Coal and Mining Company and its employees is quoted in full from the report of 1899:

THE ASSUMPTION COAL CASE

In May, 1899, the Assumption Coal and Mining Company, of Assumption, Illinois, and its employees filed a petition for the adjustment of the mining price to be paid at that place. The history of the case is stated fully in the decision, which appears below. The hearing was conducted at Springfield by agreement of parties. The evidence taken at this hearing will be found in the appendix to this report. In addition to this evidence, the board caused to be made, by its chairman and secretary, a personal inspection of the mining property at Assumption. The board fixed the mining price at 52.5 cents per ton, net of mine. This decision was accepted by both sides.

Following is the full text of the decision:

STATE OF ILLINOIS, BOARD OF ARBITRATION,  
*Springfield, June 17, 1899.*

In the matter of the joint application of the Assumption Coal and Mining Company, of Assumption, Illinois, and its employees.

Application filed May 29, 1899. Hearing at Springfield, May 29, 1899.

In this case this board is petitioned to fix a mining rate for the Assumption coal mine. The difference between the employing company and its employees is stated in the application in the following language:

"A difference between said company and its employees as to the proper price to be paid for mining coal in said company's mine. Said price is to be so fixed as to allow the company to make a reasonable profit on their capital invested, taking the business for the year beginning January 1, 1898, and ending December 31, 1898, as a basis to figure from as shown from sworn statements made from the company's books, and also taking into consideration the increased wages to be paid the day labor for the year ending December 31, 1899, over the wages paid for the year 1898."

The Assumption Coal and Mining Company, at the time of the inauguration of the general strike of miners in 1897, was paying 15 cents per ton, net of, mine. The scale formulated by the miners' State convention September 21, 1897, advanced the price to 52.5 cents, but a compromise was effected and work was resumed at 50 cents. This rate prevailed until April 1, 1898. The scale proposed by the joint scale committee of operators and miners of the State in the previous February, and effective April 1, raised the price at Assumption to 60 cents per ton. The company declared its inability to pay this price and closed its mine. The suspension continued for about three months. Work was then resumed at 52.5 cents and the mine continued in operation at this rate during the remainder of the year. It was alleged at the hearing of this case that this price was ascended to by the company, not because it was conceded to be an equitable rate, but merely in preference to permitting the mine to remain idle, and in the hope of securing a lower rate for the succeeding year. But the scale for 1898 having been readopted by the joint scale committee for 1899, the scale price at Assumption remained unchanged. The mine was closed April 1, 1899, but operations were resumed with a reduced force pending an investigation by this board for the purpose of fixing a fair and equitable mining rate.

It will be observed that the scope of the inquiry is limited somewhat by the terms of the application. The mining price "is to be so fixed as to allow the company to make a reasonable profit on their capital invested, taking the business for the year beginning January 1, 1898 and ending December 31, 1898, as a basis to figure from as shown from sworn statements made from the company's books." While this provision does not exclude all other consideration, nor eliminate all other sources of information than "sworn statements made from the company's books," yet we take it to be the controlling condition to be complied with in arriving at a conclusion in this case.

It is stipulated in the application that the board shall take "into consideration the increased wages to be paid the day labor for the year ending December 31, 1899, over the wages paid for the year 1898." But it was not demonstrated at the hearing that any increase in the wages of day labor had been actually demanded or was in contemplation; and we do not feel justified in permitting a merely possible increase in such wages to become a factor in the determination of a mining rate.

A sworn statement by an officer of the company shows the following summary of coal production, the average mining price, and receipts and disbursements for the year 1898:

Gross weight coal mined, 1898	53,651 tons	53,651
Average mining price per ton	cents	51.73
Selling price of total output	\$88,913.51	
Accounts lost	311.17	
Net sales		\$58,599.34
Paid for mining	827,757.10	
Paid for brushing	1,119.45	
Paid bottom men	9,000.45	
Paid top men	7,959.15	
Paid for expenses	8,310.39	
Total		54,536.54
		4,062.80
Discounts on coupon books	\$411.00	
Profits on merchandise (estimated)	125.00	
		536.00
Cash balance for year's work		1,628.80

The above expense items do not include interest on investment, royalty on coal removed, or natural depreciation of plant. These (says the statement) are carelessly estimated as follows:

Interest on investment (actual, not estimated) \$100,000 at 6 per cent	\$6,000.00
Royalty on coal at 3 cents per ton for 53,651 tons	1,609.53
Depreciation of plant, other than for coal removed, for year	1,000.00
	8,609.53
Grand total loss for the year	3,980.73

A superior quality of coal is produced at Assumption, but, although its market price is much above the average paid for bituminous coal, owing to the great depth of the mine and the thinness of the vein (it is three and one half feet in thickness) the cost of production is such that the coal is excluded from the Chicago market, and has to depend upon consumption for domestic purposes chiefly in the central part of the State in the cities and towns along the line of the Illinois Central Railroad.

It is contended by the company that in order to earn 3 cents per ton for royalty on coal removed, \$1,000 for the natural depreciation of the plant, and interest at the rate of 6 per cent on an investment of \$500,000, the mining rate should be reduced to 44 cents per ton. A still further reduction to 42 cents is urged because of a possible increase in the wages of day labor; but, for the reason already stated, this proposition is eliminated from the case altogether.

The board has endeavored to ascertain the amount of capital invested by the Assumption Coal and Mining Company on which a profit may be properly calculated, but, owing to a discrepancy of statements and circumstances some difficulty has been experienced in arriving at a satisfactory conclusion upon this point. The general manager of the company stated that approximately \$100,000 had been invested in the mine, and, as already shown, this was the basis upon which it was proposed to estimate profit and loss. That this amount of money has been expended at the Assumption mine there is no doubt, but whether or not all of it can be properly considered an "investment" is another question. It is stated, for instance, that the company has never paid a dividend—that whether profits have accrued have been "invested" in the property, but it is admitted on the other hand, that much of the \$100,000 has been devoted to the equivalent of money borrowed to make up losses incurred in periods of unprofitable operation. It is also alleged that large sums of the capital have been expended in the purchase of coal rights; but, if we are to allow 3 cents per ton for royalty on coal as part of the operating expenses, as we do in this case, it is manifestly improper to include money paid for coal rights as part of the "investment."

Money invested in a coal mine must be expended chiefly (1) for the sinking of shafts and (2) for the erection of buildings and the purchase and construction of machinery and equipments. The Assumption mine being 1,000 feet in depth the sinking of shafts was expensive. According to the general manager of the company, the main shaft cost approximately \$20,000 and the escape shaft \$15,000, or a total of \$35,000. The exact amount invested in buildings, machinery, and equipments we have been unable to determine with any degree of certainty.

The capital stock of the Assumption Coal and Mining Company is \$300,000. The capital stock of the corporation may be either more or less than the capital actually invested, but in the case of the corporation under consideration, we were aware of no circumstance which would cause any considerable variance between the capital stock and the capital invested.

From a personal view of the mining plant and from all of the circumstances of the case, we are of the opinion that, for the purpose of this inquiry, \$30,000 would be a fair estimate of the capital invested—the capital on which the company is justly entitled to a reasonable profit.

So far as our information extends, a royalty of three cents per ton on coal removed is not an excessive figure.

We believe it to be proper also to make a reasonable allowance for "depreciation of plant." It is well known that a coal mine at the end of an uncertain period will be exhausted, leaving nothing for repairs in the original investment except an utterly valueless hole in the ground and some machinery which must be removed to some other locality to be of any value whatever. It is proper, therefore, that provision should be made for a "sinking fund" to replace the capital invested when the mine shafts have become exhausted. What this should be it is impossible to determine with absolute accuracy, owing to the difference in the character of different mines; but in the present case we are disposed to concede the claim of the company to \$1,000 per annum for depreciation of plant.

It must be borne in mind that we are compelled to take the business of this company for the year 1898 "as a basis to figure from." During that year the Assumption mine was idle three months. The receipts shown by the company's statement, therefore, are not the receipts from the uninterrupted operation of the mine for an entire year, but for nine months only. On the other hand, the expenses included in the same statement are figured for the entire year, for the maintenance of an idle mine involves a considerable expense. Thus of the total sum of \$8,310.85 designated in the company's statement as "expenses," it appears that \$937.08 was paid out during the three idle months of April, May, and June.

After eliminating the three idle months from the calculation, supposing a mining rate of 52.5 cents during the nine months of actual operation, allowing a sinking fund for "depreciation of plant" at the rate of \$1,000 per annum, striking out the slight deduction from the year's profits for "accounts lost," and accepting as accurate the other figures contained in the company's statement of receipts and expenditures, the business of the Assumption Coal and Mining Company for the nine months of actual operation in 1898 would have shown the following results:

RECEIPTS	
Total receipts from sales of coal	\$78,913.51
Receipts from other sources	766.00
	— \$79,679.51
EXPENSES	
Mining (at 52.5 cents)	\$28,116.77
Brushing	1,119.45
Bottom men	9,090.45
Top men	7,959.15
Miscellaneous expenses	7,473.31
Sinking fund for depreciation (9 months)	750.00
Royalty on coal removed, at 3 cents per ton	1,669.53
	— \$6,468.66
Net profit for nine months	3,010.85

If the mine had been in operation throughout the year, the profits, if maintained in the same proportion, would have aggregated \$4,013.47, or eight per cent on an investment of \$50,000. But it is alleged that during the summer months the business has never shown a profit. Conceding this to be true and assuming that the mine, if in operation during the three months designated, would have paid expenses, the net profits still remain, a dividend of seven and one half per cent on \$50,000, the authorized capital stock of the company. Owing to the hazardous character of the investment, this is not an excessive profit, it certainly ought not to be less and perhaps ought to be more, but unfortunately, owing to the fierce competition which has prevailed in the coal business in recent years, investors in coal mines must now be content with a smaller margin of profit than formerly.

It has been the invariable rule with this board, whenever the question of wages has been submitted

for decision, to fix the rate as high as is shown to be consistent with fair profits to the employer. This condition is indispensable to the welfare not only of the employer, but of the employee. No person or corporation can be justly expected to engage in a continuously unprofitable business or to give employment to large bodies of men from purely philanthropic motives.

The pay rolls of the company for the month of November, 1898, show that at 52 1/2 cents per ton, run of mine, the earnings of the miners, working an average of twenty days, average \$2.33 per day. This we believe to be somewhat in excess of the earnings of miners in other mines operating under similar conditions, for instance, the "third year" mines of the northern field.

The Assumption mine has been in operation during the past year at a mining rate of 52 1/2 cents. The miners have been able to earn fairly good wages, and the company has earned a profit—admittedly not an excessive profit, but as large, perhaps, as ought to be expected in view of the low rates of interest current at the present time. In consideration of all the circumstances, we are of the opinion that the existing rate of 52 cents at Assumption ought to be maintained.

It is therefore adjudged that the Assumption Coal and Mining Company pay for mining coal fifty-two and one-half (52 1/2) cents per ton, run of mine.

HORACE R. CATTLE, *Chairman*,  
W. S. FORMAN,  
DANIEL J. KEEFE,  
*State Board of Arbitration*  
E. MCCAN DAVIS, *Secretary*

## INDIANA

**1. Statutory provisions**<sup>1</sup>.—*Composition of State board.*—The Indiana board, known as the labor commission, is peculiarly constituted. The governor is to appoint for a 2-year term one person who has been for 10 years of his life an employee and one who has been for 10 years an employer, and they shall not both be members of the same political party. When acting as a board of arbitration these two persons are to associate with them a judge of the circuit court of the county in which the controversy occurs; and, if the parties agree, additional members may be chosen for the particular case, one by the employer and one by the employee. The circuit judge is the presiding member.

*Arbitration by initiative of parties.*—The Indiana law provides for arbitration only where both parties agree in applying for it in the case of a dispute involving at least 25 persons. Such an agreement must be signed by two-thirds of the employees affected or by a committee elected at a meeting at which not less than two-thirds are present. If the employees are members of a trade union they may be represented by its officers.

*Power to summon witnesses.*—The circuit judge, who is the presiding member of the board of arbitration, has power to compel the attendance of witnesses, apparently in the same manner as when acting as a regular court.

*Effect of decision.*—Where both parties have joined in an application the decision of the arbitrator is binding, no limit being fixed for its duration. Any person who was a party to the proceedings may bring a petition before the circuit court of the county to enforce compliance with the award. The court shall grant a rule to show cause why the award has not been obeyed, and after examination shall issue an order to give just effect to the decision. Disobedience shall be deemed contempt of court and may be punished accordingly, but the punishment shall not extend to imprisonment except in case of willful and contumacious disobedience.

*Mediation on initiative of board.*—On receiving information of the existence of any strike or dispute affecting 50 or more persons, it is the duty of the members of the labor commission to put themselves into communication with the parties, offer their services as mediators, and endeavor to bring about an amicable adjustment or to induce the parties to arbitrate. If after 5 days the differences have not been amicably adjusted or submitted to arbitration, it is the duty of the labor commission to investigate the facts and causes of this disagreement. For this purpose it has power to compel the attendance of witnesses, its orders being subject to enforcement by the circuit court. The commission shall report the results of its investigations to the governor, who, unless he shall perceive good reasons to the contrary, shall at once authorize the publication of the report. The report shall thereupon be printed and a copy furnished to any person requesting it.

*Compensation.*—The commissioners are paid \$10 per day for the time actually expended and necessary traveling expenses, and the members of the local boards of arbitration chosen by the parties receive the same compensation. The duration of the investigation of any case is limited to 10 or 15 days, according to the circumstances.

**2. Work of Indiana labor commission.**—The Indiana labor commission entered upon its work in June, 1897. Its first report covers the work of 18 months, and appears to show very considerable activity on the part of the board and results by no means to be despised. As the board itself points out, the greater part of its work had

<sup>1</sup>Laws of 1897, ch. 88; 1899, ch. 228.

been in the nature of conciliation rather than arbitration, and, although it speaks of arbitration in a few instances," the detailed statement of the cases in which it intervened seems to show but a single case of formal arbitration. There were altogether during the 18 months 39 strikes and lockouts in which the commission took some part. In 28 of these satisfactory agreements were reached through the mediation of the commission. In 19 of these cases the workmen secured either advance in wages or other improved conditions. In 4 cases the commission simply investigated the conditions of settlement without taking any share in bringing it about, while in 7 cases the efforts of the commission to effect an agreement failed. The total number of strikers involved in the disputes investigated by the commission was 13,815, although 6,000 of these were concerned in the national strike of miners during 1897, in which the Indiana board cooperated with the boards of arbitration of Ohio and Illinois in aiding somewhat to bring about a settlement. Aside from the 39 cases of strikes referred to, the commission was instrumental in bringing to an end 2 boycotts, while in 5 instances its intervention served to prevent strikes. It appears that in a considerable number of instances the initiative in seeking conciliation came from one or both of the disputants themselves.

The second report of the Indiana labor commission, covering the years 1899 and 1900 shows even greater activity and success than was manifested during the preceding years. The board intervened in not less than 40 disputes during these 2 years, and secured information regarding many others, in which it would doubtless have taken part had there been any probability of advantage resulting. It does not appear that there were any instances of formal arbitration by the board during these 2 years. In various cases where the board mediated it drew up written terms of settlement and succeeded in persuading the parties to agree to them. The report seems to show about an equal number of cases of mediation which resulted successfully and which resulted unsuccessfully. Of course, it is impossible to tell in every instance whether the intervention of the board really had an important effect in bringing about a settlement of the dispute, but in some instances the beneficial effect of the mediation of the labor commission is very obvious. It is pointed out that several disputes were rather the result of misunderstanding and ill feeling than of real grievances, and that when the parties were once brought together through the influence of the labor commission they found little difficulty in reaching a peaceful settlement. Among the instances of intervention which may be considered as unsuccessful were many in which the parties ultimately settled the strike, but not with any apparent reference to the advice of the board.

Perhaps the most important case in which the Indiana board has been interested, aside from the national coal miners' strike, was the strike in the works of the American Tin Plate Company at Elwood. The employees there, to the number of 1,500, asked for an advance in wages and the recognition of their union.

The company claimed that it had made large contracts for the sale of tin plate based on the prevailing wages and could not afford to raise them. The strikers at first refused to accept the services of the State commissioners in bringing about a settlement. There was a tendency toward lawlessness on the part of the men, especially because the company imported workmen to take their places. The labor commissioners continued to urge the executive committee of the strikers to resort to arbitration or conciliation. Finally a committee representing the strikers, accompanied by the commissioners, visited the officers of the company, and after a conference of 7 hours a contract was agreed upon which ended the strike. The commissioners were highly complimented by both parties to the strike on account of their influence in bringing about a settlement.<sup>1</sup>

**3. Opinion of board concerning its work.**—The experience of the commission proves that conciliation, rather than arbitration, is the more effective and satisfactory method of settling disputes between capital and labor. While arbitration has been accepted in a few instances, in all of which it has proved effective, yet, for the most part, both sides in the controversies in which the commission has officiated have preferred conciliation as the better means of effecting settlements. This has been gratifying to the commission for the dual reason that it lessens its responsibility and affords better opportunities for more completely unting warring factions. Men are averse to leaving questions involving the correctness of their methods and the welfare of their business interests to the judgment of others, and especially when the latter may have only a rudimentary knowledge of the intricate matters which labor controversies usually involve. This aversion is at times still further aggravated by the ill feeling which these contentions beget.

<sup>1</sup>See First Biennial Report of the Indiana Labor Commission, p. 32.

"Results are different where successful efforts at conciliation are exerted. The contestants meet, talk over grievances, discuss the interests of the business involved, come to a better knowledge of each other's wishes and needs, reconcile their conflicting opinions, and thus pave the way to mutual concessions and satisfactory agreements.

"These contentions, often intensified by personal dislikes, strengthened by self interest, and too frequently colored by ignorance of essential economic truths, if permitted to drift in their own untrammelled way, lead to unfortunate consequences. It can not be denied, therefore, that every successful effort at conciliation or arbitration of differences between employer and workman promotes the welfare of the industrial and social life of society. So far as can now be remembered, these meetings have always brought good results, and in almost every instance where settlements have not been made, it has been where the employer and the men did not meet. Not only have these conferences facilitated settlements otherwise requiring longer time, but frequently have resulted in closer friendships and inspired reciprocal good will. \* \* \*

"The desirableness of the State's intervention to prevent conflicts has found ample evidence in the frequency with which the commission's efforts have been solicited. Not an inconsiderable amount of its labor has been devoted to the adjustment of disputes before the strike crisis was reached. In some instances employers have solicited mediation to avert trouble, and in others employees have asked assistance for the same reason. Occasionally, the matters in controversy have been of secondary importance, but their settlement before a conflict was precipitated has removed the probability of an augmentation of causes which might lead to such a result and the hurtful efforts which are the outgrowth of strife. To avert trouble by timely intervention is much easier and less expensive than to delay action until dissatisfaction has culminated in a strike. The time and money saved to both capital and labor by this method of intervention is not easily estimated, but it has been a source of acknowledged helpfulness many times. No written statements of them have been filed nor made public for the reason that the expressed wish of both parties to such settlements usually has been that there be no record made of them." (Report Indiana Labor Commission, 1897-98, pp. 7-9.)

From Report of 1899-1900, p. 11.

"Voluntary arbitration and conciliation are now extensively employed as means of adjusting differences between capital and labor in Indiana, and are rapidly growing in use and gaining popularity within its borders. In some trades such instrumentalities have almost wholly taken the place of the strike. Approval of these methods find strong expression in the ranks of labor, and some of their constant champions are among the practical thinkers on economic subjects in labor organizations, and the trades most friendly to these processes are these which represent the oldest and strongest associations. In some trades contracts are made in which wages and working conditions are agreed upon for the ensuing season, and where provisions are also made that if controversies arise they shall be settled by arbitration or conciliation without cessation of work. With these settlements occurring annually, and being observed in the spirit of sincerity, there is growing up a better feeling through a fuller confidence, and a stronger sentiment of reciprocal dependence and trustfulness. Force, as typified by the average strike, involves so many of the elements of repugnance that the conditions of settlement in most instances are less advantageous than if the more pacific and rational method of conciliation or arbitration had been employed."

#### IOWA

**Statutory provisions as to local boards.**—An Iowa act of 1886<sup>1</sup> authorized the establishment of more or less permanent local boards of arbitration and conciliation for particular trades. No use, however, was ever made of the authority given in the law, and it was omitted by the code revisers of 1896. The provisions are nevertheless interesting. They resemble in some degree those of the French statutes concerning councils of *prud'hommes*.

The district court of each county was directed to issue a license for the establishment of a tribunal for voluntary arbitration whenever a petition should be presented signed by at least 20 persons employed as workmen and by employers having at least that number of employees. The tribunal should consist of not less than 2 employers, or their representatives, and 2 workmen, or their representatives. There was also to be an umpire who, however, should be appointed only by the agreement of all the representatives of employers and workmen.

<sup>1</sup> Act of March 6, 1886.

These tribunals should take jurisdiction of any dispute between employers and workmen who had petitioned for their establishment, or who might submit their dispute to it in writing. The majority of the tribunal might provide for an examination of books, documents, and accounts, or the tribunal might unanimously direct that instead of producing books an accountant should be appointed to examine the records and make a report. Committees of the tribunal might be established consisting of an equal number of employers and employees, and having power to settle finally any dispute as to which they could reach a unanimous agreement. In case of failure to agree, however, all matters must be referred to the full tribunal. Before the umpire should proceed to act the question in dispute must be plainly defined and signed by the members of the tribunal or by the parties themselves, and this submission must provide that the decision of the umpire should be final. There was, however, no provision in the law as to the method of enforcing the decision.

### KANSAS

**1. Permanent local boards.** Kansas has a law similar in many regards to that of Iowa providing only for local boards of arbitration. As in Iowa, the law is a dead letter. The law differs from that of Iowa, however, in providing that the district court itself shall when it establishes a tribunal, appoint an umpire, who shall be called upon to act whenever the other members of the tribunal have failed to agree, after holding 3 meetings upon the subject. The award of the umpire is conclusive as regards matters submitted to him by the other members of the tribunal or by the parties.

The following is the Kansas statute in full (Gen. Stats., 1889, ch. 5a):

#### EPHEMERALS OF VOLUNTARY ARBITRATION.

PARAGRAPH 32. The district court of each county, or a judge thereof in vacation, shall have the power, and upon the presentation of a petition as hereinafter provided it shall be the duty, of said court or judge to issue a license of authority for the establishment within and for any county within the jurisdiction of said court of a tribunal for voluntary arbitration and settlements of disputes between employers and employed in the manufacturing, mechanical, mining and other industries.

PARAGRAPH 33. The said petition shall be substantially in the form hereinafter given, and the petition shall be signed by at least persons employed as workmen or by two or more separate firms, individual or corporation, within the county who are employers within the county.

SECTION 3. If the said petition shall be signed by the two or more firms or employers or workmen, and be a proper form, the judge shall forthwith cause to be issued a license authorizing the existence of such a tribunal and containing the names of 4 persons to compose the tribunal, 2 of whom shall be workmen and 2 employers, all residents of said county, and fixing the time and place of the first meeting thereof. \* \* \*

PARAGRAPH 35. Said tribunal shall continue in existence for one year from the date of the license creating it and may take jurisdiction of any dispute between employers and workmen in any mechanical, manufacturing, mining, or other industry who may submit their disputes in writing to such tribunal for decision. \* \* \* Said court at the time of the issuance of said license shall appoint an umpire for said tribunal, who shall be sworn to impartially decide all questions that may be submitted to him during his term of office. The umpire shall be called upon to act after disagreement is manifested in the tribunal by failing to agree during three meetings held and full discussion had. His award shall be final and conclusive upon such matters only as are submitted to him in writing and signed by the whole of the members of the tribunal or by parties submitting the same. And the award of said tribunal shall be final and conclusive upon the questions so submitted to it. *Provided*, That said award may be impeached for fraud, or duress, or mistake.

PARAGRAPH 36. The said tribunal when convened shall be organized by the selection of one of their number as chairman, and one as secretary, who shall be chosen by a majority of the members.

PARAGRAPH 37. The members of the tribunal and the umpire shall each receive as compensation for their services, out of the treasury of the county in which said dispute shall arise, two dollars for each day of actual service. The sessions of said tribunal shall be held at the county seat of the county where the petition for the same was presented, and a suitable room for the use of said tribunal shall be provided by the county commissioners.

PARAGRAPH 38. All submissions of matters in dispute shall be made to the chairman of said tribunal, who shall file the same. The chairman of the tribunal shall have power to administer oaths to all witnesses who may be produced, and a majority of said tribunal may provide for the examination and investigation of books, documents, and accounts necessary, material and pertaining to the matters in hearing before the tribunal, and belonging to either party to the dispute. The umpire shall have power when necessary to administer oaths and examine witnesses and examine and investigate books, documents, and accounts pertaining to the matters submitted to him for decision.

PARAGRAPH 39. The said tribunal shall have power to make, ordain, and enforce rules for the government of the body when in session, to enable the business to be proceeded with in order, and to fix its sessions and adjournments, but such rules shall not conflict with this statute nor with any of the provisions of the constitution and laws of the State. *Provided*, That the chairman of said tribunal may convene said tribunal in extra session at the earliest day possible, in cases of emergency.

PARAGRAPH 40. Before the umpire shall proceed to act, the question or questions in dispute shall be plainly defined in writing and signed by the members of the tribunal or a majority thereof, or by the parties submitting the same, and such writing shall contain the submission of the decision thereof to the umpire by name, and shall provide that his decision on the matter after hearing shall be final, and said umpire must make his award within five days from the time the question or questions in dispute are submitted to him. Said award shall be made to the tribunal, and if the award is for a specific sum of money, said award of money or the award of the tribunal, when it shall be for a specific sum, may be made a matter of record by filing a copy thereof in the district court of the county wherein the tribunal is in session. When so entered of record it shall be final and conclusive, and the proper court may on motion of anyone interested enter judgment thereon, and when the award is for a specific sum of money may issue final and other process to enforce the same. \* \* \*

PARAGRAPH 341. The form of the petition \* \* \* shall be as follows: "To the district court of — County for a judge thereof \* \* \* I, The subscribers hereto being the number and having the qualifications required in this proceeding, being desirous of establishing a tribunal of voluntary arbitration for the settlement of disputes in the manufacturing, mechanical, mining, and other industries, pray that a license for a tribunal of voluntary arbitration may be issued, to be composed of four persons and an umpire, as provided by law."

**2. Conciliation by State labor commissioner.**—The report of the Kansas bureau of labor for 1898 (pp. 326, 334) shows that the State commissioner of labor, in connection with the investigation of strikes which he is authorized to make according to law, takes a more or less active part in trying to bring about peaceful settlement of them. During two of the strikes in the coal mines of Kansas during 1899 the commissioner held conference with the employers and the miners, and undoubtedly had some influence in bringing about an agreement. The more important of these strikes was one which extended also into Arkansas and Indian Territory. Part of the employers involved held conferences with the men, in which the commissioner of labor had some part, and reached an early settlement. The other employers, however, refused to negotiate and the strike continued for many months.

**3. Arbitration of railroad strikes.**—A unique provision was adopted by Kansas in 1899 regarding the settlement of disputes on railways.<sup>1</sup> A court of record, to be known as the court of visitation, was created. It consisted of a chief judge and two associate judges. Its chief functions had to do with the regulation of railway rates and other railway matters, but it also was authorized to try to prevent the disturbance of transportation by strikes. The act amounted, in fact, to a provision for compulsory arbitration of railway disputes. If the court found the employees at fault in any strike it might prohibit them from interfering with the operation of the railroad; if it found that the employers had been unjust the court might direct the railway to resume its usual operations. This last provision apparently implied that the railway would have to concede to the demands of its striking employees in case it should be necessary in order to continue operations upon the usual scale.

The Kansas statute was never put into actual application, and, indeed, the court of visitation has not been in existence for about two years.

The chief provision of the Kansas statute regarding arbitration is as follows.

SEC. 12. Whenever it shall be made to appear to said court by affidavit that a strike by the employees, or part of them, of any railroad company organized under the laws of this State or doing business therein is obstructing commerce or the traffic on such railroad, and inconveniencing the public, or the people of any municipality, or endangers or threatens the public tranquillity, said court shall issue a citation requiring said corporation to appear before it at a day and hour named, and make answer, verified by the positive oath of an officer or agent of said corporation residing in this State and then present therein concerning the said strike, its extent, the cause or causes thereof, what conduct, if any, of said corporation or its officers led to such strike, and the precise point or points of dispute between said corporation and its striking employees. If said answer be not made at the time fixed, or be evasive, the court shall make a final decree as upon hearing and enforce the same as such. If said answer be properly made the matter shall be without further delay summarily heard upon evidence, and if the corporation be found free from fault in the premises and the strike unreasonable, the court shall so find and the said proceedings shall be dismissed, and thereupon and upon public notice as ordered by the court given of such decision it shall be unlawful for said strikers, or any of them, to interfere in any manner whatever, by word or deed, with any other employees said corporation may employ and set to work. But if the court shall find that said corporation has failed in its duty toward its employees, or any of them, or has been unreasonable, tyrannical, oppressive or unjust, and the strike resulted therefrom, the court shall so find specifically, and shall enter a decree commanding such corporation to proceed forthwith to perform its usual functions for the public convenience, and to the usual extent and with the usual facilities, as before said strike occurred, and if said decree shall not be implicitly obeyed in full and in good faith, the court may take charge of said corporation's property and operate the same through a receiver or receivers appointed by said court until the court shall be satisfied that said corporation is prepared to fully resume its functions, all costs to be paid by said corporation. If, in answer to said original process ordering it to show cause as aforesaid, said corporation shall show to the court's satisfaction that said striking employees have resumed work and said strike has ended, the proceeding shall be dismissed. If in such answer it shall show to the court's satisfaction that said striking employees have resumed work under an agreement to remain in said corporation's service pending the hearing of the proceedings, and that the corporation will abide by the terms of said agreement, then, and only in such case, the hearing of said matter in controversy concerning the cause or causes of said strike may be postponed on request a reasonable time, or from time to time, while said employees so remain at work, and upon settlement of said strike said proceedings may be at any time dismissed, but if said employees again quit work, said matter shall be brought to an immediate hearing and decree, notwithstanding a pending postponement.

Approved January 3, 1899

## LOUISIANA

**1. Statutory provisions.**<sup>2</sup>—The Louisiana board consists of 5 members instead of the usual 3, 2 being selected from employers, 2 from employees on the recommendation of labor organizations, and the fifth upon the recommendation of the other four. Their term of office is 4 years.

<sup>1</sup> Laws of 1899, ch. 28.

<sup>2</sup> Acts, 1891, th. 139.

*Investigation on application of parties.*—The board is bound to take cognizance of any dispute between an employer who employs not less than 20 persons and his employees, upon application of either or both parties. The application must be signed by the employer or by a properly ascertained majority of the employees in the department affected or by a properly chosen representative of such employees. It must contain the promise to continue without lockout or strike until the decision of the board is made, if made within 10 days. The names of the employees making or sanctioning the application are to be kept secret. The board shall make prompt inquiry and report to the parties what, if anything, ought to be done to adjust the dispute. If mediation fails, the board shall make a written report, which shall at once be made public.

*Investigation and mediation on initiative of board.*—Whenever it shall come to the knowledge of the board by notice from a mayor or other local officer or many other way, that a strike is threatened, or has occurred, it is the duty of the board to communicate with the employer and employees and to try by mediation to effect a settlement, or, provided that the strike or lockout is not actually in force, to persuade them to submit the matters in dispute to arbitration. It is the duty of the mayor or other local officer to give notice of strikes.

The State board shall, in default of other settlement, investigate the cause of the controversy and publish a report stating the cause and assigning the responsibility or blame.

*Compensation of board.*—Five dollars per day of actual service, and expenses.

*Power to summon witnesses.*—The board is not given an unlimited power to compel testimony, but is specially authorized to summon as a witness any operative affected or any person who keeps the records of wages, and to require the production of books and papers containing the records of wages earned or paid.

2. *Work of board.*—While the Louisiana board has been organized, it does not appear that it has ever accomplished results of importance.

## MARYLAND<sup>1</sup>

*Statutory provisions.*—Local boards of arbitration. Maryland has a law providing for the establishment of local boards, but it appears to be entirely a dead letter. 1. The terms of the law any subject of dispute between employers and employees may be settled by arbitration in the following manner. If they agree in writing to abide by the decision of any judge or justice of the peace, this judge or justice must hear the case and determine it in a summary manner. Or the parties may agree to submit the case to arbitrators to be appointed by such judge or justice, half of whom shall be employers and the other half employees, all acceptable to the parties respectively. The judge or justice in this case shall sit with the other arbitrators.

Every determination of a dispute by a judge or justice, or by a board of arbitration thus appointed, shall have the same effect as if the action had been regularly brought in court by due process of law. It is further provided, however, that if the parties see fit they may mutually agree upon any system of arbitration different from that above described, the award to be conclusive as between the parties. Another peculiar provision is that whenever any controversy shall arise between a corporation in which the State of Maryland is interested as a stockholder or creditor and its employees which shall tend to impair the prosperity or usefulness of the corporation, the State board of public works may, in its discretion, suggest to the parties to submit to arbitration. If the parties shall refuse to do so it shall be the duty of the board of public works itself to examine into the cause of the controversy and to report concerning it to the next general assembly.

## MASSACHUSETTS

1. *Statutory provisions.*<sup>2</sup>—*Composition of State board.*—The governor, with the consent of the senate, is to appoint a State board of 3 members, of the Board of Mediation and Arbitration, 1 an employer or representative of an employers' association, 1 selected from some labor organization, and a third appointed upon the recommendation of these two. The term of office is 1 year.

*Investigation on application of parties.*—The board is bound to take cognizance of any dispute between an employer who employs not less than 25 persons and his employees, upon application of either or both parties. The application must be signed by the employer or by a majority of the employees in the department

<sup>1</sup> Code of Public Laws, art. 7.

<sup>2</sup> Acts of 1886, ch. 263, as amended 1887, ch. 269, 1888, ch. 261, and 1892, ch. 382.

affected or by a properly chosen representative of such employees. It must contain the promise to continue without lockout or strike until the decision of the board, if made within 3 weeks. The names of the employees making or sanctioning the application are to be kept secret. The board shall make prompt inquiry and report to the parties what, if anything, ought to be done to adjust the dispute. This decision shall at once be made public.

*Effect of the decision.*—Where both parties are joined in an application for arbitration the decision shall be binding on them for 6 months, or until either gives notice of 60 days for its termination.

*Investigation and mediation on initiative of board.*—Wherever it shall come to the knowledge of the board, by notice from a mayor or other local officer or in any other way, that a strike is seriously threatened or has occurred, it is the duty of the board to communicate with the employer and employees and to try, by mediation, to effect a settlement, or, provided that a strike or lockout is not actually in force, to persuade them to submit the matters in dispute to arbitration. It is the duty of the mayor or other local officer to give notice of strikes.

The State board may, if it deems advisable, in default of other settlement, investigate the cause of the controversy and publish a report, stating the cause and assigning the responsibility or blame.

*Witnesses.*—No definite provisions authorizing compulsion of testimony, but power is implied.

*Expert assistants.*—If the parties desire, each may appoint 1 person to act as an expert assistant to the State board in its investigation. These persons shall be familiar with the business affected. They shall obtain information concerning the wages paid and the methods prevailing in similar establishments within the State. They shall be paid \$7 per day and expenses.

*Compensation of State board.*—Two thousand dollars per year each and expenses.

*Local boards of arbitration and conciliation.*—The parties to any controversy may agree to submit their dispute to a local board, the compensation of which may either be mutually agreed upon or the employer may designate 1 member, the employees another, and the 2 may select a third who shall be the chairman. This board shall have all the powers of the State board, and its jurisdiction is exclusive, although it may ask advice of the State board. The decision is binding to whatever extent may have been agreed upon by the parties in making the submission. These local arbitrators are paid, by the town or county, \$3 per day, not exceeding 10 days for any one arbitration.

The following is the full text of the Massachusetts act, as amended

SEC. 1 (as amended by chapter 269, acts of 1887, and by chapter 261, acts of 1888). The governor, with the advice and consent of the council, shall, on or before the first day of July in the year eighteen hundred and eighty-six, appoint three competent persons to serve as a state board of arbitration and conciliation in the manner hereinafter provided. One of them shall be an employer or selected from some association representing employers of labor, one of them shall be selected from some labor organization and not an employer of labor, the third shall be appointed upon the recommendation of the other two. *Provided, however,* That if the two appointed do not agree on the third man at the expiration of thirty days, he shall then be appointed by the governor. They shall hold office for one year, or until their successors are appointed. On the first day of July, in the year eighteen hundred and eighty-seven, the governor, with the advice and consent of the council, shall appoint three members of said board in the manner above provided, one to serve for three years, one for two years, and one for one year, or until their respective successors are appointed, and on the first day of July, in each year thereafter, the governor shall in the same manner appoint one member of said board to succeed the member whose term then expires, and to serve for the term of three years or until his successor is appointed. If a vacancy occurs at any time, the governor shall in the same manner appoint some one to serve out the unexpired term, and he may in like manner remove any member of said board. Each member of said board shall, before entering upon the duties of his office, be sworn to a faithful discharge thereof. They shall at once organize by the choice of one of their number as chairman. Said board may appoint and remove a clerk of the board who shall receive such salary as may be allowed by the board, but not exceeding twelve hundred dollars a year.

SEC. 2. The board shall, as soon as possible after its organization, establish such rules of procedure as shall be approved by the governor and council.

SEC. 3 (as amended by chapter 269, acts of 1887). Whenever any controversy or difference, not involving questions which may be the subject of a suit at law or bill in equity, exists between an employer, whether an individual, partnership or corporation and his employees, if at the time he employs not less than twenty-five persons in the same general line of business in any city or town in this Commonwealth, the board shall, upon application as hereinafter provided, and as soon as practicable thereafter, visit the locality of the dispute and make careful inquiry into the cause thereof, hear all persons interested therein who may come before them, advise the respective parties what, if anything, ought to be done or submitted to by either or both to adjust said dispute, and make a written decision thereof. This decision shall at once be made public. It shall be recorded upon proper books of record to be kept by the secretary of said board, and a short statement thereof published in the annual report hereinafter provided for, and the said board shall cause a copy thereof to be filed with the clerk of the city or town where said business is carried on.

SEC. 4 (as amended by chapter 269, acts of 1887, and chapter 383, acts of 1890). Said application shall be signed by said employer, or by a majority of his employees in the department of the business in which the controversy or difference exists, or their duly authorized agent or by both parties, and shall contain a concise statement of the grievances complained of, and a promise to continue on in business or at work without any lockout or strike until the decision of said board, if it shall be made within three weeks of the date of filing said application. When an application is signed by an agent

claiming to represent a majority of such employees, the board shall satisfy itself that such agent is duly authorized in writing to represent such employees, but the names of the employees giving such authority shall be kept secret by said board. As soon as may be after the receipt of said application the secretary of said board shall cause public notice to be given of the time and place for the hearing thereon, but public notice need not be given when both parties to the controversy join in the application and present therewith a written request that no public notice be given. When such request is made notice shall be given to the parties interested in such matter as the board may order, and the board may, at any stage of the proceedings, cause public notice to be given, notwithstanding such request. When notice has been given as aforesaid, each of the parties to the controversy, the employer on the one side and the employees interested on the other side, may in writing nominate, and the board may appoint, one person to act in the case as expert assistant to the board. The two persons so appointed shall be skilled in and conversant with the business or trade concerning which the dispute has arisen. It shall be their duty under the direction of the board to obtain and to report to the board information concerning the wages paid and the methods and grades of work prevailing in manufacturing establishments within the Commonwealth of all factories similar to that in which the matters in dispute may have arisen. Said expert assistants shall be sworn to the faithful discharge of their duty, such oath to be administered by any member of the board, and their fee shall be preserved with the record of the proceedings in the case. They shall be entitled to receive from the treasury of the Commonwealth such compensation as shall be allowed and certified by the board, together with all necessary traveling expenses. Nothing in this act shall be construed to prevent the board from appointing such other additional expert assistant or assistants as it may deem necessary. Should the petitioner or petitioners fail to perform the promise made in said application, the board shall proceed no further thereupon without the written consent of the adverse party. The board shall have power to summon as witnesses any operative in the departments of business affected and any person who keeps the records of wages earned in those departments, and to examine them under oath and to require the production of books containing the record of wages paid. Summonses may be signed and out of the board by any member of the board.

SEC. 5. Upon the receipt of such application and after such notice, the board shall proceed as before provided and render a written decision, which shall be open to public inspection, shall be recorded upon the records of the board and published at the discretion of the same in an annual report to be made to the general court on or before the first day of February in each year.

SEC. 6. Said decision shall be binding upon the parties who join in said application for six months, or until the other party has given the other notice in writing of his intention not to be bound by the same in three conspicuous places in the shop or factory where the work is done.

SEC. 7. as amended by chapter 299, acts of 1887. The parties to any controversy or difference as described in section three of this act may submit the matters in dispute in writing, to a local board of arbitration and conciliation, such board may either be mutually agreed upon by the employer and the employees, or the employer may designate one of the arbitrators, the employees or their duly authorized agent another, and the two arbitrators so designated may choose a third, who shall be chairman of the board. Such board shall, in respect to the matters referred to it, have and exercise all the powers which the state board might have and exercise, and its decision shall have whatever binding effect may be agreed by the parties to the controversy in the written submission. The jurisdiction of such board shall be exclusive in respect to the matters submitted to it, but it may ask and receive the advice and assistance of the State board. The decision of such board shall be filed with the clerk of the city or town in which the hearing held, and if such decision shall at once be filed with the clerk of the city or town in which the controversy or difference arose, and a copy thereof shall be forwarded to the State board. Each of such arbitrators shall be entitled to receive from the treasury of the city or town in which the controversy or difference that is the subject of the arbitration exists, if such payment is approved in writing by the mayor of such city or the board of selectmen of such town, the sum of three dollars for each day of actual service not exceeding ten days for any one arbitrator. When yet it is made to appear to the mayor of a city or the board of selectmen of a town that a strike or lockout such as described in section eight of this act is seriously threatened or actually occurs, the mayor of such city or the board of selectmen of such town shall at once notify the State board of the facts.

SEC. 8, as amended by chapter 269, acts of 1887. Whenever it shall come to the knowledge of the State board, either by notice from the mayor of a city or the board of selectmen of a town as provided in the preceding section or otherwise, that a strike or lockout is seriously threatened or has actually occurred in any city or town of the Commonwealth, involving any employer and his present or past employees, and at the time he is employing, or up to the occurrence of the strike or lockout was employing, not less than twenty-five persons in the same general line of business in any city or town in the Commonwealth, it shall be the duty of the State board to put itself in communication as soon as may be with such employer and employees, and endeavor by mediation to effect an amicable settlement between them or to endeavor to persuade them, provided that a strike or lockout has not actually occurred or is not then continuing, to submit the matters in dispute to a local board of arbitration and conciliation as above provided, or to the State board, and said State board may, if it deems it advisable, investigate the cause or causes of such controversy and ascertain which party thereto is mainly responsible or blameworthy for the existence or continuance of the same, and may make and publish a report finding such cause or causes and assigning such responsibility or blame. The board shall have the same powers for the foregoing purposes as are given it by section three of this act.

SEC. 9. Witnesses summoned by the State board shall be allowed the sum of fifty cents for each attendance, and the further sum of twenty-five cents for each hour of attendance in excess of two hours, and shall be allowed five cents a mile for travel each way from their respective places of employment or business to the place where the board is in session. Each witness shall certify in writing the amount of his travel and attendance. The amount due him shall be paid forthwith by the board, and for such purpose the board shall be entitled to draw from the treasury of the Commonwealth as provided for in chapter one hundred and seventy-nine of the acts of the year eighteen hundred and eighty-four.

And also (1892, 382):

SEC. 1. In all controversies between an employer and his employees in which application is made to the State board of arbitration and conciliation, as provided by section four of chapter two hundred and sixty-three of the acts of the year eighteen hundred and eighty-six as amended by section three of chapter two hundred and sixty-nine of the acts of the year eighteen hundred and eighty-seven, and by section one of chapter three hundred and eighty-five of the acts of the year eighteen hundred and ninety, said board shall appoint a fit person to act in the case as expert assistant to the board. Said expert assistants shall attend the sessions of said board when required, and no conclusion shall be announced as a decision of said board in any case where such assistants have acted until after notice given to them, by mail or otherwise, appointing a time and place for a final conference between

accuracy in all of its details, but it gives, nevertheless, a fairly correct view of the nature of the board's work.

*Summary of work of Massachusetts State board of mediation and arbitration, 1894-1900.*

	1894	1895	1896	1897	1898	1899	1900	Total
Total number of cases	57	32	30	36	32	36	49	232
Cases arbitrated	10	10	12	11	5	1	2	54
Cases mediated								
Successful	8	10	6	7	3	11	27	72
Unsuccessful	19	12	12	15	11	11	20	106
Joint applications by parties								
By	11	11	12	14	6	2	6	61
Application by one party	7	6	4	8	1	5	11	48
Action by initiative of board	19	15	14	14	13	19	14	128
Public hearings held			1	1	1			6
Wages involved annual	\$6,041,900	\$1,701,666	\$1,216,400	\$1,036,260	\$4,227,000			

The figures showing the total number of cases coming before the board, include every case which has been brought to its official cognizance, even although its action may have been forestalled by a voluntary settlement between the parties, or in some other way.

The cases during the 7 years from 1894 to 1900 have averaged about 33 yearly, the largest number being in 1900, 49, and the smallest in 1898, 22, and the total for the 7 years being 236. The cases in which there was a formal arbitration and decision by the board can be fairly distinguished from those in which the board merely mediated, endeavoring by its good offices to bring about a mutual agreement between the parties. The average number of cases of formal arbitration has been about 7 yearly, the largest number being 11 in 1897, and the smallest 1, in 1899. It is noteworthy that in only 1 case during these years has there been an absolute refusal on the part of the employees to abide by the decision of the board in a case arbitrated, while apparently there has been no instance of refusal on the part of the employers. On the other hand, there have been at least 7 cases where the employers have refused to submit a matter to the binding decision, although the employees have offered to do so, while in 4 or more cases the employees have declined formal arbitration when offered by the employers. There are, of course, many more cases where one or both parties refused to accept the mediation of the State board or to follow its recommendations in case of mediation.

The number of cases in which the State board has mediated rather than arbitrated is 178. In estimating the number of instances in which mediation has proved successful, the attempt is made to determine those cases in which a settlement has been reached through the intervention of the board which probably would not have been reached at all, or would have been reached less promptly, without such intervention. The number of such instances is 72, being about two-fifths of the total number of cases of mediation. The instances of unsuccessful mediation, however, include a considerable number where settlements of some sort or another, or failure of strikes, had already occurred before the board had time actually to take any steps in the matter, and others in which its good offices were from the first refused by both parties. The number of cases in which, after the board had succeeded in securing actual conferences with the parties in dispute, it has failed to bring about a settlement is therefore considerably less than the 106 shown in the total. The proportion of cases in which mediation has proved successful as compared with those in which it has proved unsuccessful varies considerably in different years. The greatest success appears to have been obtained in 1900, when 27 cases of mediation resulted in a settlement, as against 20 which were unsuccessful.

Including together the cases which the board has settled by means of arbitration and those in which its mediation has hastened or effected a settlement, it will be found that in more than half of the total number of cases brought to its attention the efforts of the board have been successful, in greater or less degree, while if we should eliminate those cases in which the board found itself at the outset precluded from taking any action whatever the proportion of successful instances would be considerably higher.

The Massachusetts law provides for arbitration only in case both parties agree in applying for it. There are a few cases also in which the board mediates upon the application of both parties. Apparently the total number of instances dur-

ing the 7 years from 1891 to 1900 in which both parties applied to the board to aid in settling their dispute was 61, while in 18 additional cases application for the intervention of the board was made by one of the parties. Even as to these instances, however, it is not always the case that the first movement to secure the assistance of the board has come from either or both parties. It is the practice of the board, whenever it hears of a strike in which its services are likely to be used, to send circulars and blank forms of application to the parties, and where the application for intervention results from such action it can scarcely be said that the initiation of the process begins with the parties. In the case of the joint applications for arbitration especially, it is probably true in many instances that such applications are made only after the board has taken the initiative in the matter. But even if we count all such applications for the intervention of the board as showing the initiative taken by the parties, it still appears that in more than half of the instances in which the board has taken action the initiative has come from the board itself. The board frequently calls attention to the fact that parties to labor disputes are slow about applying for its services, and that it is often forced to urge them strenuously before they will accept its assistance.

There are a few cases from time to time in which the board is neither able to induce the parties to arbitrate their disputes nor to agree among themselves, and in which the board judges it wise to make a public investigation and to publish its opinion as to the justice of the case, in the hope that the sentiment of the community may bring about a settlement. Though it is not possible always to determine from the reports of cases whether such a public hearing has been held, resort to this method is comparatively rare: the total number of such hearings held during the 6 years in question being apparently 6.

The last row of figures in the table shows, doubtless somewhat roughly, the amount of the annual wages of the employees who have been involved more or less directly in disputes in which the board has intervened. It appears that the year in which the board's activity was most important was 1894, although in 1898, despite the fact that the number of cases coming before the board was fewer than in any other year, the amount of wages involved was reported to be very large—\$1,227,570. These figures, however, are evidently far from being an accurate measure of the importance of the work of the board.

It is a noteworthy fact that a large majority of the cases in which the Massachusetts State board has actually acted as arbitrator and rendered a formal decision have been in connection with disputes in the boot and shoe industry, and most of these decisions have involved somewhat complex tables of prices for piecework. The introduction of new machinery in this industry appears to have made difficult the adjustment of prices for piecework, so that there has been a very large number of disputes, while, on the other hand, the spirit both of employers and employees seems to be quite often favorable to the peaceful settlement of the difficulty. In fact, there have been for a long time past not a few cases in which disputes in the boot and shoe industry have been settled by conciliation or by private arbitration. The State board has intervened in relatively few disputes in the textile industries, and has arbitrated in still fewer, although it had an important influence in settling a great strike at New Bedford in 1891. The board also has seldom been called upon to act in the case of disputes in the building trades. It is especially noteworthy that disputants have seldom been willing to submit to arbitration questions of general principle, such as that of the exclusive employment of union men. Questions relating to hours of labor also have been but rarely brought before the board for arbitration. In fact, it appears clearly from the statements regarding the individual cases in which the board's action has been successful that most of them have been disputes in which comparatively little bitter feeling was evoked between the parties. When once a strike has reached an acute stage and the feelings of the parties are strongly aroused, efforts at mediation or arbitration are not apt to be successful.

Two or three individual instances of the action of the Massachusetts State board may be stated as illustrative of the methods employed and of the results accomplished.

*Spinners and weavers' strike, New Bedford, 1894.*—In August, 1894, several cloth mills in New Bedford gave notice of a proposed reduction in wages, though without stating the precise amount of the reduction. Soon after the unions of spinners and weavers ordered strikes, which involved about 10,000 operatives and brought most of the cloth mills in the city to a standstill. The feeling of the operatives was sensibly embittered by the evasion on the part of the employers of the "particulars law." The State board sent out communications to both sides offering its services, but received no response. The mayor of the city invited the operatives and the manufacturers to a conference in the presence of the State

board, but only 1 manufacturer attended and nothing was accomplished. The efforts of the board to bring about a settlement had no effect until October, when, in response to an invitation, the representatives of the unions appeared before the board, although the managers of the mills refused to meet in joint conference. On the next day the board held a meeting with the employers and thereupon addressed a letter to both sides containing the following recommendation: "The advice of the board is that the operatives at once assemble in such manner as may seem to them best, and by vote propose to the agents of the respective mills that the mills be opened to the former operatives on Monday next or as soon as practicable, under the concession of one-half of the reduction heretofore proposed by the manufacturers," and that the corporations accept such a proposition. Three days later an agreement was reached between the employers and the employees on the lines thus laid down by the board.

The board contrasts with the fortunate outcome of its efforts in this case the evil results of the refusal of the employers at Fall River to accept its offers of mediation or arbitration in connection with the great strike in that city, which was nearly coincident with the strike at New Bedford. The strike at Fall River lasted 2 or 3 weeks longer than that at New Bedford and resulted in a complete defeat of the employees.<sup>1</sup>

*Marlboro boot and shoe workers.*—The most elaborate and in many ways the most important disputes which have come before the Massachusetts board in recent years were a series of cases involving, in the words of the board itself, "practically the whole of the shoe manufacturing industry of Marlboro," which were decided in the year 1896. There were 6 of these cases, 5 of which were settled by formal arbitration, each involving the fixing of a large number of different items of prices for piecework. Thus in the case of the S. H. Howe Shoe Company, the decision for 1 factory involved the fixing of 102 prices. As an illustration of the complexity of these decisions, 2 of them may be quoted:

Stitching second row, folded linings—men's, boys', and youths'.....	So 03
Stitching second row, folded linings—little girls'.....	024
Stitching second row, no linings—men's, boys', and youths'—upon special machine.....	024

3. *Opinion of board itself concerning its work.*—The Massachusetts board of arbitration itself repeatedly expresses in its reports the opinion that its work has been of very great benefit to the industrial interests of the State.

It believes "that its usefulness has steadily grown and that both employers and employees are becoming more disposed to settle their disputes by peaceful means, either by appeal to the State board or otherwise. Nevertheless, the members of the board frequently express regret at the unwillingness of employees and still more of employers to accept it and in settling their difficulties or at least concerning the tardiness of their consent to mediation or arbitration. It urges that only as the general sentiment among those immediately interested in labor difficulties, and among the citizens generally, insists more strongly upon the adjustment of industrial disputes by conciliatory means will the board be able to exercise the most satisfactory influence. The following extracts, from some of the more recent annual reports of the Massachusetts board of mediation and conciliation, bring out these opinions clearly:

Report of 1895, page 10. "In the last 12 months the work of the board and the law creating it have been frequently mentioned with approval in other States and countries. How far such commendations are deserved it is not for us to say. But if, as it has been said, our Commonwealth has adopted the best way yet discovered of dealing with controversies between employers and employees, it is strange that so many of the employers and workmen of our State appear not to realize the importance of it sufficiently to enable them to avert, as they might do, many of the most troublesome controversies by appealing to the board in the first stages of the dispute, when there is yet time for cool discussion. The same old theoretical objections are constantly appearing in quarters where the board is not known through practical experience with its work and methods, and the same old regrets are constantly expressed that parties interested did not know in the beginning more about the board and the law governing its action.

"There is, however, a brighter side for those who will work and hope. For 9 years this Commonwealth has had a State board whose duty it is to urge even upon unwilling ears the practical advantage of settling disputes by reason and discussion, rather than by the arbitrary use of force and intimidation. We believe that progress has been made every year; that the good influence has been felt all

<sup>2</sup> See also testimony of Hon. Chas. D. Walcott before the Industrial Commission, Reports, vol. VII, pp. 906-919.

over the State, and that the methods of arbitration and conciliation have commended themselves, when in actual operation, in quarters where there had been either distrust of their practical efficiency or openly expressed dislike to them on theoretical grounds. Some recent strikes have been the most extensive and bitterly contested controversies in the State's history, but although the militia of 4 other States were at one time in arms for the preservation of order and the protection of property, nothing of the sort has been required in Massachusetts."

Report of 1896, p. 6: "It may be said in general of the board's work during the last year that, while the volume of business has not increased, the quality of the work has not deteriorated. In the last 12 months have occurred most noteworthy instances of successful arbitration and conciliation. All decisions upon joint application have been accepted in the best spirit by the parties concerned, and when the parties to a controversy thought there was nothing which they could reasonably be expected to submit to arbitration, the board has been successful beyond the anticipations of anyone in bringing the representatives of the parties together and effecting an amicable agreement. A good instance of this kind is seen in the case of the Boston steam fitters, who, after a settlement had been practically agreed upon, were so well pleased with what had been done that they united in putting into the settlement an agreement that in the future any differences which can not be settled by the respective committees of the association of employers and the union shall be referred to the State board for final decision, without strike or lockout."

Report of 1897, p. 8: "There appears to have been of late a marked change in the attitude of organized labor towards arbitration, notably in Boston and Lynn. It is a cause of regret that the expressed willingness of workmen and the union to submit questions to the decision of an impartial tribunal has not always been met in a conciliatory spirit by employers \* \* \*

"With this view of what is expected of the board, we are led every year to take cognizance of strikes and lockouts when there is no reasonable expectation of an early adjustment by agreement of the parties. Sometimes under these discouraging conditions, by the exercise of patience, tact, and discretion, good results have been achieved through the efforts or by the advice of the board, but a perceptible lapse of time is essential for the purpose, and the first attempts at getting acquainted with the parties and securing their confidence are sometimes spoken of by the newspapers and by magazine writers as 'failures.' The apparent results or want of result in such cases are by themselves no proper test of the work of a board or of the value of an economical principle or policy. Some people who are unfavorable to any form of State arbitration, and therefore determined not to see any good that may be done by it, are ready to cite all these cases as 'failures' of State arbitration, although rightly viewed they merely show the failure in particular instances of employees or employers to make use of an influence which always works for harmony and never for discord. Arbitration presupposes a certain amount of intelligence and a considerable degree of self-control on the part of those who are expected to resort to it. The reasonable expectation is that it will be resorted to before war is declared and everybody thereby made angry and excited. The realization of this truth makes slow but as we believe, steady progress among the people, and until it is well understood the results of any form of arbitration must of necessity fall short of what ought to be seen."

#### MICHIGAN

**Statutory provisions as to State board.**<sup>1</sup>—The law merely authorized the governor to establish a board at his discretion, and until about 1900 none was instituted, and as yet little has been accomplished.

**Composition of board.**—Three members, appointed for 3 years, with no restrictions as to qualifications.

**Investigation on application of parties.**—In this State there is no provision for investigation on the application of one party only, although perhaps this would be covered by the authority of the board to endeavor to mediate in any strike coming to its knowledge. The law simply provides that it is lawful for the parties to a labor dispute to submit it jointly to its decision. In this case they must agree to abide by the decision of the board and to continue at work pending such decision, provided it shall be given within 10 days after the completion of the investigation. The decision would thus nominally be binding, but the law contains no special provision as to the time which it shall continue in force or as to the method of compelling obedience.

**Investigation and mediation on initiative of board.**—Wherever it shall come to the knowledge of the board that a strike is threatened or has occurred, it is the

<sup>1</sup>Laws, 1889, ch. 238.

duty of the board to communicate with the employer and employees and to try by mediation to effect a settlement.

The State board may, if it deems advisable, in default of other settlement, investigate the cause of the controversy.

*Compensation of board*—Five dollars per day of actual service; secretary, \$1,200 per year.

*Power to summon witnesses.*—The board of arbitration is given, without very specific provisions, general power, such as that of a court, to summon witnesses and require the production of books and papers.

*Work of board*—For some years after this law was passed the governor appointed no board. Quite recently a board was constituted and has accomplished a few results of some importance. No printed report has yet appeared.

### MINNESOTA

*Statutory provisions.*—*Composition of board.*—The governor, with the consent of the senate, is to appoint a State board of 3 members, 1 an employer or representative of an employer's association, 1 selected from some labor organization, and a third appointed upon the recommendation of these 2. The term of office is 2 years.

*Investigation on application of parties*—The board is bound to take cognizance of any dispute between employers and employees upon application of either or both parties. The application must be signed by the employer or by a properly ascertained majority or representative of the employees. It must contain the promise to continue without lockout or strike until the decision of the board, if made within 3 weeks. The board shall make proper inquiry and report to the parties what, if anything, ought to be done to adjust the dispute. This decision shall at once be made public.

*Effect of the decision*—Where both parties are joined in an application for arbitration, the decision shall be binding on them for 6 months, or until either gives notice of 60 days for its termination.

*Investigation and mediation on initiative of board.*—Wherever it shall come to the knowledge of the board, by notice from the mayor or other local officer, or from a labor or business organization, or in any other way, that a strike is threatened or has occurred it is the duty of the board to communicate with the employer and employees and try by mediation to effect a settlement or to persuade them to submit the matters in dispute to arbitration. The State board may, if it deems advisable, in default of other settlement, investigate the cause of the controversy and publish a report stating the cause and assigning the responsibility or blame.

*Compensation of board*—Five dollars per day of actual service and expenses.

*Power to summon witnesses.*—The board of arbitration is not given an unlimited power to compel testimony, but is specially authorized to summon as a witness any operative affected or any person who keeps the records of wages, and to require the production of books and papers containing the records of wages earned or paid.

*Work of State board*—The following extract from a recent letter of the secretary of the Minnesota board shows that its activities as yet have been insignificant. It appears that for some time the positions were entirely vacant.

The present board had been so recently appointed that the only business done was to meet and organize. We have made a search for reports of former boards, but are unable to find any, and correspondence with members of the former board indicates that no reports were made by them. In 1897 the printers on all the newspapers in the Twin Cities (St. Paul and Minneapolis) were locked out, and the matter was arbitrated before the State board, which found for the printers, but their decision was disregarded in part by the publishers. It seems the law was defective, in not providing a penalty, and the publishers therefore felt themselves free to do as they chose with the board's finding. This information is given as I personally recollect it, and is not taken from State records. The case cited appears to have been the only one ever brought before the Minnesota State board of arbitration. The present board will meet in a short time to adopt rules of procedure.

### MISSOURI

*Statutory provisions—local boards of arbitration.*—A Missouri law<sup>1</sup> provides that the commissioner of labor statistics may, upon being informed of the existence of a dispute which may result in a strike or lockout, visit the place and seek to mediate. He may also at his discretion order the formation of a local board of arbitration, composed of 2 employers and 2 employees, not parties to the dispute but engaged in similar occupations, the commissioner of labor to be president of

<sup>1</sup> Laws, 1895, ch. 170.

<sup>2</sup> Act April 11, 1889.

the board. Such a board has power to summon witnesses and to render a decision, but the only effect of the decision is "to give the facts leading to the dispute to the public through an unbiased channel."<sup>1</sup> In no case shall a board of arbitration be formed when work has been discontinued, but the commissioner may order the formation of a board upon the resumption of work. All expenses of such boards are paid out of the appropriation for the bureau of labor statistics.

It does not appear that any important use has been made of the provisions of this law.

#### MONTANA.

Montana has an elaborate statute regarding arbitration (Political Code, part 3, sections 3330-3338), but no use has yet been made of it, and no State board appointed under its authority. The statute is very similar to that in Massachusetts, just described.

#### NORTH DAKOTA

*Mediation by labor commissioner.*—In North Dakota the commissioner of agriculture and labor is directed, when requested to do so by either party to a labor dispute affecting 25 or more employees, to visit the place and seek to mediate between them.<sup>1</sup>

#### NEW JERSEY

**1. Statutory provisions.**—*Composition of State board.*—The New Jersey law originally provided that one of the three members of the board should be a member of a bona fide labor organization, but a later law, 1892, increased the board to 5, named its members, and provided that the governor should fill vacancies, without any regulation as to qualifications of the members. Apparently, however, the governor has followed the practice of appointing at least 1 labor member.

*Investigation on application of parties.*—In this State there is no provision for investigation on the application of one party only, although perhaps this would be covered by the authority of the board to endeavor to mediate in any strike coming to its knowledge. The law simply provides that it is lawful for the parties to a labor dispute to submit it jointly to its decision. In this case they must agree to abide by the decision of the board and to continue at work pending such decision, providing it shall be given within 10 days after the completion of the investigation. The decision would thus nominally be binding, but the law contains no special provision as to the time which it shall continue in force or as to the method of compelling obedience.

*Mediation on initiative of board.*—The law provides that whenever a strike or lockout occurs or is seriously threatened the board shall proceed to the locality and endeavor by mediation to bring about an amicable settlement. It may also inquire into the cause of the difficulty. There is no specific provision as to publishing a report fixing the responsibility.

*Compensation of board.*—Ten dollars per day of actual service, and expenses.

*Local boards of arbitration.*—In New Jersey any grievance between employers and employees may be submitted to a local board of 5 persons. When the employees are members of a labor organization 2 arbitrators shall be selected by such organization or by the central body to which it belongs. Otherwise 2 arbitrators are chosen by vote of the majority of the employees. The employer chooses 2 arbitrators and these designate a fifth, who is the chairman. The board having thus been constituted must secure from the county judge a license or order approving its organization, and referring to it the matters in dispute. This board has power to compel the attendance of witnesses and the production of books and papers to the same extent as courts of record. Its decision is a settlement of the matter referred to it unless an appeal is taken to the State board of arbitration. There is, however, no specific provision as to the method of enforcing the decisions.

**2. Work of the New Jersey board.**—A perusal of the reports of the New Jersey State Board of Arbitration for the years 1895 to 1899 shows clearly that this board is far less active and accomplishes far less than the State boards of New York, Massachusetts, Ohio, and Indiana. The various reports each contain a long list of strikes in connection with which the board has offered its services as mediator or arbitrator, with the almost invariable comment that the employer, or more rarely the employees, refused to accept the services of the board. There appear to have

<sup>1</sup> Acts of 1890, ch. 66.

<sup>2</sup> Laws of 1892, ch. 137.

<sup>3</sup> See also testimony of Mr. James O. Smith, Reports of Industrial Commission, Vol. VII, p. 977.

been not more than 3 or 4 cases during the 5 years in which the board has really had an important influence in settling a strike of any consequence, and in none of these cases has there been a formal arbitration and decision by the board. The following quotation from its report for 1897 shows the recognition on the part of the board that its powers are limited and its work of relatively small importance:

"During the year ending with this date 68 strikes have come under the notice of our board. This is a little over an average of 1 a week for the whole State, and considering the fact that even at this most of them were trivial, and of short duration, it must be said the number was comparatively small. In the case of every strike brought to the notice of this board through any source whatever our services were promptly offered to both sides. How far our services or suggestions went toward settling any of these disputes we can not say definitely, but we do know of several instances in which we were credited with making recommendations that ultimately resulted in bringing about a termination of the strike.

"The law does not empower our board to step in and compel the parties to a strike to submit the matter in dispute to arbitration. We can not do more than offer our services; but if either side does not wish to accept the offer, we have no authority to go any further. The consent of both sides is a prerequisite of successful intervention on our part. Sometimes we find the employer willing that we shall intervene, while at other times it is the employees who are desirous of utilizing our services.

"In the year just ended we were requested only once to hold an investigation, and that was in connection with the strike at Kearney & Foot's File Works, Paterson. We could not, however, see any object to be gained by acceding to the wishes of the employees."

## NEW YORK

**1. Statutory provisions.**—*State board of arbitration.*—The organization and methods of business of the New York State Board of Mediation and Arbitration, which are very similar to those of the State boards in other States, are set forth in detail in the statute, which is quoted in full below. Up to 1901 the law provided that one member of the board should belong to one of the leading political parties, another member to the other leading party, and the third to an incorporated labor organization. In the present year the existing board of arbitration was abolished, and the commissioner of labor together with his first and second deputies, were given its powers and duties.<sup>1</sup> The board has authority to render decisions where both parties agree to submit to its arbitration, but the law contains no provisions regarding the method of enforcing such decisions. The board may also mediate in any strike or lockout upon its own initiative. The statute likewise provides for the establishment of local boards of arbitration.

The New York statute, modified only by the change in the composition of the board above indicated, is as follows.

**SECTION 140. Organization of board.**—There shall continue to be a State board of mediation and arbitration, consisting of three competent persons, to be known as arbitrators, appointed by the governor, by and with the advice and consent of the senate, each of whom shall hold his office for the term of three years and receive an annual salary of three thousand dollars. The term of office of the successors of the members of such board in office when this chapter takes effect shall be abridged so as to expire on the thirty-first day of December preceeding the time when each such term would otherwise expire, and thereafter each term shall begin on the first day of January.

One member of such board shall belong to the political party casting the highest and one to the party casting the next highest number of votes for governor at the next preceeding gubernatorial election. The third shall be a member of an incorporated labor organization of this State.

Two members of such board shall constitute a quorum for the transaction of business, and may hold meetings at any time or place within the State. Examinations or investigations ordered by the board may be held and taken by and before any of their number, if so directed, but a decision rendered in such a case shall not be deemed conclusive until approved by the board.

**§ 141. Secretary and his duties.**—The board shall appoint a secretary, whose term of office shall be three years. He shall keep a full and faithful record of the proceedings of the board, and all documents and testimony forwarded by the local boards of arbitration, and shall perform such other duties as the board may prescribe. He may, under the direction of the board, issue subpoenas and administer oaths in all cases before the board, and call for and examine books, papers, and documents of any parties to the controversy.

He shall receive an annual salary of two thousand dollars, payable in the same manner as that of the members of the board.

**§ 142. Arbitration by the board.**—A grievance or dispute between an employer and his employees may be submitted to the board of arbitration and mediation for their determination and settlement. Such submission shall be in writing, and contain a statement in detail of the grievance or dispute and the cause thereof, and also an agreement to abide the determination of the board, and during the investigation to continue in business or at work, without a lockout or strike.

<sup>1</sup> Laws of 1901, ch. 9.

Upon such submission the board shall examine the matter in controversy. For the purpose of such inquiry they may subpoena witnesses, compel their attendance, and take and hear testimony. Witnesses shall be allowed the same fees as in courts of record. The decision of the board must be rendered within ten days after the completion of the investigation.

§ 113. *Mediation in case of strike or lockout*.—Whenever a strike or lockout occurs, or is seriously threatened, the board shall proceed as soon as practicable to the locality thereof, and endeavor, by mediation, to effect an amicable settlement of the controversy. It may inquire into the cause thereof, and for that purpose has the same power as in the case of a controversy submitted to it for arbitration.

§ 114. *Decisions of board*.—Within ten days after the completion of every examination or investigation authorized by this article, the board or majority thereof shall render a decision, stating such details as will clearly show the nature of the controversy and the points disposed of by them, and make a written report of their findings of fact and of their recommendations to each party to the controversy.

Every decision and report shall be filed in the office of the board and a copy thereof served upon each party to the controversy, and in case of a submission to arbitration, a copy shall be filed in the office of the clerk of the county or counties where the controversy arose.

§ 115. *Annual report*.—The board shall make an annual report to the legislature, and shall include therein such statements and explanations as will disclose the actual work of the board, the facts relating to each controversy considered by them and the decision thereon, together with such suggestions as to legislation as may seem to them conducive to harmony in the relations of employers and employees.

§ 116. *Submission of controversies to local arbitrators*.—A grievance or dispute between an employer and his employees may be submitted to a board of arbitrators, consisting of three persons, for hearing and settlement. When the employees concerned are members in good standing of a labor organization, which is represented by one or more delegates in a central body, one arbitrator may be appointed by such central body and one by the employer. The two so designated shall appoint a third, who shall be chairman of the board.

If the employees concerned in such grievance or dispute are members of good standing of a labor organization which is not represented in a central body, the organization of which they are members may select and designate one arbitrator. If such employees are not members of a labor organization, a majority thereof, at a meeting duly called for that purpose, may designate one arbitrator for such board.

§ 117. *Consent; oath; powers of arbitrators*.—Before entering upon his duties each arbitrator so selected shall sign a consent to act and take and subscribe an oath to faithfully and impartially discharge his duties as such arbitrator, which consent and oath shall be filed in the clerk's office of the county or counties where the controversy arose. When such board is ready for the transaction of business, it shall select one of its members to act as secretary, and notice of the time and place of hearing shall be given to the parties to the controversy.

The board may, through its chairman, subpoena witnesses, compel their attendance, and take and hear testimony.

The board may make and enforce rules for its government and the transaction of the business before it, and fix its sessions and adjournments.

§ 118. *Decisions of arbitrators*.—The board shall, within ten days after the close of the hearing, render a written decision, signed by them, giving such details as clearly show the nature of the controversy and the questions decided by them. Such decisions shall be a settlement of the matter submitted to such arbitrators, unless within ten days thereafter an appeal is taken therefrom to the State board of mediation and arbitration.

One copy of the decision shall be filed in the office of the clerk of the county or counties where the controversy arose, and one copy shall be transmitted to the secretary of the State board of mediation and arbitration.

§ 119. *Appeals*.—The State board of mediation and arbitration shall hear, consider, and investigate every appeal to it from any such board of local arbitrators, and its decisions shall be in writing and a copy thereof filed in the clerk's office of the county or counties where the controversy arose, and duplicate copies served upon each party to the controversy. Such decision shall be final and conclusive upon all parties to the arbitration.

**2. Work of the New York State board of arbitration.**—*General summary.*—The New York State board of arbitration publishes no statistical summary of its work. It gives, however, in its annual report a statement of its action in each of the more important cases in which it has intervened, at least such as are accompanied by actual cessation of work. There is every probability that the cases of intervention in strikes and lockouts thus mentioned include practically all of any significance, so that the summary of these will give a fairly satisfactory view of the work of the board. Perhaps a considerable number of instances in which intervention has proven unsuccessful fail of presentation. While it is not always possible to judge from the statements given precisely what share the board had in the controversy, the following table probably gives a fairly accurate record of the board's activities:

*Work of New York State board of arbitration, 1894-1900.*

	1894	1895	1896	1897	1898	1899	1900	Total.
Total cases of intervention .....	20	25	18	26	21	29	18	157
Arbitration by agreement of parties .....	2	1	.....	.....	2	.....	.....	5
Public hearings and reports .....	1	4	3	3	.....	6	1	18
Failure to settle by same .....	1	2	2	1	.....	2	.....	8
Successful mediation .....	9	10	7	14	10	12	14	76
Unsuccessful mediation .....	6	9	7	8	6	11	3	50
Local arbitration .....	2	1	1	1	3	.....	.....	8

The number of strikes and lockouts in which the board has intervened in one way or another averages slightly over 22 yearly, and is fairly uniform from year to year. The total number of cases during the 7 years, 1894 to 1900, was 157. The total number of strikes reported by the board during 1895-1900 was 2,181. It is noteworthy that the cases in which there is formal arbitration in pursuance of a joint application of the parties for a settlement of their dispute are exceedingly rare. The 5 cases enumerated in the table include 2 or 3 in which the board made formal recommendations on the application of one party only. In a somewhat larger number of cases, 18, the board has held a public hearing as to the causes and justice of the controversy, and has published the evidence taken, usually with some comment. In some cases settlement is made during the public investigation, and no report is made. Such public hearings are generally held only in case of important and prolonged disputes which the board has failed to settle by mediation, and hence it is not surprising that in nearly half of the instances in which public hearings have been held they have still failed to bring about an adjustment.

The most important work of the New York board, as it itself repeatedly points out, is in informal mediation between parties to labor disputes. Its reports contain the records of no less than 126 cases of such mediation during the past 7 years as regards disputes which had gone so far as to result in suspension of work. In 76 of these the efforts of the board have, to judge from the reports presented, been instrumental in bringing about a settlement, or at least in hastening it. It is, of course, impossible to know with certainty what would have been the outcome of these difficulties in the absence of the mediation of the State board. The number of strikes where mediation has been unsuccessful, as described in the reports, is 50, but it is possible that the board publishes no account of some of the less important instances in which its attempts at mediation have failed. One is struck in reading the reports of the board with the fact that the initiative in mediation or arbitration almost always comes from the board itself rather than from the parties. There appear to have been very few cases in which either party alone, and almost none in which both parties jointly, have appealed to the board for an adjustment of their difficulties. In 1899, out of 20 cases in which the board took action, the initiative in 23 came from the board itself, in 5 from employees, and in 1 from the employer.

That there has been a growing disposition to make use of the services of the New York board is claimed by its members apparently with good ground. Some idea of the importance of its work may be gained from the following quotation from the report of 1900. After naming the leading cases of intervention, the board says,

The foregoing constitute a number of the more important troubles that occurred during the year. More than 12,000 persons were involved in those mentioned, and over 14,000 more were involved in other troubles, nearly 100 in number, in which the board took part, all of which will be referred to in detail in the body of the report which follows.

The New York law also makes provision for the settlement of disputes by local arbitration, and there have been 8 cases during the past 7 years in which this method has been employed at the instance of the State board. In several of these cases a member of the State board has been the odd member of the locally chosen board, so that his decision would be final in case of a failure of the members representing the parties to agree. As to the rareness of resort to local arbitration, the following is quoted from the report of the State board for 1895:

It is a notable fact that under the first section of chapter 43 of the laws of 1887, providing in detail for voluntary arbitration of differences between employers and employees by boards of their own choosing, such sections having been framed to meet the views and desires of representatives of the labor organizations, not one single case in which the course of proceeding prescribed by the act has been followed has come to the knowledge of this board. All that has been accomplished in the way of mediation or arbitration pursuant to the act has been reached by the board through invitations of the parties to disputes, or either of them, or through intervention of the board as the act commands.<sup>1</sup>

*Mediation in street railway strike, 1898.*—Some detailed illustrations of the work of the board may now be given: The most important work accomplished by the New York State Board of Mediation and Arbitration in 1898 appears to have been in connection with the strike of the employees of the Rapid Transit Railway Company of Syracuse, about 400 men in number. The first strike began on August 5, 1898, with the demand that the company no longer require a deposit of \$25 from its employees as a guaranty of faithful service, and that the company receive committees of the men presenting grievances. The strike began on Friday, and on Saturday the members of the State board of arbitration were on

<sup>1</sup>Ninth annual report of the Board of Mediation and Arbitration of New York, 1895, p. 14

the ground. The board recommended to the company that the demands of the men be granted, and after some negotiation, lasting 3 days, the company did so, and the strike was declared off. About a week later, however, there was some question raised as to the interpretation of the agreement reached. The vice-president of the street railway company immediately telegraphed to the State board of arbitration asking it to decide the matter and agreeing to abide by its decision. The board again returned to Syracuse and promptly issued its report and decision, which was complied with by the company.

On September 20 the members of the Amalgamated Association of Street Railway Employees, employed upon the road, demanded that only members of the organization be employed. This the company refused, and issued a statement to the public declaring that it had 20 or more nonunion men in its employ whom it was unwilling to discharge, pointing to the manner in which it had conceded previous demands and abided by the decisions of the State board of mediation and arbitration, and insisting that the general principle of the rights of nonunion labor was at stake. The board of mediation and arbitration held several conferences with the parties, and on September 24 issued a statement recommending to the company that it give assurances to the men that it would not discriminate against any person for being a member of the labor union, for serving on committees of a union, or for having formerly engaged in a strike; that it would grant a hearing to any employee charged with disobeying the rules or neglecting duty, and a rehearing if a claim of new evidence was presented. To the employees it was recommended that they recede from the demand for the exclusive employment of members of the union; and that they interpose no opposition to the dismissal of men who had been given a proper hearing. These recommendations were accepted by both sides after a short discussion and the strike was settled.<sup>1</sup>

*Mediation in silk weavers' strike, 1897.*—During the summer of 1897 about 300 silk weavers employed by the Rhenania silk mills, at College Point, N. Y., struck for higher wages and for the abolition of a system of contracts. After various unsuccessful attempts by the State board of mediation and arbitration to adjust the differences, the board decided to make a public investigation and recommendations. It accordingly did so, and published the evidence, together with recommendations that the silk mills increase their wages to the rates prevailing in 1893, discontinue the system of enforced contracts by which wages were withheld as a forfeit for quitting employment without giving the prescribed notice, and reemploy those who had struck so far as they desired employment. On the other hand, the strikers were advised to withdraw their demand for the discharge of 17 weavers who had refused to join in the strike, and it was also recommended that a local board of arbitration for the settlement of future difficulties be established. Later on, the strike was settled under terms largely in accord with the recommendations of the board.<sup>2</sup>

*Mediation in Albany street railway strike, 1900.*—On January 21, 1900, the conductors and motormen on the Troy division of the United Traction Company of Albany went on strike. The previous day a committee of the employees had presented a proposed agreement to the superintendent of the company, and it was claimed that he refused to consider it. The committee reported back to their union and a strike was ordered, some 350 men refusing to take out their cars on the morning of January 21. No attempt was made to operate the division of the road affected, and traffic was entirely suspended.

The main feature of the proposed agreement was a demand for 20 cents per hour.

The board, through Commissioner Gilbert, held a conference with representatives of the strikers on the evening of January 22, and on the morning of January 23 Commissioners Gilbert and Delehanty conferred with officers of the company. A conference was arranged for the same afternoon at the office of the board. The conference lasted all the afternoon and adjourned to permit the representatives of the company in the conference to confer with the board of directors. Conferences were continued the next day, and as a result of their deliberations the company made the following proposition on the afternoon of January 24:

*Resolved*, That the United Traction Company agrees to the following recommendations of the State Board of Mediation and Arbitration in settlement of the differences with the employees of the Troy division:

First. Any committee of the employees representing organized or unorganized labor will be recognized when they desire to be heard in relation to any grievance.

<sup>1</sup> Report of New York State Board of Mediation and Arbitration, 1898, pp. 202-235.

<sup>2</sup> Report of New York State Board of Mediation and Arbitration, 1897, pp. 24-28.

Second. The employes of the Troy division upon showing their badges shall be permitted to ride free on the Troy division.

Third. The company will pay conductors and motormen on the Troy division at the rate of eighteen and a half cents an hour for not exceeding eleven hours, and at the same rate for extra time, exclusive of the time allowed for meals, all time on car to be paid for whether car is moving or not.

Fourth. There will be no discrimination against any of the men on account of the present strike, and they will not be discharged for participating therein.

Fifth. Any man who may be suspended or discharged by the superintendent shall be entitled to appeal to the executive committee of the United Traction Company and to a hearing by that committee.

The foregoing resolution was unanimously adopted by the executive committee of the United Traction Company at a meeting thereof duly held in the city of Albany on the 21th day of January, 1900.

In witness whereof I have hereunto set my hand this 21th day of January, 1900.

JOHN W. McNAMARA,  
*Secretary of United Traction Co.*

The board also met and conferred with a committee from the common council of Troy, and the proposition made by the company to the men was recommended by the board and accepted by the committee representing the strikers. It was, however, rejected by the strikers at a meeting held the same night.

Negotiations were continued and on Friday afternoon the board received the following proposition from the men to be presented to the company:

SECTION 1. Any committee of the employes representing the Amalgamated Association of the Street Railway Employes of America, Division No. 132, of Troy, N. Y., will be recognized when they desire to be heard in relation to any grievance.

§ 2. The employes of the Troy division, upon showing their badges, shall be permitted to ride free on the Troy division, in uniform or not.

§ 3. The company will pay all conductors and motormen on the Troy division of the United Traction Company at the rate of 20 cents per hour, not exceeding 11 not less than 10 consecutive hours to constitute a day's work for a regular man. All time on cars to be paid for, whether the car is moving or not. All regular cars not to have more than 50 minutes or less than 40 minutes for dinner or supper.

§ 4. All cars shall pull in from the same car house that they start from, and all men shall be paid for any time in excess of 10 minutes that is required of them to go from the reporting place to the place where repairs are to be made. When men are called upon to do any work, they shall be paid from 10 minutes from the time they are instructed to report.

§ 5. The rule regarding a man missing his car shall remain the same as heretofore. He shall lose 7 days' work.

§ 6. That all conductors shall keep the receipts of their day's work until their day's work is finished, when they will deposit with an agent of the company their receipts and shall receive a receipt for the same from him.

§ 7. Any member of this association laid off, and after investigation found not at fault, is to be reinstated and be paid for the total number of days that he has been laid off by the company and the number of hours per day as his run on the time table calls for, and an extra shall be paid an amount equal to the amount received by the man whose place he fills.

§ 8. There will be no discrimination against any of the men on account of the present strike, and they will not be discharged for participation therein.

§ 9. Any man who may be suspended or discharged by the superintendent shall be entitled to an appeal to the executive committee of the United Traction Company, and shall be given a hearing by such committee, and if found to be innocent he shall be reinstated.

§ 10. All regular cars shall go out early in rotation. If a man loses his car, the next man moves up in rotation. That the oldest conductor in service, on his respective line, shall have the first car out, and the rest follow in rotation.

This proposition was rejected by the company, which then announced that, so far as they were concerned, all negotiations with the strikers were at an end.

On Sunday morning conductors and motormen, from various places, appeared in Albany, and it was thought that the company intended to begin the operation of the road on the following day, but, during the afternoon, Vice-President Brady and Secretary McNamara, of the company, met a committee of the strikers, with their counsel, at the Troy Club, and, after a conference, reached an agreement practically on the lines of the agreement recommended by the board, except in the matter of the rate of compensation. The strike was officially declared off at a meeting of the men at 3.30 Monday morning, January 29. Following is a copy of the agreement reached:

First. Any committee of the employes, representing organized or unorganized labor, will be recognized when they desire to be heard in relation to any grievances.

Second. The employes of the Troy division, upon showing their badges, shall be permitted to ride free on the Troy division.

Third. The United Traction Company shall pay all conductors and motormen on the Troy division as follows: Twenty cents per hour for all regular cars, and no less regular cars to be run than the present time tables call for, and more regular cars to be run if the traffic requires. The regular cars to be run not less than 10 hours, exclusive of 50 minutes for meals, all other conductors and motormen to be paid at the rate of 18½ cents per hour. All time on cars to be paid for, whether the cars are moving or not.

Fourth. There will be no discrimination against any of the men on account of the present strike, and they will not be discharged for participation therein.

Fifth. Any man who may be suspended or discharged by the superintendent shall be entitled to appeal to the executive committee of the United Traction Company, and to a hearing by that committee.

Sixth. All matters of detail in the running of cars shall be regulated by the rules of the company, and all grievances not herein provided for, and which now exist, or may hereafter exist, shall be heard in the manner provided for in the first paragraph, and be decided by the executive committee

*Committee representing the Amalgamated Association of  
Street Railway Employees of America, Division No. 132*

*Mediation in brickmakers' strike, 1898.*—On January 14, 1898, about 2,000 men employed in the brickyards in the vicinity of Haverstraw, N. Y., struck, demanding that the number of brick required from each pit be reduced from 25,000 and 27,000 to 20,000, and asking for a scale of wages. The manufacturers claimed that the limit of the number of bricks was so much less than that fixed by their competitors that they could not grant these demands. The strikers succeeded in preventing the attempts of their employers to resume work with other laborers. Representatives of the State board of mediation and arbitration visited Haverstraw several times and found no disposition on the part of either side to recede from the stand taken. Finally the commissioners, on August 24, recommended to the employees that they declare the strike off, as they could gain nothing by remaining out longer. This advice the men accepted, with the understanding that wages would be fixed at the opening of business for the next season.<sup>1</sup>

*Arbitration in marble workers' strike, 1897.*—In 1897 there was a strike of about 635 marble workers and their helpers in New York City, the strike affecting chiefly the New York Life Insurance building and a new hotel building. After several conferences between the respective organizations it was decided to leave the matter to a board of arbitration, as recommended by the State board of mediation and arbitration. Three members were selected by each side and these selected an umpire. The arbitrators reached an agreement, compromising between the demands of the workmen and those of the employers, and the strike was settled after about 2 weeks.<sup>2</sup>

*Public hearing and report on strike of chandelier workers.*—During May, 1900, the board was requested by Mr. E. J. Lynch, international president of the Metal Polishers, Platers, Buffers and Brass Workers' Union, and Timothy Daly, local walking delegate of the same union, to endeavor to bring about a settlement of a trouble in the metal trades in New York City and vicinity involving 1,200 men and 12 shops. Commissioner Delehanty immediately placed himself in communication with representatives of the employers, with a view to securing a conference with a committee of the men on strike. A proposed agreement had been presented to the employers' association. The employers' association refused to accede to the propositions therein contained. They also refused as a body to treat with the union, but they stated that the individual employers were ready to meet at any time a committee of their own employees.

They declined absolutely to grant a shorter workday. Commissioner Delehanty arranged conferences in several instances, but they were productive of no results, and there was no change in the situation during the months of May and June. Finally, at the request of representatives of the union, a public investigation of the matter was held, and the following is a copy of the findings and recommendations in the case:

#### STATE BOARD OF MEDIATION AND ARBITRATION

In the matter of the strike of the employees of the chandelier manufacturers in the city of New York.

The State board of mediation and arbitration, as the result of a public investigation duly held in the above entitled matter, and at the request of the said employees, at the New Amsterdam Hotel in the city of New York, on the 11th day of July, 1900, makes, as required by section 141 of chapter 415 of the laws of 1897, the following findings of fact and recommendations thereon:

First. That on April 24th, 1900, the polishers and molders in the employ of the firm of John Williams & Company, of 556 West Twenty-seventh street, New York City, went out on strike on the refusal by said company to accede to a demand, previously made by a committee of its employees, for a nine-hour day with ten hours' pay, and on the 26th day of April, 1900, the balance of said factory hands quit work for the same reason.

<sup>1</sup> Report New York State Board of Mediation and Arbitration, 1898, p. 65.

<sup>2</sup> Report of New York State Board of Mediation and Arbitration, 1897, p. 57.

Second. That when said strike occurred there was a quantity of unfinished work in the shop of the said John Williams & Company.

Third. That on May 1st, 1900, the said John Williams & Company sent said unfinished work, or a part thereof, for completion to the factories of Mitchell Vance & Company, Cassidy & Son Manufacturing Company, Oakley & Enos Manufacturing Company, F. F. Caldwell, J. B. McCoy & Son, L. Plout & Company, B. Goetz, Rosser & Son, The Vossberg Manufacturing Company, and Archer & Hancock Manufacturing Company, all of New York City, and in the same line of business as said Williams & Company.

Fourth. That between May 1st and 3rd, 1900, the factory employees, or the greater part thereof, of the several firms last above mentioned, were called out by the officers of the Metal Polishers, Buffers, Plates and Brass Workers' International Union of North America, because of the refusal of the said firms to discontinue labor upon the struck work of John Williams & Company.

Fifth. That subsequent to the date of the strike which was ordered in the said factories, the firms were notified in writing that the employees demanded, as a condition of settlement of the trouble, that a nine-hour day with ten hours' pay must be conceded.

Sixth. That since said trouble originated strenuous efforts have been made by various parties to effect an amicable adjustment thereof, but without avail.

Seventh. That from the testimony of the several manufacturers taken herein, which was not on oath, and, therefore, the trade conditions at the time of said strike and at the present time would not seem to warrant the concession of a nine-hour day with ten hours' pay.

And, from the foregoing findings, we recommend as follows:

First. That the employees of the several manufacturers above mentioned return to their respective employments on the same terms and conditions as existed prior to the origin of said trouble, and that the employers receive and restate them accordingly.

Second. That there shall be no discrimination on the part of any manufacturer against any of his employees because of connection with the existing strike.

Third. That when the trade conditions warrant, the manufacturers accord to their employees a nine-hour day with ten hours' pay.

Fourth. That said strike be declared off.

Dated July 18, 1900.

Respectfully submitted

JAMES M. GILBERT  
W. H. H. WYSTER  
F. R. DELFANTY

The recommendations of the board were not at first accepted by the strikers, but within a short time after the completion of the investigation the strike was declared off and work resumed under the terms recommended by the board.

**3. Opinions of New York board concerning its own work.**<sup>1</sup>—From report of 1895: "This board was created in 1886 for the relief of workmen and to mitigate the strike evil. It has met with success commensurate with the powers vested in it and the delicate work in hand, which requires patience, tact, and diplomacy. That it is difficult to enlarge its powers without infringing on the rights of employer and workman is evidenced by the fact that other States in which boards were subsequently instituted or arbitration laws enacted have almost uniformly adopted the law under which this board was created. We fail to recognize the utility of compulsory arbitration, except in a form that may apply to corporations of a public character created for the primary and paramount object of service to the people.

"The sentiment in favor of mediation by a third party in cases of labor disputes continues to grow. In States in which no State boards exist, even with arbitration laws on their statute books, the intervention of a third party between contestants occurs only when an unusually disastrous strike takes place and when the public peace is seriously threatened. Disinterested citizens are diffident about meddling in these disputes. A strike may go on indefinitely without an effort to adjust differences and end the suffering of the toiler that follows idleness and relieve the employer from loss and vexation incident to disturbance of his business. The authority vested in this board by chapter 63, Laws of 1887, enables a member, or the full board, to proceed at once to the place of the strike without invitation, and frequently with eminently satisfactory results. The appearance of an authorized official is often all that is necessary to bring about an understanding between disputants, who are willing to make concessions to the mediator that they would be loth to grant if obliged to face each other.

"It is a notable fact that under the first sections of chapter 63 of the Laws of 1887, providing in detail for voluntary arbitration of differences between employers and employees by boards of their own choosing, such sections having been framed to meet the views and desires of representatives of labor organizations, not one single case in which the course of proceeding prescribed by the act has been followed has come to the knowledge of this board. All that has been accomplished in the way of mediation or arbitration pursuant to the act has been reached by the board through invitation of the parties to disputes, or either of them, or through intervention of the board as the act commands."

From report of 1899: "More is accomplished through mediation than by arbitration. The board frequently finds one party or the other to a controversy, and sometimes both, disinclined to submit the matter in dispute to arbitration, and

<sup>1</sup> See also testimony of Mr. Jas. M. Gilbert, reports of Industrial Commission, vol. VII, pp. 873-882.

<sup>2</sup> Report of Board of Mediation and Arbitration, 1899, p. 13.

often in such cases conferences have been arranged, through mediation, at which mutual concessions were made and agreements reached, thus accomplishing practically the same result as would have been reached at the outset by arbitration.

"In instances where both mediation and arbitration have failed to bring about a restoration of harmonious relations, the board has instituted inquiries through one or more of its members, at the conclusion of which its recommendations have been accepted and the trouble terminated. The strikes of laborers in Rochester, knitting-mill employees in Cohoes, match packers in Oswego, tailors in Troy, silver platers in Niagara Falls, tile layers in Syracuse, molders in Depew, garment workers in Binghamton, silk weavers in New York, molders in Lockport, and others of more or less importance, all of which are referred to in detailed statement of strikes and lockouts in this report, were settled in this manner.

"The power to investigate is used only as a last resort, as a means of getting at the cause or causes of the controversy, and with a view to making such recommendations as in the judgment of the board are best calculated to end the dispute with fairness to both sides. During the year 6 public investigations were held, and in 3 of these the recommendations of the board at the conclusion were accepted and harmony restored, and that after any settlement whatever seemed impossible owing to the uncompromising attitude assumed by one party or the other at the outset and the bitter feeling that naturally followed as a result. In another case a settlement of the matter in dispute was reached during the progress of the investigation, and in the 2 remaining cases the investigations were not without results the testimony in each enabling the board to make recommendations which properly carried out would tend to prevent a recurrence of the trouble in the establishments struck."<sup>1</sup>

*Information as to strikes.*—The New York board of mediation complains of the difficulty of securing information of the existence of strikes, and continues:

"It is for this reason that every facility for obtaining prompt and accurate information of labor disturbances should be furnished the board. A step in the right direction would be the incorporation into the New York State law of the provision of the Massachusetts and Ohio arbitration laws which requires the chief executive of towns and cities to promptly furnish the board information of the occurrence of a strike or lockout in his locality. Better still would be a law requiring an employer to promptly report to the board any strike in his establishment, with the cause or causes therefor; and the board is of the opinion that if the law could go even further and require an employer to give notice to the board of his intention to lockout his employees, giving the reason for his intended action, a sufficient length of time before taking the action, and likewise compelling a union or body of workmen to notify the board of their intention to strike before actually going on strike, the number of labor disturbances would be reduced to a minimum. There is no labor leader who will not tell you he is against the strike except as a last resort. It is not the policy of the more conservative unions to order a strike unless compelled to do so, and there is no employer who is not anxious to avoid a strike or refrain from a lockout in his establishment. That being admittedly so, why should not the employer, the employee, the union, and the labor leader welcome and give their unqualified support to such a line of action on their part that could but inure to their common good?"<sup>2</sup>

The New York State board of arbitration in its earlier reports, for 1897 and 1898, also recommended the amendment of the New York arbitration law by inserting a provision similar to that in Massachusetts, which requires the chief executive of cities and towns to forward promptly to the State board information of the occurrence of strikes or lockouts, or of danger of their occurrence.<sup>3</sup>

## OHIO.

1. *Statutory provisions.*—*Composition of State board of arbitration.*<sup>4</sup>—The governor, with the consent of the senate, is to appoint a State board of 3 members, 1 an employer or representative of an employer's association, 1 selected from some labor organization, and a third appointed upon the recommendation of these 2. The term of office is 3 years.

*Investigation on application of parties.*—The board is bound to take cognizance of any dispute between an employer who employs not less than 25 persons and his employees, upon application of either or both parties. The application must be signed by the employer, or by a properly ascertained majority of the employees

<sup>1</sup> Report 1899, pp. 11, 12.

<sup>2</sup> Report, 1899, p. 13.

<sup>3</sup> Report of New York State Board of Mediation and Arbitration, 1897, p. 14, 1898, p. 22.

<sup>4</sup> Act of March 14, 1893, act of April 27, 1896.

in the department affected, or by a properly chosen representative of such employees. It must contain the promise to continue without lockout or strike until the decision of the board, if made within 10 days. The names of the employees making or sanctioning the application are to be kept secret. The board shall make proper inquiry and report to the parties what, if anything, ought to be done to adjust the dispute. This decision shall at once be made public.

*Effect of decision.*—The Ohio law contains a somewhat unusual provision that a joint application by the parties for arbitration may contain a stipulation that the decision of the board shall be binding upon the parties to the extent stipulated, and that the decision may to that extent be enforced as a rule of court in the court of common pleas of the county.

*Investigation and mediation on initiative of board.*—Wherever it shall come to the knowledge of the board, by notice from the mayor or other local officer, or in any other way, that a strike is threatened, or has occurred, it is the duty of the board to communicate with the employer and employees and to try by mediation to effect a settlement, or to persuade them to submit the matters in dispute to arbitration. It is the duty of the mayor or other local officer to give notice of strikes.

The State board may, if it deems advisable, in default of other settlement, investigate the cause of the controversy and publish a report stating the cause and assigning the responsibility or blame. If no settlement has been reached because of the opposition of one party, the board must, on the application of the other, make such an investigation and report.

*Power to summon witnesses.*—The board of arbitration is not given an unlimited power to compel testimony, but is especially authorized to summon as a witness any operative affected or any person who keeps the records of wages, and to require the production of books and papers containing the records of wages earned or paid.

*Compensation of State board.*—Five dollars each per day, and expenses.

*Local boards of arbitration and conciliation.*—The parties to any controversy may agree to submit their dispute to a local board, the composition of which may either be mutually agreed upon, or the employer may designate one member, the employees another, and the two may select a third, who shall be chairman. This board shall have all the powers of the State board, and its jurisdiction is exclusive, although it may ask advice of the State board. The decision is binding to whatever extent may have been agreed upon by the parties in making the submission. These local arbitrators are paid by the town or county \$3 per day, not exceeding 10 days for any one arbitration.

**2 Work of the Ohio board.**—The annual report of the Ohio State board of arbitration for 1898 contains a statistical summary of the work of the board for the 6 years from 1893 to 1898, inclusive. According to this statement the number of strikes and lockouts in which the board has intervened during the various years has been as follows: 1893, 10; 1894, 11; 1895, 12; 1896, 11; 1897, 19; 1898, 17. The total number for the 6 years is 83, of which 38 had to do with reduction of wages; 21 with demands for advance in wages; 7 with refusal to recognize unions; 5 with refusal to reinstate discharged men, and 12 with other causes. According to this statement 68 of the strikes and lockouts had been settled, and 15 remained unsettled. By this it is not meant, however, that settlements were effected by the action of the board of arbitration in all the cases enumerated.

The statistical material thus given may be supplemented by a study of the specific cases in which the board has taken action, as described in its annual reports, from which the following table has been prepared, which includes also the figures for 1899:

*Work of Ohio State board of arbitration, 1893-1899.*

	1893	1894	1895	1896	1897	1898	1899	Total
Total number of cases .....	7	10	12	13	19	17	11	89
Arbitration by joint agreement ..				1				1
Recommendation on formal investigation .....	3	3						6
Mediation .....								
Successful .....		2	6	7	5	8	7	35
Unsuccessful .....	3	4	6	5	11	9	3	44
Joint applications .....				1				1
Applications by one party ..	3	2	2	2	2	1	1	14
Local arbitration .....	1	1					1	3

The number of cases does not agree exactly in each year with that stated by the board, probably owing to the fact that certain unimportant cases are not described in detail in the annual reports. It will be seen that the number of cases in which the board has interested itself has ranged from 7 in 1893 to 19 in 1897. During the 7 years the total number of cases in which the board has taken action, more or less important, is 89. It is noteworthy, however, that in only one of these cases has there been a formal decision on the basis of a joint agreement of the parties to submit to arbitration. Moreover, in only 6 cases, and those all occurring during the first 2 years of the board's activity, has it, on the application of one of the parties to a dispute, made a formal investigation and recommendation to the parties. In two of these instances the employers refused to accept the terms recommended. By far the greater number of cases are those in which the board has simply mediated, by bringing about conferences between the parties, or by attempting to bring them about. Of the 89 instances of such mediation it appears from the reports that about 35 were settled, which probably would not have been settled, or would not have been settled so soon, except for the intervention of the board. Among the cases counted as unsuccessful, however, are included not a few where the controversy proved to be one not within the jurisdiction of the board, or where the difficulty was settled before the board had opportunity to take any active part. Probably in more than half of the cases in which the board has actually taken steps to bring about an agreement, its efforts have been rewarded with a greater or less degree of success. It is, of course, impossible to determine what proportion of these disputes might have been settled sooner or later without the intervention of the board.

In most cases of mediation the Ohio State board has acted either upon its own initiative or after notification of strikes by the mayors of cities, as provided by law. In only 12 instances during the 7 years has either party to a dispute applied in the first instance for the good offices of the board. In fact, taking all circumstances into account, it does not appear that the board has commended itself greatly to either workmen or employers, or that its services have exercised a very important effect on industrial relations.

The provision of the Ohio statute permitting the settlement of disputes by locally chosen arbitrators has been availed of in only 3 instances—in 1893, 1894, and 1899, respectively. In each of these cases, however, this method resulted in a satisfactory settlement of important and serious difficulties.

*Brown Hoisting Works strike.*—The action of the Ohio State board in the strike of the Brown Hoisting Works at Cleveland in 1896 illustrates its method of work and the importance of the results sometimes accomplished. In that case the invitation to the board to intervene came from the mayor of Cleveland on June 25, 1896. The company had some time before locked out about 800 men. The dispute had to do largely with the recognition of the committees of the men and of the International Association of Machinists. The secretary of the board endeavored to persuade the employers to meet the president of the International Association of Machinists in conference, but they at first refused to do so. The board of arbitration itself met at Cleveland on July 1 and made repeated efforts to persuade the company to confer with the men, or to submit the difficulty to a local board of arbitration, but in vain. Meantime there was a growing tendency to lawlessness on the part of the strikers, and two deaths resulted. On July 14 the strikers filed an application with the board, asking it formally to investigate the grievances, and after giving notice to the company a hearing was instituted, both parties being represented in person and by counsel. During this hearing the president of the company expressed a willingness to confer with representatives of the men, with a view to reaching a mutual agreement. The men selected for this purpose by the company, however, were nonunion men, so that naturally no agreement with the striking union workmen was brought about. The board, however, held various conferences with the parties separately, and finally, on July 27, the company, through the board, submitted to the men a proposition offering to take back the former employees as rapidly as possible, to deal with each individual with regard to employment, and to give proper consideration, first by the foremen and afterwards by the superintendent and manager, to all grievances or complaints. This proposition was accepted by the men and the long strike was brought to a close, the militia who had been summoned to preserve order being withdrawn.<sup>1</sup>

*Coal-mining disputes.*—The Ohio State Board of Arbitration has also taken a somewhat active part in endeavoring to settle the recent extensive difficulties in the coal-mining industry. During the great strike of 1897, in which more than

<sup>1</sup> Report Ohio State Board of Arbitration, 1896, pp. 119-129.

100,000 miners were involved, the board gave fully six months of its time to investigation and to endeavors to bring about a settlement. For this purpose it cooperated with the boards of arbitration of Illinois and Indiana, going outside of the State, especially in order, if possible, to bring about an agreement between the coal operators and miners of the Pittsburg district, upon which it was believed that the general settlement of the strike in all the States depended. It was in part through the efforts of these boards, acting jointly, but more particularly of the Ohio board, that conferences between the coal operators and the miners were held at Pittsburg and at Columbus, the latter resulting in an agreement which finally settled the strike. The Ohio board also claims to have had considerable influence in bringing about an agreement between the coal operators of the Pittsburg district to establish a uniform rate of wages and uniform conditions of employment in all the mines of the district, an agreement which went into effect January 2, 1898, but which was superseded by a later more general agreement between the United Mine Workers of America and the operators of the leading coal States.<sup>1</sup>

*East Liverpool potteries strike, 1899.*—On October 31, 1899, through the public press, the attention of the board was called to a strike of several hundred girls employed in the potteries at East Liverpool. Telegraphic communication with the mayor disclosed the fact that 300 biscuit warehouse girls were on strike for higher wages. The strike of the warehouse girls involved all the potteries in the city, caused all other departments of the works to suspend operations, tied up the entire pottery industry in the vicinity, and threw about 7,000 hands out of employment.

The secretary arrived at East Liverpool Wednesday, November 1. The mayor placed the secretary in communication with the officers of the Federal Labor Union, No. 7696, of the American Federation of Labor, to which the girls belonged.

They explained that previous to the strike certain firms paid the girls 75 cents per day; that for a long time previous to the strike a feeling of discontent prevailed among the girls and a general desire was manifested by them for an increase in wages.

The same evening the representative of the board attended a meeting of the manufacturers and explained to them the various features of the law, the duties and powers of the board, urged the importance of a prompt and fair settlement, and requested the appointment of a committee to meet a similar committee from the girls' organization, with a view of adjustment. The employers cheerfully agreed to his request and selected a committee with full power to act.

This committee stated to the board that it was not informed as to why the girls ceased work; that not a single firm had been notified that the girls had any grievance or that they desired any change in the pay or conditions of work, or intended to go on strike; that they were not aware of any dissatisfaction existing among the girls, and that, if they had any reasonable cause for complaint and would have made the matter known, their grievance would have been considered and properly adjusted without the loss of wages or business.

On Thursday, November 2, the secretary attended a mass meeting of the girls and prevailed on them to select a committee to wait on the manufacturers, make known their grievance, and take such steps as might be necessary to secure a speedy and amicable settlement.

On Friday morning, November 3, the two committees met as per agreement, each having authority to negotiate a settlement. The meeting between the representatives of the manufacturers and the girls was of the most cordial nature and gave promise of a prompt settlement.

The conference was of short duration; the girls presented their claim for an advance in wages that would give to each a uniform price of \$1 per day in all the potteries. After consideration the manufacturers stated that, in their judgment, the girls were entitled to an advance. However, they considered the demand for an advance of 33½ per cent unreasonable and beyond their ability to pay. They desired to deal fairly with their employees in the matter of wages, and proposed to pay an advance of 16½ per cent, or 12½ cents per day. This proposition was not at first acceptable to the girls, who contended for \$1 per day. Being desirous, however, for a speedy resumption of work, they yielded their objections and accepted the proposed advance, it being mutually agreed that all potteries should resume work on Saturday morning, November 4, and that all the girls should return to their situations without prejudice.

<sup>1</sup> Report Ohio State Board of Arbitration, 1897, pp. 6, 28-31

3. *Opinion of Ohio board as to its work.*—The following quotations are from the official reports of the Ohio board.<sup>1</sup>

Report of the State board for 1893, 1894, 1895, and 1896, pp. 65, 66, 81.

"The meeting together in a conciliatory spirit of the representatives of both capital and labor is the surest and best method yet discovered of preventing great loss and injury, not only to themselves, but to the general public, and the highest social and Christian duty demands that such methods of conciliation be sought and employed, or that the matters in dispute be referred to third parties for arbitration, if in any way possible to do so.

"It is always a source of satisfaction when these destructive contests are ended, but just at this time when labor generally is suffering on account of insufficient employment it is hoped the ranks of the unemployed will not be swelled by the inability of employers and employees to govern themselves by reason.

"Differences arise which are permitted to become disputes, and finally lead to a strike or lockout which almost invariably ends in one or both parties making concessions in order to settle the controversy.

"Would it not be good policy, wise and humane, for both the men who have the money, and the men who work for it, to make the concessions when the difference is first presented, or, at least, before a strike or lockout is inaugurated, and thus save themselves and the community from the disastrous consequences that so frequently attend these movements?"

"By reference to the statement of cases the board has acted upon during the 18 months that have elapsed since its organization, it will be seen that labor people generally are friendly to the law authorizing arbitration, and have invoked it in the settlement of differences much more frequently than employers. It is pleasing, however, to note that many employers have shown the same commendable spirit in dealing with their employees and encourage any movement or influence that promises relief from strikes or lockouts.

"When either party to a controversy applies for arbitration, either to the State or a local board, it would be better for the opposite party to unite in the application and lend their aid to the work in order that the investigation may be full and complete, and the conclusions arrived at fair and just to all concerned.

"While the members of the board are keenly conscious of the futility of their labors in some cases, and of disappointments and dissatisfaction attending them in others, yet they have, they hope, a pardonable satisfaction in knowing that considerably more than half the cases and in all the more important ones with which they have had to deal, amicable adjustments of labor disputes have followed their intervention, and that in no instance of a strike or lockout confined to this State since the organization of the board has it become necessary, be it said to the great credit of the contestants, to invoke the aid of the civil authorities to maintain the peace and preserve public order. We should be glad did our experience lead us to believe that such would continue to be the case; but the near approach to a condition requiring the services of the militia in a couple of instances forbids the expression of strong confidence in this respect. We may say in this connection that we are glad to note the growth of sentiment among both employers and employees in favor of the peaceable settlement of labor troubles within themselves. They are fast finding out that in every labor controversy there is always a reasonable way of adjustment which the parties concerned by intelligence, patience, and forbearance can find out."

Report of 1897, p. 8: "Before concluding this report we desire, briefly, to record some of the results of our observations of the operations of official arbitration in the name and by the authority of the State. Where controversies have arisen between employers and employees the agitation of the subjects of supposed grievances has been almost entirely *ex parte*. Each contending party has heard only his own side discussed, and the more that discussion has been prolonged the stronger each becomes in the conviction that he is right. As a rule neither has ever heard a fair statement of the other's views or theory of the contention. Thus they become more and more widely separated until, except along the cold hard lines of business routine, they have no more dealing with each other than the Jews had with the Samaritans. The advent of the official peacemakers of the State among them furnished about the first and only occasion for each to hear the case and complain of the other. The presence of the State conciliators, wholly unbiased and unprejudiced between the contending parties, invariably tends to temper and subdue the hostility and diverse convictions which have long been a barrier to conciliation and peace. When each has heard fully from the other for the first time, moderation and a hope of final peace supervene, and then the work

<sup>1</sup> See also testimony of Mr. Joseph Bishop, Reports of Industrial Commission, vol. VII, pp. 168-181.

of the board is easy. In a majority of cases these conditions are present. It is the State asserting her strong desire for and her vast interest in industrial peace which finally achieves that great public good, the accomplishment of which it is our pride and pleasure to record.

#### PENNSYLVANIA.

**Statutory provisions—Local boards.**—The Pennsylvania law<sup>1</sup> on its face provides for a system of compulsory arbitration upon the initiative of either party with compulsory enforcement of decision. In practice, however, no use whatever has been made of these provisions of statute.

The law declares that either party or both parties to a labor dispute may make application to the court of common pleas of any county to appoint a board of arbitration. The court, if in its judgment the matters are of sufficient importance, may order each of the parties to select 3 citizens to serve as members of a board of arbitration, and the court shall appoint 3 more who are not directly connected with the interests of either party. In case either party refuses to make the appointment the court may select 6 persons.

The board of arbitration thus constituted has power to send for persons, books, and papers, and any person refusing to obey its orders is guilty of a misdemeanor.

After giving each party such hearing as it chooses to demand, the board shall render a decision which shall be final and conclusive as to all matters brought before it. There are no definite provisions, however, regarding the enforcement of the decision upon the parties.

The compensation of the members of these local boards is paid out of the treasury of the county.

#### TEXAS.

**Statutory provisions—Local boards.**—Texas has an act<sup>2</sup> providing for local boards of arbitration. The act is very nearly identical with that of Pennsylvania, but, as in Pennsylvania, no use apparently has ever been made of it. The act is entirely voluntary, merely regulating the method of organization in case employers and employees see fit to establish boards and to secure a license from the district judge. The parties must agree to abide by the awards for a period of one year. A copy of the award is to be filed in the office of the district court, and it becomes enforceable as a judgment of the court. The law, however, contains no specific provision regarding fines and penalties, or other methods of actual enforcement.

#### UTAH.

**Statutory provisions—Composition of State board of arbitration.**—The governor, with the consent of the senate, is to appoint a State board of 3 members, 1 an employer or representative of an employers' association, 1 selected from some labor organization, and a third who is neither employer nor employee. Not more than 2 may belong to the same political party. The term of office is 4 years.

**Investigation on application of parties.**—The board is bound to take cognizance of any dispute between an employer who employs not less than 10 persons and his employees, upon application of either or both parties. The application must be signed by the employer or by a properly ascertained majority of the employees in the department affected, or by a properly chosen representative of such employees. It must contain the promise to continue without lockout or strike until the decision of the board is made, if made within 3 weeks. The board shall make proper inquiry and report to the parties what, if anything, ought to be done to adjust the dispute. This decision shall at once be made public.

**Effect of decisions.**—In Utah there is no fixed limit for the duration of the binding effect of the decision of the State board, but it continues in force until either party gives notice of its intention not to be bound after 90 days from the date of notice.

**Power to summon witnesses.**—The board of arbitration is given general power, such as that of a court, to summon witnesses and require the production of books and papers.

**Investigation and mediation on initiative of board.**—Wherever it shall come to the knowledge of the board that a strike is threatened, or has occurred, it is the duty of the board to communicate with the employer and employees and to

<sup>1</sup> Act of May 18, 1893.

<sup>2</sup> Laws of 1895, page 379.

<sup>3</sup> Laws of 1901, approved March 14.

try by mediation to effect a settlement, or to persuade them to submit the matters in dispute to arbitration.

*Compensation of board.*—Three dollars per day, to be paid by the parties to the dispute; also expenses, to be paid by the State.

*Work of State board.*—The following extract from a recent letter of the chairman of the Utah board (dated July 5, 1901) shows that its work as yet has been confined to conciliation, and apparently has not been very extensive:

This board was organized in 1897. It has nothing of any consequence to report. The only labor difficulty of moment that has occurred since the board came into existence was the strike, in January of the present year, of a large proportion of the employees of the Pleasant Valley Coal Company, the owner of an extensive group of mines. The strikers applied for arbitration. They, however, declined to conform to the provision of the law which required them to first resume their relations with the company, unless the latter would pledge itself, in that event, to join in the application for arbitration and not to discriminate against individual employees. The company refused to stipulate, in advance, what it would do. The difficulty was, however, of brief duration, as the employees soon returned to work, without condition.

Up to date the chief function of the board has been to produce conciliation between the parties to any labor dispute, when a rupture appeared to be imminent. In this direction it has been gratifyingly successful.

The mass of the people of Utah are opposed to lockouts and strikes. This strong popular sentiment has kept the State free from serious labor disturbances.

### WISCONSIN.

**1. Statutory provisions:**—*Composition of State board of arbitration.*—The governor, with the consent of the senate, is to appoint a State board of 3 members, 1 an employer or representative of an employers' association, 1 selected from some labor organization, and the third appointed upon the recommendation of these 2. The term of office is 2 years.

*Investigation on application of parties.*—The board is bound to take cognizance of any dispute between an employer who employs not less than 25 persons and his employees, upon application of either or both parties. The application must be signed by the employer or by a properly ascertained majority of the employees in the department affected, or by a properly chosen representative of such employees. It must contain the promise to continue without lockout or strike until the decision of the board is made, if made within 30 days. The names of the employees making or sanctioning the application are to be kept secret. The board shall make proper inquiry and report to the parties what, if anything, ought to be done to adjust the dispute. This decision shall at once be made public.

*Effect of the decision.*—Where both parties are joined in an application for arbitration the decision shall be binding on them for 6 months, or until either gives notice of 60 days for its termination.

*Expert assistants.*—If the parties desire, each may appoint one person to act as an expert assistant to the State board in its investigation. These persons shall be familiar with the business affected. They shall obtain information concerning the wages paid and the methods prevailing in similar establishments within the State. They shall be paid \$7 per day and expenses.

*Power to summon witnesses.*—The board of arbitration is not given an unlimited power to compel testimony, but is specially authorized to summon as a witness any operative affected or any person who keeps the records of wages, and to require the production of books and papers containing the records of wages earned or paid.

*Investigation and mediation on initiative of board.*—Wherever it shall come to the knowledge of the board, by notice from a mayor or other local officer, or in any other way, that a strike is threatened or has occurred, it is the duty of the board to communicate with the employer and employees and to try by mediation to effect a settlement, or, provided that a strike or lockout is not actually in force, to persuade them to submit the matters in dispute to arbitration. It is the implied duty of mayors or other local officers to give notice of strikes.

The State board may, if it deems advisable, in default of other settlement, investigate the cause of the controversy, and publish a report stating the cause and assigning the responsibility or blame.

*Compensation of State board.*—Five dollars each per day and expenses.

*Local board of arbitration and conciliation.*—The parties to any controversy may agree to submit their dispute to a local board, the composition of which may either be mutually agreed upon, or the employer may designate one member, the employees another, and the two may select a third, who shall be the chairman. This board shall have all the powers of the State board, and its jurisdiction is exclusive, although it may ask advice of the State board. The decision is binding

<sup>1</sup> Laws of Wisconsin, 1895, ch. 364.

to whatever extent may have been agreed upon by the parties in making the submission. These local arbitrators are paid by the town or county \$3 per day, not exceeding 10 days for any one arbitration.

**2. Work of Wisconsin State board.**—The Wisconsin State board of arbitration and conciliation was organized in July, 1895. During the first 18 months of its work, covered by the first biennial report, the board was comparatively inactive. It reported only 3 cases of any importance in which it had intervened, in 2 of which its efforts at mediation were unsuccessful. By a recommendation of the board the law was amended so as to give it added powers of investigation and mediation on its own initiative, and so as to provide that requests for the services of the board should be addressed to the governor of the State. Doubtless, owing in part to these changes and in part to greater familiarity of the board with its duties, the report for the years 1897 and 1898 shows more accomplished than in the preceding period. There are 22 cases described in which the board mediated. In 17 of these its efforts appear to have been instrumental in bringing about an agreement or in hastening an agreement. It is noteworthy that no cases of formal arbitration and decision by the board are reported, although in one instance the board made a formal investigation at the instance of one of the parties and reported its findings and recommendation.

**3. Opinion of Wisconsin board concerning its work.**—In our report of January 2, 1897, the board recommended that certain changes in the law creating and governing this board be made.

"In compliance with such recommendations the legislature of 1897 amended the law by making it the duty of this board to take cognizance of any threatened labor trouble. By so doing, the board were enabled in many instances to bring about a settlement between employer and employee before their differences had reached the serious culmination of a strike or lockout.

"Since the date of our last report the board have been successful in a great many instances in preventing strikes, by inducing employees to defer or modify their demands for increase of wages or changes in conditions governing their employment. In several disagreements the services of the board have been requested by one or both parties to the controversy, or, as provided by law, by some civil official resident in that locality. However, this has not been done in as many instances as the board could have desired. By far the great majority of cases in which the board have interested themselves have been taken up through information received from the daily press. In such cases the board have promptly proceeded to the place where the trouble existed and tendered their services to both parties in controversy. While in some cases its friendly offices have been accepted, it has been necessary in others to bring about the desired result by persistent effort on our part to induce the persons most interested to meet and in a friendly manner attempt by mediation to adjust their differences. In many such cases, even though the board has not been called in by either party, after an explanation of the position of the board in these matters, one or both have been willing to submit the points in dispute for arbitration.

"The controversies of which the board has had cognizance during the 2 years included in this report involve more or less directly employees whose yearly earnings are estimated at \$2,779,500. The total amount of earnings under ordinary conditions of the corporations, factories, etc., involved, it is estimated, would amount to about \$9,500,000. The total expenses incurred by the State board of arbitration from September 30, 1896, to September 30, 1898, covering the 2 fiscal years, are \$1,578.27.<sup>1</sup>

## WYOMING

**Constitutional provisions.**—The constitution of Wyoming provides that the legislature shall establish boards of arbitration, whose duty it shall be to hear and determine all differences between employers and their workmen. Appeals from the decisions of such "compulsory boards of arbitration" may be taken to the supreme court.

The legislature of Wyoming has as yet not carried out this provision of the constitution.

## CHAPTER IV.

### CONCILIATION AND ARBITRATION IN GREAT BRITAIN.

---

#### I. GENERAL SUMMARY.

Probably in no other country, excepting New Zealand, has so great progress been made in the direction of securing peaceful relations between employers and employees as in Great Britain. This is doubtless largely due to the fact that the workmen in that country are so thoroughly organized, as has already been brought out in the summary. The organizations of workmen, moreover, find themselves confronted in many trades by strong organizations of employers. Owing to the strength of organization on each side industrial disputes, when they occur, are likely to be more prolonged and serious than elsewhere, and they are accordingly avoided so far as possible by each side. The respective organizations are well fitted, also, through their experienced officers, for conducting negotiations, while their strength also increases the responsibility of both sides and makes the decisions of arbitrators, or the mutual agreements reached, more binding.

The efforts at peaceful adjustment of labor difficulties in Great Britain have been mainly confined to private agencies. While there has been for many years legal provision for arbitration, comparatively little has been accomplished through public intervention, although the new act of 1896 has had some measure of usefulness.

It can not be said that Great Britain has worked out a single system for regulating the relations between employers and employees which is to be considered as the typical or the best system. In different trades widely different methods have been resorted to with success, while methods which have proved satisfactory in some trades have failed when the attempt was made to apply them in others. The character of the system adopted and the success of its working depends upon the strength of the respective organizations of workmen and of employers, upon their spirit toward one another, upon outside influences, such as foreign competition, affecting the trade, and upon many other circumstances.

In addition to the trade systems of conciliation and arbitration in Great Britain there have been established in various cities what are known as district boards of conciliation, often under the auspices of the municipal council or of the board of trade. Their work has proved hitherto of relatively little importance.

In a number of instances, moreover, trade disputes in Great Britain, especially those of a prolonged character, have been settled through the intervention of some outside person. Although no formal previous agreement with reference to arbitrators may exist in a trade, the parties to a prolonged dispute may of their own initiative agree to refer it to some prominent man as arbitrator. In other instances such a man takes the initiative himself, invites the parties to a conference, and mediates between them, probably more often bringing about a mutual agreement than himself prescribing the terms of settlement.

Below is presented a table showing what has been accomplished in recent years in the settling of strikes and lockouts by means of arbitration and conciliation in Great Britain. It must be borne in mind that this table refers only to the settlement of disputes which have actually resulted in cessation of work. Further on is given a statement of the work of joint boards and other agencies in settling disputes which do not reach the point of causing the stopping of work. The latter

phase of the working of these systems is beyond question by far the more important.

*Settlement of disputes by conciliation and arbitration—Great Britain.<sup>1</sup>*

Number of strikes settled—	1894	1895	1896	1897	1898	1899	Total
<b>B. trade boards</b>

	5.6	22.5	15.5	8.4	7.7	6.3	10.9

246,400 in one strike of boot and shoe workers.

This table shows that the total number of strikes settled by means of arbitration and conciliation during the 6 years from 1894 to 1899 has been 253. The average number yearly was, thus, 42, and in fact the actual number for each year has been very near that figure. The number of cases settled by conciliation during this period has been 142, and the number settled by arbitration 111. It is noteworthy, however, that the proportion of cases settled by conciliation has generally increased from year to year.

The total number of strikes which occurred in Great Britain during the 6 years in question was 4,881, so that a trifle over one-twentieth of the number have been settled by arbitration and conciliation. It is noticeable, however, that the proportion of persons affected by strikes and lockouts which have been settled by these peaceful means is 10.9 per cent of the number affected by all strikes. The proportion of persons affected by strikes settled in this manner, as compared with the persons affected by all strikes, has varied from 5.6 per cent in 1894 to 22.5 per cent in 1895. The large number in the latter year is explainable chiefly by the settlement of the great boot and shoe workers' strike through the intervention of Sir Courtenay Boyle.

If we compare the results brought about by the work of the joint trade boards of conciliation and arbitration with those secured by the intervention of individuals, we find an apparent superiority in the results accomplished by individual action. The total number of strikes settled by arbitration and conciliation under trade boards during the 6 years from 1894 to 1899 was 73, and the number of persons affected, 29,337. The total number of strikes settled by individuals was 154, and the persons affected, 108,929. It must be remembered, however, that the chief work of the trade boards is in preventing strikes rather than in settling them. There are few occasions for appeal by such boards to outside arbitrators; indeed, in only one-fifth of all the strikes settled by them during this period was formal arbitration resorted to. It is because these boards settle by conciliatory means so many disputes which do not amount to strikes that they are in a position

<sup>1</sup> Compiled from Reports of Chief Labor Correspondent on Strikes and Lockouts, 1894-1899.

to settle by this method, rather than by arbitration, strikes which actually do occur. On the other hand, of the strikes which have been settled by individuals the larger proportion have been the subject of formal arbitration rather than of conciliation or mediation. The large number of persons affected by strikes settled by individuals is partly explained by the fact that in 1895 one strike in which 46,000 persons were involved was ended in this way.

The table shows that comparatively little has been effected in the settlement of disputes by the various federated labor bodies, although these frequently provide machinery for arbitration, so far as the side of the employees is concerned. Only 6 strikes, affecting 838 persons, are reported to have been settled through conciliation or arbitration under the auspices of trades councils and federations during 1894 to 1899. Similarly unimportant as yet has been the work of district and municipal boards of conciliation, which have settled only 6 disputes, affecting 604 persons.

## II. STATE ARBITRATION IN GREAT BRITAIN.

**1. Early acts and their working.**—At the time of the investigation of the Royal Commission on Labor (1891) there were several acts of Parliament providing for arbitration of labor disputes, all of which have since been repealed and a new act, differing greatly in nature, adopted.

The first of these older acts, passed in 1821, provided for the settlement of labor disputes by 4 or 6 arbitrators, half representing the employers and half the workmen, all nominated by a magistrate of the district when both parties should apply therefor. Disputes as to the general rate of wages were expressly excluded from the jurisdiction of these boards. If the arbitrators could not agree they must refer the points of difference to the magistrate appointing them. The arbitration might be invoked on the application of either party, and the decision might be enforced by distress or by imprisonment.

In view of the increased practice of voluntary arbitration and conciliation a new act was passed in 1867, permitting masters and workmen to form councils of conciliation and arbitration, these boards, on being licensed by the Government, to have the same power of enforcing awards as the boards provided for in the act of 1821. The councils should be composed of an equal number of masters and workmen—not less than 2 nor more than 10 of each. These councils, like those provided for in the earlier act, had no power to establish a rate of wages.

An act of 1872 provided that masters and workmen might choose either members of a council or standing arbitrators and give them all the powers belonging to arbitrators under the act of 1821, their jurisdiction including, as the other acts did not, questions relating to wages. This appears to have been intended chiefly as an extension of the act of 1867 to include questions of wages.

The Royal Commission states that all the machinery provided by these acts, in spite of the frequent desire expressed for arbitration with enforceable decisions, seems seldom, if ever, to have been put in motion. Very few people were even aware of the existence of these acts. It does not appear that there had been a single application for the licensing of a council of arbitration or conciliation under the act of 1872.

**2. Recommendations of Royal Labor Commission.**—The Royal Labor Commission investigated very thoroughly the subject of conciliation and arbitration, and entered into an elaborate discussion of it in its final report, but was unable to agree in any important recommendations. The chief opinions expressed by the commission merit quotation.<sup>1</sup>

"We find from the evidence that the effect of the existing trade and district boards is highly beneficial in averting conflicts, but they are far as yet from covering the whole field of industry. We have thus been led to consider whether it would be possible by any legislation either to increase the efficiency of these institutions, or their number, or to supplement them by the creation under act of Parliament of boards of a similar character.

"In the first place, we have discussed the question whether it would be expedient to establish or to give to town and county councils power to establish industrial tribunals throughout the country with legal powers to hear cases arising out of existing and implied agreements, or depending upon the interpretation of trade customs, and to make enforceable decisions. \* \* \*

"Much of the evidence which was brought before us by witnesses from the less

<sup>1</sup> Final Report, Royal Commission on Labor, p. 56, also Appendix 3, by Sir Frederick Pollock, p. 3.

<sup>2</sup> Final Report, Royal Commission on Labor, secs. 291-307.

organized trades consisted of complaints of grievances of a highly technical character. \* \* \* It was difficult to ascertain in all cases how far these witnesses were really representative, but the prevalence of allegations of this kind leads us to believe that there does exist among those employed in many industries much discontent and dissatisfaction with the means which they possess of obtaining redress for real or supposed injustice. \* \* \*

"Upon this ground, therefore, there might be a plea for the establishment of special industrial tribunals qualified by the greater technical knowledge of those who should compose them to deal with questions arising out of particular conditions and trade customs.

"On the other hand, we have had to weigh the arguments (1) that in large and well-organized trades the workmen have already quite sufficient means of obtaining a remedy for grievances connected with existing or implied agreements or trade customs; (2) that in unorganized occupations, especially in the case of unskilled labor, a dispute on questions of this kind is more likely to be terminated by cessation of the engagement between an employer and workman than by a resort to any tribunal, however constituted, (3) that in the most important unorganized occupation, that of agriculture, such courts would not be useful unless they were very numerous, (4) that several previous acts, passed with a view to establishing industrial tribunals, with legal powers of trying cases arising out of existing contracts, have proved complete failures, (5) that in this country the only disputes which lead to serious actual conflict are those relating to the terms, not of existing, but of future agreements.

"Upon the whole we do not find ourselves able to recommend the systematic and general establishment of special industrial tribunals (in addition to the existing legal methods) for deciding the question arising upon existing agreements.

"We think, however, that though it would be unwise to institute any general system of industrial tribunals, there might be some advantage in an experiment of a tentative and permissive character in this direction. Local representative bodies have now been constituted in every part of the country, and it would be possible to give to town and county councils a power of taking the initiative in the creation of special tribunals for defined districts or trades, more or less after the pattern of the French *conseils de prud'hommes*. We do not contemplate the direct appointment of members of such courts by local authorities, and certain general statutory conditions would have to be laid down directed toward securing an equal representation in such courts of the various interests concerned and providing for a chief and summary method of procedure. \* \* \*

"A proposal has been made to confer upon the voluntary trade or district boards of conciliation powers similar to those possessed by ordinary courts of law in relation to disputes arising out of existing agreements. This course appears to us to be undesirable. Such success as these boards have achieved (and then success has been considerable) has, in our opinion, been mainly due to their purely voluntary character and to the fact that they have possessed no legal cohesive powers. \* \* \*

"In the case of the larger and more serious disputes arising with regard to the terms of future agreements, frequently between large bodies of workmen on one side and employers on the other, we have had to consider, in the first place, suggestions for the compulsory reference of such disputes to state or other boards of arbitration, whose awards should be legally enforceable. No such proposal, however, appeared to us to be definite or practical enough to bear serious examination.

"We have, in the next place, discussed a proposal to establish under act of Parliament district boards of conciliation and arbitration, the chief object of which would be to bring about the settlement of questions relating to future agreements. These boards might, it was suggested, be established either by a Government department or, as some think would be a better plan, by town and county councils, subject, perhaps, in that case to confirmation by some central authority. They would have statutory powers of intervening in trade disputes, in the interest of the public as well as that of the parties, of holding inquiries, and using necessary means of procuring information, and in cases where their intervention should fail to avert a conflict would publish reports which should serve to guide public opinion as to the merits of the contest. It was represented that such boards need not displace existing or future voluntary boards of conciliation, but would fill up the void space not covered by those voluntary boards, and would be especially useful in the case of small trades or unorganized workmen.

"On the other hand, we have had to consider that such boards, by whatever public authority they were established, would have an official character, and might, for that reason, be less popular and less resorted to than the present volun-

tary institutions, yet, at the same time, their presence might have the bad effect of arresting the growth of these institutions. Even if they did not injuriously interfere with the further development of boards of conciliation in large and well-organized trades, they would probably displace or at least check the extension of the district boards which are not limited to particular industries.

"We are of opinion that no central department has the local knowledge which would enable it to attempt with success the creation of such institutions, and that the intervention of local public authorities can not be usefully extended at present beyond the experimental action suggested above with regard to industrial tribunals to decide cases arising out of existing agreements.

"We hope and believe that the present rapid extension of voluntary boards will continue until they cover a much larger part of the whole field of industry than they do at present. This development seems to us to be at present the chief matter of importance, and it has the advantage over any systematic establishment of local boards of greater freedom of experiment and adaptation to special and varying circumstances. If at some future time the success of these voluntary boards throughout the country shall have become well assured, and if any success should attend the experiment previously suggested of giving to local authorities the power of initiating the formation of industrial tribunals, it may be found expedient to confer larger powers either upon voluntary boards or upon such industrial tribunals. But at the present stage of progress we are of opinion that it would do more harm than good either to invest voluntary boards with legal powers or to establish rivals to them in the shape of other boards founded on a statutory basis, and having a more or less public and official character.

"Although we are unable to agree in supporting any proposal for establishing, at the present time, any system of State or public boards for intervening in trade disputes, we think that a central department, possessed of an adequate staff and having means to procure, record, and circulate information, may do much by advice and assistance to promote the more rapid and universal establishment of trade and district boards adapted to circumstances of various kinds. \* \* \*

"We think that this difficulty [as to the selection of arbitrators] might in many cases be met if power were given to a public department to appoint, upon the receipt of a sufficient application from the parties interested, or from local boards of conciliation, a suitable person to act as arbitrator, either alone or in conjunction with local boards or with assessors appointed by the employers and workmen concerned, according to the circumstances of each case. We think that arbitrators thus appointed would be fairly free from suspicion of bias, and that, if the same persons were habitually appointed to act, and their services were frequently required, they would acquire a certain special skill and weight in dealing with industrial questions. Their decisions, however, would not possess legally binding effect any more than those of unofficial arbitrators in industrial questions. Possibly, if the plan proved successful and the work sufficient, such arbitrators might hereafter be made permanent, instead of temporary and occasional judicial officers."

**3. Opinion of labor members of Royal Commission on Labor.**—The labor minority of the Royal Commission doubted the advantage of resort to arbitration as distinguished from conciliation. They naturally opposed, accordingly, any system of State arbitration, nor did they favor even State mediation. They say:

"The only legislation relating to this subject that appears to be required is the grant of adequate power to the labor department to obtain the fullest possible information about the facts of every dispute, the actual net wages earned, the cost of living, the price of the product, the cost of manufacture, the salaries and interest paid, the employers' profits, and any other details that they may seem material. We recommend that the labor department should be given power to obtain these facts, voluntarily if possible, but where necessary, by compulsory inspection of accounts, etc., in order that the issues between the contending parties may be impartially and accurately ascertained and put fairly before the combatants and the public. The great and increasing part taken by the press and public opinion in large industrial disputes, even to the extent of contributing large sums in support of one or the other party, not to mention the occasional intervention of the Government, renders the fullest possible investigation by a public department absolutely necessary in the interests of justice."

**4. Existing English statute as to arbitration, 1896.**—Notwithstanding the negative attitude of the Royal Labor Commission as to State arbitration, there continued to be a considerable amount of agitation on the subject. Various bills, some of wide-reaching scope, were proposed in Parliament. Finally in 1896 Parliament repealed all previous acts and in their place substituted the conciliation act of August 7,

1896 (59 and 60 Vict., chap. 30), which is now in force. As this act is brief it is here reproduced in full:

AN ACT to make better provision for the prevention and settlement of trade disputes [7th August, 1896]

Be it enacted by \* \* \* Parliament assembled, and by the authority of the same, as follows:

Any board established either before or after the passing of this act, which is constituted for the purpose of settling disputes between employers and workmen by conciliation or arbitration, or any association or body authorized by an agreement in writing made between employers and workmen to deal with such disputes (in this act referred to as a conciliation board), may apply to the board of trade for registration under this act.

The application must be accompanied by copies of the constitution, by-laws, and regulations of the conciliation board, with such other information as the board of trade may reasonably require.

The board of trade shall keep a register of conciliation boards, and enter therein, with respect to each registered board, its name, and principal office, and such other particulars as the board of trade may think expedient, and any registered conciliation board shall be entitled to have its name removed from the register on sending to the board of trade a written application to that effect.

Every registered conciliation board shall furnish such returns, reports of its proceedings, and other documents as the board of trade may reasonably require.

The board of trade may, on being satisfied that a registered conciliation board has ceased to exist or to act, remove its name from the register.

Subject to any agreement to the contrary, proceedings for conciliation before a registered conciliation board shall be conducted in accordance with the regulations of the board in that behalf.

Where a difference exists or is apprehended between an employer, or any class of employers and workmen, or between different classes of workmen, the board of trade may, if they think fit, exercise all or any of the following powers, namely:

1. Inquire into the causes and circumstances of the difference.

2. Take such steps as to the board may seem expedient for the purpose of enabling the parties to the difference to meet together, by themselves or their representatives, under the presidency of a chairman mutually agreed upon or nominated by the board of trade, or by some other person or body, with a view to the amicable settlement of the difference.

3. On the application of employers or workmen interested, and after taking into consideration the existence and adequacy of means available for conciliation in the district or trade and the circumstances of the case, appoint a person or persons to act as conciliator or as a board of conciliators.

4. On the application of both parties to the difference, appoint an arbitrator.

If any person is so appointed to act as conciliator, he shall inquire into the causes and circumstances of the difference by communication with the parties, and otherwise shall endeavor to bring about a settlement of the difference, and shall report his proceedings to the board of trade.

If a settlement of the difference is effected, either by conciliation or by arbitration, a memorandum of the terms thereof shall be drawn up and signed by the parties or their representatives, and a copy thereof shall be delivered to and kept by the board of trade.

The arbitration act, 1889, shall not apply to the settlement by arbitration of any difference or dispute to which this act applies but any such arbitration proceedings shall be conducted in accordance with such of the provisions of the said act, or such of the regulations of any conciliation board, or under such other rules or regulations as may be mutually agreed upon by the parties to the difference or dispute.

If it appears to the board of trade that in any district or trade adequate means do not exist for having disputes submitted to a conciliation board for the district or trade, they may appoint any person or persons to inquire into the conditions of the district or trade and to confer with the employers and employed, and, if the board of trade think fit, with any local authority or body as to the expediency of establishing a conciliation board for the district or trade.

The board of trade shall from time to time present to Parliament a report of their proceedings under this act.

The expenses incurred by the board of trade in the execution of this act shall be defrayed out of moneys provided by Parliament.

The masters and workmen arbitration act, 1824, and the councils of conciliation act, 1867, and the arbitration (masters and workmen) act, 1872, are hereby repealed.

This act may be cited as the conciliation act, 1896.

The significant features of the foregoing law, it will be noticed, are the official standing given to voluntary boards of arbitration and conciliation through registration, the keeping of records, etc., and the power given to the board of trade to create such boards where they do not exist, and itself actively to intervene where it deems such action advisable to determine the causes and circumstances of the dispute, and to take steps for its adjustment. No provision is made as to the enforcement of awards of arbitrators. The act scarcely goes as far as those in some of our American States.

The statute has scarcely been in force a sufficient length of time to enable a conclusive judgment to be made as to its effects. Moreover, the reports do not show precisely the methods which have been employed in the disputes which have been settled under the act; it is impossible to distinguish between the settlement of disputes by boards established voluntarily and registered under the act and settlement by the initiative of the department of labor itself. The total number of cases of strikes which were brought under the act during the 3 years from August, 1896, to July, 1899, was 67, of which 41 were settled and 26 failed of settlement. Of the cases settled 26 were by conciliation and 15 by arbitration. The total number of disputes settled by all agencies through conciliation and arbitration during these same 3 years was 128, from which it would appear that about one-third of the disputes which have been settled in a peaceable manner have been those under the act of 1896.

The following table shows the disputes acted upon by the British board of trade under the conciliation act from August, 1896, to June, 1899:<sup>1</sup>

Items	August, 1896, to June, 1897.	July, 1897, to June, 1899.	Total.
Disputes settled under this act			
By conciliation.....	14	12	26

### III. TRADE CONCILIATION—GENERALLY.

1. **Extent and effects of system.**—The system of peaceful negotiation directly between employers and employees has probably been more highly developed in Great Britain than in the United States. All the methods of negotiation, conciliation, and arbitration which have already been described as existing in the United States find their prototypes in Great Britain, and all of them have been more extensively and more successfully employed than in the United States. We find in Great Britain a very large number of cases in which the general conditions of labor, as well as minor matters, are determined by informal negotiation between individual employers or organized employers and labor organizations. In many instances joint written agreements are adopted establishing the conditions of labor for a given period. This is not only true with regard to particular cities and localities, but frequently such written agreements apply to large sections of a trade throughout the country. These agreements, whether local or more wide reaching, frequently provide for the settlement of minor disputes by joint committees, and quite often with appeal to an impartial arbitrator in case of failure to agree. In some cases these agreements provide for the sliding-scale system of wages. Finally, there are many instances in which formal and permanent boards have been established by organizations of employers and employees, whose duty it is either to determine the general conditions of labor or to settle minor disputes, or to perform both these functions.

In the preceding section we have summarized the work of the more formally organized boards of conciliation and arbitration in Great Britain as regards the settlement of actual strikes and lockouts. As was before intimated, however, the chief work of such boards always consists in preventing strikes and lockouts rather than in settling them. The same is true regarding less formal methods of negotiation between employers and employees. The strike is, after all, in Great Britain as in the United States, a comparatively rare form in which the system of collective bargaining manifests itself. The enormous importance of the various methods of peaceful negotiation between employers and employees in Great Britain may be judged by statistics published by the Labor Department, showing the number of changes in wages from year to year which are brought about by methods of negotiation and conciliation, as compared with changes resulting from strikes.<sup>2</sup> It appears that during the year 1899, 1,175,577 persons were reported as having had their wages changed. Of this number only 34,273 received changes in wages as a result of strikes and lockouts. No less than 97 per cent, accordingly, of all changes in wages took place without strike, by peaceful methods. The corresponding figures for the years 1896 to 1898 are given in the following table.

	Changes in rates of wages arranged							
	Without strike				After strike.			
	1896.	1897.	1898.	1899.	1896.	1897.	1898.	1899.
Number of work people.....	551,933	553,213	963,134	1,141,303	56,721	44,231	52,035	34,273
Percentage.....	91	93	95	97	9	7	5	3

<sup>1</sup> Bulletin U. S. Department of Labor, No. 28, May, 1900, p. 605.

<sup>2</sup> Report of Labor Department on Changes in Rates of Wages and Hours of Labor, 1899, p. xix.

It will be observed from this table that during recent years there has been a steady decrease in the proportion of wage changes in Great Britain which have taken place as the result of strikes. Apparently peaceful methods of negotiation are more and more supplanting such violent methods as the strike and the lockout.

The British statistics also distinguish between the number of wage changes which are brought about (*a*) by informal negotiation between the parties concerned (or more frequently between labor organizations and employers), (*b*) by the more formally organized joint boards and by mediation and arbitration by outside parties, and (*c*) those which take place automatically under the sliding-scale system. The following table shows the number of persons whose wages were changed by each of these methods from 1896 to 1899, together with the proportion coming under each head:

Agencies by which the changes in wages were arranged	Number of work people affected				Percentage number of work people whose wages were arranged by each agency			
	1896	1897	1898	1899	1896	1897	1898	1899
Parties concerned or their representatives.....	111,112	116,301	813,548	618,273	98	75	80	53
Conciliation boards, joint committees, mediation, or arbitration ...	60,254	15,322	32,571	379,285	10	2	3	32
Sliding scales.....	136,288	135,618	169,047	178,018	22	23	17	15
Total.....	607,654	267,141	1,015,166	1,175,576	100	100	100	100

It will be observed that, except during the year 1899, the wage changes taking place as the result of formal conciliation and arbitration were, comparatively speaking, few in number, ranging from 2 per cent to 10 per cent of the whole number. The exceedingly large figure for 1899, amounting to 32 per cent of all the wage changes, is chiefly due to general changes of wages made by the conciliation board in the federated coal-mining districts. The reason why the number of changes made by these formal boards is usually comparatively small is partly because, after all, these boards exist in comparatively few industries, and partly because, in many instances, their functions do not extend to the determination of the general conditions of employment, the general rate of wages, etc., but are limited to the settlement of minor disputes.

By far the greater number of wage changes, it will be observed, are those which result from informal direct negotiation between the parties concerned or their representatives. Changes made in this way range from 53 per cent to 80 per cent of the entire number. These changes, of course include those made by joint written agreement between employers and employee, where such agreements are not adopted by formally constituted permanent boards or by formal arbitration by outside parties.

Finally, a great many wage changes are made by the system of sliding scales. Under the sliding-scale system wages may naturally be expected to change more frequently than under any other system, so that the large numbers in the above table do not indicate that a correspondingly large proportion of the entire number of working people in the country are subject to the sliding-scale system. From 15 to 23 per cent of the entire number of wage changes during the 4 years named took place as the result of the operation of sliding scales.

**2. Written agreements as to conditions of labor.**—Unfortunately the British statistics above quoted do not permit us to ascertain what proportion of wage changes embody themselves in written agreements between employers and employees. We know from other sources, however, that the system of written agreements is even more widely developed in Great Britain than in the United States. The methods of adopting such agreements and their contents appear to be very similar in both countries. (For description of agreement system in the United States see Introduction, Chapter II.) The majority of such written agreements in Great Britain are local, being adopted by local organizations of workmen and either individual employers or associations of employers. In a few instances, however, these agreements cover much larger sections, or even virtually an entire trade. Some of them, as is pointed out below, are adopted by formally constituted joint boards of employers and employees of a permanent character. More frequently, however, they are informally adopted, although beyond question, in many instances, temporary joint committees, especially constituted for the purpose, hold more or less formal sessions in the adoption of these agreements.

The reports issued by the British Labor Department from year to year contain long lists of written agreements, some of them establishing time-work rates of wages and others establishing piecework scales. In the list of agreements establishing time wages, no less than 509 are mentioned for the building trades of England alone. The conditions of labor in practically the entire textile, boot and shoe, and glass trades are apparently determined by such joint written agreements, while in the coal-mining, iron and steel, engineering (machinery), pottery, tailoring, and various other trades these agreements are exceedingly common.<sup>1</sup>

**3. Joint wages boards and boards of conciliation.**—Special interest undoubtedly attaches to those more formal systems of conciliation and arbitration which have been established in many of the leading industries of Great Britain. While these systems have often been referred to by various writers, and are held up as models for adoption in the United States, it can not be said that any one definite form of organization or procedure has commended itself to employers and employees in Great Britain so as to stand forth preeminently. Moreover, these more formal methods of conciliation and arbitration do not apply to such a large proportion of the industries of Great Britain as is sometimes supposed. As the royal labor commission reported in 1894, they as yet cover only some of the more skilled trades where organization is most thorough. Even in the skilled trades it is still in England a comparatively exceptional thing that a trade or a section of a trade should have a joint board of employers and employees of a permanent character, and still more rarely is there provision for arbitration of questions on which the joint boards can not agree. The plan more usually adopted is that of special conferences between representative committees to settle general questions, minor and local questions being settled either directly between the individual employer and his employees, or between officials of different associations, or between trades-union officials and individual employers. Many of the most strongly organized unions appear to prefer these simpler methods to permanent joint boards.

One of the noteworthy facts regarding joint boards of employers and employees in Great Britain is this. That the organization of these boards is very general, established by permanent written agreement or constitution, while in the United States, as we have seen, the methods of organization and procedure are usual, left either to unwritten custom or are determined by the annual agreements regarding conditions of labor themselves. The constitution and rules of some of the joint boards of Great Britain, which are set forth more fully below, are highly elaborate and very interesting.

The great majority of the permanent joint boards of employers and employees in Great Britain are more or less local in their character. Notwithstanding the fact that conditions of labor in a country as small as Great Britain may, at least in many trades, properly be relatively uniform everywhere, we find only two or three instances in which these boards take on a national character. On the other hand, few of the permanent boards are small affairs. In general, they cover an entire trade in a city or in a district of considerable extent. Thus, while there are 5 or 6 separate boards of conciliation under various names in the coal-mining industry, each of these covers a very large number of mines.

In discussing the work of the formal boards of employers and employees in Great Britain, we must continually bear in mind the distinction already pointed out between two great classes of industrial disputes.

(1) Those arising out of the existing terms of engagement or contract between employers and employed, largely questions of interpretation, which are for the most part limited to particular establishments and of little importance.

(2) Those arising out of proposals concerning terms of future service. These are frequently of wide interest and affect large bodies of men.

Some of the joint trade boards in Great Britain undertake to settle both of these classes of disputes, but in other trades there are either distinct boards for each class or the one permanent board has to do with only one class of disputes, those of the other class being settled in some more informal manner. Joint boards whose work is confined mainly to settling either general conditions of wages for entire trades, or the particular rates in localities or individual establishments necessary to carry out the general provision, are often known as wages boards. Joint boards are known usually as boards of conciliation when they act chiefly upon minor grievances submitted by employers or employees under their jurisdiction.

<sup>1</sup>Report of Labor Department on Standard Time Rates of Wages, 1899, pp. 176-209; Report on Standard Piece Rates of Wages, 1900, pp. 290-304.

As to the nature and advantages of wages boards, the British Royal Commission on Labor has this to say:

"Wages boards" are to be distinguished both from mere occasional meetings or conferences between representatives or committees of employers and employed in a trade for the purpose of discussing wage rates or other points at issue, and from the joint committees which are frequently constituted in trades for the purpose of hearing and determining in a judicial manner questions arising between individual employers and those whom they employ. The object of a true wages board is to prevent conflicts by means of periodical and organized meetings of representatives of employers and employed for the purpose of discussing and revising general wage rates in accordance with the changing circumstances of the time. Thus a wages board fulfills the same purpose as a sliding scale, but does not pretend to adopt any automatic principle of regulating wages in exact accordance with prices. A wages board in this way avoids some of the difficulties which have frequently led to the failure of sliding scales. In some cases the two systems have been advantageously combined, and the principal business of a wages board has been the supervision and occasional revision of a sliding scale. Although the primary purpose of a wages board is the regulation of wages, it may also be made use of for the discussion of other general trade questions, and be, as it were, a parliament of the trade."

The joint boards of conciliation in Great Britain, whose chief function consists in the settlement of minor disputes, are more numerous than the wages boards and other boards which have more general powers regarding the conditions of labor. Many workmen and thoughtful economists are disposed to question the advantage of formal and permanent boards of conciliation for the determination of the general conditions of the labor contract. In many trades occasions calling for discussion as to the general conditions of labor are comparatively rare and a permanent board is less necessary. If a spirit of conciliation exists, the representatives of the parties can get together informally from time to time to readjust the terms of the labor contract. The chief advantage in having a formally constituted board, with power to determine these conditions, lies in the emphasis which it lays upon the thought that resort to peaceful methods is the thing to be expected. The machinery is at hand and refusal to use it becomes conspicuous or is even a direct breach of faith. If, however, boards having power to settle minor disputes exist, the spirit of conciliation is likely to be developed, and even though these boards have no control of general questions and though other boards having such control may not exist, yet it may readily become the rule for employers and employees to meet together in friendly conference when general questions arise. There certainly seems some weight in the contention of various British writers that it is undesirable to grant to the same body power to determine the general conditions of labor and to settle minor disputes regarding the interpretation of those conditions. (See further discussion on this subject, quoted from British writers below, pp. 484 ff. this volume.)

The following table shows for each year from 1894 to 1899 the number of these more formal trade boards of conciliation and arbitration and wages boards known to the labor department of the British Board of Trade, together with the working of the boards for each year.

*Work of trade boards of conciliation and arbitration, 1894-1899.<sup>1</sup>*

	1894	1895	1896	1897	1898	1899
Total number of boards . . . . .	64	68	83	77	69	53
Number reporting cases settled . . . . .	43	39	19	46	47	53
Cases submitted to boards . . . . .	1,733	1,282	1,451	1,465	1,320	1,232
Cases withdrawn or settled outside . . . . .	368	293	582	603	493	506
Cases settled						
By conciliation . . . . .	1,112	331	608	623	555	503
By arbitration . . . . .	223	158	205	186	220	172
Total . . . . .	1,365	989	813	809	775	675

It will be observed that there has been an apparent decrease in the number of existing boards from 83 in 1896 to 69 in 1898, although the number is still greater than in 1894. This apparent decrease, however, is due to the dropping from the

<sup>1</sup> Royal Commission on Labor, Final Report, secs 112, 115

<sup>2</sup> Compiled from Reports of Chief Labor Correspondent on Strikes and Lockouts.

list of all boards which properly never were of any considerable importance and which died a natural rather than a violent death. It is true that in no small number of instances joint boards have been broken up by the dissatisfaction on one side or the other or by the refusal to abide by their decisions. But this is not the history of most important boards which have once become thoroughly established.

The number of cases annually submitted to these boards from 1894 to 1899 has varied from 1,332 to 1,733. By far the greater number of cases, however, are confined to a few boards in the coal mining and boot and shoe industries, and most of these are relatively unimportant. Unfortunately, there is no way of distinguishing in the statistics as to the magnitude or the nature of the questions settled by the various boards.<sup>1</sup> Of the cases which have been brought before the boards each year from one-fourth to two-fifths are withdrawn or settled without final action by the board. The cases actually settled have decreased each year since 1894, ranging down from 1,365 to 675. This decrease, however, by no means indicates a decreasing importance in the work of these boards. It more probably shows that they have resulted in producing greater harmony, so that fewer disputes arise. About three-fourths have been settled by conciliation and one-fourth by arbitration. It is doubtless true that this distinction is hardly applied with exactness in some of the reports made by the various boards to the British labor department.

The system of conciliation and arbitration has been most fully developed in the mining trades, the iron and steel trades, the textile trades, and the boot and shoe trades. The relative importance of the work of the boards in the different trades may be judged somewhat roughly by the following table, showing all of the separate boards and the number of cases settled by them during 1899. It must be remembered, however, that the conditions in different trades vary greatly, so that perhaps a larger number of disputes might be expected to arise in some than in others, while in some trades the disputes are of such a character as to lend themselves more readily to adjustment by conciliation and arbitration than in others.<sup>2</sup>

<sup>1</sup> A general idea of the nature of the disputes brought before these boards may be gained from the following comment of the chief labor correspondent on the statistics of 1899 (Report of Chief Labor Correspondent on Strikes and Lockouts, 1899, p. liv).

"The number of cases is less than in 1898, when 775 were settled. On the other hand, the magnitude of the interests involved in the cases was probably greater, as they include readjustments of wages over the federation area and in Durham. The two boards in these districts, which were re-established in 1899, together control the wages of about 400,000 work people. The board for Northumberland, which was also re-established during 1899, did not effect any general change in wages before the close of that year. Negotiations for the formation of a conciliation board for the Scottish coal trade were in progress during the year, but the board did not come into operation until 1900.

"These boards, controlling the general level of wages, are entirely distinct from the local joint committees, of which those in Northumberland and Durham are the chief, whose function is the local readjustment of rates, with a view to bringing the wages paid to particular classes in individual pits into conformity with those generally paid in the county. The two committees referred to contributed between them 350 cases, or more than half the total number settled by all known permanent conciliation boards.

"Another large contribution to the total came from the boards in the boot and shoe trade, which disposed of 125 cases, mostly of a minor character, such as the classification of sample boots and materials.

"The boards on which employers, shipwrights, and joiners are represented, and which deal with questions of demarcation of work between the two trades, also disposed of a large number of minor cases. Permanent boards of this description are in existence in the Tyne district, at Stockton and Hartlepool, at Middlesbrough, and on the Clyde. These four boards settled 57 cases of disputed work during the year.

"So far as their conciliatory work is concerned, most of the boards in the iron and steel trades settle only questions at individual works, general changes in wages being settled by the sliding scale changes, and three advances were agreed upon during the year.

"Other general wages changes, settled by the boards or their arbitrators, affected house painters at Sunderland, plasterers at Reading and at Edinburgh, marine engineers on the northeast coast, iron founders on time wages in the same district, bedstead workers and cased-tube and stair-rod makers chiefly at Birmingham, tin-plate openers in Monmouth and South Wales, and checkers and pressmen at Northampton. The change in this last case, however, did not take effect until 1st February, 1900."

<sup>2</sup> Report of Chief Labor Correspondent on Strikes and Lockouts, 1899.

*Summary of the work of permanent boards of conciliation and arbitration during 1899, with comparative figures for 1898 and 1897.*

[Except where expressly stated in a footnote, the figures for 1899 represent the entire work of the boards. In a few cases the figures for earlier years only include cases of which the board of trade has received special information.]

**4. Sliding scales.**—In a few trades in Great Britain the system of sliding scales has been adopted for the determination of wages. These scales are often established in the first instance by wages boards or of joint boards of conciliation, but they provide for an automatic adjustment of wages thereafter according to some definite relation to the rise and fall of prices or to other elements affecting the prosperity of the industry. The trades in which sliding scales have been most satisfactory are the mining and iron and steel trades.

In connection with the study of individual trades given hereafter various wages boards and sliding scales are described, it being impossible to separate sharply between joint boards of conciliation and arbitration and boards which simply settle wage matters or establish sliding scales.

The following quotations from the final report of the Royal Labor Commission as to wages boards and sliding scales show very clearly the advantages and the difficulties of these arrangements.

As to sliding scales, the Royal Commission expresses the following opinion:<sup>1</sup>

"The advantages claimed for this system are (1) that it obviates disputes about wages, at any rate, during fixed periods; (2) that it promotes a feeling of co-partnership and common interest between employers and employed; (3) that it enables employers to calculate what will be the cost of production, in wages, for some time ahead, and therefore to enter into long contracts with some feeling of security; (4) that it causes alterations in the rates of wages to take place gradually and by a series of small steps, instead of suddenly and at a bound.

"The frequent failure of attempts to establish a permanent sliding scale seems to be chiefly due to the difficulties of agreeing on a basis price, many of which, however, are such as may gradually be removed as the real nature of the problem becomes better understood. A common difficulty in settling and revising the basis of sliding scales arises from one party or the other contending that other circumstances besides the average wages and selling prices for a preceding term of years should be taken into consideration, such as changes in the cost of material, or the state of the labor market, or the relative wages of men in other districts and like industries, or competition with other districts and countries. An experienced witness giving evidence on behalf of employers in the iron and steel trade thought that, in view of all this, it would never be possible to have a permanent sliding scale, based upon the price of the product apart from other circumstances, and that any sliding scale would require revision every few years. It also appears that workmen are apt to think that the sliding scale does not operate quickly enough to give them the full advantage of an upward movement of prices. It was explained that this feeling on their part is often due to the fact that the actual average prices which employers are getting frequently by no means correspond with the quoted market prices of the day, because in the coal trade employers have to make large contracts, as a rule, for 3 or 4 months ahead, and in foreign trade often much longer. It was explained by a witness of great experience that the dissatisfaction so often felt by miners with the operation of the sliding scale was due to the fact that the prices, inflated by speculation in a rising market, which they see quoted in newspapers, are usually much in excess of the real average price which is being obtained by coal owners, and represent merely the temporary value of a small part of the coal in the market, so that workmen are apt to think that, under a sliding scale, they do not get the full advantage of rising prices. The only remedy seems to be that there should be a joint standing committee of employers and employed, charged with the supervision of a sliding scale, and working upon frequent periodical reports made by accountants having full power to examine the books of employers, and that the workmen at large should implicitly trust their representatives, and delegate the fullest powers to them. All this implies a trade very highly organized in some respects.

"The system of sliding scales, so far as existing experience shows, is not applicable to all industries, but only to those in which, as in iron smelting, there is a certain simplicity in the product and steadiness in the cost of the raw material, or which, like coal mining, consist in the extraction of the raw material itself. It was represented that it would be very difficult to apply such a system to any complex manufacture in which the varying prices of the ingredient raw materials were a disturbing force in the cost of production. This is no doubt the reason why it has been introduced into so few industries. Even in coal mining, to which it seems specially applicable, it has had only a limited success. But representatives, both of employers and workmen in industries in which this system has been tried, agree that if a satisfactory basis to a scale could be arrived at the system would be one conducive to friendly relations and the good of the trade. It seems, however, to be desirable to notice at this point a fundamental objection taken by many workmen to the principle of a sliding scale, namely, that wages should determine prices and not prices wages. Objection is also made by some to any system of sliding scale which does not provide a minimum below which the wage rate is not to fall, on the ground that the cost of a certain minimum standard of life for the workers should be the first charge upon the produce of industry and should be maintained even in times of depression of trade. This appears to be the principle underlying the great struggle in the coal trade, which arose after we closed the evidence, and was described in that struggle as the maintenance of the 'living wage.' The establishment of a sliding scale is also objected to by some workmen on the ground that, while the scale lasts, it renders the chief work of the union superfluous and so weakens the organization by causing its members to withdraw from it."

<sup>1</sup> Final Report, Royal Labor Commission, sees 109-115.

#### IV. ARBITRATION AND MEDIATION BY OUTSIDE PARTIES.

An important distinction which must always be borne in mind in considering the English experience as to industrial disputes is that, already explained, between conciliation and arbitration. Although the words are frequently used as synonymous they properly stand for two very different practices. Boards of conciliation usually consist of an equal number of employers and employees, and their general function is to discuss and bring about agreements to which all the members consent.

Arbitration, on the other hand, implying a definite decision of disputes by some disinterested party, is naturally resorted to for the most part only after failure to bring about an agreement by conciliatory methods.

In a number of the trades in Great Britain which have permanent boards of conciliation the rules provide for the reference of such matters as can not be otherwise settled to an umpire or arbitrator. The practice is indeed much more common in Great Britain than in those trades in the United States which have adopted the conciliation and agreement system on a large scale. Even general questions relating to the future conditions of labor are occasionally referred to outside arbitrators. This is the case under such important systems as that in the manufactured iron and steel trades of the North of England, the mining trade in the federated districts, and the boot and shoe trade. By some of these agreements it is provided that such arbitrators are to be specially chosen for each dispute which arises; more often the arbitrator is agreed upon in advance and retains his position for many years. Arbitrators are usually prominent public men. In some cases they are actively engaged in industry. Thus, Sir David Dale was for many years the umpire in the manufactured iron trade. More often perhaps the arbitrator is a statesman or man of letters not engaged in industry.

In a few trades the decisions of these arbitrators have been frequently called for, but in a greater number of trades the occasions for action by them have proved rare, both sides being far from desirous to have the conditions of employment settled by an outside party. Indeed, it can scarcely be said that either workmen as a class or employers as a class strongly favor, as an ordinary practice, the calling in of persons from outside the trade to determine the relations of employers or employees. (See expressions on this subject below, p. 484ff.) While apparently the decisions of arbitrators once rendered have been carried out loyally, they have yet often been a source of discontent on one side or both.

So far we have been speaking chiefly of arbitration of disputes in advance of strikes and under previous agreement for their submission to such decision. In the absence of such formal arrangements for arbitration, the parties to particular disputes in Great Britain not infrequently submit them, before or after a strike or lockout has intervened, to impartial arbitrators. Indeed some very important strikes have been settled in this way. Either the disputants have agreed to submit to the decision of outside persons or the latter have themselves taken the initiative in offering mediation. The most remarkable case of this kind was that of the prolonged coal strike of 1893. So great was the public injury from the strike that Gladstone himself, then prime minister, urged the operators and owners to come to an agreement, and finally asked Lord Rosebery to act as the mediator. Through his social position Lord Rosebery was able to bring about a friendly conference between the representatives of the two sides and a mutual agreement was soon effected. Again, in 1895, a great strike in the boot and shoe trade was terminated largely through the mediation of Sir Courtenay Boyle, permanent secretary of the board of trade, and in 1896 Lord James, a cabinet minister, brought about a settlement of the strike in the Clyde and Belfast shipbuilding trades.

Other conspicuous instances of successful interventions of this kind were those in which a committee of distinguished persons terminated the London Dock strike of 1889, and in which the bishop of Durham brought to an end the miners' strike in that county in 1892. It has been not unusual for mayors of towns or other local authorities to offer this kind of intervention. Regular boards for the purpose of mediation have been established in a number of the larger industrial centers. These are more fully described below.<sup>1</sup>

<sup>1</sup> Webb, *Industrial Democracy*, I, 240.

## V. GENERAL BOARDS OF CONCILIATION AND ARBITRATION IN MUNICIPALITIES.

In several English manufacturing centers boards of conciliation, or perhaps more properly of mediation, have recently been established, usually more or less under the influence of the local board of trade, but sometimes apparently at the instance of the city government. Thus there is in Leicester what is known as the mayor's arbitration board, composed of men of entirely different trades. In connection with this general board individual boards of arbitration are provided for in the particular trades, with right of appeal to the higher board. In Bradford and Leeds boards have been established of a somewhat similar nature, under the leadership of the chamber of commerce. These boards, not resting formally upon agreements between employers and employees, have no final power unless disputes be submitted to them by common consent, and their general intention appears to be to bring parties to labor disputes into conference with one another.<sup>1</sup>

The number of these district boards of conciliation and arbitration is fully 20, but their activity has hitherto been very limited. The report of the British board of trade on strikes and lockouts scarcely mentions a single strike which has been settled by these boards during the past five years,<sup>2</sup> and the number of cases of minor disputes not resulting in strikes which have come before them is also insignificant. Nevertheless the movement is interesting, as showing the general desire for industrial peace, and doubtless it has had an influence in bringing about the establishment of trade boards in certain cases. In the opinion of the Royal Labor Commission "the system appears to be especially well adapted to places where a number of different industries are carried on, while trade boards of conciliation seem most suited to those staple industries which are carried on in special districts by large masses of men."<sup>3</sup>

The most important of these district boards of conciliation is the London Conciliation Board, which was a direct outcome of the great strike of dock laborers in London in 1889. It was organized at the instance of the London board of trade. Each of the leading groups of trades in the city has a separate conciliation committee, composed of an equal number of employers and employees, to which any dispute in the trade may be submitted, if both sides agree to do so, with provision for appeal to a central board composed of 12 members chosen by employers and 12 by employees, together with 1 representative of employers and 1 of employees from each body or trade in the city representing more than 1,000 persons. If this board can not reach an agreement, or if its decision is not accepted, it offers to the parties facilities for arbitration, although, of course, there is no compulsion upon them to arbitrate. It has been found that it is considered a sign of weakness for one contestant to appeal for the good offices of the board, so that its activity has chiefly been in the direction of mediation on its own initiative. The amount of work accomplished is therefore somewhat limited.<sup>4</sup>

<sup>3</sup> RULES AND BY-LAWS OF THE LONDON CONCILIATION BOARD.

### RULES

I. That a permanent body be constituted, to be called the London Conciliation Board, which shall be affiliated to the London chamber of commerce, and that its composition shall be as follows, viz:

- (a) Twelve members representing capital or employers to be elected by the council of the chamber
- (b) Twelve members representing labor, to be elected by the employed
- (c) To these shall be added representatives from the separate trade-conciliation committees as hereinafter referred to.

(d) Four members, viz, the lord mayor of London, or some member of the corporation to be nominated by him, the chairman of the London county council, or some member of the council to be nominated by him, and two representatives of London labor organizations to be selected by the labor representatives on the board.

The formation of the board shall date from its first meeting, on December 12, 1890. Its original members shall hold office for not exceeding three years, as may have been or may be from time to time determined by the electing bodies, respectively.

II. The duties of the London Conciliation Board shall be as follows:

(a) To promote amicable methods of settling labor disputes and the prevention of strikes and lockouts generally, and also especially in the following methods:

1. They shall, in the first instance, invite both parties to the dispute to a friendly conference with each other, offering the rooms of the chamber of commerce as a convenient place of meeting. Members of the board can be present at this conference, or otherwise, at the pleasure of the disputants.

2. In the event of the disputants not being able to arrive at a settlement between themselves, they shall be invited to lay their respective cases before the board, with a view to receiving their advice, mediation, or assistance. Or should the disputants prefer it, the board would assist them in selecting arbitrators, to whom the questions at issue might be submitted for decision.

3. The utmost efforts of the board shall in the meantime and in all cases be exerted to prevent, if possible, the occurrence or continuance of a strike or lockout until after all attempts at conciliation shall have been exhausted.

The London Conciliation Board shall not constitute itself a body of arbitrators, except at the

## VI. RESPONSIBILITY OF TRADE UNIONS IN CONNECTION WITH ARBITRATION AND CONCILIATION.

Undoubtedly one of the chief reasons why the system of conciliation and arbitration has been more successful in Great Britain than in any other country is the strong organization of trade unions and their consequent moral responsibility. Employers are willing to negotiate with organizations which are able and likely to carry out their agreements or to abide by the decisions of arbitrators. To be sure, as we shall see elsewhere, p. 619, trade unions in Great Britain are expressly relieved from legal responsibility for their acts and agreements in connection with relation to employers. It is not because of any power to fine or to punish the members of the unions, or the body collectively, for failure to carry out agree-

express desire of both parties to a dispute, to be signified in writing, but shall in preference, should other methods of conciliation fail, offer to assist the disputants in the selection of arbitrators chosen either from its own body or otherwise. Any dispute coming before the board shall, in the first instance, be referred to a conciliation committee of the particular trade to which the disputants belong, should such a committee have been formed and affiliated to the chamber.

(b) To collect information as to the wages paid and other conditions of labor prevailing in other places where trades or industries similar to those of London are carried on, and especially as regards localities either in the United Kingdom or abroad where there is competition with the trade of London. Such information shall be especially placed at the disposal of any disputants who may seek the assistance of the London Conciliation Board.

III. The separate trade conciliation committees shall be composed of equal numbers of employers and of employed.

Each trade shall elect its own representatives, employers, and employed voting separately for the election of their respective representatives. The number of members and the general rules of procedure shall be determined by each particular trade, subject to the approval of the London Conciliation Board.

The trade conciliation committees shall be affiliated to the London Chamber of Commerce, and shall be represented upon the London Conciliation Board. Any trade conciliation committee constituted as above, representing a body or trade in the metropolitan districts of more than 1,000 individuals, shall send 2 representatives to sit on the London Conciliation Board, 1 being an employer and the other an operative workman, each to be separately elected by employers and employed, respectively. In the case of trade conciliation committees representing bodies or trades in the metropolitan districts smaller in number than 1,000 individuals, two or more such committees may unite together to elect joint representatives to the London Conciliation Board.

It shall be the duty of the trade conciliation committees to discuss matters of contention in their respective trades, to endeavor amicably to arrange the same, and in general to promote the interests of their trade by discussion and mutual agreement. In the event of their not being able to arrange any particular dispute, they will refer the same to the London Conciliation Board, and in the meantime use their most strenuous endeavors to prevent any strike or lockout until after the London Conciliation Board shall have exhausted all reasonable means of settlement.

They may from time to time consider and report to the London Conciliation Board upon any matter affecting the interests of their particular trade upon which it may be thought desirable to employ the action or influence of the London Chamber of Commerce as a body.

IV. The London Chamber of Commerce places its rooms at the disposition of the London Conciliation Board of the trade conciliation committees for holding their meetings. Any alterations in the rules and regulations of these bodies, which may be from time to time proposed, shall be submitted for approval to the council of the chamber.

V. The above regulations shall be subject to by-laws, to be specially framed for the purpose and which shall be open to amendment as required from time to time, on agreement between the council of the chamber of commerce and the London Conciliation Board.

### BY-LAWS

#### *Trade conciliation committees*

1. Any trade carrying on its operations within the metropolis or in any part of London, or within a reasonable distance thereof, can form a conciliation committee of its own trade under the foregoing rules.

2. Each committee shall elect its own chairman, who may be either a member of the committee or a person chosen from outside the committee. Should the chairman be a member of the committee, he shall not have a second or casting vote. If the committee, however, should elect a chairman not being a member of the committee, either as general chairman, or to preside on any special occasion, he shall not vote with the committee, and the committee shall decide at the time of his election whether he shall have a casting vote or otherwise. The committee shall also elect a vice-chairman who shall, in the absence of the chairman, exercise the same power as the chairman.

3. In the event of any question being put to the vote at any meeting where the number of representatives of the employers and employed shall not happen to be equal, any member present shall have the right to claim that the voting power of each order shall be equal, irrespective of the numbers present. In this case the chairman shall call upon the order whose numbers predominate to exclude from the voting such a number of their order for the time being as shall suffice to produce an equality of voting between the two orders, the chairman counting himself as one of the order to which he belongs.

4. A quorum shall consist of not less than one-third of each order.

#### *London Conciliation Board*

5. The board shall elect its own chairman and vice-chairman, who shall vote with the board, but shall not have a second or casting vote.

6. The regulations of by-law 3, as laid down for the guidance of the trade conciliation committees, shall also apply to the London Conciliation Board.

7. The chairman shall be selected from the employers of labor on the board and the vice-chairman from among the employed.

ments or to abide by the decision of arbitrators, that trade unions are more responsible in Great Britain than elsewhere. The responsibility grows out of the fact that the unions, from long experience, recognize that if they desire to retain the respect of their employers they must carry out their agreements. The influence of public opinion is likewise extremely strong in forcing them to do so. Again, the control of the union over its members is made strong in various ways. The organizations are so extensive and so powerful that if any small number of members should leave rather than carry out the order of their officers, these members would probably be unable to find employment in their trades. Moreover, the English unions mostly have an important system of benefits. If a member severs his connection with the union, refusing to carry out its agreements, he forfeits the right to these benefits and loses the advantage of the contributions which he has made from year to year in order to secure them.

There are those, indeed, who advocate an increase in the legal responsibility of trade unions. It is true that agreements have not always been carried out faithfully and that unions as a body, or groups of their members, have at times refused to abide by the decisions of joint boards of conciliation or of outside arbitrators. The Royal Commission on Labor, while recognizing this difficulty, was unable to agree in recommending measures for increasing the legal responsibility of unions. An important minority, headed by the Duke of Devonshire, did strongly urge legislation making unions capable of entering into legally enforceable agreements. This minority, however, was composed wholly of employers or of members of the leisured class, and their proposition was strongly opposed by the labor members of the commission. The views of the royal commission and the other views just referred to are more fully set forth in the section on the legal position of trade unions, p. 622.

## VII. UNIONS OF EMPLOYERS AND EMPLOYEES.

Considerable attention has lately been attracted to a new form of industrial combination which is now becoming prominent in Great Britain, and which owes its origin and strength largely to Mr. E. J. Smith, of Birmingham. An important feature of the system is the establishment of joint wages and conciliation boards. The chief trades mentioned in this connection are those engaged in the manufacture of bedsteads, spring mattresses, fenders, electrical fittings, brass cases, tubes, and china furniture. Conciliation and arbitration have also been employed extensively by the National Society of Amalgamated Brassworkers. (Bulletin Department of Labor, pp. 536-540.)

The following extracts from a statement by Mr. Walter T. Griffin, United States commercial agent at Lamoges, summarize the system.<sup>1</sup>

"To prevent manufacturing being carried on at a pecuniary loss, a minimum scale is adopted. A representative article, like a certain pattern of bedstead or one dozen plates of a given size and shape, is taken as a basis to ascertain how much it costs to manufacture; the manufacturers agree on the minimum rate at which it can be made; then a certain percentage is added for profits, and this forms the minimum selling price for that article. The manufacturers bind themselves by the rules of the alliance not to sell without the consent of the alliance below this minimum price. The workmen are also offered certain interests in the success of the business, and, both parties being mutually dependent, there is no occasion for strikes, lockouts, or trade disputes.

"The rules of the alliance, as carefully laid down, are as follows:

"First. A thorough examination into the costs of production is made in every trade. \* \* \* Up to date Mr. Smith has had before him some 20 trades for examination, and he says that he has not yet found a trade in which one-third of the manufacturers had learned or practiced the art of cost taking. \* \* \*

"Second. The cost taking includes the fixing of uniform rates for working expenses, carriage, cash discounts, selling commissions, merchants' allowances, rebates to large buyers, and all the incidental costs of trading. Large buyers are given a rebate according to the amount of their purchases from the combination every 6 months. This is obtained from the secretary of the alliance only, and is granted on all purchases, thus enabling the buyer to distribute his orders throughout the whole alliance if it suits his purpose to do so. The system of fixing transportation charges places every member of the combination on an equal footing all over the world, no matter where his works may be situated. To all of these expenses is added a proportion of profit which is accepted as the minimum.

<sup>1</sup> Quoted in Bulletin of the National Association of Wool Manufacturers, September, 1899, pp. 282-286.

"Third. Rules are drawn up which govern the alliance and arrange for the investigation of complaints (or even suspicions) of underselling or departure from the regulations. \* \* \* The defendant never knows who his complainant is, so that friction is avoided and inquiry encouraged. \* \* \*

"Fourth. In many of the combinations compensation against loss is guaranteed to all members. It is very significant, however, that not a single application has been made. Various grades of selling prices are also adopted whenever a trade depends upon the quality of the goods and the reputation of makers, so that the unknown and less skillful maker may have a fair chance. It is an automatic arrangement, however, which is adjusted every 6 months, so that no one can abuse a privilege by selling in a lower grade and taking away the trade of a competitor.

"Fifth. Every combination has a large fund for fighting and other purposes. This fund is secured by means of a guaranty at a bank, so that the money does not have to be drawn from the business. Each member guarantees in proportion to his standing in the trade, and he is responsible only for the amount against his name. \* \* \*

"Sixth. The ordinary expenses of management are met by quarterly levies, made in the same way.

"Seventh. A foreign committee is appointed for the collection of statistics and examination into competition. It also makes recommendations, from time to time, as to how to meet this competition. \* \* \*

"Eighth. There is no attempt at monopoly or at making a close trade in any of the combinations; due regard is paid to claims of an applicant for admission to a combination. \* \* \*

"Ninth. The inducements offered to the work people are as follows:

"(a) The wages, hours, and conditions of labor existing at the time the employers' alliance is completed are guaranteed as long as the alliance lasts.

"(b) A wages and conciliation board is formed, in which the workmen have an equal right in every way. This board has absolute power to settle all disputes which can not be arranged in the respective works, on terms in keeping with the rules of each alliance. \* \* \* But in all new questions its power is absolute; and if an agreement can not be reached an arbitrator is called in, whose decision must be accepted by both parties. So far, an arbitrator has never been needed. Until the dispute is settled the workmen accept the employers' terms under protest. When the question is settled by the board the decision is retroactive, so that the delay necessary to adjust the matter is not prejudicial to either party. Strikes and lockouts are thus made impossible.

"(c) The first rearrangement of the selling prices carries with it a wage bonus for the workman in proportion to the amount of the average advance. Generally speaking, the first advance on the selling price carries with it a bonus of 10 per cent on the wages, but this varies with the proportion of the wages included in the cost of production; sometimes it is only 5 per cent bonus. \* \* \* Any additional advance in the selling price must be made by the consent of the whole board, and carries with it a bonus on the wages, in a proportion agreed upon by the original alliance, and depending mainly on the proportion which wages bear in the selling prices of the articles. Generally it is a 5 per cent bonus on a 10 per cent advance. This, however, is subject to a sliding scale; i. e., in the event of a reduction being necessary in the selling price, from any reason whatsoever, the bonuses are reduced, proportionately, until the first bonus is reached.

"(d) The employers, having formed a union amongst themselves, give their support to trades unionism in every way. They employ none but unionists, so that the workmen must form a union if none exists. On the other hand, the workmen refuse to work for any but associated employers. If, therefore, any member of an alliance leaves it or is expelled for any just reason, his workmen must leave his employment. While such a dispute lasts, the cost is shared equally between the two associations. \* \* \*

Mr. Smith has written a little book known as "The New Trades Combination Movement" defending his proposed plan. Especially as regards its effect upon the condition of the workmen, he uses, in part, the following language:<sup>1</sup>

"The new combination scheme aims at an improvement in the condition of the work people, the recognition of their right to participate in the benefits arising from increased profits, and the drawing into close bonds of unity employers and employed. This object, however, is advanced as being part of a business transaction. Philanthropy, as such, is not pleaded as being part even of the motive. \* \* \*

<sup>1</sup> E. J. Smith, *The New Trades Combination Movement*, London, 1899, pp. 51-65.

"It is, therefore, as to the making of a bargain that workmen are approached. 'We are helpless without you, and you are helpless without us; shall we help each other?' The work people naturally reply, 'What is it you want us to do, and what are we to get for doing it?' It is to me one of the most extraordinary things imaginable that there are still people living who object to the consummation of such a compact. Day by day we read of the 'Labor war.' Day by day we are deluged by the reflections of well-meaning people as to the suicidal effects of the strife between capital and labor. \* \* \* Why do we not make laws which would strangle the evil at its birth? \* \* \*

"But while our lawgivers are making up their minds, there is nothing to prevent capital and labor from helping each other by methods which our present laws do not, as far as we know, forbid. Yet, as soon as this is mentioned, there are some people who grow angry, and who denounce it as 'un-English' and 'coercive.' Only a week or two ago a daily paper waxed eloquent in its denunciation of any agreement whereby the liberty of the manufacturers might be restricted. The fact that 90 per cent of a whole trade thought it no restriction did not count. The certainty that the other 10 per cent were responsible for bringing down both profits and wages was ignored. The liberty of the subject was everything. \* \* \*

As to the fixing of wages temporarily at formerly existing rates, Mr. Smith says: "I confess that I am sorry that I have no better terms to offer. I should be better satisfied if the alliance could be stated on terms which would require no further alteration on either side. That this is impossible I have fully demonstrated. I once spent 6 weeks in joint conferences between masters and workmen, trying to establish some basis upon which we could begin as we meant to go on. It is with a sense of humiliation that I confess that the time was worse than wasted. My critics seem to have missed this, but I gave it to them gratis as 'another failure.' The workmen tried to get the *highest* prices paid by anybody as a *minimum*, the employers tried to get the *lowest* as a *maximum*. I was quite helpless, and we adjourned forever. I am not responsible for the condition of things as I find them when I am consulted by a trade. Each side has done its best to beat the other, and I have to accept things as they are. My first endeavor is to prevent anything from getting worse. \* \* \*

"I am constantly being asked whether the first bonus secures a 'living wage?' My answer is that this depends upon circumstances. If it be in a trade where a strong union has been able to maintain a good wage, the first bonus and the first advance in selling prices may be sufficient on both sides. But if, as is generally the case, there is no union, or only a very weak one, the probability is that the first bonus is not sufficient, any more than the first rearrangement of selling prices is; but whatever it is, it will at least be proportionate to the advance on selling prices, and it is generally higher. \* \* \*

"But the 'living wage' does not depend upon the bonus paid. It is to be found in the result of the friendly conferences held by the wages boards as years go on. Step by step there is accomplished the seeming miracle of a fair wage being paid, without dispute and without strikes. \* \* \*

"And now, what has [the workman] to do in return? He has simply to keep the compact from breaking down by refusing to work for those who would destroy it. \* \* \*

"Without restrictions of some kind this scheme would be of no more service than any of the others which have been tried without success. It is clear enough that manufacturers must either be left free to sell at what prices they please, or they must be compelled to sell with at least a minimum profit. If the former is conceded, it is absolutely certain that some will sell at prices which will make fair wages impossible. \* \* \*

"The history of every association will show that pledges without the power to insist upon their fulfillment are useless, as they will be broken. Even if they are not broken, buyers would say they were, so that the effect on the minds of the competitors would be just the same. Restriction is, therefore, a positive necessity. \* \* \*

"The whole matter is in the hands of the work people. If they will go on working for manufacturers who sell without profit, the consequences are of their own seeking; if they refuse to do so, they can stop the evil at once. The compact is made without regard to any individual. It is simply an admission as to the wisdom of a principle which will be made to apply all around. So far the cry of the trade-unionists has been that of a 'living wage' only. A living wage is impossible without 'a living profit.' They are asked to demand both, and to refuse to work for anyone who will not comply with the demand."

## VIII. BRITISH OPINION AS TO CONCILIATION AND ARBITRATION.

1. *Opinion of Royal Commission on Labor regarding trade conciliation and arbitration.*—The Royal Commission on Labor in 1894 expressed its opinion in favor of trade conciliation as a means of settling general questions, but not especially favoring arbitration by outside persons, especially as to the general conditions of labor. It said:<sup>1</sup>

"Special attention has been called in this part of the report to the wages boards, which have a permanent character and a written constitution, but in practice they do not, perhaps, differ essentially, except in so far as they may embody a rule for reference to arbitration, from the frequent meetings between representatives of employers and employed for the same purpose, which are held in some trades not in pursuance of formal rule, but as a matter of fact, and in accordance with an established custom. Of this kind are the frequent conferences between the central committees of the coal owners' and miners' organizations in Durham and Northumberland to settle general or 'county' questions. There is, however, an advantage in a permanent organization about which authority grows, and which is always ready to deal with difficulties as they crop up, instead of being called into activity after feelings of dissension have arisen. On the whole, it appears that sliding scales and wages boards, considered as modes of dividing the receipts of industry between employer and employed have met with some success, checked by failures in a few important trades in which both sides are strongly organized, and the conditions of the industry itself are favorable. It is obvious that this success has not as yet extended to any considerable portion of the whole field of industry, and it is not yet proved by experience that these modes of action can exist without strong organization on the side of the employed, or that such strong organization can permanently exist, except in a class of trades possessing certain natural advantages."

On the other hand, the commission says as to arbitration by outside persons:<sup>2</sup>

"Questions in many trades and concerning various issues have been from time to time referred to arbitration. In large questions, such as general wage rates, demarcation disputes between trades, hours of labor, or the restriction of apprentices, resort has frequently been made to the decision of eminent persons in the legal, political, or industrial spheres. Where trades are large and strongly organized, the plan of referring such general questions to single individuals has proved, in some cases, to be attended by considerable difficulties. In the first place there is a difficulty in finding suitable arbitrators. Either the arbitrator is quite unconnected with industrial work, and then the process of informing his mind upon the matter is too long and costly, or he is in some way connected with the industrial world, and then one party or the other is apt to suspect him of bias and partiality. A still more fundamental difficulty is this. In general questions, such as those which affect wages or hours, in which interest of considerable magnitude and far-reaching consequences are involved, either the employers or the employed, or both, are frequently indisposed to intrust the decision to any single person. Instances have been brought to our notice in which such awards, when given, have caused the greatest dissatisfaction, although they have for a period been accepted and largely observed. In a few instances the awards of single arbitrators have even been repudiated."

"It may, perhaps, be fairly collected from the evidence that, in cases where very strong organization enables the workmen fully to hold their own, and even gives them advantages in bargaining, they are the more apt to be averse to arbitration by individuals regarding these general questions, while employers are more disposed to resort to it. Certainly the desire for arbitration on general questions, and especially for some form of State arbitration, seems usually to be stronger among workmen of poorly organized trades. But, on the whole, it seems to be a common feeling that these general questions are too important to be referred to what is sometimes known as 'one-man arbitration.' It seems at present that the objection felt by strong trades to submitting large questions concerning wage rates or hours to arbitration resembles that which would prevent Parliament from referring to the decision of an eminent judge some question upon which the two Houses failed to agree. Such questions are in fact not suited for judicial decision. They are questions of practical politics, in which the relative strength of the opposite parties is an element that can hardly be left out of account. The result of these difficulties has been that, in some of the great strongly organized trades at any rate, resort to 'one-man arbitration' is not so

<sup>1</sup> Final Report of Royal Labor Commission, sec. 115.

<sup>2</sup> *Ibid.*, secs. 136, 137.

frequent now as it once was. If in the case of various industries a desire for arbitration is expressed, it would more often seem to be in the direction of some kind of State tribunal than in that of reference of questions to individual arbitrators."

**2. Opinion of labor members of Royal Labor Commission as to trade arbitration.**—If the minority report presented by the special representatives of labor upon the British Royal Labor Commission may be considered as indicative of the views of laboring men in Great Britain generally concerning arbitration by outside persons, public or private, there is very little enthusiasm in favor of the system, while conciliation methods meet much more approval. Messrs. William Abraham, Michael Austin, James Mawdsley, and Tom Mann declare their approval of the system of deciding questions as to the interpretation of existing agreements between employers and employees by means of joint boards, but they hold that the fixing of the terms of new agreements is not a proper subject for arbitration, owing to the absence of any settled principles upon which the decision shall be based. The opinion of these gentlemen in full is as follows:<sup>1</sup>

"Trade disputes fall into two distinct classes. On the one hand we have questions as to the proper interpretation of an existing agreement or its application to a particular piece of work. This class of question is in our view well adapted for settlement by joint boards, whether of conciliation or arbitration, similar to those in the boot and shoe making industry. We should welcome the establishment of similar boards in every industry, to be fully recognized by the board of trade, but in no way controlled by it. It is indispensable that they should be composed of equal numbers of employers and employed, and that the latter should be elected by the trade union concerned. As the main purpose of these boards would be conciliation, we see no advantage in giving them any legal functions or compulsory powers. Their decision can only be effective in so far as it brings to bear the common public opinion of either side. One great advantage to be expected from them is, indeed, the breaking down of that repugnance, still unhappily felt by some employers, to expressly recognize the officers of the trade unions and to frankly confer with them on equal terms. Such joint boards might do much to maintain a uniform standard wage in each trade throughout the district and thus serve to prevent that maddening at wages and cutting of prices by a few unscrupulous employers, which is at present a fruitful source of disputes. They could also render most valuable service in trades in which piecework prevails by the formulation of detail piecework lists and their application to new jobs.

"For the other class of questions—the terms upon which a new agreement should be entered into—which includes all proposals for general advances or reductions of wages, increase or decrease of hours, etc.—arbitration appears to us to be of little real use and to be of equivocal advantage to the workman. The points at issue are not such as admit of decision upon any principles which both sides accept.

"In the recent colossal dispute in the coal trade, for instance, the employers demanded a reduction of rates on the ground that prices and profits had fallen. The men refused to submit to any reduction because, as they alleged, even the former rates did not amount to a "living wage," that minimum necessary for efficient citizenship below which it is to the public interest that no person should sink. Before an arbitrator could have dealt with this case, the prior question must first have been settled of whether wages ought to follow prices, or prices wages, a point of social or industrial policy on which there is no agreement.

"The result of this absence of settled principle has been that, where cases of this description have been referred to arbitration, the issue has usually turned upon a comparison of the period in question with some "normal year," and the decision has been given upon consideration of whether the employers were making profits higher or lower than those of that year. But this, it will be obvious, comes in effect to stereotyping the average position of the workman at that which he enjoyed in the year 1870, 1880, or any other year selected as the normal period. Believing, as we do, that the whole energy of the community should be turned to increasing the share which has hitherto fallen to the wage-earner, we are opposed to any system which tends to accept the past or present standard as a basis for the future. If arbitration is resorted to at all, with regard to this class of questions, we think that it should only take place on a reference which (omitting all mention of fluctuations of prices or profits, or of any normal year) is explicitly based upon an inquiry whether the existing conditions are or are not consistent with efficient citizenship."

**3. Opinion of Mr. and Mrs. Webb.**—It may not be inappropriate to summarize a criticism upon the organization and working of these joint boards as most com-

<sup>1</sup> Final Report Royal Commission on Labor, p. 145.

monly constituted made by Mr. and Mrs. Webb, who have probably made a more thorough study of trade unionism and of arbitration than any other persons in Great Britain.<sup>1</sup> They are certainly especially familiar with the point of view of unionists concerning these methods.

*Conciliation.*—Mr. and Mrs. Webb are disposed to doubt whether the ordinary form of joint boards of conciliation is the most satisfactory arrangement for adjusting labor difficulties. They lay great stress upon what they consider the vital distinction which is to be drawn between the function of making a new bargain as to labor conditions and that of interpreting the terms of an existing bargain, and hold that this distinction is often too little regarded.

In the case of the interpretation of an existing bargain they believe that in general decision by experts representing each side is better than resort to arbitration by an outside person unfamiliar with the conditions, or to a general board consisting of prominent employers and employees. Once a general agreement has been reached in a trade as to the broad conditions of labor, the general rate of wages, etc., a multitude of questions arise as to the application of the agreement to particular cases. Especially where methods of production are elaborate the formation of a piece-work scale for individual factories, in order to carry out correctly the general agreement as to the rate of wages, involves high technical knowledge. The issues are exclusively those of fact, in which both the desires and the tactical strength of the parties directly concerned must be entirely eliminated. For conciliation, compromise, and balancing of expedients there is absolutely no room. On the other hand, it is indispensable that the ascertainment of facts should attain an almost scientific precision. Moreover, the settlement should be automatic, rapid, and inexpensive. For this class of questions no person unfamiliar with the trade is fitted to render a decision, and, on the other hand, to require the time of a large body of busy employers and workmen to discuss these minor matters is wasteful, while that system is also likely to lead to unnecessary friction.

The settlement of the terms of a new general agreement, continue these writers, involves an entirely different set of considerations. Questions as to the general level of wages, as to hours of labor, overtime, etc., are not issues of fact, and can not be decided on the basis of principles laid down in advance. There is the fullest possible play for the arts of diplomacy. Each party is anxious to get the best conditions for itself. The question is not to ascertain what are the facts nor even what would be a just decision, according to some ethical standard or view of social expediency, but to find a common basis upon which each side can bring itself to agree rather than to go to open war.

For the decision of this latter class of cases, in the opinion of Mr. and Mrs. Webb, trained experts acting according to fixed principles, have no place. Moreover, arbitration by an outside party is apt to be unsatisfactory to both sides. Negotiations between a joint committee of the employers and the employees is the one effective peaceful method of settling these questions. For this purpose it is not always essential to have a permanently constituted joint board, holding sessions at regular intervals, although these may be desirable in certain trades. In many trades these general questions come up only at rare intervals, and then can best be settled by informal conferences between the employers as a body or their selected representatives and the representatives of the employees.

These views are supported by reference to the experiences of various trades with conciliation and arbitration. The system in the Lancashire cotton-spinning industry is especially held up to approval, as compared with that in the boot and shoe trade and in coal mining. (See opinions as to these systems, post, pp. 492, 504, 506.)

The conclusions reached by Mr. and Mrs. Webb are thus summarized:

"Taking the trade-union world as a whole, the machinery for collective bargaining must be regarded as extremely imperfect. We do not here discuss whether collective bargaining is or is not economically advantageous to the workmen or to the community. We may, however, assume that it is desirable, if it exists, that it should be carried on without friction. \* \* \* This demands machinery which over the greater part of the trade-union world has not yet been developed. Throughout the great engineering and building trades, and indeed in nearly all the time-work trades, collective bargaining, though practically universal, is carried on in a haphazard way with the most rudimentary machinery, and usually by amateurs in the craft of negotiation. The piecework trades have, in the main, been forced to recognize the importance of commanding the services of salaried professionals to deal with their complicated lists of prices. Only among the cotton

<sup>1</sup> Webb, *Industrial Democracy*, Part I, chs. II and III.

spinners and cotton weavers, however, do we yet find any arrangement for insuring, by a technical examination, for continuity of expert services. Finally, we see the whole machinery for collective bargaining seriously hampered, except in 2 or 3 trades, by the failure to make the vital distinction between interpreting an existing wage contract and negotiating the terms upon which a new general agreement should be entered into. We must, in fact, conclude that among the great unions only the cotton spinners, cotton weavers, and the boiler makers, and, to a lesser extent, north of England and Midland ironworkers and the Northumberland and Durham miners, can be said to be adequately equipped with efficient machinery for collective bargaining."<sup>1</sup>

*Arbitration.*—The distinction between the interpretation of existing agreements and the establishment of new agreements furnishes also the basis for the criticisms of Mr. and Mrs. Webb upon the practice of arbitration as distinguished from conciliation. They declare that although the general public seems to consider arbitration—that is, reference of disputes which can not be otherwise settled to some disinterested party—a panacea for all labor difficulties, the great mass of employers and employees alike are little disposed to resort to this system.

As to questions of interpretation, they say, there is usually required an expert knowledge not within the reach of any person not directly connected with the trade, nor need there be so much difficulty in reaching an agreement between the representatives of the two sides that reference to an outside person is necessitated. As a matter of fact, the great strikes and lockouts which paralyze whole industries almost always arise, not on issues of interpretation, but on proposals concerning the terms upon which for the future labor shall be engaged. As to such a fundamental matter, for example, as the rate of wages, employers are not willing to allow any outside authority to intervene. The establishment of wages by an arbitrator seems to them as undefensible an interference with industrial freedom as the fixing of wages by law, and even less satisfactory, because it does not apply uniformly to all employers in the trade. Employees, on the other hand, are unwilling to resort to arbitration because they are uncertain as to what will be the fundamental assumptions upon which the arbitrator will base his award.

As a matter of fact, continue Mr. and Mrs. Webb, the difficulty regarding arbitration arises from the failure of the parties to the dispute to agree with regard to the fundamental assumptions upon which it should be settled. Employers are apt to hold that wages should rise or fall with prices; that a certain reasonable profit should be the first consideration, not only for the benefit of their own pocket-books, but for the permanence and prosperity of national industry. Employees, on the other hand, are more and more taking the view that all other interests ought to be subordinated to the demand for the "living wage." "The arbitrator's award, if it is not a mere 'splitting the difference,' must be influenced by one or the other of these assumptions, either as a result of the argument before him or as the outcome of his education or sympathies. However judicial he may be in ascertaining the facts of the case, the relative importance which he will give to the rival assumptions of the parties can scarcely fail to be affected by the subtle influences of his class and training. The persons chosen as arbitrators have almost invariably been representative of the brain-working class—great employers, statesmen, or lawyers—men bringing to the task the highest qualities of training, impartiality, and judgment, but unconsciously imbued rather with the assumptions of the class in which they live than with those of the workmen."

These writers hold that in those industries in which joint boards of conciliation, with provision for reference of disputed questions to outside arbitrators, have worked successfully, notably in the manufactured iron trade, there has been more nearly an agreement between employers and employees as to the fundamental assumptions upon which conditions of labor should be based than is found in most other trades. Thus it has been in some cases the assumption of both that wages should rise and fall in some proportion to prices, and by the adoption of the system of sliding scales or by a periodical adjustment of wages along the lines of that assumption, the parties have been able to agree among themselves or to abide by the decision of arbitrators as to what was necessary to carry out that general principle.

While thus doubting the advantage of arbitration as ultimately fixing the conditions of labor, Mr. and Mrs. Webb consider the intervention of a third party as extremely useful in many cases to bring about interrupted negotiations between the employers and the employees. The first requisite for efficient collective bargaining is that the parties meet face to face and discuss in an amicable manner. But this

<sup>1</sup> Webb, pp. 204-206.

initial step is often one of difficulty. Employers, especially, consider it in many cases beneath their dignity, or a derogation from their rights, to treat with representatives of their men at all on equal terms. They are unwilling, for example, to declare their profits and losses or even prices—facts upon which they base their decisions as to the demands of their employees. Workmen, on the other hand, are often prejudiced and unreasonable. In order to bring about negotiations recourse to an impartial umpire may be of great assistance. The employer's dignity is not offended by appearing before some eminent statesman or jurist. Material facts can be brought out by the arbitrator. Moreover, if he has tact and experience he can help the disputants to forget the irritating features of their difficulties and to impress upon each that which is strong in the position of the other. The real business of the arbitrator is not to supersede collective bargaining, but to promote it. Thus Lord Rosebery settled the recent miners' strike, not by himself determining the conditions of labor, but by inducing the parties to agree between themselves. The same has been true for the most part with regard to other important instances of the action of arbitrators.

4. *Opinion of Mr. J. S. Jeans as to attitude of employers and employees.*—We have already referred, in connection with the various methods of peaceable adjustment of the conditions of labor, to the attitude of representatives of employers and employees as to these methods. The following more general opinion as to the attitude of both classes toward these different methods as a whole is quoted from Mr. J. S. Jeans, who has himself had experience in connection with conciliation and arbitration:

*The attitude of workmen.*—"Generally the proposals for the substitution of some peaceable method of settling labor disputes have emanated from the side of the employers, but this does not necessarily mean that they have always been the best friends of the principle of conciliation. Cases have occurred where the employers have again and again refused to recognize any other solution of the problem to be dealt with than their own will. But if the employers had invariably advocated and stood by the system of conciliation that would only have been what might be expected from their circumstances. Generally speaking, the employers have a better education and a higher intelligence than their employees, so that they are or should be capable of acting rather upon reason than upon impulse, and of appreciating the ultimate as well as the immediate bearing of any action that they might undertake. They have also, as a rule, a great deal more at stake. The workman, if he is involved in a strike or a lockout, can pack up his 'kit' and seek for work elsewhere. The employer, having once planted himself on a particular spot, has generally come to stay, and he must accept all the direct and indirect consequences of any action in which he is concerned.

"Nevertheless, all the evidence that is available as to the attitude assumed by workmen toward the systems of conciliation and arbitration shows that they are generally alive to its importance, and that they have seldom taken up an antagonistic position toward them. Many cases have even occurred where the workmen have proposed conciliation, and it has been declined by the employers. Several such cases are on the records of the Royal Labor Commission, notably among the cutlers of Sheffield and the miners of Scotland. As a rule, also, the workmen, having once accepted arbitration through their chosen representatives, have faithfully carried out the award of the umpire, however hostile, while cases have occurred where a large body of workmen have raised the funds necessary to recoup an employer for any loss that he may have incurred through the resistance of his men to such an award.

\* \* \* \* \*

"In some quarters a great deal has been made of the fact that the workmen have sometimes refused to accept an award, and it has been argued thereupon that their loyalty was not to be depended on. No better witness could be cited on this point than Sir Rupert Kettle, who, in addressing the Social Science Congress in 1870, made the following remarks: 'He knew of arbitration boards established in a great variety of trades—the building trade, the textile-fabric trade, manufacturing trades of various kinds, contract trades, and the various kinds of productive industries, as well as distributing industries—and he had never known a single instance of a workman breaking his contract. But he was bound to say that he had known of individual masters who had broken the contract. In those cases, however, the public opinion of the district had always been brought to bear for the purpose of supporting the arbitration board. He would tell them further what temptation some of the men were sometimes subjected to to break

their contract. He had known instances in the building trade, which consisted of 3 or 4 branches, where carpenters, bricklayers, and plasterers consented to abide by the court of arbitration, while the masons positively refused to submit. The result of the award was unsatisfactory to the 3 trades, but nevertheless, though they did not get an advance, they honorably accepted the decision. A week afterwards the masons struck for an advance, and it was given by the masters; and yet the 3 bodies of men—the carpenters, the bricklayers, and the plasterers—went on working, and were willing to go on working throughout the whole year, upon the judgment of the court of arbitration, although they were engaged upon the same building as the masons who had got the advance."

"It is, of course, difficult to assemble a considerable number of representatives of two conflicting interests to discuss matters that involve large issues to both without some degree of friction occurring or being liable to occur. But the first thing that both sides should resolutely strive for is patience, and the next thing is to studiously avoid anything in the form of discourtesy. If the one side ruffles the feelings or excites the temper of the other, there is generated a disposition to retaliate, which is more or less inherent in our frail human nature, and this disposition, it need hardly be added, is quite inconsistent with that calm and judicial frame of mind which alone is suited to the trial of such issues."

"It is, however, proper to observe that there have been numerous cases where the workmen have recorded emphatic objections to both arbitration and sliding scales."

"In nearly every instance where a sliding scale has been introduced in the mining industry and abandoned, it has been given up at the instance of the workman. In West Yorkshire a sliding scale was in force for 2 years preceding 1881, but it was terminated in March of that year owing to the men being dissatisfied with it. In the Durham coal trade there have been 1 different scales under which wages were fixed according to the ascertained average selling price of coal. Only one of these, however, lasted for more than 24 years."

*The attitude of employers.*—"The whole history of the movement that has resulted in the adoption over a wide area of conciliation and arbitration as means for the settlement of industrial disputes proves that the more liberal and advanced employers have usually recognized the principle as a rational and suitable one to be applied to difficulties of the kind stated."

"The most valuable and complete record of the views and recommendations of employers on this subject that has hitherto been made available is that contained in the Answers to the Schedules of Questions issued by the Royal Commission on Labor. Arbitration or conciliation is advocated by 38 employers and by 8 employers' associations. Some of these answers recommend that boards of arbitration should have power to enforce their awards. Others recommend that when employers and workmen can not agree over a dispute, either regarding wages or other matters, there ought to be independent arbiters appointed by the Government, each having a separate district, who would be appealed to in such cases. Others, again, appear to be in favor of profit sharing and cooperation, while a few are of opinion that sliding scales are the true solution of the difficulty."

"It was the employers who introduced conciliation into nearly every industry in which it is now a feature, and in not a few cases the employers have been anxious to use the system when the workmen have been passive or avowedly hostile."

"But while there have been numerous cases of this kind, large bodies of workmen have, on the other hand, ranged themselves on the side of conciliation, and have \* \* \* been faithful to its mandates, while the cases are by no means rare where individual employers have pronounced against both conciliation and arbitration, and there is a still larger number of cases where they have declared in favor of the former and against the latter."

## IX. CONCILIATION, ARBITRATION, AND SLIDING SCALES IN THE MINING INDUSTRY.<sup>1</sup>

1. **Generally.**—The British mining industry, like that of the United States, has been subject to very great depressions and vicissitudes. Wages have, of necessity, at times been greatly reduced. Strikes not infrequently have resulted from these conditions. Nevertheless, a great deal has been done in the mining industry of Great Britain in the direction of peaceful settlement of disputes. The employees in the mines are very thoroughly organized. No less than 424,783 members of labor organizations in the mining and quarrying industry were reported in 1899.<sup>2</sup> The number of persons employed in mining in 1891 was somewhat over 600,000. It thus appears that labor organizations in this industry are more extensive, as they are also probably more effectively organized than they have been, at least until very recently, in the United States. Over against the organizations of miners, moreover, stand strong organizations of employers, each covering a large district. Under these circumstances joint boards of conciliation and arbitration and other peaceful methods of settling disputes are greatly facilitated. During the most recent years especially these methods have been extended and made more effective.

Some of the joint boards of employers and employees which are found in the mining trades of Great Britain have to do only with the settlement of minor disputes growing out of the interpretation of existing agreements or otherwise arising between individual employers and their men. Boards of this sort have had a longer and more successful experience than those boards having power to determine the general conditions of labor. These more general boards, however, have existed from time to time, although their career has been interrupted. In the past two or three years they have been especially flourishing, and by their decisions the general conditions of labor of a very large proportion of the miners of Great Britain are now determined.

The most important of these boards having power to determine the general condition of labor are found in the Northumberland coal district, the Durham coal district, the great region known as the federated districts, and the South Wales district. The general boards in Northumberland and Durham exist side by side with other boards having to do with minor difficulties, but without authority to determine the general rate of wages.

The sliding-scale system, by which wages fluctuate in some relation to prices, has been employed more generally in the mining industry of Great Britain than in any other. The history of the various sliding scales has not been altogether one of success. In nearly all districts sliding scales have existed at one time or another, but their operation has been from time to time interrupted by discontent, usually on the part of the employees, and most of the scales have lasted for only a few months or a few years.

In the county of Durham there have been four sliding scales and, although the system was not in use in 1894, the secretary of the miners' union then declared his belief that it was the best means of adjusting the relations of employers and employees. In the county of Northumberland there have been three different scales. The last scale was terminated by the employers on account of the great fall in the prices of coal. They desire to reestablish the system, but the miners are shy.

There have been various sliding scales in the less important districts in England and Scotland, and one in the Cumberland iron mines is still in force. The most successful experience with the sliding scale has been, however, in the coal mines of South Wales, where a system, now fixing the wages of about 100,000 persons, has been in force, with some few interruptions, since 1875.

The extent of the sliding-scale system in the mining and quarrying trade may be judged by the fact that in 1898 126,083 persons had their wages changed as the result of the operation of these scales, out of a total of 673,905 persons in these trades who had their wages changed by all methods combined. The proportion in 1899 was approximately the same.<sup>3</sup>

Aside from these permanent methods of furthering peaceful relations between employers and employees, several great disputes between the coal miners and

<sup>1</sup> Royal Commission on Labor, final report, Part II, summary. Bulletin United States Department of Labor, May, 1900. "Voluntary Conciliation and Arbitration in Great Britain." Report of Chief Labor Correspondent on Strikes and Lockouts, 1899, page II. Report of Labor Department on Changes of Wages and Hours of Labor, 1899, page Ixix. Jeans, Conciliation and Arbitration, chapters viii-xii.

<sup>2</sup> Labor Gazette, 1901, p. 6.

<sup>3</sup> Report on Changes of Wages and Hours of Labor, 1899, p. Ixix.

their employers have been amicably adjusted, though only after prolonged cessation of employment, by the intervention of prominent individuals. Thus in 1893, when nearly 300,000 persons were thrown out of employment by the great strike in the mining industry, Lord Rosebery, at the instance of Mr. Gladstone, intervened and succeeded in bringing about a settlement. In the great miners' strike of 1898, also, there was intervention on the part of the Ministry, which hastened the settlement.

The extent to which peaceful methods of settling points of difference have been carried in the mining and quarrying trades may be understood from the fact that in 1898 646,238 persons in these trades had their wages changed as the result of various forms of peaceful negotiations, or by the operation of sliding scales, while only 27,667 changes in wages resulted in strikes. In 1899 the number of persons in these industries whose wages were changed as the result of strikes was only 826, 99.9 per cent of all persons whose wages were changed having secured those changes through peaceful methods.<sup>1</sup>

It should, of course, be borne in mind in interpreting these figures that previous attempts to establish permanently peaceful relations between employers and employees in the mining trades by means of joint boards and otherwise have succeeded only for a limited period of time. So long as conditions are generally prosperous, as they have been during the past two or three years, there is less difficulty in adjusting wages and conditions of labor, but in times of depression the decisions of joint boards and of independent arbitrators as to such general questions are not always accepted. Nevertheless, it seems probable that the system of joint boards for determining general questions, as well as local and minor questions, has now obtained a more secure foothold in the British mining industry than ever before. A description of the leading methods of conciliation and arbitration in the coal and non-mine will therefore be profitable.<sup>2</sup>

**2. Northumberland coal trade.**—In the Northumberland coal-mining district there are at present two joint committees of employers and employees, one of which has to do with the settlement of local and minor questions, and the other with the determination of the county rate of wages. The committee having to do with local questions has had a long and successful history, but the other committee was more recently established and has not had a record of continuous success.

The joint committee for the settlement of local questions was established in 1872. At present it consists of six representatives of the Northumberland Miners' Association, and six representatives of the Steam Collieries Defence Association. A chairman is chosen annually by the two associations, and he has a casting vote. Cases may be referred to arbitration, each side appoints one or more arbitrators and these agree upon an umpire, or in case they fail to do so the chairman of the joint committee appoints him. The committee has power to discuss all questions except those of a general nature affecting the whole trade, but its jurisdiction applies only by the consent of the parties concerned. No change in rates for mining will be considered in any particular colliery unless the rate existing is at least 5 per cent above or below the county average.

The system has worked very successfully. Since 1872 work has stopped in no colliery for a single day because of the refusal to accept the decisions of the committee. There has indeed been an increasing tendency to settle disputes locally without resort to the joint board, although both employees and employers have expressed at different times great satisfaction with the working of the board for the settlement of local questions.

There was also established in 1891 a joint committee for the Northumberland district, composed of fifteen representatives on each side with an independent chairman, and having power to fix general scales of wages. This board continued in existence for 2 years, but wages continued to fall, four or five decisions of the board being against the employees, so that finally the board was abandoned. It was revived, however, in practically the same form as before, in 1898, and is still in operation.

**3. The Durham coal district.**—There are, in the Durham coal district, four separate boards of conciliation for the settlement of local matters, and one large board for the determination of the county rate of wages and of the general conditions of

<sup>1</sup> Report on Changes of Wages and Hours of Labor, 1899, p. lxx.

<sup>2</sup> The British Royal Commission on Labor said in 1891 "Some system of conciliation, either by means of joint boards or informal conferences and negotiations, exists in the greater number of districts engaged in the mining industry \* \* \* The method of joint committees, which are in some cases supplemented by general conferences between associated employers and employed, has proved very successful, especially where care is taken to prevent any accumulation of work, and to provide, in the case of minor disputes, either for local settlement or for reference to local arbitration." Considerable opposition is, however, says the commission, expressed both by representatives of the mine owners and of the employees to the system of ultimate decision. (Final Report, Part II, p. 82.)

labor. As in Northumberland, the boards for settling local matters have been the longest in existence and have worked most successfully. These four boards represent different classes of employees, which have separate organizations—the miners proper, the coke men, the engine men, and the mechanics, respectively. A single organization of employers appoints the representatives of the mine owners on each board. The system has been in operation since 1872. These boards have power to deal with all questions referred to them except general or county questions, or those involving the dismissal of workmen. Questions concerning wages may be taken up only if the rates paid at any particular colliery are above or below the county average. The boards each consist of an equal number of employers and employees chosen by their respective associations. The chairman of each board is the judge of the county court, and he has a casting vote. Provision also exists for the appointment of arbitrators, especially as regards local questions. Each side appoints an arbitrator, and if these can not agree they select an umpire; in case of failure to agree upon one, he is selected by the county court judge.

It was reported by witnesses before the Royal Commission on Labor that the system worked with some difficulty, because of the divergent interests of the numerous employers concerned, and because the unions of employees are not sufficiently strong. It has usually been the case that disputes could be settled by joint boards without resort to arbitration, but a considerable number of cases have been referred to local arbitrators. Thus in 1890, out of 1,016 cases brought before the joint committee, 125 were referred to local arbitration.<sup>1</sup>

The general board for the determination of the rate of wages and the general conditions of labor in the Durham district is of more recent origin than the local boards, and has been interrupted in its operation from time to time by discontent on the part of the employees. The board was reestablished in 1898 and is still in active operation. It consists of 36 members, 18 appointed by the Coal Owners' Association, 9 appointed by the organization of the miners proper, 3 by the organization of coke men, 3 by the engine men, and 3 by the mechanics. There are thus an equal number of employers and employees on the board. The members of the boards are to choose annually an independent umpire with power to cast a decisive vote. The objects of the board are stated to be,

"By conciliatory means to prevent disputes and to put an end to any that may arise, and with this view to consider and decide upon all claims that either party may from time to time make for a change in the county rate of wages or county practices."<sup>2</sup>

The success of the boards having to do with minor and local matters in Durham and Northumberland is attributed by Mr. and Mrs. Webb<sup>3</sup> to the fact that "a clear distinction [is] maintained between the machinery for interpretation and that for concluding a new agreement. The earnings of the miners in both counties are determined ultimately by general principles applicable to the whole of each county, which are revised at occasional conferences of representative workmen and employers. \* \* \* These meetings, held only at rare intervals, command the presence of the greatest coal owners in the county, and of the most influential miners' leaders especially elected for the purpose. The board deliberates in private and publishes only its decisions. Resort to the umpire, or, in Northumberland, to the casting vote of the chairman, is rare, the usual practice being for a frank interchange of views to go on until a basis of agreement can be found.

"On the other hand, all questions of interpretation or application are dealt with by another tribunal, which goes on undisturbed even when one or other party has temporarily withdrawn its representatives from the board of conciliation. In marked distinction from the conciliation board, the 'joint committee' in each county meets frequently and is engaged in incessant work."

Mr. and Mrs. Webb, however, consider that these permanent boards for the settlement of local questions, because demanding the time of so many busy men, are not wholly satisfactory.

**4. South Wales joint committee and sliding scales.**—In the year 1875 a Miners' Sliding Scale and Joint Committee was established in South Wales. It consists of an equal number of representatives of employers and employees. The representatives of coal owners are chosen by the South Wales Coal Owners' Association. This organization comprised, in 1890, 70 colliery companies, owning 207 collieries, which produced in that year more than 21,000,000 tons of coal and employed about 70,000 men. The number of men to whom the system applies is now considerably larger.

This joint board fixes the general conditions of labor chiefly by means of sliding scales, but also decides local and minor matters.

<sup>1</sup> Royal Commission, Final Report, Part II, secs. 65, 66.

<sup>2</sup> Report of the Chief Labor Correspondent on Strikes and Lockouts, 1899, p. 94.

<sup>3</sup> *Industrial Democracy*, I, pp. 192-191.

Questions coming before the committee are not submitted to vote, and no decision is made unless both sides agree. The representatives of the workmen have generally favored the appointment of umpires, but the employers are usually unwilling to do so. The decisions of the committee are binding for a certain period of time.

There have been five separate agreements as to the system of sliding scales in South Wales, the dates of which are, respectively, 1875, 1882, 1888, 1890, and 1892. The present scale has been in operation for nearly 10 years. It is based upon the standard rate of wages actually paid in December, 1879, and upon the prices of coal at the seaports in that year. The scale does not actually fix wages. All wages are based on piece prices, and there are considerable differences in these prices in the different collieries, because of the variations in conditions. The system merely provides that for a given change in the price of coal there shall be a certain percentage added to or deducted from all rates of wages. The base price is 7s. 8d. per ton. For every change of 1d. in the price per ton there shall be a change of  $\frac{1}{4}$  per cent in the standard rate of wages. Changes are made at the end of each period of 2 months. The prices are determined with great care by joint auditors representing the employers and employees. No maximum or minimum is fixed for the fluctuation in wages on the basis of the sliding scale. Anthracite coal is not taken into account in determining prices.

At the time when the agreement of 1892 was adopted the prices were decidedly high, and it was provided that for the current month wages should be at the rate of 46 $\frac{1}{2}$  per cent above the standard piece price of 1879. Almost immediately after the agreement, however, a great fall of prices set in, and, by successive deductions every 2 months, the rate of wages fell by the end of the year to 22 $\frac{1}{2}$  per cent above the rate of 1879. For several years after this prices still fell gradually, and wages finally, at the end of 1896, stood only 10 per cent above the rates of 1879. The advance in 1897 was very slight and the miners became much dissatisfied with the operation of the scale. They gave the required notice of 6 months for its termination, and in 1898 a strike of 5 months took place. At the end prices of coal having advanced, an agreement was reached to reestablish the scale of 1892. The scale can not be abrogated until 1903, and then only in case 6 months' notice of the desire to terminate it is given by either party. As the result of the increase in the price of coal, wages rose until at the end of 1899 they stood 30 per cent above the standard of 1879.<sup>1</sup>

A prominent writer said of this South Wales system in 1891: "No sliding scale hitherto adopted in the coal-mining industry has been exposed to greater strains, or has stood the test so well, as that which continues to govern the rate of wages to be paid to miners in the collieries of Monmouthshire and the South Wales Coal Owners' Association." \* \* \*

"It must not, however, be supposed that the scale has been an unqualified success, or that it has not had to undergo considerable modification from time to time. As a matter of fact, there have been five different scales introduced since the first one was adopted in May, 1875, and each new scale has represented concession of one kind or another to meet the views or demands of either side." \* \* \*

This writer says further that the strongest buttress of the sliding scale committee has been the body known as the Monmouthshire and South Wales Coal Owners Association. "This association, which included 67 of the most important coal owners and coal-owning companies in July 1890, and possessed at that time a very large balance in cash, which has been increased to £100,000 at least, is practically a society for mutual assurance and indemnity against loss from strikes. Each member subscribes beforehand—and this is important—in proportion to his output, and the function of the association is to regulate the action of members as to wages. In other words, and in order to escape a tedious description of the practice in given cases, if the men employed by a member ask for an increase of wages the member asks advice of the association. If the association tells him to yield, then yield he must, or be content to lose his share of the benefits of the association; if the association tells him to resist, then he may resist in the full knowledge that he will be indemnified against loss of profits upon an agreed scale so long as the funds of the association last, and that the members of the association are under a legal liability to increase, if necessary, their already large funds." When the sliding scale committee fixes the rate of wages from time to time, if masters of men are refractory, the association is able to enforce the judgment of the committee.

**5. Board of conciliation of the federated districts.**—The latest and most wide-reaching movement toward conciliation and arbitration in the mining industry grew out of the great contest between the operators and miners in 1893. The coal owners

<sup>1</sup> Report of the Labour Department on Standard Piece Rates of Wages, 1900, pp. 10-15.

<sup>2</sup> Jeans's Conciliation and Arbitration, ch. x.

in the great central districts in that year asked for a reduction of 25 per cent in wages in view of the falling prices. The men struck in June and no settlement was reached until November. Fully 300,000 persons were thrown out of employment. There were various negotiations and proposals concerning arbitration, but it was objected that the tendency of arbitrators was to "split the difference." In September the men refused, by a large vote, to arbitrate. Later on Mr. Gladstone urged a settlement of the dispute, and suggested a conference under the chairmanship of Lord Rosebery. The conference was accordingly held, and it was determined to establish a board of conciliation, with an outside chairman having a casting vote. The committee could not agree upon a chairman, and the appointment of one was referred to the speaker of the House of Commons, and the immediate dispute was settled. This board did not work very satisfactorily, and when, in 1896, the coal owners demanded a further reduction of wages it broke up. In 1898, however, the board was reestablished, and the employers and employees readily reached an agreement in naming an independent chairman.

"The board of conciliation for the coal trade of the federated districts" as now constituted consists of 14 members chosen by the federated coal owners and 14 chosen by the miners' federation.<sup>1</sup> The permanent chairman, who has a casting

<sup>1</sup> The following are the rules of the new board.

1. That the title of the board shall be "The board of conciliation for the coal trade of the federated districts."

2. The board shall determine, from time to time, the rate of wages as from 1st January, 1899.

3. The board shall consist of an equal number of coal owners or coal owners' representatives elected by the federated coal owners, and miners or miners' representatives elected by the Miners' Federation of Great Britain—14 of each, with a chairman from outside, who shall have a casting vote.

4. The present members of the board are and shall be

Chairman—The Right Honorable Lord James of Hereford

\* \* \* \* \*

Whenever a vacancy has arisen, from any cause, on the board, except in the office of chairman, such vacancy shall be filled up within one month of its occurrence by the body which appointed the member whose seat has become vacant. Intimation of such appointment shall be at once sent to the secretaries. On the death, resignation, or removal of the first or any subsequent chairman the board shall endeavor to elect another chairman, and should they fail, will ask the speaker for the time being of the House of Commons to nominate one.

5. The meetings of the board shall be held in London or such other place as the board shall from time to time determine.

6. The constituents of the board—i. e., coal owners or coal owners' representatives, and miners or miners' representatives—are, for brevity, herein referred to as "the parties."

7. The parties shall each, respectively, elect a secretary to represent them in the transaction of the business of the board, and each party shall give written notice thereof to the secretary of the other party, and both such secretaries shall remain in office until they shall resign or be withdrawn by the parties electing them. The secretaries shall attend all meetings of the board, and are entitled to take part in discussion, but they shall have no power to move or second any resolution, or to vote on any question before the board.

8. They shall jointly convene all meetings of the board and take proper minutes of the board and the proceedings thereof, which shall be transcribed in duplicate books, and each such book shall be signed by the chairman, president, or vice-president, or other person, as the case may be, who shall preside at the meeting at which such minutes are read and confirmed. One of such minute books shall be kept by each of the secretaries. The secretaries shall also conduct the correspondence for the respective parties and conjointly for the board.

9. The secretaries shall, on the written application of either of the parties made by the chairman and secretary of either party for an alteration in the rate of wages, or an alteration of the rules, or for any of the objects mentioned in clause 4, call a meeting of the board within 21 days, at such time and place as may be agreed upon by the secretaries. The application for the meeting shall state clearly the object of the meeting.

10. The president, or in his absence the vice-president, shall preside at all the meetings at which the chairman is not present as herein provided. In the absence of both president and vice-president, a member of the board shall be elected by the majority to preside at the meeting. The president or vice-president, or other person presiding, shall vote as a representative, but shall not have any casting vote. When the chairman is present he shall preside and have a casting vote.

11. All questions shall, in the first instance, be submitted to and considered by the board, it being the desire and intention of the parties to settle any difficulties and differences which may arise by friendly conference if possible. If the parties on the board can not agree, then the meeting shall be adjourned for a period not exceeding 21 days, and the matter in dispute shall be further discussed by the constituents of the two parties and the chairman shall be summoned by the secretaries to the adjourned meeting, when the matter shall be again discussed, and in default of an agreement by the parties on the board, the chairman shall give his casting vote on such matter at that meeting, which shall be final and binding.

12. All questions submitted to the board shall be stated in writing, and may be supported by such verbal, documentary, or other evidence and explanation as the parties may desire, subject to the approval of the board.

13. All votes shall be taken at meetings of the board by show of hands. When at any meeting of the board the parties entitled to vote are unequal in number, all shall have the right of fully entering into the discussion of any matter brought before them, but only an equal number of each shall vote, the withdrawal of the members of whichever body may be in excess to be by lot, unless otherwise arranged.

14. Each party shall pay and defray the expenses of its own representatives and secretary, but the costs and expenses of the chairman, stationery, books, printing, hire of rooms for meeting, shall be borne by the respective parties in equal shares.

THOS. RATCLIFFE ELLIS,  
THOMAS ASHTON,  
*Joint Secretaries of the Board.*

vote, is Lord James of Hereford. All questions must be submitted in the first instance to the board, it being the purpose to prevent strikes if possible. If the board can not agree at the first meeting an adjournment is taken and the matter is discussed by the respective parties. At the second meeting, if the members of the board fail to agree, the chairman shall give his casting vote, which shall be final and binding. The rules prohibit the practice of splitting the difference between existing rates and those demanded. In connection with this provision is one fixing a minimum wage for 2 years, at not less than 30 per cent above the tonnage rates of 1888, a provision which makes the employees more content with the board than they were as it formerly existed. The agreement further provides that wages shall not be more than 45 per cent above the rates of 1888. The first rate established by the reorganized board made an advance of 5 per cent on the rates formerly existing.

6. **Cleveland iron miners.**<sup>1</sup>—A board of conciliation has been in existence since 1873, representing the North Yorkshire and Cleveland Miners' Association on the one hand and the Cleveland Mine Owners' Association on the other. It consists of 6 representatives chosen by each association. In case of failure to agree on any point one arbitrator is chosen by each side and these select an umpire. The decision of the board is binding for 3 months.

This board is also said to have worked very successfully. It meets 5 or 6 times yearly and settles on an average about 7 cases at each meeting. In 1890, 29 cases were disposed of, an umpire being appointed in only 2 cases. Both sides prefer on the whole not to submit matters to arbitration by outside parties.

7. **Other mining districts.**—Joint committees of employers and employed have also been permanently established in South Yorkshire and East Worcestershire, and are, from time to time, temporarily established in West Yorkshire. These boards are also said to work successfully.<sup>2</sup>

In the month of August, 1883, a wages board was constituted in the South Staffordshire coal trade.<sup>3</sup> In 1888 the wages board, which had been broken up by the strike in 1884, was reconstituted on similar lines to those existing previously, but without a president. Its first act was to draw up an automatic scale, not based, as before, on the price of one class of coal at one particular colliery, but upon the average selling price of all qualities of coal throughout the district. That price was to be ascertained by submitting the books of 12 employers—6 selected by the representatives of their own body on the board, and 6 by those of the men—to the examination of a firm of accountants approved by both parties. Alterations in the scale could take effect only after 3 months' notice. It was reported in 1891, that, subject to a few minor modifications effected without friction by mutual agreement, the scale adopted in 1888 still continued to operate, and it was said to be giving perfect satisfaction. Every alteration, however, hitherto made under it in the rate of wages, had resulted in a gain to the men. Apparently, later reductions proved too severe a strain for the system, for the sliding scale is no longer in force in the district.

## X. IRON AND STEEL, ENGINEERING, AND SHIPBUILDING TRADES.

1. **Generally.**<sup>4</sup>—Most of the joint committees of employers and employees in the British iron and steel trades, unlike those in the coal trade, have authority to settle general questions, such as the general rate of wages, as well as minor disputes arising out of existing arrangements or those of a purely local character.

<sup>1</sup> Royal Commission, Final Report, Part II, sec. 71, Bulletin, Department of Labor, Vol. V, pp. 503-507.

<sup>2</sup> Royal Commission, Final Report, Part II, sec. 81.

<sup>3</sup> Jeans, Conciliation and Arbitration, ch. 12.

<sup>4</sup> The Royal Commission on Labor reported: "Some system of conciliation, either by means of informal conferences or negotiations between associated employers and employed, or between individual employers and associated employed, or by boards of arbitration and conciliation, joint committees and wages boards, has been established in by far the greater number of industries under consideration. The evidence given shows that this tends to the avoidance of disputes, and to the promotion of a general understanding between employers and employed." The commission describes about ten different boards of conciliation existing in these trades. All but one of these boards, it points out, makes provision for the final reference of disputed questions to independent arbitrators or umpires. The need has been felt for the existence of some final authority to which reference may be made in case of deadlock. The systems are almost universally reported to have worked satisfactorily. It is stated that the existence of these boards lessens the danger and reduces the number of strikes, because it insures great care on both sides with regard to the position taken up. The rules of most of the associations stipulate that all points of dispute shall be referred to arbitration before a strike takes place. It is stated also that the award of the arbitrators is accepted in practically all cases. There are some objections raised on the ground that arbitrators do not understand technical points, and that decisions are not always accepted, but the general opinion seems strongly in favor of the system. (Royal Commission, Final Report, Part II, pp. 125, 135.)

No one of the boards applies to as large a number of employees as some of the leading boards of the mining industry, but all of the joint boards in the iron and steel industry combined bring under their jurisdiction a very large number of employees, and have done much in recent years to prevent strikes and lockouts. It appears that in 1898, 200,918 persons in these trades had their rate of wages changed as a result of peaceful negotiations of one sort or another (not necessarily in every case through the intervention of permanent joint boards of conciliation and arbitration), while only 4,652 persons had their wages changed as a result of strikes. In 1899, 151,130 persons were affected by changes of wages brought about by peaceful negotiation, while only 5,491 were affected by changes resulting from strikes.<sup>1</sup>

It need scarcely be pointed out that, as a necessary condition of the widespread adoption of the methods of conciliation and arbitration, organizations, both of employers and employees in these trades, are numerous and strong. In 1899 there were 331,245 members of labor organizations in the metal, engineering, and ship-building trades of Great Britain.

Even where permanent joint boards of conciliation do not exist, we find that the conditions of labor in these industries are very generally determined by joint agreements of organizations of employers and employees covering often very considerable districts. A long list of such agreements is published in the annual reports of the British labor department on wages.

The sliding scale system has been employed with considerable success in certain branches of the metal trades of England. While in some instances the system has been discontinued, it has been in almost continuous operation for many years in several important districts, and in recent years the scope of the system has been considerably extended. Out of 19 different systems of sliding scales which are reported as in operation in Great Britain in 1899, 16 are found in these trades. The total number of persons in these trades whose wages were changed as the result of the operation of sliding scales in that year was 52,399.<sup>2</sup>

The system of sliding scales has proved most effective in determining the wages of pig-iron workers, where the work is relatively simple and the base price easily determined. A considerable number of scales, however, apply to other classes of iron and steel workers. The most important sliding scales in these trades are the following.<sup>3</sup>

Name	Number of employees affected
West Cumberland blast-furnace men...	1,350
Barrow in Furness blast-furnace men...	2,200
Barrow in Furness steel workers...	2,000
Midlands iron and steel workers...	20,000
North of England iron and steel workers...	6,000
South Wales and Monmouthshire iron and steel workers...	5,000
Consett & Jarrow steel-mill men...	1,000
Eston steel workers...	1,200
Cleveland blast-furnace men...	5,500

The most important joint boards in these trades are described in detail below. Other trades mentioned as having joint committees are the wrought-nail trade, the brass trade at Birmingham, and the nut and bolt trade.<sup>4</sup> In addition to these, the new system of trades combinations promoted by Mr. E. J. Smith, which provide for joint boards, include several minor finished iron and metal trades. This system is more fully described above (p. 48).

**2. North of England manufactured iron and steel trade.**—The oldest and most important of the joint boards referred to is that for the manufactured iron and steel trade of the north of England, which dates from 1869. This board consists of 1 employer and 1 operative from each works joining the system. The operatives select their representative by ballot yearly. The board establishes a standing committee consisting of 5 representatives of each side, which has power to take up disputes in the first instance and to settle any question, except such as relates to a general rise or fall of wages, provided the question is submitted by the representatives of both sides from the works affected. Questions as to general wages

<sup>1</sup> Report of Labor Department on Changes of Wages and Hours, 1899, p. LXIX.

<sup>2</sup> *Ibid.*

<sup>3</sup> Report of Labor Department on Piecework Scales, 1899, pp. 21-34.

<sup>4</sup> Royal Commission, Part II, sec. 149.

must be considered by the board as a whole. A referee is to be chosen yearly by the vote of the majority of the board, and he may be invited to preside, with power to vote, in general board meetings; or, in case of failure of the board to agree as to any matter, a special arbitrator may be appointed. No strike is permitted without effort at conciliation or arbitration, and there are careful rules regulating the manner of presenting grievances, which tend to check unwarranted complaints.

This board is reported to have succeeded admirably in settling trade disputes. It had up to 1891 effected 60 wage settlements—7 by mutual arrangement, 20 by arbitration, and 33 by the operation of sliding scales. The average number of cases brought before the board annually during the 10 years preceding 1891 was 18. In only 4 cases, from 1883 to 1891, was the decision of the referee called for. The decisions have always been loyally carried out by both sides. In only two or three cases since the establishment of the board have there been stoppages of work. Friendly relations have been promoted by its existence. Sliding scales are used wherever conveniently applicable. The first scale<sup>1</sup> was adopted by this board in 1871, but it was operative for 3 months only. The next, which was introduced in 1874, and lasted 12 months, was that known as the "Derby" scale, on account of its details having been settled at a conference at Derby. Under this scale an arrangement was made with the South Staffordshire iron trade for basing a uniform wage on the average net selling prices in the two districts. The third scale came into force in May, 1880, and continued in operation until the end of January, 1882. It was known as the "Dale" scale, because the settlement of its basis had been placed in the hands of Mr. David Dale as arbitrator. It was revised for a short time in 1883, but notice was given by the operatives for its discontinuance after one settlement had taken place. The scale at present in force was adopted on July 1, 1889. Its basis was fixed at a meeting of the board held on April 15, 1889, on receipt of the report drawn up by the committee which had been specially appointed to consider the matter. It had an original binding force of 2 years.

It is true, as pointed out by the Royal Commission, that the number of establishments represented in the board is decreasing, and since the employees can have no representative unless their employer is represented, the number of employees affected is also decreasing. This is partly due to the relatively declining importance of the iron trade as compared with the steel trade and partly to the desire of employers to get the advantage of the board without bearing its expenses.<sup>2</sup>

The following comment upon the working of this board is by Mr. J. S. Jeans, who has himself been actively connected with the board as a representative of the employers.<sup>3</sup>

"No industry has supplied a more remarkable testimony to the merits and advantages of both arbitration and sliding scales than the finished-iron trade of the north of England, where a board has been in uninterrupted operation since 1869, and where wages have for the greater part of the intervening period been regularly varied according to the ascertainment of selling prices. All this has been accomplished without any serious dispute, and without any suspension of labor worth speaking of, in an industry where disputes were previously both frequent and disastrous.

"Since the board was established there have been 60 wage settlements—7 by mutual arrangement, 20 by arbitration, and 33 by sliding scales. The rates have varied between 13s. 3d. per ton, long weight, paid for puddling on 2nd April, 1873, when other work was paid for at 27½ per cent above the standard, and the 6s. 3d. per ton, short weight, paid for puddling on 31st October, 1885, when the wages for other work were 27½ per cent below the standard.

"In making settlements of wages, regard is had to the capability of the works to produce cheaply, the quality of the machinery, and the ability of the men employed. The quality of the machinery is an important element in determining the rate of wages an employer can afford to pay. According to this mode of judgment it may happen that two workmen of equal ability are earning different wages because one of them is so fortunate as to be employed at works possessing better machinery than those at which the other is working. The board, however, endeavors to secure uniformity of wages only in connection with uniformity of conditions."

<sup>1</sup> Jeans, *Conciliation and Arbitration*, ch. xvi.

<sup>2</sup> Royal Commission, *Final Report*, Part II, sec. 119, Bulletin Department of Labor, pp. 497-502.

<sup>3</sup> Jeans, *Conciliation and Arbitration*, ch. xvi.

The following are the rules and by-laws of the board of conciliation and arbitration for the manufactured iron and steel trade of the north of England in full:

#### RULES

1. The title of the board shall be The Board of Conciliation and Arbitration for the Manufactured Iron and Steel Trade of the North of England.

2. The object of the board shall be to arbitrate on wages or any other matters affecting the respective interests of the employers or operatives, and by conciliatory means to interpose its influence to prevent disputes and put an end to any that may arise.

3. The board shall consist of one employer and one operative representative from each works joining the board. Where two or more works belong to the same proprietor, each works may claim to be represented at the board, but in all such cases where iron and steel are worked, it is recommended that one representative shall represent iron and one steel, such arrangements shall, however, be optional on the part of the firm and workmen jointly.

4. The employers shall be entitled to send one duly accredited representative from each works to each meeting of the board.

5. The operatives of each works shall elect a representative by ballot at a meeting held for the purpose on such day or days as the standing committee hereafter mentioned may fix, in the month of December in each year, the name of such representative and of the works he represents being given to the secretaries on or before the 1st of January next ensuing.

6. If any operative representative die or resign, or cease to be qualified by terminating his connection with the works he represents, a successor shall be chosen within 1 month, in the same manner as is provided in the case of annual elections.

7. The operative representatives so chosen shall continue in office for the calendar year immediately following their election, and shall be eligible for reelection.

7a. In case of the total stoppage of any works connected with the board, both employer and operative representatives shall, at the end of 1 month from the date of such stoppage, cease to be members of the board, and of any committee on which they may have been elected. Any vacancies so resulting from this or any other cause shall be filled up by the committee affected.

8. Each representative shall be deemed fully authorized to act for the works which has elected him, and a decision of a majority of the board, or in case of equality of votes, of its referee, shall be binding upon the employers and operatives of all works connected with the board.

9. The board shall meet for the transaction of business twice a year, in January and July, but by order of the standing committee the secretaries shall convene a meeting of the board at any time. The circular calling such meeting shall express in general terms the nature of the business for consideration.

10. At the meeting of the board to be held in January in each year it shall elect a referee, a president, and vice-president, two secretaries, two auditors, and two treasurers, who shall continue in office till the corresponding meeting of the following year, but shall be eligible for reelection. The president and vice-president shall be ex-officio members of all committees, but shall have no power to vote.

11. At the same meeting of the board a standing committee shall be appointed, as follows: The employers shall nominate 16 of their number, exclusive of the president (not more than 5 of whom shall be entitled to vote or take part in any discussion at any meeting of the committee), and the operatives 5 of their number, exclusive of the vice-president.

12. The standing committee shall meet for the transaction of business prior to the half-yearly meetings, and in addition as often as business requires. The time and place of meeting shall be arranged by the secretaries in default of any special direction.

13. The president shall preside over all meetings of the board and of the standing committee, except in cases that require the referee. In the absence of the president a temporary chairman, without a casting vote, shall be elected by the meeting.

14. All questions requiring investigation shall be submitted to the standing committee or to the board, as the case may be, in writing, and shall be supplemented by such verbal evidence or explanation as they may think needful.

15. All questions shall, in the first instance, be referred to the standing committee, who shall investigate and have power to settle all matters so referred to it, except a general rise or fall of wages or the selection of an arbitrator to be empowered to fix the same. Before any question be considered by the standing committee an agreement of submission shall be signed by the employer and operative delegate of the works affected and be given to the committee. In case of the standing committee failing to agree, the question in dispute shall be submitted to the referee, who shall be requested to decide the same, but in all such cases witnesses from all the works affected may be summoned to attend and give evidence in support of their case.

16. No subject shall be brought forward at any meeting of the standing committee or of the board unless notice thereof be given to the secretaries 7 clear days before the meeting at which it is to be introduced.

17. All votes shall be taken at the board and standing committee by show of hands, unless any member calls for a ballot. If at any meeting of the board the employer representative or the operative representative of any works be absent, the other representative of such works shall not, under the circumstances, be entitled to vote.

18. When the question is a general rise or fall of wages, a board meeting shall be held, at which the referee may be invited to preside, and in case no agreement be arrived at a single arbitrator shall be appointed, and his decision at or after a special arbitration held for the purpose shall be final and binding on all parties. The referee may by special vote of a majority of the board be appointed arbitrator.

19. Any expense incurred by the board shall be borne equally by the employers and operatives, and it shall be the duty of the standing committee to establish the most convenient arrangements for collecting what may be needed to meet such expenses. The banking account of the board shall be kept in the name of the treasurers, and all accounts shall be paid by check signed by them.

20. The sum of 10s. (£2 4s) for each member of the board or standing committee shall be allowed for each meeting of the board or standing committee. This sum shall be divided equally between the employers and operatives, and shall be distributed by each side in proportion to the attendance of each member. In addition, each member shall be allowed traveling expenses at the rate of 3 halfpence (3 cents) per mile, and when an operative member is engaged on the night shift following the day on which a meeting is held he shall be allowed payment for a second shift.

21. The operative representative shall be paid for time lost in attending to grievances at the works to which he belongs at the rate of 10s. (£2 4s) for each shift actually and necessarily lost. Should he, however, lose more time than reasonably necessary in the opinion of the manager, the latter shall fill up the certificate only for such amount as he considers due before signing it. Whatever sum or sums

in this or any other way be paid to operative representatives in excess of what is paid to employer representatives, railway fares alone excepted, one-half of such excess shall concurrently be credited to the employers collectively. An account of attendances, and fees paid to each representative shall be kept, and the secretaries shall call the attention of the standing committee to any case where the cost of adjusting disputes at any works exceeds, in their opinion, a proper amount in proportion to the number of operatives employed.

22. Should it be proved to the satisfaction of the standing committee that any member of the board has used his influence in endeavoring to prevent the decisions of the board or standing committee from being carried out, he shall forthwith cease to be a representative, and shall be liable to forfeit any fees which might otherwise be due to him from the board.

23. If the employers and operatives at any works not connected with the board should desire to join the same, such desire shall be notified to the secretaries, and by them to the standing committee, who shall have power to admit them to membership on being satisfied that these rules have been or are about to be complied with.

24. No alteration or addition shall be made to these rules, except at the meeting of the board to be held in January in each year, and unless notice in writing of the proposed alteration be given to the secretaries at least 1 calendar month before such meeting. The notice convening the annual meeting shall state fully the nature of any alteration that may be proposed.

25. The standing committee shall have power to make from time to time such by-laws as they may consider necessary, provided the same are not inconsistent with or at variance with these rules.

#### BY-LAWS

Rule 5. The secretaries shall, in the month of November in each year, issue a notice to each works connected with the board, requesting the election of representatives in the month of December, and shall supply the requisite forms.

Rule 11. The standing committee shall have power to fill up all vacancies that may arise during the half year.

Rule 11. An official form shall be supplied to each representative, on which complaints can be entered. Either secretary receiving a complaint shall be required to forward a copy of the same to the other secretary, and the complaint shall be considered as officially before the board from the date of such notice.

Rule 16. This rule to be interpreted to mean that no case in which the standing committee are called upon to deal finally with a complaint from any member of the board shall be taken up without 7 days' notice has been received, but this is not to apply to routine business, or to complaints, the investigation of which may be considered necessary by the committee.

Rule 19. The sum of 1d. (2 cents) per head per fortnight shall be deducted from the wages of each operative earning 2s. 6d. (\$0.61) per day and upward. Each firm shall pay an amount corresponding to the total sum deducted from the workmen. The contributions shall be forwarded on official forms, to be supplied by the secretaries, to the bankers (the National Provincial Bank of England, Limited) within one week from the pay [day] when the money is deducted from the operatives.

Rule 20. If any member be compelled in the service of the board to attend meetings on two or more days consecutively, the sum of 3s. 6d. (\$0.85) each shall be allowed per night. This is not to apply to any members living in the place where the meeting is held. Members attending meetings on any day except Mondays or Saturdays, and being that week employed on the night turn, to be paid for 2 days for each sitting.

The board earnestly invites the attention of all who belong to it, either as subscribers or as members, to the following instructions.

If any subscriber to the board desire to have its assistance in redressing any grievance, he must explain the matter to the operative representative of the works at which he is employed. Before doing so he must, however, have done his best to get his grievance righted by seeing his foreman or the manager himself.

The operative representative must question the complainant about the matter, and discourage complaints which do not appear to be well founded. Before taking action he must ascertain that the previous instruction has been complied with.

If there seem good grounds for complaint, the complainant and the operative representative must take a suitable opportunity of laying the matter before the foreman, or works' manager, or head of the concern (according to what may be the custom of the particular works). Except in case of emergency, these complaints shall be made only upon one day in each week, the said day and time being fixed by the manager of the works.

The complaint should be stated in a way that implies an expectation that it will be fairly and fully considered, and that what is right will be done. In most cases this will lead to a settlement without the matter having to go further.

If, however, an agreement can not be come to, a statement of the points in difference shall be drawn out, signed by the employer representative and the operative representative, and forwarded to the secretaries of the board, with a request that the standing committee will consider the matter. An official form on which complaints may be stated can be obtained from the secretaries.

It will be the duty of the standing committee to meet for this purpose as soon after the expiration of 7 days from receipt of the notice as can be arranged, but not later than the first Thursday in each month.

It is not, however, always possible to avoid some delay, and the complainant must not suppose that he will necessarily lose anything by having to wait, as any recommendation of the standing committee or any decision of the board may be made to date back to the time of the complaint being sent in.

Above all the board would impress upon its subscribers that there must be no strike or suspension of work. The main object of the board is to prevent anything of this sort, and if any strike or suspension of work take place, the board will refuse to inquire into the matter in dispute till work is resumed, and the fact of its having been interrupted will be taken into account in considering the question.

It is recommended that any changes in modes of working requiring alterations in the hours of labor, or a revision of the scale of payments, should be made matters of notice, and as far as possible, of arrangement beforehand, so as to avoid needless subsequent disputes as to what ought to be paid.

**3. The West of Scotland manufactured steel trade.**—The board of conciliation in this district was established in 1890, with almost precisely the same form of organization as that of the last-named board. On account, however, of the relatively imperfect organization of the employers and employees, and of the ill feeling growing out of earlier strikes, the board did not at first work well. In 1898, however, it was reported that there had been no strikes of importance for the past 5

years, and that there had been no repudiations of the decisions of the board. In September, 1896, a more general agreement was made in the manufactured iron trade of Scotland, and a board of conciliation, precisely similar to that of the West of Scotland steel trade, was established. Sir James Bell, formerly lord provost of Glasgow, was unanimously chosen arbitrator, but during the past 2 years his services have not been needed. (Royal Commission, Part II, sec. 149; Bulletin Department of Labor, Vol. V, pp. 509-515.)

**4. Midland Iron and Steel Wages Board.**—This board was established in 1876 and was reorganized and extended in 1886, so that it now includes the iron-making district of which Birmingham is the center. Forty-two firms were represented at the time of the report of the Royal Commission on Labor. There are 12 members of the joint board on each side.

In case the board is equally divided on any question, a casting vote is given the chairman, who, though independent and chosen by the other members of the board, must be personally connected with the iron trade.

This board has made very extensive use of the system of sliding scales. Not less than 20,000 persons coming under its jurisdiction have their wages fixed in this way. The method as regards iron puddlers provides that for every increase or decrease of £1 in the price of pig iron per ton there shall be an increase or decrease of 1s. 6d. in wages. The effect of this system in recent years has been to keep wages comparatively uniform until the marked rise in prices in 1899 and 1900. From 1892 to 1898 wages fluctuated only between 7s. 3d. per ton and 7s. 9d. per ton, while during the year 1900 wages reached 9s. per ton.<sup>1</sup>

This joint wages board in the Midland district is reported to have had very successful operation and practically to have prevented general strikes in that district since its establishment.

**5. Joint boards and sliding scales in the pig-iron industry.**—The manufacture of pig iron is peculiarly well adapted to the application of the sliding-scale system. We find accordingly that there are seven such scales in operation in the pig-iron industry, applying to many thousands of employees. In connection with several of these sliding scales permanent joint boards of employers and employees have been established for the fixing of scales and the interpretation of them. In some cases these boards also have power to settle other classes of disputes.

Perhaps the most important of these sliding scales of the pig-iron industry is that in the Cleveland district. The first sliding scale was adopted in 1879, and the one at present in force, which was adopted in 1897, is the eighth of these scales. There have been some interruptions of the operation of the system, one of which lasted for 18 months, but on the whole it has proved decidedly successful. It applies to about 5,500 workers, all of whom are employed by the Cleveland Iron Masters' Association, which consisted in 1894 of 17 firms owning 108 blast furnaces.

The present scale in the Cleveland blast furnaces is based on a selling price of 34s. per ton for pig iron. For every change of 2.40d. in the price of pig iron, a change of one-fourth of 1 per cent is made in the rate of wages. That is to say, for every fluctuation of 1s. in the price of pig iron there is a change of 1½ per cent in the various piece rates by which wages are determined. The standard on which wages are based is the rate for 1879. Since 1891 wages have varied from one-fourth of 1 per cent above the standard of 1879 to 28.75 per cent above that standard. Most of the time between 1891 and 1898 the wages were only slightly above the standard, the highest figure being reached in 1899 when there was a marked increase in the price of pig iron.<sup>2</sup>

Great pains are taken to secure fairness and accuracy of the adjustment of wages under this arrangement. The average selling prices of a number of selected firms are taken, and either party may request the omission of one or more of these firms or the inclusion of others for the sake of securing more satisfactory comparison. In case of a difference of opinion as to such a request, it is referred to a committee consisting of not more than 6 on either side, who, if they can not agree, refer the matter to an umpire. The prices are ascertained confidentially by two properly accredited accountants, one chosen by the employers and the other by the employees. The ascertainment of prices and the changes of rates takes place once in 3 months.

The sliding-scale system in the midlands iron and steel trade, which is especially important in its application to puddlers, has already been described. Other sliding-scale systems for determining the wages of pig-iron workers are found in the

<sup>1</sup> Report of Labor Department on Piecework Scales, 1899, pp. 27, 28.

<sup>2</sup> Report on Piecework Scales, 1899, p. 21.

West Cumberland district, in Barrow-in-Furness, and in the South Wales and Monmouthshire district.

Regarding the complexity of the sliding-scale system, even as applied to the relatively simple pig-iron industry, Mr. Jeans, in his book on Conciliation and Arbitration, makes the following statement:

"The conditions of blast-furnace labor may be cited as illustrating the difficulties of framing a sliding scale for the regulation of wages over a large area of operations. On the first blush it might appear as if nothing could be more simple than to fix a scale rate for the remuneration of the labor of men employed about a blast furnace. The labor is not of a character that seems to vary much; it is pretty constant; the requirements to be met do not involve a high degree of skill, and the product is always substantially the same. And yet there are no fewer than 26 different classes of workmen employed about blast furnaces, who are paid under the scale at rates varying according to the nature of their occupation. The question that has to be determined is not alone the relation of a particular wage to a particular price, but the relation which the wages paid to one class of workmen shall bear to the wages paid to 25 other classes, and the relation of each to the realized selling price of the product."<sup>1</sup>

5. **Wear Shipbuilding Board of Conciliation.**—This body was established in 1885. It represents on the part of the men the organizations of shipwrights, joiners, smiths, and drillers. Each of these separate branches of the trade has a departmental board of its own, composed of 6 employers and 6 employees, with power to settle disputes in its own branch. There is also a general board made up of 3 representatives from each section of the workmen and an equal number of employers. Any matter which can not be settled by either a department board or the general board is decided by referees, who are prominent men not connected with the trade and whose decision is binding. This board is reported to have had a very successful career. Its decisions are followed generally by the shipbuilders on the other rivers of England.<sup>2</sup>

## XI. CONCILIATION AND ARBITRATION IN TEXTILE AND CLOTHING TRADES.

1. **Generally.**—The Royal Commission on Labor states that there is a very general consensus of opinion in favor of boards of conciliation or joint committees among representatives of the textile and clothing trades. "In the textile trades it is true that comparatively little has yet been done in the actual establishment of such boards. \* \* \* In the clothing trades, upon the other hand, two long-established and very successful boards in the hosiery trade have recently fallen into decay and are practically extinct, but a new group of boards which have arisen in the boot and shoe trade seem to have already had a fair amount of success and to be likely to continue in operation."<sup>3</sup> Since the report of the Royal Commission, as is shown in a recent paper published by the United States Department of Labor, there has been a further movement toward the establishment of joint boards in the cotton trade and in the dyeing trades, while the boards in the boot and shoe trade have been extended. Very satisfactory results have also been secured by informal negotiations as to the conditions of labor.

2. **Nottingham hosiery and glove trade.**—Perhaps the first permanent board of conciliation established in Great Britain was that in the Nottingham hosiery and glove trade, which dates from 1860. The board consisted of 11 manufacturers, elected by a public meeting of their own body, and 11 operatives, elected by a meeting of the various branches of the trade. The boards chose yearly a chairman, who had a casting vote. There was no provision for reference of disputes to outside arbitrators, but committees of inquiry were established to investigate disputes in the first instance.

This board worked with great success for about 20 years. More recently, however, it has fallen into disuse, and in fact practically no longer exists. The cause of this decline is said to be that the interests of the different classes of workmen represented have ceased to be identical. Apparently also they are not very strongly organized.

<sup>1</sup>J. S. Jeans, *Conciliation and Arbitration*, chap. XI.

<sup>2</sup>Royal Commission, Final Report, Part II, sec. 152.

<sup>3</sup>Royal Commission, Final Report, Part II, secs. 386, 387.

<sup>4</sup>*Ibid.*, secs. 384, 385.

There was also formerly a somewhat similar board in the hosiery trade of Leicestershire, but this likewise has fallen into decay.

**3. Nottingham lace trade.**—A board of conciliation in the lace trade has existed at Nottingham since 1868. It has been considerably modified in its organization and methods at different times. At present the board consists of 13 manufacturers and 13 operatives, the representatives on each side being divided among 3 different branches of the trade. The representatives are chosen by the organizations of employers and employees, respectively. All questions in dispute are submitted in the first instance to that section of the board which represents the branch of the trade concerned, but no settlement can be considered as binding until it is ratified by the full board. Should the board fail to agree on any question, each side has the privilege of consulting its own constituents and of appointing an independent chairman to sit with the board; if, after this, no agreement is reached the question is to be referred to the board of trade of the British Government. No alteration of wages of more than 7½ per cent may be considered by the board.

The provisions concerning the enforcement of the decisions of the board, such as are found in the rules of few other joint committees, are interesting. It is provided that any member of the Lace Manufacturers' Association who fails to comply with a decision regarding the prices to be paid, shall pay the costs of the inquiry into his action, in addition to the difference in wages from the time of the complaint. If he refuses to do so the employers' association must refuse to him any pecuniary assistance, while the association of operatives has full power to withdraw its workmen from the service of the employer. On the other hand, any member of the operatives' association who shall violate a decision must pay the costs of the inquiry. If he fails to do so the operatives' association must pay the costs and must exclude him from all its benefits, or if it gives him any assistance it must pay a fine of £10.

It is stated by the secretary of the Lace Makers' Union that a hard fight has been necessary to uphold the conciliation system. At different times employees have been dissatisfied with decisions and have wished to abolish the board. In two cases the board was unable to control them and was temporarily practically broken up. Nevertheless, the Royal Commission on Labor reported in 1891 that for the past 10 years all disputes had been amicably settled.<sup>1</sup>

**4. Cotton trades.**<sup>2</sup>—In all branches the cotton trades wages are fixed by the piece, and the great complexity of the operations makes the determination of the rates a matter of extreme difficulty. It becomes especially necessary to distinguish between occasional settlements of the general level of wages and local or temporary adjustments and interpretations necessary to carry out these general principles. The cotton operatives of Lancashire, the greatest cotton manufacturing district in the world, unlike those in this country, are very strongly organized. There has been developed accordingly a complex system of adjusting wages, which has been highly successful in avoiding disputes. No provision is made for resort to outside arbitrators. The settlement of the countless minor technical points of dispute arising in connection with the piecework scales of individual mills is mainly in the hands of the respective secretaries of the local associations of employers and employees, who are practically permanent paid officers.

"The factors which enter into the piecework rates of the Lancashire cotton operatives are so complicated that both the employers and the work people have long since recognized the necessity of maintaining salaried professional experts who devote their whole time to the service, respectively, of the employers' association and the trade union. \* \* \* All the officials who are to concern themselves with these intricate trade calculations are selected by competitive examination."

When it comes to concluding or revising the general agreement itself—a matter in which not one firm or operative alone is interested, but the whole body of employers and workmen—we find the machinery for collective bargaining taking the form of a joint committee composed of a certain number of representatives of each side. Thus for the various districts there are more or less formal boards, usually, however, without a permanent constitution and rules, which revise the details of their lists in periodical conferences in which the leading employers of the district concerned arrange the matter with the leading trade-union officials and representative operatives. When the point at issue is not the alteration of the technical details of the list, but a general reduction or advance of wages by a certain per cent throughout the trade, or a general shortening of the work time, the matter discussed is between appointed representatives of the whole body of the employers, attended by their agents and solicitors, and the central executive officers of the

<sup>1</sup> Royal Commission, Final Report, Part II, p. 263; Bulletin, Department of Labor, Vol. V, pp. 516-519.

<sup>2</sup> Webb, Industrial Democracy, I, 196-200.

Amalgamated Association of Operative Cotton Spinners as representing all the district unions.

The regulations as to these district or general conferences for settling the conditions of labor are covered for the greater part of the cotton operatives by what is known as the "Brooklands agreement." This was adopted in 1893 in settlement of a general strike which lasted 20 weeks.<sup>1</sup>

It is provided that every complaint must be submitted first by the secretary of the local association of employers or of employees to the secretary of the other organization. If these fail to reach an agreement, the point at issue is to be discussed by a committee consisting of the secretary and three representatives chosen by the local organizations on each side. Should these still fail to reach a decision, the matter is referred, if either of the secretaries of the local organizations deem it advisable, to a committee consisting of four representatives of the federated association of employers, with their secretary, and four representatives of the amalgamated association of employees, with their secretary. Until all these nego-

<sup>1</sup> The essential parts of the Brooklands agreement are as follows.

4. That, subject to the last preceding clause, and with the view of preventing the cotton-spinning trade from being in an unsettled state too frequently from causes such as the present dispute, to the disadvantage of all parties concerned, no advance or reduction of such wages as aforesaid shall in future be sought for by the employers or the employed until after the expiration of at least 1 year from the date of the previous advance or reduction, as the case may be, nor shall any such advance or reduction when agreed upon be more or less than 5 per cent upon the then current standard wages being paid. Notwithstanding anything hereinbefore contained in this clause, whenever a general demand for an advance or decrease of wages shall be made, the wages of the mule card and blowing room operatives may be increased to such an extent as may be mutually agreed upon.

5. That the secretary of the local employers' association and the secretary of the local trade union shall give to the other of them, as the case may be, 1 calendar month's notice in writing of any and every general demand for a reduction or advance of the wages then being paid.

6. That in future no local employers' association, nor the federated association of employers on the one hand, nor any trade union or federation of trade unions on the other hand, shall countenance, encourage, or support any lock out or strike which may arise from or be caused by any question, difference or dispute, contention, grievance, or complaint, with respect to work, wages, or any other matter, unless and until the same has been submitted in writing by the secretary of the local employers' association to the secretary of the local trade union, or by the secretary of the local trade union to the secretary of the local employers' association, as the case may be, nor unless and until such secretaries or a committee consisting of 3 representatives of the local trade union, with their secretary, and 3 representatives of the local employers' association, with their secretary, shall have failed, after full inquiry, to settle and arrange such question, difference or dispute, contention, complaint, or grievance within the space of 7 days from the receipt of the communication in writing aforesaid, nor unless and until, failing such last-mentioned settlement and arrangement, if either of the said secretaries of the local trade union and the local employers' association shall so deem advisable, a committee consisting of 4 representatives of the federated association of employees, with their secretary, and 4 representatives of the local amalgamated association of the operatives' trade union, with their secretary, shall have failed to settle or arrange, as aforesaid, within the further space of 7 days from the time when such matter was referred to them, provided always that the secretaries or the committee hereinbefore mentioned, as the case may be, shall have power to extend or enlarge the said period of 7 days whenever they may deem it expedient or desirable to do so. Should either the local employers' association or the local operatives' association fail to call such a meeting within 7 days (unless by consent of the other side), then the party which has asked for the meeting shall have the right to at once carry the question before the joint committee of the employers' federation and the operatives' amalgamation without further reference to the local association, and should either the employers' federation or the operatives' amalgamation fail to deal with the matter in dispute within a further 7 days, then either side shall be at liberty to take such action as they may think fit.

7. Should a firm make any change which, when completed, involves an alteration in the work or rate of wages of the operatives which is considered not satisfactory by them, then the firm shall at once place the matter in the hands of their association, who shall immediately take action as per clause 6, failing which the operatives involved shall have the right to tender notices to cease work without further notice to the employers' association. When a settlement is arrived at it shall date from the time the change was made.

8. Every local employers' association or the federated association of employers on the one hand, and every local trade union or the federation of trade unions on the other hand, shall, with as little delay as possible, furnish to the other of them, in writing, full and precise particulars with reference to any and every question, difference or dispute, contention, or grievance that may arise with a view to the same being settled and arranged at the earliest possible date in the matter hereinbefore mentioned.

9. There shall not be placed upon any joint committee of the federated association and the amalgamated association more than one member of the local employers' association and one member of the local trade union, in addition to the respective secretaries of those bodies. The rest of the said joint committee shall consist of persons who have not locally adjudicated upon the matter in question. It is understood that in case of unavoidable absence of secretary a substitute may be present to act in same capacity as secretary.

10. It is agreed that in respect to the opening of new markets abroad, the alteration of restrictive foreign tariffs, and other similar matters which may benefit or injure the cotton trade, the same shall be dealt with by a committee of three or more from each federation, all the associations undertaking to bring the whole of their influence to bear in furthering the general interests of the cotton industry in this country.

11. The above committee shall meet whenever the secretary of either federation shall be of opinion that questions affecting the general interests of the cotton trades should be discussed.

12. The representatives of the employers and the representatives of the employed in the pending dispute do mutually undertake that they will use their best endeavors to see that the engagements hereinbefore respectively entered into by them are faithfully carried out in every respect. (Bulletin, U. S. Dept. of Labor, V, 513-524.)

tiations have been gone through with no strike or lockout may be countenanced. Apparently these rules do not apply to general conferences regarding the conditions of labor for the future throughout the district. These are of a less formal character. It is provided, however, that no change in wages shall be sought by either side until at least one year after the date of the last previous change, and that no change shall be by more than 5 per cent.

This agreement is stated to have had the effect of practically preventing strikes since its adoption. It is especially noticeable that the funds of the operatives' organization spent in supporting strikes and disputes have fallen from an average of from \$29,000 per year from 1885 to 1892 to \$4,237 in 1898.<sup>1</sup>

Mr. and Mrs. Webb say on this point: "The lists of prices have been so carefully and elaborately worked out that even the district conferences are of only occasional occurrence. The general policy of both employers and operatives is against any but rare and moderate variations of the standard earnings. \* \* \* The joint conferences of the whole trade take place therefore only in momentous crises, and are accompanied by all the solemnity and strenuousness of an assembly on whose decision turns the question of peace or war."<sup>2</sup>

In addition to boards provided for by the Brooklands agreement there is a joint board in the weaving branch of the cotton trade in north and northeast Lancashire. It was first established in 1881. It consists of 6 representatives chosen by each side. Its decision is not final, the rules providing that the employers' section and the operatives' section of the committee shall respectively report to their constituents as to the general results of the various discussions. It is stated that neither side has been willing to appoint arbitrators, but that nevertheless the system has proved exceedingly advantageous to the trade. The greater number of the disputes which have arisen have not been over the general standard of wages, but as to the rates for new and difficult kinds of cloths, and these are peculiarly fitted for settlement by such a committee.

Since its establishment in 1881, reported the Royal Commission on Labor in 1894, it had worked very successfully, having settled 20 or 30 important cases which had come before it.

Mr. and Mrs. Webb say as to the conciliation system<sup>3</sup> in the cotton trade:

"The machinery for collective bargaining developed by the cotton operatives, in our opinion, approaches the ideal. We have, to begin with, certain broad principles unreservedly agreed to throughout the trade. The scale of remuneration, based on these principles, is worked out in elaborate detail into printed lists, which (though not yet identical for the whole trade) automatically govern the actual earnings of the several districts. The application both of the general principles and of the lists to particular mills and particular workmen is made, not by the parties concerned, but by the joint decisions of two disinterested professional experts, whose whole business in life is to secure, not the advantage of particular employer or workmen by whom they are called in, but uniformity in the application of the common agreements to all employers and workmen. The common agreements themselves are revised at rare intervals by representative joint committees, in which the professional experts on both sides exercise a great and even a preponderating influence. The whole machinery appears admirably contrived to bring about the maximum deliberation, security, stability, and promptitude of application."

**5. The dyeing trade.**—Two boards of conciliation have recently been established in the dyeing trade in Yorkshire. One board, representing the West Riding Dyeing and Finishers' Association on the one hand and the Amalgamated Society of Dyers on the other, has grown out of a smaller organization established in 1891. It now consists of 9 members from each organization, elected annually. No decision of the board is binding upon the parties to a dispute except at the express desire of both parties. By the consent of both parties the board may call in the assistance of 2 or more experts. It may also assist the parties in selecting arbitrators.

The other board, which includes warp dyers in this same district, has very similar rules. It is reported that both boards have worked very successfully and have resulted in friendly relations between employers and employed.<sup>4</sup>

**6. Other allied trades.**—Attempts have been made to establish boards of conciliation in the tailoring trade, but a mutual distrust and misunderstanding prevented their success. The Royal Commission on Labor reported in 1891 that steps were being taken to establish a board in the woolen trade in Yorkshire, but no other

<sup>1</sup> Bulletin, Department of Labor, pp. 519-521.

<sup>2</sup> Webb, *Industrial Democracy*, p. 200.

<sup>3</sup> *Industrial Democracy*, I, p. 203.

<sup>4</sup> Bulletin, Department of Labor, V, pp. 526-530.

information as to this board is available. A board of conciliation existed in the potteries trade from 1868 to 1891, but it suffered many difficulties and was finally broken up. There are still attempts to refer individual cases to the decision of arbitrators, chosen by each side with power to appoint an umpire.<sup>1</sup>

## XII. BOOT AND SHOE TRADE.

A local board of arbitration and conciliation has existed in the boot and shoe trade at Leicester since 1875. Local boards of a similar nature have also existed at Northampton, Kettering, Bristol, and Leeds. These boards have been more or less successful, but about 1895 there were serious difficulties growing out of the introduction of new kinds of machinery and work, which resulted in prolonged strikes. Finally the British Board of Trade offered its services as a mediator and the points at issue were referred to Lord Henry James, by mutual agreement. In connection with the settlement a new system of arbitration and conciliation for the general trade was established.

This agreement between the Federated Association of Boot and Shoe Manufacturers and the National Union of Boot and Shoe Operatives established a joint committee consisting of 1 manufacturer and 4 workmen to determine the precise method on which piecework "statements" shall be based. Joint committees for the local districts, similarly constituted, were established to prepare similar statements for their respective localities. Each of these committees was authorized to appoint an umpire to determine matters on which they should fail to agree. If the committees were unable to agree upon an umpire the appointment should be made by the presidents of the two national organizations or, if they failed to agree, by Lord James. Aside from these boards the agreement provided that previously existing local boards of arbitration and conciliation should be reconstituted, with full power to settle all questions of a local nature concerning wages, hours of labor, and conditions of employment.

No strike or lockout shall be entered into on the part of any member of an organization represented on any of the boards of arbitration. All awards and decisions must specify a date before which neither side shall be permitted to reopen the question. No restriction shall be put on the introduction of machinery or on the output of machinery.

The most interesting feature is the establishment of a fund in the hands of trustees as a guaranty for the carrying out of the agreement and of the decisions of arbitrators under it. The sum of £1,000 was deposited by the representatives of each side. In 1899 a strike occurred in the shoe trade in London. The London branch of the National Union had always been hostile to the terms of settlement and thought that this strike would test the strength of the agreement. Lord James decided that the agreement had been practically broken by the workmen and that the sum of £300 should be forfeited from the fund on deposit.

The full text of the national agreement in the boot and shoe trade is as follows:

We, the undersigned representatives of the Federated Associations of Boot and Shoe Manufacturers and of the National Union of Boot and Shoe Operatives, agree to the following terms of settlement of the dispute in the boot and shoe trade on behalf of those whom we represent.

1. This conference is of opinion that a piecework statement or statements for lasting and finishing machine workers and those working in connection therewith are desirable, such statements to be based on the actual capacity of an average workman, any manufacturer to have the option of adopting piecework or continuing day work, it being understood that the whole of the operatives working on any one process shall be put on one or the other system, which shall not be changed oftener than once in six months. Heeling and sewing to be regarded as separate processes.

2. This conference is of opinion that a piecework statement for wellet work at Northampton should be prepared on the principle laid down in the above resolution, viz., "the statement shall be based on the actual capacity of an average workman," employers having option as laid down in that resolution with regard to payment by the time or piece.

3. That for the purpose of carrying into effect the last two resolutions joint committees be appointed as follows:

(a) A joint committee of representatives of the employers and workmen, four of each, to determine the principles and methods of arrangement and classification on which piecework statements for machine workers shall be based, such committee to hold its first meeting on May 5, 1895, at Northampton, for preliminary business.

(b) Joint committees composed of representatives of employers and employed, four of each, to prepare such statements for their respective localities in accordance with the principles laid down by the above joint committee. Such committees to hold their first meetings with the least possible delay after the completion of the work of the above joint committee.

(c) A joint committee to prepare a statement for wellet work for Northampton, composed of representatives of employers and employed, four of each, such committee to hold its first meeting on May 5, 1895, for preliminary business.

Such committees shall take such evidence and obtain such information as they may think fit for the purpose, and each shall appoint an umpire to determine points on which they fail to agree.

<sup>1</sup> Royal Commission on Labor, Final Report, Part II, secs 374, 381, 388, Bulletin Department of Labor, V, p. 524.

Falling agreement on the part of any of the committees as to the appointment of umpires, the appointment shall be made by the president of the federation and the general secretary of the union, or if they fail to agree by Sir Henry James.

4 That the various local boards of arbitration and conciliation, consisting of equal numbers of representatives of employers and workmen in the district, be immediately reconstituted, and their rules be revised so far as necessary, with a view to greater uniformity, by a joint committee of representatives of employers and employed, four of each to be appointed forthwith. The revised rules to be submitted to and adopted by the local boards, with or without amendment in matters of detail. Pending the completion of this revision the former rules to be in force, but only questions of classification and other minor local questions not involving matters of principle to be entertained in the meantime, with the exception of the question of the minimum wage for clickers and pressmen in centers where notices have already been given to local boards.

5. That such boards when reconstituted shall have full power to settle all questions submitted to them concerning wages, hours of labor, and the conditions of employment of all classes of work people represented thereon within their districts which it is found impossible to settle in the first place between employers and employed, or secondly between their representatives, subject to the following conditions:

(a) No board shall require an employer to employ any particular workman, or a workman to work for any particular employer, or shall entertain any question relating to such matters, except for the purpose of enabling a workman to clear his character.

(b) No board shall claim jurisdiction over the conditions and terms of employment of work people outside its district; provided that no actual work shall be sent out of a district which has been the subject of an award in that district.

(c) No board shall interfere with the right of an employer to make reasonable regulations for time, keeping and the preservation of order in his factory or workshop.

(d) No board shall put restrictions on the introduction of machinery or the output therefrom, or on the adoption of day or piecework wages by an employer in cases in which both systems have been sanctioned, subject to the conditions prescribed in resolutions 2 and 3. No question referred to in sub-sections (a), (b), (c), (d) shall be made a matter of dispute by the union.

6. That it is desirable and necessary to provide financial guarantees for duly carrying out the provisions of this agreement, and existing and future awards, agreements, and decisions of boards, arbitrators, or umpires, so long as they do not contravene the provisions of this agreement; and that a scheme be at once prepared for depositing certain sums in the hands of trustees for that purpose.

7. That the committee intrusted with the revision of the rules of local arbitration boards be instructed to insert provisions—

(a) To carry the last resolution into effect forthwith. If not agreed upon by both sides, the conditions and terms of the trust to be referred to and finally settled by Sir Henry James.

(b) That in future all awards and decisions shall specify a date before which neither side shall be competent to reopen the question.

(c) That where a minimum wage has been fixed and is in operation, and a proposal is made to change it, the board or umpire, in giving a decision or award, shall take into account the length of time which has elapsed since the question was last determined, and the conditions existing at the two dates, respectively.

The notices already given by the union for an advance on the minimum wage to clickers and pressmen shall be held to be good notices to the arbitration boards for the districts to which they refer, and shall be dealt with forthwith.

8. No strike or lockout shall be entered into on the part of any body of workmen, members of the national union, or any manufacturer, represented on any local board of arbitration.

9. That if any provision of this agreement, or of an award, agreement, or decision, be broken by any manufacturer or body of workmen belonging to the federation or national union, and the federation or the national union fail within ten days either to induce such members to comply with the agreement, decision, or award, or to expel them from their organization, the federation or the national union shall be deemed to have broken the agreement, award, or decision.

10. That any question as to the interpretation of these terms of settlement be referred to Sir Courtney Boyle, whose decision thereon shall be final and binding on both parties.

That Sir Henry James be requested to act as umpire to determine any other disputed points between the federation and the national union arising out of this agreement.

A typical local board in the boot and shoe trade is that of Leicester. As reorganized in April, 1895; it consists of 6 representatives of each side serving for 1 year. The board is to elect an umpire at its first meeting, or if the members can not agree in the selection of an umpire any particular question of dispute which can not be settled by the board shall be submitted to two arbitrators, one appointed by each side, who shall have power to appoint an umpire if necessary. Decisions are final and binding on all parties. There must be no suspension of work on either side, the main object of the board being to prevent this. Any decision of the board shall date back to the time of the complaint.<sup>1</sup>

Mr. and Mrs. Webb<sup>2</sup> consider this elaborate machinery for adjusting disputes in the boot and shoe trade far from satisfactory. It has effected many peaceful settlements, but there has been "endless friction, discontent, and waste of energy among workmen and employers alike." Among other objections "the operatives complain that when a general agreement has been concluded they can not get any speedy or certain enforcement of it through the local boards. \* \* \* When at last the umpire's decision has been given it has often failed to command the assent and sometimes even to procure the obedience of the workmen. This arises, we believe, from the class of umpires whom it has been necessary to choose. The questions of interpretation necessarily turn, not on any general principle but on extremely technical trade details, which are unintelligible to any person outside the industry.

"The discontent of the employers is directed chiefly to another feature of the

<sup>1</sup> Royal Commission, Final Report, Part II, secs. 384, 388; Bulletin Department of Labor, pp. 488-497.

<sup>2</sup> Webb, Industrial Democracy, I, pp. 186-190.

organization. The work of the local boards is so laborious and incessant that the great magnates of the industry can not spare time to attend. \* \* \* Moreover, in a publicly conducted national conference, formed of equal numbers from each party, neither the representative workmen nor the representative employers dare concede anything to their opponents, or even submit to a compromise. The result is that every important issue is inevitably remitted by the conference to the umpire. Lord James has accordingly found himself in the remarkable position of imposing laws upon the entire boot and shoe making industry, prescribing, for instance, not only a minimum rate of wages but also a precise numerical limitation of the number of boy learners to be engaged by each employer, the conditions under which alone a wholesale trader may give work out to subcontractors, and the extent to which employers shall themselves provide workshop accommodation and the date before which such premises shall be in use. This, it is obvious, goes beyond collective bargaining. The awards of Lord James amount in fact to legislative regulation of the industry, the legislature in this case being not a representative assembly acting on behalf of the whole community, but a dictator elected by the trade." The employers protest against such far-reaching powers being given to one outside the trade.

## CHAPTER V.

### ARBITRATION IN OTHER EUROPEAN COUNTRIES.

#### I. INTRODUCTION.

Conciliation and arbitration of labor disputes, whether by private initiative, or by public authorities, have been carried much less far in the continental countries of Europe than in Great Britain or in the United States. The working people are far from being strongly organized in most of these countries, and class distinctions are such that employers are less willing to treat with their workmen upon an equal plane than they are in Anglo-Saxon countries. To a far greater extent than in England or the United States the conditions of labor on the Continent are settled by the employer without consultation with the employees. Indeed, strikes and lockouts are much less common and on the whole less successful in these countries than in English-speaking lands.

Voluntary systems of conciliation and arbitration are especially lacking upon the Continent of Europe. What has been accomplished in the direction of the peaceful settlement of labor difficulties has been for the most part through the initiative of the Government. This is possibly an indication of the general dependence of the people in the countries of continental Europe upon the public authorities. The most successful experience in the settlement of the relations of employers and employees by voluntary conciliation has been in Belgium in the great mines of Mariemont and Bascoup.

Until very recently the only public machinery for adjusting labor disputes which has existed in most European countries has been after the fashion of the French *conseils de prud'hommes* (councils of experts), designed merely for the consideration of minor difficulties, chiefly between individual workmen and individual employers, and growing out of the terms of the existing labor contract rather than relating to the terms of future employment. That is, these agencies have nothing to do with settling strikes or with preventing those general disputes which lead to strikes. Their purpose is to avoid the expense, the formality, and the antagonism likely to occur from recourse to ordinary courts of justice for the settlement of minor differences between employers and employees. These councils have compulsory power within their sphere of action, in the same way as ordinary courts.

Within the past 10 or 12 years, however, Belgium, France, and Germany have established systems of public boards or courts of arbitration, with a certain amount of power for the settlement of general labor disputes. It is noteworthy that, notwithstanding the tendency toward compulsory governmental action in so many directions in these countries, no attempt has yet been made to compel employers and employees to submit their general differences to arbitration. Apparently the most successful results through these public agencies for settling general disputes have been secured in France.<sup>1</sup>

<sup>1</sup> The French Labor Department made a very thorough investigation of arbitration in 1891-92 (published by the Office du Travail, 1893). The report describes in detail the methods employed in different countries, both by public authority and private initiative, and the results accomplished. The following extracts from the introductory letter of transmittal give a very satisfactory view of the progress of the arbitration movement at that time.

"England is the first of all foreign countries where the practice of arbitration has been introduced and rationally developed, the first also of which our study treats. You will note especially in the chapter which concerns it the extent to which recently the chambers of commerce have taken part in initiating the establishment of permanent councils of conciliation and arbitration, as well as the conditions and the results of the use of the system of sliding scales, by means of which, in the mines and metal industries, wages increase or diminish at the same time with the prices of coal and iron.

"Certain English colonies—Australia, Canada—have also already taken the first steps in the direction of arbitration. \* \* \*

"In the United States the legislation of a large number of States intervenes in favor of the practice of arbitration. Four among them have even created, for this object, official and permanent boards. \* \* \* The reports (of these boards) contain the most valuable information concerning the infinite variety of difficulties which are encountered in the matter. \* \* \*

"Belgium, by its Councils of Industry and Labor, created from 1889 on, offers another example of

## II. FRANCE.

1. **Councils of experts.**<sup>1</sup>—The first systematic attempt on the part of any government to establish tribunals for the settlement of labor disputes was made in France. The so-called *conseils de prud'hommes*, or councils of experts, however, by no means correspond to the arbitration boards established in the United States. Their functions seldom if ever extend to the settlement of general labor disputes, strikes, or lockouts. They have to do rather with disputes between individual workmen and their employers, and in many cases regarding matters which would in this country be brought before courts of law.

The first council of experts was created in 1806 for the city of Lyons at the solicitation of the silk merchants, but the law was so framed that similar councils might be organized by executive decree in other cities, and this privilege was quickly availed of. Other laws extending and modifying the system were passed in 1853, 1864, 1880, 1881, 1883, and 1884.

Councils of experts are created for particular localities, and particular industries or groups of industries by decrees of the central government upon the recommendation of local bodies. They must be composed of not less than 6 members, exclusive of the president and vice-president. An equal number of members is elected by employers and by employees. Every employer 25 years of age who has carried on his trade for 5 years is entitled to vote for employer members, while superintendents, foremen, and workmen of the same age and experience vote for representatives of the employees. Only persons 30 years of age or over are eligible for election. The term of service of members is 6 years, and one-half the members retire every 3 years. The members serve in general without pay.

The president and vice-president of a council are elected by the council itself from among its own members. When the president is a representative of the employers, the vice-president must be a representative of the employees, and vice versa. A "special bureau" is established within each council, consisting of 1 employer and 1 employee, whose duty it is to terminate minor disputes by means of conciliation, if possible, with appeal to the "general bureau or bureau of judgment." This general bureau is composed of the president and vice-president of the council and an equal number, not less than 2, of employer and workman members. The procedure before both of these bureaus is simple and inexpensive. The decisions are given by a majority vote of the members.

The jurisdiction of these councils of experts relates exclusively to matters arising out of the labor contract or out of apprenticeship. When the amount involved in the dispute does not exceed 200 francs, the judgment of the council is final.

These boards have undoubtedly performed a very useful function in avoiding the expense and the antagonism which would arise if the countless minor disputes between employers and their individual employees were brought before the ordinary law courts. In a large proportion of these cases conciliation is effected without a formal decision of the council, while when such decisions are rendered they have the force of orders of court.

---

a legal and official organization of industrial arbitration, but in the same country the *collieries of Maricourt and Bascoup* possess councils of conciliation and arbitration due to private initiative, the operation of which, constantly improved, dates back 15 years, and has produced the most fortunate results. \* \* \* In the other European States the question which occupies us has been, hitherto, less clearly defined and less clearly solved. Although in the German and Austrian laws concerning industry there are found some provisions regarding arbitration in case of strikes, their application as yet has been only very limited. We can point out only certain instances of recourse to arbitration which have taken place, aside from all legal formalities, in Germany, Austria, Holland, and Sweden, and refer to two industrial establishments at Berlin where councils of conciliation exist, established upon the type of Maricourt.

"The history of arbitration in France ends the volume. This history, although little rich as yet in established and conclusive results, nevertheless presents already numerous and interesting attempts which show the existence of a current of opinion decidedly in favor of the peaceful settlement of industrial disputes. As indicating this general tendency of thought, I cite only the provisions in the by-laws of a large number of unions of employers and unions of workmen, the existence since 1874 of a joint board in the Paris paper industry, the creation in 1877 of a permanent arbitration commission by the printers of Rouen, the persistently pursued efforts during the past 10 years on the part of the French Federation of Book Workers in favor of the method of conciliation, and, finally, the repeated appeals made to arbitration in the cases of important strikes."

It is interesting to observe that nearly one-third of this report of 600 pages is taken up with an account of arbitration and conciliation in Great Britain, and about as much more with the description of arbitration in the United States. The amount of space given to Belgium is less than one-third as great as that given to either of these countries, while to Germany, Austria, the Netherlands, and Sweden only a few pages each are given.

<sup>1</sup> Bulletin, Department of Labor, vol. IV, pp. 861-864.

The following is an extract from the last official report available as to the working of the councils:

"In 1897 the special bureaux of the councils of experts have had before them 51,326 disputes between employers and workmen, 32,926 being in regard to questions of wages. They have brought about conciliation between the parties in 21,317 cases, or 57 per cent of those decided. In 15,652 cases, or 43 per cent, their efforts have failed. The other cases have been withdrawn or remain unsettled. In the general bureau the councils have had before them 15,881 cases, of which they have decided 6,592, the parties withdrawing in 9,045 cases, and 244 remaining unsettled at the close of the year. There were 803 appeals to the tribunals of commerce; in 195 cases the judgment was affirmed and in 506 it was reversed." (Bulletin de l'Office du Travail, 7<sup>me</sup> année (1900), p. 690.)

**2. Arbitration tribunals under law of 1892.**—It must be remembered that the French councils of experts do not undertake to settle general labor disputes or to determine in any way the future conditions of employment. The first attempt to establish in France public tribunals for the settlement of general labor disputes dates from 1892. The law passed in that year provides that any dispute between employers and employees may be submitted to a board of conciliation or of arbitration.<sup>1</sup> The employers or employees may, either jointly or separately, address a declaration to the justice of the peace of the canton setting forth the character of the dispute. The justice of the peace must give notice of the receipt of this declaration to both the opposing parties and they must, within 3 days, send their responses. If they accept the overtures for conciliation each party must designate delegates to represent it, not to exceed 5 persons. The justice of the peace must urge these delegates or the parties to organize a committee of conciliation. The meeting of the committee must take place in the presence of the justice of the peace, who may be appointed by the committee to preside over its discussions. If an agreement can not be reached by such a committee of conciliation, the justice of the peace invites the parties to appoint one or more arbitrators on each side, or to select a common arbitrator. If arbitrators so chosen can not reach a solution of the dispute they may choose a new arbitrator to act as umpire. If they fail to agree upon an umpire he shall be named by the president of the civil tribunal (a higher court than that of the justice of the peace).

Aside from the provisions for the initiation of conciliatory measures by the parties, the law prescribes that the justice of the peace must, in the absence of action on their part, invite the employers and employees to state to him the matter in dispute and to enter upon procedure for conciliation and arbitration.

There is no provision for enforcing the decision of arbitrators, further than a requirement that the decision shall be made a matter of record.

The statute of 1892 in full is as follows:

The Senate and the Chamber of Deputies have adopted, the President of the Republic promulgates, the following law.

**ARTICLE 1.** Employers, workmen, or employees, between whom a dispute of a collective character relating to conditions of employment has arisen, may submit the questions which divide them to a committee of conciliation, or, in default of an agreement of this committee, to a council of arbitration, and these shall be constituted in the following manner:

**ART. 2.** The employers, workmen, or employees may, together or separately, in person or by proxy, address a declaration in writing to the justice of the peace (juge de paix) of the canton or one of the cantons in which the dispute has arisen, and shall contain—

1 The names, capacities, and domiciles of the applicants or their proxies.  
2 The matter of dispute, with a succinct account of the motives pleaded by the other side (partie).  
3 The names, capacities, and domiciles of the persons to whom the proposal of conciliation or arbitration should be notified.

4 The names, capacities, and domiciles of the delegates chosen from amongst those concerned by the applicants, in order to assist or represent them, the number of these delegates not exceeding 5.

**ART. 3.** The justice of the peace delivers acknowledgment of the receipt of this declaration, with indication of the date and hour of the deposit, within 24 hours, to the opposing party or its representatives by letter or, if need be, by notices posted on the gates of the courts of justice of the canton and on those of the mayorality of the commune in which the dispute has arisen.

**ART. 4.** On receipt of this notification or within 3 days those concerned must send their reply to the justice of the peace. The period having passed, their silence is taken as a refusal.

If they accept, they give in their reply the names, capacities, and domiciles of the delegates chosen to assist or represent them, the number of these latter not exceeding 5.

If the departure or absence of the persons to whom the proposal is notified or the necessity of consulting the principals (mandants), partners, or an administrative council does not permit of a reply within 3 days, the representatives of the said persons should within the 3 days declare what is the delay necessary for arrangement of a reply. This declaration is transmitted by the justice of the peace to the applicants within 24 hours.

**ART. 5.** If the proposal is accepted, the justice of the peace urges (invite d'urgence) the parties or their delegates to form among them a committee of conciliation. The meetings take place in the presence of the justice of the peace, who may be appointed by the committee to preside at the debates.

**ART. 6.** If an agreement is arrived at as to the conditions of conciliation, the conditions are set down in a report drawn up by the justice of the peace and signed by the parties or their delegates.

<sup>1</sup> Bulletin Department of Labor, Vol. IV, p. 854.

ART. 7. If an agreement is not arrived at, the justice of the peace invites the parties to appoint either one or more arbitrators each or a common arbitrator.

If the arbitrators do not agree as to the solution of the dispute, they may choose a new arbitrator to act as umpire.

ART. 8. If the arbitrators can neither decide on the solution of the dispute nor agree as to the new arbitrator, they must declare the fact in the report, and this arbitrator will be named by the president of the civil tribunal after inspection of the report, which shall be sent to him forthwith by the justice of the peace.

ART. 9. The decision on the points at issue (fond) which has been arrived at, revised and attested by the arbitrators, is sent to the justice of the peace.

ART. 10. When a strike occurs, in default of initiative on the part of those concerned in it, the justice of the peace, ex officio, and by the means indicated in article 3, invites the employers, workmen, or employed, or their representatives, to make known to him within 3 days—

1 The matter of dispute with a succinct account of the alleged motives

2 The acceptance or refusal of conciliation and arbitration

3 The names, capacities, and domiciles of the delegates chosen, where the case occurs (le cas échéant), by the parties, the number of the persons chosen by each side not exceeding 5

The delay of 3 days may be increased for the reasons and under the conditions indicated in article 4

If the proposal is accepted, it shall proceed conformably to articles 5 and 6 following

ART. 11. The reports and decisions mentioned in articles 6, 8, and 9 above are preserved in the minutes at the office of the justice of the peace, who sends a copy free of charge to each of the parties and addresses another to the minister of commerce and industry through the prefect

ART. 12. The demand for conciliation and arbitration, the refusal or failure to reply of the opposing party, the decision of the committee of conciliation or of the arbitrators notified by the justice of the peace to the mayor of each of the communes over which the dispute is spread, are made public by each of these mayors, who post them up in the place assigned to official notices

The posting up of these decisions may be done by the parties concerned. The notices are exempted from stamp duty.

ART. 13. The premises necessary for the meetings of the committees of conciliation or councils of arbitration are provided, heated, and lighted by the communes in which they meet

The expenses arising therefrom are included among the compulsory expenses of the communes

The outlay of the committees of conciliation and arbitration shall be fixed by a notice of the prefect of the department, entered among the compulsory departmental expenses

ART. 14. All deeds executed in carrying out the present law are exempt from stamps and registered gratis.

ART. 15. The arbitrators and the delegates nominated under the present law must be French citizens

In professions or trades where women are employed they may be chosen as delegates on the condition that they are of French nationality

ART. 16. The present law applies to the colonies of Guadeloupe, Martinique, and the Reunion

**3. Working of arbitration law of 1892.**—This new French law has already proved very advantageous. The French people are probably somewhat more disposed to accept Government intervention than those of Saxon descent.

The following statement gives a summary in the cases in which recourse has been had to the law of 1892 regarding conciliation and arbitration for the year 1898 and for the preceding 5 years collectively:<sup>1</sup>

*Summary of cases in France in which recourse was had to conciliation and arbitration, 1893 to 1897, and 1898.*

Items.	1893 to 1897.	1898	1899
Total number of strikes .....	2,262	368	740
Cases in which the law of 1892 was applied .....	1487	91	197
Disputes settled—			
Before the creation of committees of conciliation .....	41	4	9
After refusal of demands for conciliation .....	26	4	4
Directly by committees of conciliation .....	2129	18	36
By arbitration .....	16	2	6
Directly by parties after having recourse to conciliation .....	9	2	4
Total cases settled through application of law .....	218	30	59
Strikes resulting or continuing—			
After refusal of demand for conciliation .....	145	34	72
After failure of recourse to conciliation and arbitration .....	422	30	59
Total cases of failure after application of the law .....	268	64	131

<sup>1</sup>The 487 cases of recourse to the law related to but 486 disputes

<sup>2</sup>There were but 126 disputes settled by committees of conciliation, 3 of them being counted twice, because 2 committees were formed in each of these 3 cases

<sup>3</sup>Figures here apparently should be 123, those given, however, are according to the original

This table shows that the law was applied in 197 cases during the year 1899. As there were in all 740 strikes during the year, these cases constituted 26.6 per cent of all disputes. The proportion for the 5 years, 1893-1897, taken collectively, in

which the law was applied, was 21.53 per cent. In the 94 cases which were reported for 1898 (corresponding figures for 1899 not being available), the initiative in demanding the application of the law was taken by the employees 57 times, by the employers 3 times, by the employers and employees twice, and in 32 cases the initiative was taken through the intervention of the justices of the peace.

As regards the results of the application of the law, it was found that in 4 of the 94 cases in 1898 work was resumed before committees of conciliation were constituted. In two of these the employees abandoned their claims, in one they were successful, and in the fourth case they obtained employment elsewhere. In 38 of the remaining 90 cases the demands for conciliation were refused, in 32 by employers, in 1 by the employees, and in 5 by both employers and employees. In 4 of these 38 cases the workmen renounced their demands, receiving partial satisfaction in one instance. In the remaining 34 cases of refusal of conciliation strikes were declared, 3 of which were successful, 10 partly successful, and 21 failed.

Deducting the 42 cases above mentioned from the total number, there remain 52 cases, for the settlement of which 52 committees of conciliation were created. In 18 of these cases the disputes were settled directly by the committees of conciliation, in two cases they were settled by arbitration, and in two other cases they were adjusted by the parties themselves after having had recourse to committees of conciliation. This leaves 30 cases in which the attempted conciliation and arbitration failed and strikes resulted or continued, which succeeded in 3 cases, succeeded partly in 15, and failed in 12. This showing is somewhat unfavorable when compared with the figures of the 5 preceding years.

Of the 30 disputes settled, in 1898, as a result of the application of the law, 4 were favorable to the demands of the employees, 20 resulted in a compromise, and 6 were unfavorable to the employees. In the 64 disputes which continued after the failure of attempts at conciliation and arbitration, the workmen succeeded in 6, succeeded partly in 25, and failed in 33.

In 1899, out of the 197 cases brought under the law, 59 were successfully settled. Of these, 21 decisions were favorable to the demands of the employees, 34 resulted in a compromise, and 4 were unfavorable to the employees. In the 131 disputes which continued after the failure of attempts at conciliation and arbitration, the employees succeeded in 15, succeeded partly in 77, and failed in 39.

For the 5 years from 1893 to 1897 the cases decided under this system of conciliation and arbitration resulted as follows: In favor of workmen, 41, or 18.8 per cent; in favor of employers, 59, or 27 per cent; compromised, 118, or 54.13 per cent.

During the 6 years from 1893 to 1898, out of 581 cases of attempts at conciliation and arbitration the initiative was taken in 22 instances by employers, in 214 instances by the workers, in 12 cases by both parties, and in 232 cases by a justice of the peace. Of the 269 cases of refusal to submit to conciliation and arbitration, 180 were by employers, 16 by workers, and 13 by both parties.

For the year 1898, 33 of the 94 cases of the application of the law were in the textile industries, 20 in the building trades, 14 in the metal trades, 10 in the leather trades, 5 in the carrying trades, 3 among miners, and not more than 1 in any other group of industries.<sup>1</sup>

The importance of the new system of arbitration may be well understood from the success in the settlement by this method of the important strike of the machinists and metal workers at Creusot in 1899, and of the strike of the miners in the valley of the Loire in 1900.

*The Creusot strike.*—This strike began September 20, 1899, and included all the workers in the great artillery factories and machine shops at Creusot, as well as those in the mines near at hand, making a total of fully 10,000. The head of the company, M. Schneider, refused to receive, among the delegates who presented the case of the workmen, the secretary of the workers' union, who was not at that time an employee. The chief demands of the strikers were: Recognition of the union; freedom of conscience and better treatment by foremen; fulfillment of promises made in June, 1899, as to advances in wages, particularly for piecework. The company had failed to raise wages on the ground that expected increases in the prices of products had failed to materialize.

The company refused these demands, and although the justice of the peace brought together a committee of conciliation, the representatives of the employers on the committee declared themselves bound to adhere to the reply given by the head of the company. The strikers even proposed the plan of marching to Paris. Finally, however, on October 4 they decided to submit to government arbitration. The company agreed to this, and M. Waldeck-Rousseau, president of

<sup>1</sup> *Office du Travail, Statistique des Grèves, 1899, pp. XIV-XVII.*

the council of state and minister of the interior, accepted the request to act as arbitrator. His decision was rendered on the 7th and the strike was ended on the 9th, both parties accepting the terms laid down. The chief features of the decision were as follows:

The company was directed, in the establishment of wages, to have regard to the increases promised in June, 1899, without allowing the rates thus determined to be modified on account of bargains between the company and furnishers of material or buyers.

The company was forbidden to make any differences in its treatment between workmen belonging to the union and nonunion men.

The union demanded that the company receive its representatives, but the arbitrator decided that, while the intervention of the union might be advantageous if both parties consented to it, it could not be forced upon the employers. The workmen had demanded in the course of the strike that they should be permitted to formally present their complaints each month. The arbitrator decided that representatives for this purpose could not properly be chosen exclusively by the union, but that each shop should have a delegate for each class of workers. The method of electing these was later prescribed in detail by the company in accordance with the decision. They are chosen yearly and are to confer bi-monthly, unless in the case of emergency, with the representatives of the employers. While this does not amount to a formal board of conciliation, it provides for a systematic method of presenting and discussing grievances and the general relations of employers and employees.

The arbitrator further decided that no workman should be discharged on account of participation in the strike just closed. It was also ordered that in case of insufficient work for the entire force, the workers of each class should be laid off in turn, the idleness being divided between union and nonunion men in shops of the same character in proportion to their number, regard, however, being had to the situation of the families of the individual workers.<sup>1</sup>

*The miners' strike.*—There is a powerful federation of miners' unions in the department of the Loire. As early as October, 1898, it had demanded from the various employing companies increases in wages, which were refused. Partial strikes took place during 1899, for the most part resulting in advantages to the workmen. The steady rise in the price of coal favored the demands of the workers, and on December 20, 1899, a general circular was presented to the employing companies demanding (1) recognition of the miners' federation; (2) wages for pickmen 6 francs per day and for others one-half franc increase; (3) reduction of the length of the working day. The company offered an increase of wages of only 5 per cent, and this being refused a strike was ordered on December 25, and soon became general. The effect was serious, threatening many industries on account of the shutting off of the supply of coal. Almost immediately, however, the representatives of the miners submitted to the prefect of the department a request for arbitration. The company agreed to the proposition, and after some negotiation MM. Gruner and Jaures were chosen arbitrators, the former by the companies and the latter by the workmen. M. Jaures is the well-known socialist leader and a member of the Chamber of Deputies.

The question of the hours of labor, which was the most difficult one, was not definitely settled by the arbitrators, but they agreed that hours should not be increased, directly or indirectly, on account of the increase in wages, and that experiments should be made to see if better arrangements of hours could not be made without reducing the production per capita, with a provision for arbitration of the question later on if necessary.

The arbitrators further decided that there should be a general increase of 9 per cent in wages, the increase, however, not to be less in any case than 30 centimes (6 cents) per day or more than 50 centimes. These rates were to be retained until June 30, 1901, at which time, if 3 months' notice should be given, the question whether the whole or part of the increase can be maintained should be decided by an arbitration procedure similar to that in the present case. These increases in wages were not to be additional to the increases granted by certain individual companies during 1899.

This decision of the arbitrators was accepted by both parties and work was begun again on January 8, 1900.<sup>2</sup>

### III. BELGIUM.

**1. Councils of experts.**<sup>1</sup>—The conseils de prud'hommes, or councils of experts, in Belgium originated in the same statute of 1806 which established these councils in France, Belgium being at that time a dependency of France. Councils were created in Bruges in 1809 and in Ghent in 1810. Later acts were passed by the Belgian Government, and finally, on the recommendation of the Labor Commission of 1886, a new general law regulating the councils was adopted in 1889.<sup>2</sup> The general character and organization of these councils of experts in Belgium is very nearly the same as in France.

Councils are established by royal decree for particular trades or groups of trades in particular districts. The number of members is also fixed by the decree, but must be not less than 6, exclusive of the president and vice-president, if they are selected from outside the councils, as may be the case. The president and vice-president are appointed by royal decree, not elected by the councils, as in France. The qualifications of electors for members of the councils are an age of 25 years and 4 years' connection with the industry. An equal number of representatives of employers and of employees are elected by these classes, respectively. Nominations for members of the council must be signed by at least 25 electors in districts having 1,000 electors and by at least 10 in districts having a smaller number. The term of office is 6 years, one-half of the members being elected every 3 years.

The councils of experts in Belgium have jurisdiction concerning disputes either among employees or between employers and their employees, their scope being thus somewhat wider than in France. Parties to a dispute not coming technically under the jurisdiction of the council may also by common accord refer the matter to it for conciliation. Where the claim does not exceed 200 francs in value the decision of the council is final. Each council establishes within itself a board of conciliation consisting of 2 members, before whom all disputes must be brought in the first instance, with provision for appeal to the general board. Either party to a dispute may take the initiative before the board, and the other party is summoned formally as in a suit at law, but the first endeavor of the council is to bring about a voluntary agreement between the parties. The council has power to summon witnesses to establish facts as to which the parties disagree. The decisions of the council are enforceable in the same way as those of courts. The members of the council are allowed a small per diem, the expenses of maintaining the council being met by the communes in proportion to the number of working people employed in each commune represented within the jurisdiction of the council.

As in France, the work of these bodies practically does not extend at all to those general questions which cause strikes and lockouts.

**2. Councils of industry and labor.**<sup>3</sup>—Belgium first undertook to establish bodies for the settlement of general labor disputes by arbitration and conciliation in 1887,<sup>4</sup> on the basis of the recommendations made by the labor commission established in the preceding year. As at first proposed these bodies were to have only powers regarding the settlement of labor disputes, but later on the measure was modified so that they have many important duties connected with labor matters, particularly duties of an advisory nature.

Such a council of industry and labor may be created by royal decree in any locality in which its utility is demonstrated. The council may consist of a number of different sections representing different industries. The number of members in each section shall not be less than 6 nor more than 12, and shall be equally divided between employers and employees. The qualifications for electors are the same as for electors of the councils of experts, a separate electoral body being constituted for the selection of the employers' representatives and of the employees' representatives in each section of the council. Elections are held by general ticket. No person is elected on the first ballot unless he receives two-thirds of the number of votes cast. If a sufficient number of persons are not elected upon the first ballot a list of the candidates receiving the most votes is prepared and a second election is held. The term of office of the members is 3 years. Each section chooses from among its members a president and secretary.

The powers of these boards regarding arbitration and conciliation are very

<sup>1</sup> Bulletin, Department of Labor, Vol. V, p. 119.

<sup>2</sup> Act of July 31, 1889.

<sup>3</sup> Bulletin, Department of Labor, V, 129.

<sup>4</sup> Act of August 16, 1887.

indefinitely stated, no provision being made regarding the methods to be employed in settling disputes and no power to enforce their decisions being given.

The law simply provides: "When the circumstances seem to require it, the governor of the province, the mayor of the commune, or the president shall, upon the request of the employers or employees, convoke the section relating to an industry in which a conflict seems imminent. This section shall use its efforts to terminate the difficulty."

These councils of industry and labor have accomplished relatively little in the way of settlement of labor disputes. Indeed, there has been a considerable degree of indifference regarding the establishment of the councils, and it is only because of the activity of the Government in setting them up that they have become comparatively numerous. In 1892 the French Office du Travail, after making a careful study of the working of the Belgium law during the 2 years it had been in force, declared that "in spite of the efforts of the Government, it has been very difficult to overcome the indifference or silent hostility of both the employers and the workmen. Everywhere, it is stated, the number of persons who refrain from voting for the election of members for the councils has been large on the part of both the workmen and the employers, while in the case of several councils some of the sections could not be continued because of the entire absence of candidates and of voters." Statistics concerning the election of the councils which actually have been established were presented, and these showed that in many instances not more than one-fourth or one-fifth of the workers entitled to vote took the pains to do so, while in few instances did the proportion reach one-half.<sup>1</sup>

In 1899 one of the sections of the council of industry at Ghent, in an address to the other sections, lamented that out of the 14 sections originally established 6 were inactive on account of the neglect of the employers to present candidates.<sup>2</sup>

It appears, also, that even where boards have been constituted their chief function, and one in which they have doubtless served a valuable end, has been that of furnishing information and expressions of opinion to the Government, rather than in settling disputes. From time to time the Government has summoned the councils of particular districts, or sections of the same industries in different councils, to hold special sessions and furnish information or recommendations upon particular subjects. Thus, in 1899, the coal-mining sections were required to give information as to the existing rates of wages compared with those of previous years.

Two years after the system had been introduced the French bureau of labor reported that only in rare instances had there been any attempt on the part of these councils to settle labor disputes, and a study of individual instances showed that little success had attended these efforts.<sup>3</sup> The reason for this failure is attributed by the French authorities to the fact that the sections frequently include several really distinct trades, so that their representatives are not fitted to decide disputes relative to a particular trade, and also to the fact that the councils attempt to unite two properly distinct functions, that of acting as a consultative body to the Government and that of conciliation and arbitration. The reports of the Belgian bureau of labor for 1899 show only two or three instances of the intervention of the councils in labor disputes, and these apparently of little importance, since they are dismissed with a brief paragraph, and since they affected comparatively few workers.<sup>4</sup>

In 1892 there was established in Belgium a higher council of labor (*Conseil Supérieur du Travail*), whose chief object is to constitute a center for the action of the various councils of industry and labor and to act as an advisory body regarding industrial matters. It is composed of 48 members, 16 of whom are employers, 16 workmen, and 16 persons who have a special knowledge of economic and labor matters.<sup>5</sup>

**3. Conciliation in the collieries of Mariemont and Bascoup.**<sup>6</sup>—A very elaborate and apparently very satisfactory system of joint boards of conciliation has existed for some time in the great collieries of Mariemont and Bascoup, operated by the same company and located in the province of Hainault. These companies employ more than 6,000 men. The main credit for the establishment of the system belongs to M. Julien Weiler, who was for many years the manager of the companies. The movement was started in 1876, after a prolonged strike in the Mariemont mines. M. Weiler was influenced by Crompton's book on industrial conciliation. He

<sup>6</sup> See on this subject paper of Mrs. J. S. Lowell before Congress on Industrial Conciliation and Arbitration, 1894.

first established what he called chambers of explanation (*chambres d'explications*) in the workshops and construction departments of the company. Each of the different trades represented in these shops was to have its own joint committee, composed of 6 workmen and 6 of the officers or foremen of the company.

M. Weiler says that at first the system did not work satisfactorily. The workmen distrusted the purpose of the employers and felt shy in the presence of the representatives of the company. The meetings were not sufficiently informal. Later on the practice was somewhat modified, and the workmen became more familiar with it and more inclined to present their views and grievances. The system was gradually extended to other departments of the service, though not to the mines themselves. As the result, various grievances which the company had scarcely known to exist have been remedied. M. Weiler reported in 1888 that the boards had been in operation 12 years, to the complete satisfaction of both parties.

In the latter year a more formal method of conciliation and arbitration was established for the two great collieries themselves. In each a board was established, half of whose members were workmen and half officers of the company. These boards have definitive power to settle certain questions arising between employers and employees, especially as to wages, and are not, as in case of the *chambres d'explications*, mere meetings for the explanation of grievances.

Records of the work of these new boards of conciliation for the years 1889 and 1891 have been made available by the researches of Mrs. Josephine Shaw Lowell. It appears that they have worked very successfully and have decided many important questions. All questions must first be submitted to the *chambres d'explications*, and are only brought before the boards of conciliation in case of failure to reach a settlement. During 1890 there were before the Bascoup board 39 questions of general interest bearing upon the condition of more than one group of workmen, 15 special questions relating to one group or one shop, and 3 individual questions.

Various expressions of opinion have been made by members of the company and by prominent workmen, and apparently all are extremely favorable as to the working of this system in the collieries of Mariemont and Bascoup.

#### IV. GERMANY.<sup>1</sup>

As in France and most other European countries, the main purpose of the arbitration tribunals established in Germany is to settle the minor disputes between employers and employees growing out of the labor contract itself, rather than to settle general disputes involving the terms and conditions of employment. Two sets of tribunals are established by the German law for this purpose.

Hand industry is still much more common in Germany than in England or the United States. The old system of trade guilds among hand workers still prevails, and is encouraged by a statute providing for the incorporation of such guilds and for their regulation. The German law of 1897 concerning guilds provides that persons who carry on trades on their own account can form guilds for the advancement of their common trade interests. One of the functions of these guilds is the adjustment of disputes between members of the guilds and their apprentices. For this purpose arbitration tribunals may be organized by them, whose jurisdiction excludes that of the local arbitration boards provided for by the law of 1890, described below. These tribunals must be composed of a president, designated by the Government, and not necessarily a member of the guild, and at least 2 other members, half chosen from among guild members by the guild itself, and half chosen by journeymen and other employees of guild members. The decisions of these bodies are enforceable as civil judgments, although an appeal may be taken to the ordinary arbitration authorities, except in certain cases where the matter in dispute does not exceed 100 marks in value.

Prior to 1890 various local arbitration tribunals had grown up in different parts of Germany. Some of these tribunals had been organized by the local authorities themselves. They were lacking, however, in efficiency, and the absence of uniformity in their character and methods was a considerable disadvantage. This evil was remedied by the general arbitration law of July 29, 1890.

This measure does not compel the establishment of arbitration tribunals, but permits local authorities, whether of communes or provinces, to establish them with the approval of the central government. Once established, however, the organization and procedure of the tribunals must be essentially uniform. The

<sup>1</sup> Bulletin, Dept. of Labor, Vol. V, pp. 319, 371-378.

arbitration tribunals may be established for single communes, parts of communes, or unions of communes, and for all of the industries of the district or only for particular groups of industries. The law contains special provisions concerning arbitration courts for the industries of coal mining, salt manufacture, quarrying, etc. The law relates only to factory employees, not applying to the handicraft trades above referred to.

Each arbitration tribunal must consist of a president and deputy president, who are elected by the local authorities for a term of not less than 1 year, neither of whom may be an employer or employee, and of not less than 4 associates. These associates must be elected in equal numbers by the employers and employees. Only those persons are electors who have completed their twenty-fifth year and who have been employed at least 1 year within the jurisdiction of the court and in the industries covered by it. The members of the court must be at least 30 years of age, and their term of office must be not less than 1 nor more than 6 years. Associates are not paid a salary, but are recompensed for time lost and for traveling expenses.

When actually exercising its functions an arbitration board must consist of the president, 1 employer, and 1 employee, unless by local statute it is provided that a larger number of associates shall be called. Parties may not be represented by counsel or persons who make a business of court proceedings. If the parties duly appear, effort must first be made by the arbitration tribunal to bring about an amicable settlement. If such agreement is reached, its terms must be recorded in the minutes. If no agreement is reached, the case goes to trial, and after taking evidence the court renders its judgment, which is enforceable according to the general rules relating to civil procedure. The costs of procedure are made very low.

The power of these boards to render enforceable decisions extends only to matters growing out of the labor contract, to claims on account of services rendered or for indemnities arising out of the relation of employer and employee, and similar matters. If the amount in dispute exceed 100 marks, an appeal may be taken to the district court.

The German arbitration tribunals are also given power, however, to act as boards of conciliation in more general labor disputes, where their services are jointly requested by the parties. When sitting as such a board of conciliation, a tribunal must consist of the president, 2 employer associates, and 2 employee associates. This number may, however, be increased by the addition of an equal number of experts (*Vertrauensmänner*) for employers and employees. The board first endeavors to effect conciliation. In case of failure to do so it renders a decision on the points of dispute by majority vote. If, however, it is found that all the employer associates and experts voted one way, and all the employee associates and experts voted another way, the president may withhold his vote and declare that a decision has not been reached. When a decision is announced, the parties must declare within a specific time whether they will abide by it or not.

## V. AUSTRIA.<sup>1</sup>

The laws of Austria, like those of Germany, provide for the organization of trade guilds in the handicraft trades, and require them to establish arbitration committees for the adjustment of disputes between guild members and their employees.

In addition to these provisions, a law of 1869 was designed to permit the establishment of arbitration tribunals after the model of the French councils of prud'hommes. This law, however, proved ineffective, since the creation of councils was entirely voluntary with members of industries. A new law of 1896<sup>2</sup> accordingly provided for the compulsory establishment of such arbitration tribunals whenever deemed desirable by the local authorities or central government. In general, it is expected that the initiative in the creation of the courts will come from the provincial councils or from local boards of trade and industry, factory inspectors, and other industrial bodies. If the recommendation of these authorities be approved by the minister of justice, acting in conjunction with the other ministers concerned with the branches of industry to which the courts specially relate, an order is issued establishing a court. Its jurisdiction may include a commune, part of a commune, or a number of communes, and may cover all classes of industries or one particular class.

<sup>1</sup> Bulletin, Dept. of Labor, Vol. V, pp. 590-596.

<sup>2</sup> Act of November 27, 1896.

Each court consists of a president, a substitute, and not less than 10 associates representing employers and 10 representing employees. The president and his substitute are appointed by the minister of justice and must have the qualifications necessary for judges. The associates must be at least 30 years old. They are elected for 4 years, one-half retiring from office every 2 years. If either the employers or employees entitled to elect members of the court refrain from doing so, the public authorities may appoint representatives for them. Associates are not salaried, but are granted their actual expenses, while those chosen from among the workmen are indemnified for loss of time.

For the purpose of transacting business each industrial court consists of the president and 1 employer and 1 employee associated. Parties may be represented by an agent or other employee.

The jurisdiction of these arbitration tribunals is minutely defined in the law, but may be stated in general to include only such matters as grow out of the labor contract. The original jurisdiction of the courts is not limited by the amount in dispute, but its judgment as to all matters involving more than 50 gulden (\$20.30) is subject to appeal to the civil courts. There is no provision as in Germany for conciliatory action by these tribunals in regard to general labor disputes.

## CHAPTER VI.

### ARBITRATION IN AUSTRALASIAN AND OTHER BRITISH COLONIES.

Experiments in legislation have been peculiarly numerous in recent years in the Australasian colonies. Labor legislation has been enacted in the various colonies, much of which goes further in its regulation of the conditions of labor than the legislation of any other country. During the past decade the movement in these colonies in favor of peaceful methods of settling labor disputes has been a very marked one. Here it is that the first attempt at compulsory arbitration has been made. New Zealand established this system as early as 1894 and Western Australia followed in 1900. Elaborate arbitration acts have also been adopted in South Australia and in New South Wales, and in the last-named colony the question of adopting compulsory arbitration is being seriously considered along the lines of the New Zealand measure, having received strong support during the legislative session of 1900. Voluntary arbitration has also made considerable progress in these colonies.

#### I. NEW ZEALAND.

1. **History of movement.**<sup>1</sup>—It was by the great maritime strike, which spread over the whole of Australasia, that Mr. Reeves, the New Zealand minister of labor, was led to make a thorough study of arbitration as a remedy for labor disputes. He examined all the arbitration laws which had been passed and studied their workings. He declared that he had found the Massachusetts Board of Conciliation and Arbitration to be "the one voluntary State tribunal that seems to do good work." The intervention of this board had been successful in many small cases in which strong passions had not been aroused; but Mr. Reeves declared that the experience of other countries, not excepting the experience of Massachusetts, confined as it had been to voluntary conciliation and arbitration, was a record of failure wherever it was most important that it should succeed and a success only when success was of comparatively little consequence.

The compulsory arbitration bill was first submitted to the New Zealand parliament in 1892. It was offered again in 1893 and 1894. It passed the lower house 3 times before it was got through the upper house. At last, in 1894, it was passed without change in its fundamental principles and with the concurrence of the leader of the opposition and several of his most important followers. The leader of the opposition said: "I believe that we have to a great extent the very best bill that can be devised in the interests of the colony." The bill took effect in January, 1895. The first case under it was tried in May, 1896.

2. **Description of New Zealand law.**—For the information of those who may desire to make a more detailed study of the New Zealand arbitration legislation the full text of the law, as amended, is given as a note at the end of this section.<sup>2</sup>

<sup>1</sup>Lloyd, *A Country Without Strikes*. See especially introduction by W. Reeves, author of arbitration bill.

<sup>2</sup>Mr. Lloyd summarizes the main points of the New Zealand law as follows:

"1. It applies only to industries in which there are trade unions.

"2. It does not prevent private conciliation or arbitration.

"3. Conciliation is exhausted by the State before it resorts to arbitration.

"4. If conciliation is unsuccessful, the disputants must arbitrate.

"5. Disobedience of the award may be punished or not at the discretion of the court.

"The compulsion of the law is threefold—compulsory publicity, compulsory reference to a dis-

It is especially to be observed that the law applies only to disputes in which associations of workmen are concerned. While an individual employer may demand the arbitration of a dispute between himself and a labor organization whether that organization be registered under the new law or otherwise, employees may bring their demands before the arbitration tribunals only in case they have registered under the arbitration law or under the trade-union law and have made themselves subject to their respective obligations. The New Zealand parliament recognized the practical impossibility of carrying on effective arbitration, or even effective conciliation, where one party is an unorganized body of workmen.

The provisions regarding the registry of industrial unions, the term applied to organizations of employees and employers alike, are more fully described elsewhere.<sup>1</sup> In general, it may be said that any organization may register on complying with certain requirements, and thereby becomes a body corporate, with power to sue and be sued, to hold property, and to make enforceable agreements regarding conditions of labor or other matters. The provisions regarding industrial agreements are especially important. They are to be duly filed with the supreme court, and may be enforced in the same manner as awards of the court of arbitration. Any union so registered or registered under the trade-union act has the power to compel others with whom it has industrial relations to submit matters in dispute to arbitration.

The New Zealand law makes provision for conciliation as a first means for bringing about the settlement of disputes, and it was the thought of the framers of the measure that disputes would seldom be carried to the actual decision of the arbitration court. The governor of the colony may divide it into industrial districts, in each of which a board of conciliation shall be established, to consist of not less than 4 nor more than 6 members. One-half of the members shall be employers and shall be elected by the employers' unions in the district, and the other half shall be employees and elected by the registered labor unions. It is especially noteworthy that only registered unions of employers and employees partake in the selection of these boards of conciliation. If for any reason the majority or all of the employers in a district see fit to refrain from forming organizations of employers, those refraining have no share in selecting the board of conciliation, although they do have the right to bring disputes before the boards when once they are established, and may be compelled to submit to its intervention. So, too, unorganized workmen, or labor organizations not registered under the act, have no share in the election. In case, for any reason, organizations of employers or employees fail to elect the members whom they are entitled to choose, the governor may appoint fitting persons to complete the membership of the board. The members of each board are required to select an impartial person, not one of their own members, to act as chairman.

In addition to these boards of conciliation, which have no final authority to decide disputes, there is a court of arbitration for the whole colony. This consists of 3 members, all appointed by the governor, but 1 chosen from among candidates to be recommended by the councils of the industrial associations of employers (each council being entitled to recommend a candidate), and another appointed similarly from candidates recommended by the industrial associations of employees. Local unions of employees do not take part in these recommendations, but only central organizations comprising several local unions. So, too, associations of unions of employers only take part in the nomination, unless there be no such associations, in which case local unions of employers may do so. The third member of the court, who is its president, is to be a judge of the supreme court selected by the governor. This latter provision is important as giving a judicial character and standing to the proceedings.

Any employer or association of employers may apply to a board of conciliation to intervene in a dispute with their employees, provided such employees are organized under the arbitration law or the trade-union law. Similarly any organization of employees, which is duly registered, may apply to the board of conciliation. If the board of conciliation considers that there is a sufficient reason for

interested arbiter, provided the disputants will not arbitrate voluntarily, compulsory obedience to the award.

"It does not forbid nor prevent disputes, but makes the antagonists fight their battles in court according to a legal code instead of the ordinary 'rules of war'."

"There is no 'making men work by law' and no 'fixing of wages by law.' The law says only that if they work it must be without strikes and lockouts, and that, if they can not agree as to prices, the decision shall be left to some impartial person and not fought out."

No disputes can be considered except in trades in which there are trade unions, and then only if the unions have registered under the law. Any 7 persons can form a trade union under the act and claim all its privileges. (Lloyd, *A Country Without Strikes*, pp. 16-18.)

<sup>1</sup> See p. 620.

action on its part, it may give notice to the other party and may proceed with its investigations. The compulsory feature here has to do with initiation of investigations; the boards of conciliation have no power to compel obedience to their awards. The proceedings before these boards are very informal and inexpensive; no counsel or solicitor is allowed to appear unless all the parties consent thereto. Each board has ample power to summon witnesses. It may appoint experts to assist in the investigation of technical questions, and these are deemed members of the board for the purpose of settling these particular matters. The chief function of the board is to ascertain facts and to endeavor to reconcile the parties. It may from time to time make suggestions to the parties and endeavor to bring about an agreement. If no settlement is finally reached by the consent of the disputants, the board shall decide the question according to its merits, and shall make a report or recommendation in writing. Each party, however, may appeal to the court of arbitration for a further investigation and the rendering of a binding decision. In the absence of such an appeal, the effect of the action of the board of conciliation depends altogether on the will of the parties, who may or may not agree to be bound by it. Any board of conciliation may refer matters upon which it can not agree to the court of arbitration, or if the board can not agree, it may simply report that fact, leaving it to the parties to appeal to the higher court if they see fit.

The court of arbitration conducts its proceedings with greater formality than the boards of conciliation, the methods being in some regards similar to those in a law court, but simpler and less expensive. Technical errors in the proceedings may not be allowed to invalidate the decision. Counsel or solicitors may appear for the parties. The court has full power to summon witnesses and secure books and papers. The court may refer matters to a local board of conciliation for investigation and report and shall in such case base its award on the report of the board.

The most interesting provisions are those regarding the enforcement of the award of the court of arbitration. The award must define clearly the persons or organizations to which it applies, and is binding upon them for such time, not exceeding two years, as the court shall fix. If an organization is named in the decision, all persons who are members at the time or who thereafter become members are bound by it. An award may direct the payment of money by one party to the other, and in such case the payment may be enforced by order of court. Awards may also prescribe the conditions of labor. A special provision declares that the court may prescribe a minimum rate of wages, with special permission for the payment of a lower rate in the case of any worker unable to earn the prescribed minimum. Any person or organization thereafter violating the terms of the award is subject to penalty, the amount to be determined by the court of arbitration on the application of the aggrieved party after proper hearing. The amount of penalty which may be assessed against any person shall not exceed £500, nor shall the aggregate of penalties and costs, as regards all parties, exceed £500. All property belonging to the judgment debtor, including the property of organizations of employers or employees, may be seized in payment of the judgment, and if the property of an organization is insufficient to meet any penalty assessed against it, its members may be held liable for the deficiency, provided that no member shall be liable for more than £10 under this provision.

While the provisions regarding the enforcement of awards are not altogether clear, it is apparently the case that penalties for the violation of awards on the part of workmen could be assessed in the first instance only against the organization as such, not directly against individual members. The organization would be able to hold its members in line by the provision that no member may withdraw without giving 3 months' notice or without paying all his dues. It is, nevertheless, obvious that circumstances might arise under which a large number of members of an organization might, against the will of the organization, violate the terms of an award and withdraw from membership after giving the required notice and before any penalties could be collected from them. As yet there has been no experience of this sort.

When the law was first passed the only penalty for violation of the judgments of the court was imprisonment. This seemed so harsh a penalty that the judges evaded it by every possible technicality, and the workmen would not ask for the imprisonment of their employers even when they felt themselves aggrieved. The law has been amended so that a fine not exceeding \$2,500 may be inflicted, and this is found greatly to increase the efficacy of the act.<sup>1</sup>

## THE NEW ZEALAND INDUSTRIAL CONCILIATION AND ARBITRATION ACT AS AMENDED.

[Act of August 31, 1894, as amended October 18, 1895, October 17, 1896, and November 5, 1898. Amendments incorporated in original law by Dr. W. F. Willoughby in Bulletin of the Department of Labor, VI, pp. 207-230, from which this text is taken.]

AN ACT to facilitate the settlement of industrial disputes by conciliation and arbitration  
[31st August, 1894] <sup>1</sup>

*Enacted by the general assembly of New Zealand in Parliament assembled, and by the authority of the same, as follows:*

1. The short title of this act is "The Industrial Conciliation and Arbitration Act, 1894." It shall come into force on the first day of January, 1895.

2. In this act, unless the context otherwise requires—

"Association" means an industrial association registered pursuant to this act

"Board" means a board of conciliation for an industrial district constituted under this act, and includes a special board of conciliation

"Court" means the court of arbitration constituted under this act

"Employer" includes persons, firms, companies, and corporations employing workers <sup>2</sup>

"Industrial dispute" means any dispute arising between one or more employers or industrial unions, trade unions, or associations of employers and one or more industrial unions, trade unions, or associations of workers in relation to industrial matters as herein defined

"Industrial matters" means all matters or things affecting or relating to work done or to be done, or the privileges, rights, or duties of employers or workers in any industry, and not involving questions which are or may be the subject of proceedings for an indictable offense, and, without limiting the general nature of the above definition, includes all or any matters relating to—

(a) The wages, allowances, or remuneration of any persons employed in any industry, or the prices paid or to be paid therein in respect of such employment

(b) The hours of employment, sex, age, qualification or status of workers, and the mode, terms, and conditions of employment

(c) The employment of children or young persons, or of any person or persons or class of persons in any industry, or the dismissal of or refusal to employ any particular person or persons or class of persons therein

(d) Any established custom or usage of any industry, either generally or in the particular district affected

(e) Any claim arising under an industrial agreement

"Industrial union" means an industrial union registered and incorporated under this act

"Industry" means any business, trade, manufacture, undertaking, calling, or employment of an industrial character

"Officer" of a trade union, industrial union, or association of workers, means only the president, vice-president, secretary, or treasurer of such body

"Prescribed manner" means the manner prescribed by regulations made pursuant to this act

"Registrar" means the registrar of friendly societies

"Supreme court office" means the office of the supreme court in the district constituted under the supreme court act, 1882, wherein any matter arises to which such expression relates and, where there are two such offices in any such district, it means that one of such offices which is nearest to the place or locality wherein any such matter arises

"Trade union" means any trade union registered under the trade-union act, 1878

Words in this act referring to any clerk, person, officer, office, place, locality, union, association, or, other matter or thing shall be construed distributively as referring to each clerk, person, officer, office, place, locality, union, association, or matter or thing to whom or to which the provision is applicable

## PART I

## REGISTRATION OF INDUSTRIAL UNIONS AND ASSOCIATIONS

## (1) Industrial unions

3. A society consisting of any number of persons, not being less than 5, <sup>3</sup> residing within the colony, lawfully associated for the purpose of protecting or furthering the interests of employers or workers in or in connection with any industry in the colony, and whether formed before or after the passing of this act, may be registered as an industrial union pursuant to this act on compliance with the following provisions:

(1) An application for registration, stating the name of the proposed industrial union, shall be made to the registrar, signed by two or more officers of the society

(2) Such application shall be accompanied by (a) a list of the members and officers of the society, (b) two copies of the rules of the society, (c) a copy of a resolution passed by a majority of the members present at a general meeting of the society specially called in accordance with the rules for that purpose only and desiring registration as an industrial union

(3) Such rules shall specify the purposes for which the society is formed, and shall provide for—

(a) The appointment of a committee of management, a chairman, secretary, and any other necessary officers, or, if thought fit, of a trustee or trustees, and for supplying any vacancy occurring through any cause prescribed by the rules, or by death or resignation

(b) The powers, duties, and removal of the committee, and of any chairman, secretary, or other officer or trustee of the society, and the control of the committee by general or special meetings.

(c) The manner of calling general or special meetings, the quorum thereof, and the manner of voting thereat

(d) The mode in which industrial agreements and any other instruments shall be made and by whom executed on behalf of the society, and in what manner the society shall be represented in any proceedings before a board or the court

(e) The custody and use of the seal, including power to alter or renew the same.

<sup>1</sup> The words "to encourage the formation of industrial unions and associations and" appearing immediately after the word "act" in the principal act were suppressed by the amendment act of 1898.

<sup>2</sup> The principal act uses the word "workmen." The amendment act of 1895 provides that the word "workers" shall be substituted for "workmen" throughout the act

<sup>3</sup> Changed from 7 in the principal act to 5 by the amendment act of 1895

(f) The control of the property of the society, and the investment of the funds thereof; and for an annual or other periodical audit of the accounts

(g) The inspection of the books and the names of members of the society by every person having an interest in the funds thereof

(h) A register of members and the mode in which and the terms on which persons shall become or cease to be members, and so that no member shall discontinue his membership without giving at least 3 months' previous written notice to the secretary of intention so to do, nor until such member has paid all fees or other dues payable by him to the union under its rules, and which fees or dues, in so far as they are owing for any period of membership subsequent to the registration of the society under this act, may be sued for and recovered in any court of competent jurisdiction by any person or authority empowered to do so by law or by such rules

(i) The conduct of the business of the society at some convenient address to be specified, and to be called the registered office of the society

4. (1) The rules may also provide for any other matters not contrary to law, and for their amendment, repeal, or alteration, but so that the requisites of subsection three of the last preceding section shall always be provided for

(2) Copies of all amendments or alterations of any rules shall, after being verified by the secretary or some other officer of the society, be sent to the registrar, who shall record the same

(3) A printed copy of the rules of the society shall be delivered by the society to any person requiring the same on payment of a sum not exceeding one shilling (21 cents)

Notwithstanding anything to the contrary contained in section three of the principal act, it is hereby enacted as follows: Where a copartnership firm is a member of any such society, each individual partner residing in New Zealand shall be deemed an individual member of the society, and also of the industrial union when such society is registered as a union; any incorporated or registered company may be registered as an industrial union of employers<sup>1</sup>

Each industrial union shall be deemed to be in the industrial district wherein its registered office is situate, and shall exercise its right of voting at the election of the board of that district accordingly, or in any industrial district in which such industrial union shall carry on its business, or any branch or part of its business, and for such purpose any such union may be also registered in any or every of such industrial district or districts<sup>2</sup>

In the case of any incorporated or registered company the directors shall sufficiently represent the members for the purpose of the application to register as an industrial union of employers, and the resolution prescribed by subsection one of section three of the principal act may accordingly be a resolution of the directors<sup>3</sup>

5. On being satisfied that the provisions of section three in relation to an application for registration have been complied with, the registrar shall register the society, without fee, as an industrial union pursuant to the application, and shall issue a certificate of registry and incorporation, which, unless proved to have been canceled, shall be conclusive evidence of the fact of such registration and incorporation, and of the validity thereof

6. Upon receiving such certificate every such industrial union shall become a body corporate, by the registered name, having perpetual succession until dissolved or the registration thereof is canceled as hereinafter provided, and shall have a common seal. There shall be inserted in the registered name of every industrial union the word "employers" or "workers" according to whether such union shall be a union of employers or workers, as thus: The Bootmakers' Industrial Union of Workers

7. Any industrial union may purchase or take on lease, in the name of the union or of trustees for such union, any house or building and any land, and may sell, mortgage, exchange, or let the same, or any part thereof, and no purchaser, assignee, mortgagee, or tenant shall be bound to inquire whether the union or the trustees have authority for such sale, mortgage, exchange, or letting, and the receipt of such trustees shall be a discharge for the money arising therefrom

8. Any trade union registered under the trade-union act, 1878, may be registered by the same name (with the insertion of such additional words as aforesaid) under this act by making application to the registrar for the purpose, and the registrar shall register such trade union as an industrial union accordingly, and issue a certificate of registration and incorporation as hereinafter provided

For the purposes of this act every branch of a trade union shall be considered as a distinct union, and may be separately registered as an industrial union under this act, and the rules for the time being of any trade union, with such addition or modification as may be necessary, to give effect to this act, shall be deemed to be the rules of the industrial union when registered under the enactment. Provided that the registrar shall not refuse to register a trade union the rules of which contain such addition or modification as aforesaid, unless such rules are distinctly contrary to some express provision of this act

9. No industrial union shall be registered under a name identical with that by which any other industrial union has been registered under this act, or by which any other trade union has been registered under the trade-union act, 1878, or so near resembling any such name as to be likely to deceive the members or the public

10. The effect of registration shall be to render the industrial union, and all persons who may be members of any society or trade union registered as an industrial union at the time of registration, or who after such registration may become members of any society or trade union so registered, subject to the jurisdiction by this act given to a board and the court respectively, and liable to all the provisions of this act, and all such persons shall be bound by the rules of the industrial union during the continuance of the membership

11. Any industrial union may at any time apply to the registrar in the prescribed manner for a cancellation of the registration thereof, and the registrar, after giving six weeks' public notice of his intention so to do, may cancel such registration, but no registration shall be canceled during the progress of any conciliation or arbitration affecting such union until the board or court has given its decision or made its award, nor in any case unless the registrar shall be satisfied that the cancellation is desired by a majority of the members of the union, and no cancellation of any registration shall relieve any industrial union, or any member thereof, from the obligation of any industrial agreement or award of the court.

#### (2) Industrial associations

12. Any council or other body, however designated, representing any number of industrial unions established within the colony may be registered as an industrial association pursuant to this act.

All the provisions of this act heretofore contained in sections three to eleven, inclusive, shall,

<sup>1</sup> This paragraph was inserted by the amendment act of 1895. The clause making five the minimum membership of an industrial union is not reproduced, as the change has already been noted.

<sup>2</sup> This paragraph was inserted by the amendment acts of 1895 and 1896, the latter amending the former by adding the part beginning with "or in any industrial district," *et c.*

<sup>3</sup> This paragraph was inserted by the amendment act of 1896.

*mutatis mutandis*, extend and apply to an industrial association, and shall be read and construed accordingly, so far as applicable.

(3) *General*

13. In the months of January and July in every year there shall be forwarded to the registrar by every association a list of the unions constituting such association, and in the same months in every year there shall be forwarded to the registrar by every industrial union a list of the members of such union. Each such list shall be verified by the statutory declaration of the president or chairman of each such association and union, and such statutory declaration shall be *prima facie* evidence of the truth of the matters therein set forth.

Each such list shall specify the names of all the officers (including trustees) of each such association or union.<sup>1</sup>

14. Every association or industrial union making default in forwarding to the registrar any list required to be forwarded by the last preceding section shall be guilty of an offense against this act, punishable by a penalty not exceeding two pounds [\$9 7s] for every week during which such default continues, and every member of the council of any such association or committee of any such union who wilfully permits such default shall be guilty of a similar offense, punishable by a penalty not exceeding five shillings [5s 2d] for every week during which he wilfully permits such default.

15. Every association or industrial union may sue or be sued for the purposes of this act by the name by which it is registered, and service of any process, notice, or document of any kind may be effected by delivering the same to the chairman or secretary of such union or association, or by leaving the same at the registered office of such union or association.

16. All deeds and instruments of any kind which the union or association is required to execute for the purposes of this act, or any regulations in force thereunder, may be made and executed under the seal of such union or association and signed by the chairman and secretary thereof, or in such other manner as may be provided in the rules of the union or association.

PART II

INDUSTRIAL AGREEMENTS

17. The parties to industrial agreements may be (1) trade unions, (2) industrial unions, (3) industrial associations, (4) employers, and any such agreement may provide for any matter of thing affecting any industrial matter, or in relation thereto, or for the prevention or settlement of an industrial dispute.

18. Every industrial agreement may be varied, renewed, or canceled by any subsequent industrial agreement made by and between the parties thereto, or any additional parties, but so that no person shall be deprived of the benefit of any industrial agreement to which he is a party by any subsequent industrial agreement to which he is not a party.

19. Every industrial agreement shall be for a term to be specified therein, not exceeding three years from the date of the making thereof, and shall commence as follows: "This agreement, made in pursuance of the industrial conciliation and arbitration act, 1891, this — day of —, between —, and then set out the matters agreed upon, and the date of the making of such agreement shall be the date when such agreement shall be first signed or executed by any party thereto, and such date, and the names of all industrial unions, trade unions, associations, or employers, parties to such agreement, shall be truly stated therein.

20. A duplicate of every industrial agreement shall be filed in the supreme court office within thirty days of the making thereof, and a fee of five shillings [5s 2d] shall be paid in respect of every agreement so filed.

21. Every industrial agreement duly made and executed shall be binding on the parties thereto and on every person who at any time during the term of such agreement is a member of any industrial union, trade union, or association party thereto, and on every employer who shall in the prescribed manner signify to the registrar of the supreme court where such agreement is filed concurrence therein, and every such employer shall be entitled to the benefit thereof, and be deemed to be a party thereto.

22. (1) For the purpose of enforcing industrial agreements, whether made before or after the coming into operation of this act, the provisions of the last preceding section hereof [see sections 73-81] shall, *mutatis mutandis*, apply in like manner in all respects as if an industrial agreement were an award of the court, and the court shall accordingly have full and exclusive jurisdiction to deal therewith.<sup>2</sup>

(2) Any industrial agreement may fix and determine what shall constitute a breach of an agreement within the meaning of this act.

(3) Nothing herein contained shall deprive any person who may be damaged of his right of action for redress or compensation in respect of any breach of an agreement.

23. [Repealed by the amendment act of 1898. — See footnote to section 22.]

PART III

CONCILIATION AND ARBITRATION

(1) *Preliminary*

24. (1) The governor may from time to time divide New Zealand, or any portion thereof, into such districts as he shall think fit, to be called "industrial districts," and notice of the constitution of every such district shall be given in the *Gazette* as occasion requires.

(2) If any such district is constituted by reference to, or be included within, the limits or boundaries of any other portion of the colony defined or created under any act, then, in case of the alteration of the boundaries of such portion of the colony, such alteration shall take effect in respect of the district constituted under this section without any further proceeding, unless the governor shall otherwise determine.

25. In and for every industrial district the governor shall appoint a clerk of awards (hereinafter referred to as "the clerk"), who shall be attached to the office of the registrar, and shall be subject

<sup>1</sup> This paragraph was inserted by the amendment act of 1895.

<sup>2</sup> The provisions of this paragraph are in substitution of the provisions of subsection (1) of section 22, and of section 23, of the principal act, according to the amendment act of 1898.

to the control and direction of that officer, and shall in the prescribed manner report to the registrar all proceedings taken or done by or before him.

The office of clerk may be held either separately or in conjunction with any other office in the public service, as the governor may determine, and he shall be paid such salary or other remuneration as the governor thinks fit.

26. It shall be the duty of the clerk—

(1) To receive, register, and deal with all applications within his district lodged for reference of any industrial dispute to the board for the district or to the court;

(2) To convene the board or court for the purpose of dealing with any such dispute;

(3) To keep a register in which shall be entered the particulars of all references and settlements of industrial disputes made to and by the board, and of all references and awards made to and by the court;

(4) To issue all summonses to witnesses to give evidence before the board or court, and to issue all notices and perform all other acts in connection with the sittings of the board or court in the prescribed manner; and

(5) Generally to do all such things and to take all such proceedings as may be required in the performance of his duties by this act or in the prescribed manner, or, in the absence of regulations, with the directions of the registrar.

27. Any board and the court, and, being authorized in writing by the board or court, any member of such board or court respectively, or any officer of such board or court, without any other warrant than this act, at any time between sunrise and sunset—

(1) May enter upon any manufactory, building, workshop, factory, mine, mine workings, ship or vessel, shed, place, or premises of any kind whatsoever, wherein or in respect of which any industry is carried on or any work is being or has been done or commenced, or any matter of thing is taking or has taken place, which has been made the subject of a reference to such board or court;

(2) May inspect and view any work, material, machinery, appliances, article, matter or thing whatsoever being in such manufactory, building, workshop, factory, mine, mine workings, ship or vessel, shed, place, or premises as aforesaid;

(3) May interrogate any person or persons who may be in or upon any such manufactory, building, workshop, factory, mine, mine workings, ship or vessel, shed, place, or premises, as aforesaid, in respect of or in relation to any matter or thing hereinbefore mentioned.

And any person who shall hinder or obstruct the board or court or any member or officer thereof, respectively, in the exercise of any power conferred by this section, or who shall refuse to the board or court, or any member or officer thereof, respectively, duly authorized as aforesaid, entrance during any such time as aforesaid to any such manufactory, building, workshop, factory, mine, mine workings, ship or vessel, shed, place, or premises, or shall refuse to answer any question put to him as aforesaid, shall for every such offense be liable to a penalty not exceeding £50 [§ 27 (3)].

28. The following persons shall be disqualified<sup>1</sup> from being appointed or elected or from holding office as chairman or as a member of any board, or as president or a member of the court, and if so elected or appointed shall be incapable of continuing to be such member, president or chairman:

(1) A bankrupt who has not obtained his final order of discharge;

(2) Any person convicted of any crime for which the punishment is death or imprisonment with hard labor for a term of 3 years or upward; or

(3) Any person of unsound mind.

No person whilst holding a seat on one board shall hereafter be eligible for nomination or election to a seat on any other board, and if he is so elected his election shall be void.<sup>2</sup>

Every person allows himself to be nominated for election as member of more boards than one, both nominations shall be void.<sup>3</sup>

In the event of any person's election becoming void under this section the governor shall fill the vacancy by appointment, in the same manner as if the prescribed number of members had not been elected, any thing in section 36 of the principal act to the contrary notwithstanding.<sup>4</sup>

This section shall apply both to boards of conciliation and to special boards of conciliators inter se, but shall not otherwise affect the operation of section 11 of the principal act, nor shall it in any way affect any election held before the coming into operation of this act.<sup>5</sup>

29. Whenever an industrial dispute shall be referred to a board or court as hereafter provided, no industrial union or association, trade union or society, whether of employers or workers, and no employer who may be a party to the proceedings before the board or court shall, on account of such industrial dispute, do any act or thing in the nature of a strike or lockout or suspend or discontinue employment or work in any industry affected by such proceedings, but each party shall continue to employ or be employed, as the case may be, until the board or court shall have come to a final decision in accordance with this act. But nothing herein shall be deemed to prevent any suspension or discontinuance of any industry or from working the same, for any other good cause.

No industrial dispute shall be referred for settlement to a board by an industrial association, industrial union, or trade union, and no application shall be made to the court for the enforcement of any award, except in pursuance of a resolution passed by a majority of the members present at a meeting specially summoned by notice being posted to each member, stating the nature of the proposal to be submitted to the meeting.<sup>6</sup>

#### (2) Boards of conciliation

30. In and for every industrial district there shall be established a board of conciliation, to have jurisdiction for the settlement of industrial disputes occurring in such district which may be referred to it by one or more of the parties to an industrial dispute or by industrial agreement.

31. The governor may determine the number of persons who (together with the chairman) shall compose the board of such district, subject, however, to the express provisions of this act, and such number shall be stated in the notice of the constitution of the district.

32. With respect to the first and subsequent elections of boards, the following provisions shall have effect:

(1) Every board shall consist of such equal number of persons as the governor may determine, being not more than six nor less than four persons, who shall be chosen by the industrial unions of employers and of workers in the industrial district respectively, such unions voting separately and electing an equal number of such members.

(2) The chairman of such board shall be in addition to the number of members before mentioned, and be elected as hereafter provided.

(3) Every board shall be elected in the following manner:

(a) The clerk shall act as returning officer, and do the acts and things hereinafter mentioned;

(b) First elections of a board shall be held within 30 days after the constitution of the district, and

<sup>1</sup> This paragraph was inserted by the amendment act of 1896.

<sup>2</sup> This paragraph was inserted by the amendment act of 1898.

the returning officer shall give 14 days' notice in one or more newspapers circulating in the district of the day and place of election, which shall be so arranged that the industrial unions of employers shall vote at one time and the industrial unions of workers at another time on the day fixed: Provided that the governor may from time to time extend the period within which any elections shall be held for such time as he thinks fit.

(c) Persons shall be nominated for election in such manner as the rules of the industrial union may prescribe, or, if there be no such rule, nominations shall be made in writing by the chairman of the union, and lodged with the returning officer at least 3 days before the date of election. Each nomination shall be accompanied by the written consent of the person nominated, and forms of nomination shall be provided by the returning officer on application to him for that purpose.

(d) When all the nominations have been received the returning officer shall give notice of the names of persons nominated by affixing a list thereof on the door of his office at least one clear day before the day of election.

(e) If it shall appear that no greater number of persons are nominated than require to be elected, the returning officer shall at once declare such persons elected.

If the number of persons so nominated exceeds the number required to be elected, then votes shall be taken as hereinafter provided.

(f) The returning officer shall preside at the election by each division of industrial unions entitled to vote, and the vote of each such union shall be signified in writing in the prescribed manner, and on being tendered by the chairman of the union, or by some person appointed by the union for that purpose in accordance with its rules, the returning officer shall record the vote in such manner as he thinks fit.

(g) Each industrial union shall have as many votes as there are persons to be elected by its division, and the persons having the highest aggregate number of votes in such division, not exceeding the number to be elected, shall be deemed elected.

(h) If it shall happen that two or more candidates have an equal number of votes the returning officer, in order to complete the election, shall give such votes to one or more of such candidates as he thinks fit. Provided that any candidate may in any such case agree to withdraw from the election.

(i) As soon as possible after the votes of each division of industrial unions have been recorded the returning officer shall ascertain what persons have been elected, as before provided, and shall state the result in writing, and forthwith post the same in some public place at the place of election.

(j) In case of any dispute touching the sufficiency of the nomination, the mode of election, or the result thereof, or any matter incidentally arising in or in respect of such election, the same shall be decided by the returning officer, whose decision shall be final.

(k) In case any election is not completed for any cause on the day appointed the returning officer may adjourn the election, or the completion thereof, to the next or any subsequent day, and may then proceed with the election.

(l) The whole of the voting papers shall be securely kept by the returning officer during the election, and thereafter shall be put in a packet and kept for 1 month, when he shall cause the whole of them to be effectually destroyed.

(m) Neither the returning officer nor any person employed by him shall (except in discharge of his duty) disclose for whom any vote has been given or tendered, either before or after the election is completed, or return possession of or exhibit any voting paper used at the election, or give any information to any person as to all or any of the matters herein mentioned; and if any person shall commit a breach of this provision he shall be liable to a penalty not exceeding twenty pounds (£20).

But nothing herein contained shall be deemed to forbid the disclosure of any fact or the doing of any act hereby prohibited if the same be required in obedience to the process of any court of law.

(1) The clerk shall, after the completion of the election, appoint a day for the first meeting of the members elected, and shall give at least 3 days' notice in writing to each member. At such meeting the members shall elect some impartial person, not being one of their number and willing to act, to be chairman of the board.

33. As soon as may be after the election of the chairman the clerk shall transmit to the governor a list of the names of the respective persons elected as members and as chairman of the board, and the governor shall cause notice thereof to be published in the Gazette, and the date on which such notice is so published shall be deemed to be the date of election, and such notice shall be final and conclusive for all purposes.

34. The members of the board and the chairman shall hold office for the period of 3 years from the date of the publication of such notice in the Gazette, and until their successors are elected.

35. On the expiration of every third year after the first election of members of a board or a chairman thereof a new election shall be held, on such day as the governor may appoint, and new members and a chairman shall be elected in the manner hereinbefore provided in respect of first elections. Any retiring member or chairman shall be eligible for reelection, and all proceedings in and about such new election may be had and taken accordingly.

36. If the chairman or any member of a board shall die, resign, or be disqualified or incapable to act his office shall be vacant, and the vacancy shall be supplied in the same manner as the original election was made, and the person so elected shall hold office in the board only for the residue of the term of his predecessor therein. Members shall resign office by letter addressed to the chairman, and the chairman by letter to the board.

37. Upon any casual vacancy being reported to the clerk in the office of a member of a board he shall take all such proceedings as may be necessary to have an election by the class of industrial union entitled to vote in the election of such member, and the provisions as to general elections shall apply accordingly as far as applicable. In the case of a casual vacancy in the office of chairman the board shall meet on such day and time as they may appoint and elect a chairman to supply such vacancy.

38. (1) The presence of the chairman and of not less than one-half in number of the other members of a board shall be necessary to constitute a quorum.

(2) But in case of the illness or absence of a chairman the members may elect one of their own number to be chairman during such illness or absence.

(3) In all matters coming before any board the decision of the board shall be determined by a majority of the votes of the members present, exclusive of the chairman, except in the case of an equality of such votes, in which case only the chairman shall vote, and his vote shall decide the question.

39. If at any time the industrial unions entitled to vote shall neglect or refuse to vote at the election of a member of the board, whether in respect of a general election or a casual vacancy, or if the members of a board shall neglect or refuse to elect a chairman, the governor may in any such case appoint such fitting persons as members of the board or as chairman as may be necessary in any case to give effect to this act.

If and as often as for any reason the prescribed number of members of the board is not duly elected, or the prescribed number of members of the court is not duly recommended, as provided

by the principal act, the governor shall, by notice in the Gazette, appoint as many fit persons to be members of the board or court as may be necessary in order to make the prescribed number. The Gazette notice of such appointment shall be conclusive evidence of the happening of the events entitling the governor to make such appointment.<sup>1</sup>

Every person appointed by the governor to be member or chairman of a board shall be deemed to be elected within the meaning and for the purposes of section 33 of the principal act.<sup>2</sup>

This section shall take effect as from the date of the coming into force of the principal act.<sup>2</sup>

40. (1) No act of a board shall be questioned on the ground of any informality in the election of a member, nor on the ground that the seat of any member is vacant, or that any supposed member thereof is incapable of being a member.

(2) In the event of the period of office of any board expiring whilst such board is engaged in the investigation of any industrial dispute the governor may, by notice in the Gazette, continue such board in office for any time not exceeding one month, in order to enable its members to take part in the settlement of such dispute, and on the expiration of such month an election of a new board shall be held in the manner herebefore provided.

41. (1) Notwithstanding the election of a board under the provisions herebefore contained, or where no district shall have been constituted, a special board of conciliators may be appointed from time to time to meet any case of emergency or any special case of industrial dispute. Such board shall consist of an equal number of persons not exceeding six, all or any of whom may be members of the board of the district, and shall be chosen separately in equal numbers by employers and industrial unions of employers directly interested in such dispute and by industrial unions of workers so interested.

(2) The members of any such special board, together with a chairman, to be elected as provided in section 32, shall, except in respect of the duration of their office, be deemed to possess all the jurisdiction and powers of a board elected for an industrial district.

42. Any industrial dispute may be referred for settlement to a board either by or pursuant to an industrial agreement, or in the manner hereinafter provided.

(1) Any party to such a dispute may, in the prescribed manner, lodge an application with the clerk requesting that such dispute be referred for settlement to a board.

(2) The parties to such dispute may comprise—

(a) An individual employer, or several employers, and an industrial union, trade union, or association of workers.

(b) An industrial union, trade union, or association of employers, or an individual employer, or several employers, and an industrial union, trade union, or association of workers, or several such unions or associations.

But the mention of the various kinds of parties shall not be deemed to interfere with any arrangement thereof that may be necessary to insure an industrial dispute being brought in a complete shape before the board, and a party or parties may be withdrawn or removed from the proceedings and another or others substituted after the reference to the board and before any report is made, as the board shall allow or think best adapted for the purpose of giving effect to this act and the board may make any recommendation or give any direction for any such purpose accordingly.

(3) An employer, being a party to a reference, may appear in person, or by his agent duly appointed in writing for that purpose, or by counsel or solicitor where allowed as hereinafter provided.

(4) An association, trade union, or industrial union, being party to a reference, may appear by its chairman or secretary, or by any number of persons (not exceeding three) appointed in writing by the chairman of the association or union for that purpose, or by counsel or solicitor where allowed as hereinafter provided.

(5) Every party appearing by a representative or representatives shall be bound by his or their acts.

(6) The clerk on receipt of any application for a reference to a board shall forthwith lay the same before the board mentioned in such application at a meeting of such board to be convened by him in the prescribed manner, and, subject to the provisions of this act, shall carry out all directions of the board in order to effect a settlement of the industrial dispute referred to it.

(7) No counsel or solicitor shall be allowed to appear or be heard before a board, or any committee thereof, unless all the parties to the reference, or interested in the matter referred to a committee, shall expressly consent thereto.

Whenever any industrial dispute has been referred for settlement to a board or the court, any employer, association, trade union, or industrial union may, on application, if the board or the court deem it equitable, be joined as party thereto at any stage of the proceedings, and on such terms as the board or the court deems equitable.<sup>2</sup>

43. Every board shall, in such manner as it shall think fit, carefully and expeditiously inquire into and investigate any industrial dispute of which it shall have cognizance, and all matters affecting the merits of such dispute or the right settlement thereof, and, for the purposes of any such inquiry, shall have all the powers of summoning witnesses, and hearing and receiving evidence and preserving order at any inquiry, which are by this act conferred on the court of arbitration.

Whenever an industrial dispute involving technical questions is referred to a board or the court for settlement two experts may be nominated, one by each party to the dispute, and such experts shall sit as assessors with and be deemed to be members of the board or court for the purposes of such dispute.<sup>1</sup>

If there are more than two parties to any such dispute one assessor shall be nominated by the parties whose interests are with the employers, and the other by the parties whose interests are with the workers.<sup>1</sup>

The assessors shall be nominated in the prescribed manner and subject to the prescribed conditions.<sup>1</sup>

Where an industrial dispute relates to employment or wages, the jurisdiction of the board or court to deal therewith shall not be voided or affected by the fact that the relationship of employer and employed has ceased to exist, unless it so ceased at least 6 weeks before the industrial dispute was first referred to the board or to the court, if there has been no prior reference to the board.<sup>1</sup>

44. In the course of any such inquiry and investigation the board shall make all such suggestions and do all such things as shall appear to them as right and proper to be made or done for securing a fair and amicable settlement of the industrial dispute between the parties, and may adjourn the proceedings for any period the board thinks reasonable, to allow the parties to agree upon some terms of settlement, and if no such settlement shall be arrived at shall decide the question according to the merits and substantial justice of the case, and make their report or recommendation in writing, under the hand of the chairman of the board, which shall be delivered to and filed by the

<sup>1</sup>This paragraph was inserted by the amendment act of 1895.

<sup>2</sup>This paragraph was inserted by the amendment act of 1896.

clerk in his own office with all papers and proceedings relating to the reference. Such report shall be delivered as aforesaid within 2 months of the day on which the application was lodged with the clerk.

45. In particular, but without limiting the general power given to a board by the last preceding section, any board may—

(1) Refer the matters in dispute, upon such terms as the board thinks fit, to a committee of their number, consisting of an equal number of representatives of employers and workers, who shall endeavor to reconcile the parties; or,

(2) Refer any matter before them to be settled by the court.

46. If the board shall report that they have been unable to bring about any settlement or any dispute referred to them satisfactory to the parties thereto, the clerk on the receipt of such report shall transmit a copy (certified by him) of such report to each party to the industrial dispute, whereupon any such party may in the manner prescribed require the clerk to refer the said dispute to the court. The clerk shall thereupon transmit all the papers and proceedings in the reference to the court.

(3) *The court of arbitration*

47. There shall be one court of arbitration for the whole colony for the settlement of industrial disputes pursuant to this act. The court shall have a seal which shall be judicially noticed, and impressions thereof admitted in evidence in all courts of judicature and for all purposes.

48. (1) The court shall consist of three members to be appointed by the governor, one to be so appointed on the recommendation of the councils or a majority of the councils of the industrial associations of workers in the colony, and one to be so appointed on the recommendation of the councils or a majority of the councils of the industrial associations of employers of the colony. Provided, That if there shall be no industrial associations of employers, then, in their stead, such recommendation as aforesaid shall be made by the industrial unions of employers.

No recommendation shall be made as to the third member, who shall be a judge of the supreme court, and shall be appointed from time to time by the governor and shall be president of the court, and in case of the illness or unavoidable absence of such judge at any time the governor may appoint some fit person, being a supreme court judge, to be and act as president, who shall hold office only during the illness or unavoidable absence of such judge.

(2) The procedure for the purpose of giving effect to this section shall be as follows:

(a) Each such council respectively shall within 1 month after being requested so to do by the governor, submit the name of one person to the governor and from the names of the persons so recommended the governor shall select two members, one from each set recommended, and appoint them to be members of the court.

In the event of a majority of the councils not having made recommendations as aforesaid, or in case such majority of recommendations shall not be received by the governor within the period of 1 month after each council has been requested to submit a name as aforesaid, or in case any person so recommended shall decline to act as a member of the court, the governor shall forthwith appoint such person as he shall think fit to be a member of the court, and such member shall be deemed to be appointed on the recommendation of the said councils, as the case may be.

(b) For the purposes of this section the expression "council" means the governing authority of the association or industrial union entitled to vote, by whatever name such authority shall be designated.

(c) As soon as practicable after a full court shall have been appointed by the governor the names of the members of the court shall be notified in the Gazette.

49. (1) Every member of the court shall hold office for 3 years from the date of his appointment and shall be eligible for reappointment and any casual vacancy occurring in the membership by death, disqualification, resignation or removal shall be supplied in the same manner as the original appointment was made, but every person so appointed to fill a casual vacancy shall hold office only for the period that his predecessor would have held office.

(2) The governor may remove any member of the court from office who shall become bankrupt, who may be convicted of any crime the punishment of which is death or imprisonment with hard labor for a term of 3 years or upward, who may become of unsound mind or who shall be absent from three consecutive sittings of the court.

50. Before proceeding to consider any case the members, other than the presiding judge, of the court and the officers thereof shall respectively make a statutory declaration that any evidence produced before them shall not be disclosed to anyone except as provided by this act.

The statutory declaration prescribed by section 50 of the principal act need be taken only once, and, in the case of each member by whom it is or has been taken, it shall be deemed to apply to all evidence produced before him during his term of office.

51. The governor may also from time to time appoint and remove such clerks and other officers of the court as shall be necessary, who shall hold office during pleasure and receive such salary or other remuneration as the governor thinks fit.

52. The court shall have jurisdiction for the settlement and determination of any industrial dispute referred to it by any board pursuant to sections 45 or 46, or by reference under section 82, or by petition under section 83, or by industrial agreement, or by either party to an industrial dispute which has arisen in a district where no board has been constituted, and for such purpose may summon any party to an industrial dispute to appear before it.

53. Either party to the dispute may appear personally or by agent, or, with the consent of all the parties, by counsel or solicitor, and may produce before the court such witnesses, books, and documents as such party may think proper, and the court shall have power to permit any other party who has or may appear to have a common interest in the matter and be willing to be joined in the proceedings to be so joined on such terms as it thinks fit.

The court shall have full and exclusive jurisdiction to hear and receive evidence, on oath or otherwise, as may be allowed by law, and to hear and determine the matters in dispute in such manner as it thinks fit, and shall be at liberty to receive any such evidence as it may think fit, whether it shall be strictly legal evidence or not, with full power to adjourn the consideration of any matter wholly or in part, for any period, or without stating any period.

Formal matters which have been proved or admitted before a board need not be again proved or admitted before the court.

54. The sittings of the court shall be held at such time and place as are from time to time fixed by the president. The sittings may be fixed either for a particular case or generally for all cases then before the court and ripe for hearing, and it shall be the duty of the clerk to give to each member of the court at least 48 hours' previous notice of the time and place of each sitting.

<sup>1</sup>This paragraph was inserted by the amendment act of 1898.

<sup>2</sup>This paragraph was inserted by the amendment act of 1898, in substitution for section 54 of the principal act repealed.

55. The parties to the proceedings before the court shall be those before the board, and the provisions hereinbefore contained as to the appearance of parties before a board shall apply to proceedings before the court.

At least three days' notice shall be given to each party to the proceedings of the time and place appointed for the meeting of the court, except where a party is added to the proceedings on his own application or with his own consent.

56. The clerk may, at the request of either party, issue a summons in the prescribed manner to any person to appear and give evidence in any manner before the court, and to produce any books, deeds, papers, or writings relating to such matter and in his possession or under his control. Such books, deeds, papers, and writings may be inspected by the members of the court for the purposes of this act, but the information obtained therefrom shall not in any form be made public. And any person upon whom any such summons shall have been served, and to whom at the same time payment or a tender of his travelling expenses on the scale hereinafter mentioned shall have been made, and who shall neglect or refuse without sufficient cause to appear or to produce any books, deeds, papers, or writings required by such summons to be produced, shall be liable to a penalty not exceeding twenty pounds [\$20] or, in default of payment, to be imprisoned for a term not exceeding one month, but the payment of such fine or the undergoing of such imprisonment shall not exempt any person from liability to an action for disobeying such summons.

57. Where it is shown to the satisfaction of the court that certain parts of books or documents to be produced in evidence do not relate to the matter before the court, the party producing the same shall be allowed to seal up such parts.

58. Every person who shall be summoned and shall appear as a witness shall be entitled to an allowance or compensation for expenses and loss of time according to the scale for the time being in force and allowed to witnesses in civil suits under the magistrates' courts act, 1893.

59. Any member of the court, or the clerk, shall have power to administer oaths or affirmations to all witnesses who shall appear before the court, and all wilful false swearing or false affirmation in any proceedings in the court under this act shall be deemed and held to be wilful perjury, and shall be indictable and punishable as such, and on any indictment it shall be sufficient to prove that the oath or affirmation was administered by such member or clerk aforesaid.

60. For the purpose of obtaining the evidence of witnesses at a distance, the court shall be deemed to have and may exercise all the powers and duties of a stipendiary magistrate under the magistrates' courts act, 1893, and the provisions of the said act, *mutatis mutandis*, shall be applicable to all proceedings in the court under this act to the same extent as if the court were a magistrate's court, and every stipendiary magistrate, and every magistrate's court, and every clerk of such court shall for the purposes aforesaid have and may exercise all such duties and powers in respect of any matter or thing arising under this act as such stipendiary magistrate, or magistrate's court, or clerk respectively could do or be required to do under the magistrates' courts act, 1893.

61. The court may sit and conduct its proceedings in open court, and a majority of the members present may decide and finally determine any matters referred to them in such manner as they shall find to stand with equity and good conscience.

62. If either of the members other than the president shall neglect or fail to attend a sitting of the court without good cause shown to the satisfaction of the president, the other member present and the president may, nevertheless, act as fully as if all the members were present.

63. The court may be adjourned from time to time and from place to place in manner following, that is to say:—(1) By the court or the president at any sitting thereof, or, if the president is absent from such sitting, then by any other member present; or, if no member is present, then by the clerk; and (2) by the president at any time before the time fixed for the sitting, and in such case the clerk shall notify the members of the court and all parties concerned.<sup>1</sup>

The power, by the last preceding section [sections 51 and 63] hereof conferred upon the president in the case of the court shall, in the case of the board, be exercisable by the chairman thereof.<sup>2</sup>

The board or the court, at any stage of the proceedings before it, and either of its own motion or at the request of any of the parties, may direct that the proceedings be conducted in private, and in such case all persons other than the parties, their representatives, and any witness under examination shall withdraw.<sup>3</sup>

64. If any person shall wilfully insult any member of the court or the clerk during the sitting of the court, or shall wilfully interrupt the proceedings of the court, or be guilty in any other manner of any wilful contempt in the face of the court, it shall be lawful for any officer of the court, with or without the assistance of any other person, to take such offender into custody and remove him from the court, to be detained in custody until the rising of the court, and the person so offending shall be liable to a penalty not exceeding ten pounds [\$10] for such offense, to be recovered in a summary way as hereinafter provided.

65. If any party to proceedings before the court shall, after notice given to such party, fail to attend or be represented before the court, without good cause shown to such court, the court may proceed and act as fully in the matter before it as if such party had duly attended or been represented. Any person who is a party to any such proceedings may be required to give evidence before the court in the manner hereinbefore provided with respect to a witness.

66. The court may refer any matters referred to it from time to time to a board for investigation and report where it shall think such board may arrive more easily at a settlement thereof, and the award of the court shall be based on the report of such board.

67. The court may at any time discontinue any matter referred to it which it shall think frivolous or trivial, and any award in such case may be limited to an order upon the party bringing the matter before the court for payment of all costs of bringing the same.

In order to enable the court the more effectually to dispose of any matter before it according to the substantial merits and equities of the case, it may, at any stage of the proceedings, of its own motion or on the application of any of the parties, and upon such terms as it thinks fit, by order:—(1) Direct parties to be joined or struck out, (2) amend or waive any error or defect in the proceedings, (3) extend the time within which anything is to be done by any party, and (4) generally give such directions as are deemed necessary or expedient in the premises.<sup>2</sup>

The powers by the last preceding section [paragraph] hereof conferred upon the court may, when the court is not sitting, be exercised by the president.<sup>1</sup>

68. The award of the court shall be made within one month after the court shall have begun to sit for the hearing of any reference, and shall be signed by the president of the court, and have the seal of the court attested thereto, and shall be deposited in the office of the clerk of the district wherein the reference arose, and be open to inspection without charge by all persons interested therein during office hours.

<sup>1</sup>This paragraph was inserted by the amendment act of 1898, in substitution for section 63 of the principal act repealed.

<sup>2</sup>This paragraph was inserted by the amendment act of 1898.

The court in its award, or by order made on the application of any of the parties at any time during the currency of the award, may fix and determine what shall constitute a breach of the award, and what sum, not exceeding five hundred pounds [\$2,433 25], shall be the maximum penalty payable by any party or person in respect of any breach. *Provided, however,* That the aggregate amount of penalties payable under or in respect of any award shall not exceed five hundred pounds [\$2,433 25].<sup>1</sup> It shall not be lawful for the court by any award to fix any age for the commencement or termination of apprenticeship.<sup>2</sup>

The court in its award, or by order made on the application of any of the parties at any time during the currency of the award, may prescribe a minimum rate of wages or other remuneration, with special provision for a lower rate being fixed in the case of any worker who is unable to earn the prescribed minimum. *Provided,* That such lower rate shall in every case be fixed by such tribunal, in such manner, and subject to such provisions as are specified in that behalf in the award or order.

69. (1) The court in its award may order any party to pay to the other party costs and expenses (including expenses of witnesses) as it may deem reasonable, and may apportion such cost between the parties or any of them as it thinks fit, and may at any time vary or alter any such order in such manner as it thinks reasonable, and such costs or any other costs ordered by the court to be paid may be recovered in any court of competent jurisdiction by the party entitled thereto under the award or order of the court as the debt due from the party liable therefor, but no costs shall in any case whatever be allowed on account of any agents, counsel, or solicitor appearing for any party.

(2) The court may also order that the whole or any portion of any such cost as aforesaid shall be taxed by the proper officer of the supreme court, and such officer shall have in, about, and in relation to such taxation all such power, duty, and authority as he would have in any case within the ordinary jurisdiction of the supreme court in respect of taxation of costs.

In every case where the court in its award or other order directs the payment of costs or expenses it shall fix the amount thereof, and specify the same in the award or order. Section 69 of the principal act is hereby modified in so far as it is in conflict with this section, but not further or otherwise.<sup>3</sup>

70. The award shall be framed in such manner as shall best express the decision of the court, avoiding all technicality where possible, but shall state in clear terms what is or is not to be done or performed by each party or person affected by the decision, and may provide for an alternative course to be taken by any party to the proceedings, or by any person affected thereby, but no award shall be void or vitiated in any way because of any informality or want of form, or any noncompliance with the provisions of this act.

71. In all legal and other proceedings it shall be sufficient to produce the award with the seal of court thereto, and it shall not be necessary to prove any conditions precedent entitling the court to make such award.

72. Proceedings in the court shall not be impeached or held bad for want of form, nor shall the same be removable to any court by *certiorari* or otherwise, and no award or proceeding of the court shall be liable to be challenged, appealed against, reviewed, quashed, or called in question by any court of judicature on any account whatsoever.

73. No proceedings in the court shall abate by reason of the death of any member of the court or of any party to such proceedings, but the same may be continued and disposed of by the successor in office of such member or legal personal representative of the party so dying.

#### (4) Enforcement of awards

74. Every award of the court shall specify each industrial union, trade union, association, person, or persons on which or on whom it is intended that it shall be binding, and the period, not exceeding 2 years from the making thereof, during which its provisions may be enforced, and during the period within which the provisions of such award may be enforced such award shall be binding upon every industrial union, trade union, association, or person upon which it shall be thereby declared such award shall be binding. *Provided,* That if the members of any industrial union or trade union are mentioned generally in any such award, all persons who are members at the date thereof of such award, or may thereafter become so during its subsistence, shall be included in the direction given or made by the award.

75-81. For the purpose of enforcing any award or order of the court, whether made before or after the coming into operation of this act, the following provisions shall apply, anything in the principal act to the contrary notwithstanding.

(1) In so far as the award itself directs the payment of money, it shall be deemed to be an order of the court, and payment shall be enforceable accordingly under the subsequent provisions of this section relating to orders of the court.

(2) If any party or person on whom the award is binding commits any breach thereof by act or default, then, subject to the provisions of the last preceding subsection hereof, any party to the award may by application in the prescribed form apply to the court for the enforcement of the award.

(3) On the hearing of such application the court may by order either dismiss the application or impose such penalty for the breach of the award as it deems just, and in either case with or without costs.

(4) If the order imposes a penalty or costs it shall specify the parties or persons liable to pay the same, and the parties or persons to whom the same are payable.

*Provided,* That the amount payable by any party or person shall not exceed five hundred pounds [\$2,433].

*Provided also,* That the aggregate amount of penalties and costs payable under any award shall not exceed five hundred pounds [\$2,433].

(5) For the purpose of enforcing payment of the amount payable under any order of the court (not being an order under section 10 hereof), a certificate in the prescribed form, under the hand of the clerk and the seal of the court, specifying the amount payable and the respective persons by and to whom the same is payable, may be filed in any court having jurisdiction to the extent of such amount, and shall thereupon, according to its tenor, operate and be enforceable in all respects as a final judgment of such court in its civil jurisdiction.

*Provided,* That for the purpose of enforcing satisfaction of such judgment where there are two or more judgment creditors thereunder, process may be issued separately by each judgment creditor against the property of his judgment debtor in like manner as in the case of a separate and distinct judgment.

(6) All property belonging to the judgment debtor (including therein, in the case of an industrial union or trade union, all property held by trustees for the judgment debtor) shall be available in or toward satisfaction of the judgment debt, and if the judgment debtor is an industrial union, an

<sup>1</sup> This paragraph was inserted by the amendment act of 1898.

<sup>2</sup> The following provisions were substituted by the amendment act of 1898, in the place of sections 75 to 81 of the principal act repealed.

industrial association, or a trade union, and its property is insufficient to fully satisfy the judgment debt, its members shall be liable for the deficiency.

*Provided*, That no member shall be liable for more than ten pounds [£48 67] under this subsection.

(7) For the purpose of giving full effect to the last-mentioned subsection hereof the court or the president thereof may, on the application of the judgment creditor, make such order or give such directions as are deemed necessary, and the trustees, the judgment debtor, and all other persons concerned shall obey the same.

(8) The foregoing provisions of this section are in substitution of those contained in sections 75 to 81 of the principal act, and those sections are hereby accordingly repealed.

(9) Nothing in this section contained shall affect the validity of any proceedings which at the coming into operation of this act are pending for the enforcement of any award or order of the court in so far as the same relates to the payment of money, and all such proceedings may either be continued under the principal act, or be abandoned and be instituted afresh under this act, but all proceedings pending for enforcement of any award by attachment are hereby stayed, and in lieu thereof proceedings may be instituted afresh for enforcement by penalty under this section.

*Provided*, That the court when disposing of such fresh proceedings shall make such order as to costs as it deems just, having regard to the costs of the proceedings abandoned or stayed as aforesaid.

#### PART IV

##### GOVERNMENT RAILWAYS

82. The management of Government railways under the Government railways act, 1887, shall be deemed to be an industry within the meaning of this act, and notwithstanding anything contained in the first-mentioned act, the railway commissioners appointed thereunder may make an industrial agreement with the society now registered under the trade-union act, 1878, and called The Amalgamated Society of Railway Servants, and either the said commissioners or the society may refer any industrial dispute between them to the court established under this act, and the commissioners may give effect to any terms of an award made by such court.

The society may be registered as an industrial union under this act, and the commissioners shall be deemed to be employers within the meaning and for the purposes of this act.

The foregoing provisions shall apply to any reconstruction of such society in case of its dissolution, and shall extend to any similar society taking the place of such first-mentioned society and registered under this act.

83. In case the commissioners shall neglect or refuse to agree with the said society to refer any industrial dispute to the court, the society may, by petition lodged with the clerk, refer such dispute to the court to hear and determine the same, and the court, upon such petition, and if it shall consider the dispute sufficiently grave to require it, may require the commissioners to appear before the court, and to submit the matters in dispute to its decision, and for that purpose the court shall have all such jurisdiction and authority and may do all such acts and things as may be necessary for such purpose, in accordance with the preceding provisions of this act.

84. Notwithstanding anything in this act contained, no board constituted under this act shall have any jurisdiction in any matter of dispute between the commissioners and the said society.

#### PART V

##### MISCELLANEOUS

85. Any notification made or purporting to be made in the Gazette by or under the authority of this act may be given in evidence in all courts of justice, in all legal proceedings, and for any of the purposes of this act, by the production of a copy of the Gazette, printed by the Government printer for the time being.

86. Every instrument or document, copy or extract of an instrument or document, bearing the seal of the court shall be received in evidence without further proof, and the signature of the president of the court, or the chairman of any board, or of the registrar, or of the clerk of awards, shall be judicially noticed in or before any court or person or officer acting judicially or under any power or authority contained in this act. *Provided*, That such signature be attached to some award, order, certificate, or other official document made or purporting to be made under this act.

No proof shall be required of the handwriting or official position of any person acting in pursuance of this section.

87. The governor from time to time may make, alter, or revoke such regulations not inconsistent with this act as may be necessary or desirable to carry out all or any of the following purposes.

(1) Prescribing the forms of certificates or other instruments to be issued by the registrar, and of any certificate or other proceeding of any board or any officer thereof,

(2) Prescribing the duties of clerks of awards, and of all other officers and persons acting in the execution of this act,

(3) Providing for anything necessary to carry out the first or any subsequent election of members of boards, or on any vacancy therein, or in the office of chairman of any board, including the forms of any notice, proceeding, or instrument of any kind to be used in or in respect of any such election;

(4) Providing for the mode in which recommendations of members of the court shall be made and authenticated.

(5) Prescribing any act or thing necessary to supplement or render more effectual the provisions of this act as to the conduct of proceedings before a board or the court, or the transfer of such proceedings from one of such bodies to the other.

(6) Providing generally for any other matter or thing necessary to give effect to this act, or to meet any particular case.

(7) Prescribing what fees shall be paid in respect of any proceedings before a board or in the court, and the party by whom such fees shall be paid, and what fees shall be paid to the president or members of the court, or the chairman or members of the board.<sup>1</sup>

(8) For any other purpose for which it is by this act provided regulations may be prescribed.

Nothing in any such regulations shall supersede any fees for the time being in force in the supreme court, or any other court, in relation to any proceedings therein, otherwise than as is herein expressly provided.

All such regulations shall be published in the Gazette, and within 14 days after the making thereof shall be laid before both houses of the general assembly if it shall be then sitting, and, if not then

<sup>1</sup>The clause "or the chairman or members of the board" was added by the amendment act of 1896.

sitting, then within 14 days after the beginning of the next session of such assembly, and shall have the force of law from the date of such publication.

88. All charges and expenses connected with the administration of this act, exclusive of expenses incurred by industrial unions, trade unions, or associations under Parts I or II of this act, or of the parties and witnesses concerned in any industrial dispute referred to a board or the court, shall be defrayed out of such annual appropriations as shall from time to time be made for that purpose by the general assembly.

89. The court shall have full and exclusive jurisdiction to deal with all offenses against the principal act, and for the purpose of this section the following provisions shall apply:

(1) Proceedings to recover the penalty by the principal act imposed in respect of any such offense shall be taken in the court in a summary way under the summary provisions of the justices of the peace act, 1882, and these provisions shall, *mutatis mutandis*, apply in like manner as if the court were a court of justices exercising summary jurisdiction under that act. *Provided*, That in case of an offense under section 64 of the principal act (relating to contempt of court) the court, if it thinks fit so to do, may deal with it forthwith without the necessity of an information being taken or a summons being issued.

(2) For the purpose of enforcing any order of the court made under this section a duplicate thereof shall, by the clerk of awards, be filed in the nearest office of the magistrate's court, and shall thereupon, according to its tenor, operate and be enforced in all respects as a final judgment, conviction, or order duly made by a stipendiary magistrate under the summary provisions of the justices of the peace act, 1882.

(3) The provisions of section 73 of the principal act shall apply to all proceedings under this section.

(4) All penalties recovered under this section shall be paid into the public account and form part of the consolidated fund.

(5) The foregoing provisions of this section are in substitution of those contained in section 89 of the principal act, and that section is hereby accordingly repealed.

(6) Nothing in this section contained shall apply to the breach of any award or order of the court, or to the penalty in respect of such breach.<sup>1</sup>

90. No stamp duty shall be payable upon or in respect of any registration, certificate, agreement, award, or instrument effected, issued, or made under this act. But nothing herein shall apply to the fees of any court payable by means of stamps.

91. Nothing in this act shall apply to Her Majesty the Queen, or any department of her Government in New Zealand, except as herein is otherwise expressly provided.

**3. Working of the New Zealand law**—Opinions regarding the working of the New Zealand compulsory arbitration law differ very greatly. Some of the conflicting statements will be quoted below. Although the act has been in force since January 1, 1895, comparatively little advantage was taken of it for the first two years, and the length of time in which it has been in active operation is not sufficient to make a final judgment possible. It is especially to be noted, moreover, that the past few years have been years of unusual prosperity in New Zealand, and that, even in the absence of the compulsory arbitration system, higher wages and improved conditions for the workmen would doubtless have been secured. Because of the rise in the labor market there has doubtless been less opposition to the decisions of arbitrators, a large majority of which have granted advantages to the employees, than would have been the case under stationary conditions or with a depressed state of industry.

There seems to be a general consensus of evidence to the effect that the arbitration act has been much more popular with employees than with employers. Employers have been especially disinclined to form organizations, and most of the disputes actually brought before the boards of conciliation and the court of arbitration have been instituted by registered labor organizations, very few owing their origin to movements on the part of the employers. On March 31, 1899, a total of 132 unions had been registered, of which 124 were unions of workmen, including a membership of 14,822.<sup>2</sup> The comparatively small number of persons subject to the effect of the compulsory arbitration law is made evident by the small number of members of these organizations. It will be remembered that the entire population of New Zealand is less than 800,000, and that by far the greater part of the population is engaged in agricultural pursuits. In 1896 only 27,389 persons in the colony were employed in factories and workshops, meat preserving and other similar establishments.<sup>3</sup> Thus the conditions are very different from those in the great industrial countries of America and Europe.

With all these qualifications as to the significance of the experience of New Zealand, the results already obtained by the operation of the compulsory arbitration law are exceedingly interesting. The boards of conciliation and the court of arbitration have already dealt with a very great variety of questions affecting a large number of trades, and have rendered awards which have been effectively enforced. While only 2 disputes were brought before the board up to March 31, 1896, and only 6 during the next year, the year ending March 31, 1898, saw no less than 30 cases settled by arbitration and conciliation, while the number of cases settled in 1898-99 was 25. In the year<sup>4</sup> ending March 31, 1900, 35 cases were brought before the various boards of conciliation. As to 13 of these the boards

<sup>1</sup> This section was inserted by the amendment act of 1898.

<sup>2</sup> See Bulletin of the New York Bureau of Labor Statistics, December, 1899.

<sup>3</sup> New Zealand Official Yearbook, 1899, pp. 272, 273.

<sup>4</sup> Report of the New Zealand Department of Labor, 1900.

reported definitely that they were unable to effect a settlement, while a considerable number of other cases were appealed to the court of arbitration. It is impossible to determine from the reports precisely how many awards of the boards of conciliation were accepted by the parties, but the number was approximately 10. The court of arbitration rendered 19 decisions during the year. Seven of these applied to the building trades in the various cities of the colony. Three had to do with the seamen and dock laborers, 2 with the workers in gold mines, 2 with the workers in coal mines, 2 with the boot and shoe industry, and 1 each with the bakers, the iron molders, and the furniture makers.

There have been comparatively few cases of violation of awards of the court of arbitration. All of these, moreover, have been as to minor matters, and small amounts of damages have been awarded or small fines imposed upon the offenders, who were in practically all instances employers.

In 1899-1900 there were four charges of breach of award brought before the court, the largest penalty imposed being £7 7s. In two of these cases the offense was the compulsion of workmen to begin labor before the hours prescribed in the award. In one of the four cases the court decreed that no breach of the award had been proved. As yet there has been no instance of a complete refusal by either party to accept an award. In particular there has been no test as to the possibility of effective enforcement upon the members of labor organizations.

The workmen generally appear to be fairly satisfied with the law, as appears from the growing number of unions which have registered under it and the growing number of disputes brought before the boards and courts. In general, employers seem to have been less favorably disposed toward the measure, but there are signs, apparently, that it is growing somewhat in favor, although perhaps a great majority of the employers still oppose it. In the case of industries in which competition between employers is sharp, there has been some disposition to favor the system of compulsory regulation of the conditions of labor because of the resulting uniformity. Manufacturers know that their competitors have to pay the same wages and meet the same conditions of employment, so that the conditions of competition are made more equitable. There are advantages, too, in the stability which results from the establishment of the terms of the labor contract for a definite period of time, within which contracts may be made with reasonable certainty regarding costs.<sup>1</sup>

One of the most noteworthy features regarding the working of the law is the comparatively slight use which has been made of the principle of conciliation as distinguished from that of arbitration. The ministers who introduced the arbitration bill told the New Zealand parliament that 90 cases out of every 100 would probably be settled by conciliation boards and would not go to the board of arbitration. Another argued that the court of arbitration would be called upon not more than once in 20 years. In practice only one-third of the cases brought before the boards of conciliation have been effectively settled by them without appeal to the court of arbitration. It is probable that, were there no opportunity for appeal to a body having compulsory authority, the conciliation boards, if they had power to compel parties to come together and discuss their differences, and to make investigations, might be able to bring about an agreement in a larger proportion of cases. Knowing, however, that the other side may appeal to a body having compulsory power, in many cases, neither party seems to take a great interest in the proceedings of the boards of conciliation, or to show a disposition to come to agreements under their influence.<sup>2</sup>

Many of the decisions of the court of arbitration are exceedingly elaborate, and prescribe all of the conditions under which labor shall be employed in a given industry or locality. The terms of the awards read in many cases not unlike those of the elaborate joint agreements regarding the conditions of labor which are frequently made in Great Britain and the United States. Of course, the most important question is usually that regarding the rate of wages, but many other matters are frequently covered by a single decision. The disposition has been to establish conditions as nearly uniform within each trade in a given locality, and to approximate as far toward uniformity throughout the colony, as the conditions of labor and of the trades would permit. In a large majority of awards the conditions are more favorable for the employees than those previously existing.

A typical decision of the court of arbitration is quoted in a note at the end of the section.

<sup>1</sup> See Bulletin of the New York Bureau of Labor, December, 1899, Reports of the New Zealand Department of Labor, 1896-1899.

<sup>2</sup> Lloyd, A Country Without Strikes, pp. 29 and 30. Reports of the New Zealand Department of Labor, 1897-1899.

One of the most important cases which the court of arbitration has had to deal with is that of the boot and shoe trade. In this trade voluntary boards of conciliation and arbitration had existed and had worked successfully for several years before the act was passed. Soon after the act came into effect the existing board expired by the terms of the agreement, and the parties were unable to agree again. An appeal was made to the court of arbitration. The court, in addition to deciding the specific points which were presented to it, reestablished the trade custom of boards of conciliation and arbitration within the trade itself, laid down a full and exact constitution for these boards, and gave them power to fix prices, determine conditions, and settle disputes within the trade.<sup>1</sup>

NOTE—DECISION OF THE COURT OF ARBITRATION OF NEW ZEALAND AS TO THE WELLINGTON CARPENTERS AND JOINERS

In the Court of Arbitration of New Zealand, Wellington Industrial district. In the matter of "The Industrial Conciliation and Arbitration Act, 1894," and the amendments thereof, and in the matter of an industrial dispute between the Amalgamated Society of Carpenters and Joiners' Industrial Union of Workers (Wellington Branch) and the Wellington Builders' and Contractors' Industrial Union of Employers

The Court of Arbitration of New Zealand (hereinafter called "the court"), having taken into consideration the matter of the above mentioned dispute, and having heard the union, by its representatives duly appointed, and having heard the Wellington Builders' and Contractors' Industrial Union of Employers by its representatives duly appointed, and such other of the employers as appeared before it, and having heard the witnesses called and examined by and on behalf of the union and of the employers, respectively, and cross-examined by the said parties, respectively, doth hereby order and award that, as between the union and the members thereof, and the employers and each and every of them, the terms, conditions, and provisions set out in the schedule hereto, shall be binding upon the union and upon every member thereof, and upon the employers and each and every of them, and that the said terms, conditions, and provisions shall be deemed to be and they are hereby incorporated in and declared to form part of this award, and, further, that the union and every member thereof, and the employers and each and every of them, shall, respectively, do, observe, and perform every matter and thing by the said terms, conditions, and provisions on the part of the union and the members thereof, and on the part of the employers and each and every of them, respectively, required to be done, observed, and performed, and shall not do anything in contravention of the said terms, conditions, and provisions, but shall in all respects abide by and observe and perform the same. And the court doth hereby further order and declare that any breach of the said terms, conditions, and provisions set out in the schedule hereto shall constitute a breach of this award, and that the sum of £100 shall be the maximum penalty payable by any party or person in respect to any such breach. *Provided, however* (as provided by the third section of the "Industrial Conciliation and Arbitration Act amendment act, 1898"), That the aggregate amount of penalties payable under or in respect of this award shall not exceed the sum of £500. And this court doth further order that this award shall take effect from the 13th day of August, 1900, and shall continue in force until the 21st day of January, 1902.

In witness whereof the seal of the Court of Arbitration of New Zealand hath been affixed, and the president of the court hath hereunto set his hand this 3d day of August, 1900

[L 8]

J. C. MARTIN, *President*

The schedule hereinbefore referred to

1. The regulated hours shall be 45 in each week, commencing, except on Saturdays and in the months of May, June, and July, at 8 a. m. and finishing at 5 p. m. During the months of May, June, and July work shall commence at 8 a. m. and finish, except on Saturdays, at 4 45 p. m. During these months half an hour shall be allowed for dinner. During the remainder of the year three-quarters of an hour shall be allowed for dinner. On Saturdays work shall commence at 8 a. m. and finish at a quarter to 12 noon.

2. All journeymen carpenters, or journeymen joiners, or journeymen carpenters and joiners, shall be paid not less than 1s 4d. per hour for any work done on any day (other than the days mentioned in paragraph 4 hereof) during the hours mentioned in paragraph 1 hereof. All wages shall be paid weekly, either on the job or at the employers' place of business, but wherever paid they shall be paid to the workmen not later than 15 minutes after leaving off work.

3. Except in respect of stair building no carpenter or joiner shall be paid by piecework, nor shall any builder or employer sublet his work labor only.

4. All the overtime work, and statutory holidays and Labor Day, shall be paid for at the rate of time and a quarter for the first 2 hours, and time and a half after the first 2 hours.

5. Any workman who considers himself not capable of earning the wages mentioned in paragraph 2 hereof may be paid such less wages as may from time to time be agreed upon in writing between any employer and the secretary or treasurer of the union, and in default of such agreement, within 24 hours after such journeyman shall have applied in writing to the secretary of the union stating his desire that such wage shall be so agreed upon as shall be fixed in writing by the chairman of the conciliation board for the industrial district, upon the application of such journeymen. \* \* \*

6. The number of men whose wages has been fixed under paragraph 5 employed by any employer shall not at any one time exceed the proportion of 1 of such men to every 3 men to whom are paid wages at the rate specified in paragraph 2.

7. The provisions of paragraphs 6, 7, and 8 shall not apply in respect of men who have been qualified to earn full journeymen's wages, but who by reason of age, sickness, or accident are no longer able to earn such wages. \* \* \*

16. The employer shall provide upon the works a properly secured place for the tools of the workmen employed upon such work by him, and shall also provide all necessary sanitary conveniences for the use of the workmen.

17. Wherever 2 or more workmen are employed the employer shall provide and keep a suitable grindstone for the use of the workmen, and every workman shall at all times keep his tools in proper order.

18. All boys shall be apprenticed by deed of apprenticeship, either to learn a particular branch or

<sup>1</sup> Lloyd, *A Country Without Strikes*, p. 49.

particular branches of the trade or to learn the trade generally. If to learn one branch only, the period of apprenticeship shall be 4 years. If to learn more than one branch, the period shall be 5 years. Any employer shall, before taking a boy as apprentice, be entitled to take him for 3 months on probation, and if at the end of such probation the boy becomes a bound apprentice, such period of 3 months shall be reckoned as part of the period of apprenticeship which under this paragraph, the boy is to serve. Apprentices who on the 27th day of June, 1900, were serving an apprenticeship without a deed of apprenticeship, may complete such apprenticeship, but it shall be incumbent upon the employer with whom such apprentice was so serving to give notice in writing to the secretary or president of the union within 1 calendar month from the date of this award of the name of such apprentice, and of the period when his service began and when it is to end. The wages to be paid to apprentices shall be, during the first year of their apprenticeship, not less than 5s. during each week, during the second year, not less than 10s. per week, during the third year, not less than 15s. per week, during the fourth year, not less than 41s. per week, and during the fifth year, not less than 41s. 6s. per week.

19. When men who have been employed for not less than 4 weeks are discharged, 4 hours shall be allowed them to put their tools in order.

20. If and after the union shall so amend its rules as to permit any person now employed in this industrial district in this trade, or any other person now residing or who may hereafter reside in this industrial district, and who is a competent workman, to become a member of the union upon payment of an entrance fee not exceeding 5s., and of subsequent subscriptions, whether payable weekly or not, not exceeding 6d. per week, upon the written application of the person so desiring to join the union, without ballot or other election, and shall give notice of such amendment in the *New Zealand Times and Evening Post*, newspaper published in the city of Wellington, then and in such case and thereafter employers shall, in the engagement of workmen, employ members of the union in preference to nonmembers, provided that there are members of the union equally qualified with nonmembers who perform the particular work required to be done and ready and willing to undertake it.

21. Until compliance by the union with the last preceding clause employers may employ workmen whether members of the union or not, but no employer shall discriminate against members of the union and no employer shall, in the dismissal or employment of workmen, or in the conduct of his business, do anything for the purpose of injuring the union, whether directly or indirectly.

22. When members of the union and nonmembers are employed together there shall be no distinction between members and nonmembers and both shall work together in harmony and under the same conditions, and shall receive equal pay for equal work.

**4. Preference of trade unions by the Court of Arbitration.**<sup>1</sup>—An interesting development of the New Zealand law and the decisions of the board of conciliation and the Court of Arbitration has been the preferential treatment of members of labor organizations. In many instances the court has decreed that employers must give preference in employment to members of registered labor unions, provided, always, that there are members of the union who are equally qualified with nonmembers to perform the work and who are willing to undertake it. The court has used care in granting this preference, and has refused it in the case of certain organizations which do not include a great majority of the workers in the trade in a given locality. That is to say, the court declines to give trade unions a preference unless they have previously practically achieved the preference for themselves. Even when it does give the preference the court is careful to protect non-unionists who are at work. Such a sentence as this occurs frequently in its decisions: "This is not to interfere with the existing engagements of nonmembers, whose present employers may retain them in the same or other positions."

By a decision rendered in January, 1900, moreover, the court held that if preference is given to trade unionists, they also must give a preference to employers who are organized in associations.

In the case of a coal mining company which had discharged three men because they were prominent members of a labor organization, the court ordered the company to pay, by way of damages to the union, \$283 which was all the wages the men had lost, and also to pay \$57 costs. It further ordered the company to reinstate any of the discharged men who should apply for reinstatement within one week, in the same positions they occupied at the time of dismissal.

As an illustration of the extent to which this practice of granting preference to members of labor organizations has been carried, we may observe that during the year ending March 31, 1899, unionists received this advantage in the awards of the arbitration court concerning the Dunedin pastry cooks, Christchurch bakers and pastry cooks, Canterbury carpenters, Christchurch furniture trades, Dunedin boot makers, Wellington tailoresses, Dunedin tailors, and Christchurch painters. But preference was refused in regard to the Christchurch engineers and the Wellington bakers. The conciliation boards recommended preferential employment of unionists in the case of the Wellington plumbers, Kaitangata coal miners (afterwards withdrawn), Wellington iron and brass molders, Christchurch tin-smiths, Dunedin tailors, and Canterbury grocers. The boards, however, did not recommend preference in regard to the Auckland bakers, Dunedin iron and brass molders, Dunedin furniture trades, Auckland painters, and Wellington painters, merely stipulating that no discrimination should be used by employers against the members of these unions.

The court of arbitration has given several reasons for this policy of favoring

<sup>1</sup>Report New Zealand Department of Labor, 1899, p. 111, 1900, p. 111. Lloyd, *A Country Without Strikes*, pp. 47, 63-67, 88.

unionists. First, where the custom has already been established in the trade, that is a reason for continuing it. Second, the title of the original act was "An act to encourage the formation of industrial unions and associations, and to facilitate the settlement of industrial disputes by conciliation and arbitration." The court held that the title must be considered as a part of the act in determining the intention of the legislature. Finally, the court holds that the advantages which the unions procure for their members are obtained at some expense, and it is but right, provided entrance to the union is not prohibited, that a preference should be given to unionists; and if nonunionists will not pay the small fee and contributions in order to obtain the same advantages, they have nothing to complain of.

Employers have in some instances seriously objected to this preference of unionists by the court of arbitration. In 1899 the master plumbers of Christ Church took an appeal from the court of arbitration on the ground that it has no legal authority to compel employers to give preference to unionists. The matter was carried to the highest court of the colony, which upheld the decision of the court of arbitration. It is probable that the New Zealand Parliament will be asked to make its stand in the matter clear, and to amend the law by expressly authorizing or expressly forbidding the preference to unionists.

**5. Proposed amendments to law.**—The reports of the New Zealand department of labor discuss various recommendations which have been made for changes in the arbitration law:

(1) That unions should themselves directly choose the members of the arbitration courts instead of merely recommending them, thus getting greater advantage from the fact that they are compelled to organize in order to avail themselves of the law. This suggestion is apparently approved by the department.

(2) That the decisions of the boards of conciliation should be made binding if the parties to the suit agree to the recommendations of these boards. Much time is now wasted, so it is claimed, by cases being brought before the conciliation boards when it is the express intention of the parties to appeal to the court of arbitration in any case. The department of labor, however, doubts whether it would be desirable in this way to destroy all provision for conciliation proper, however great the economy.

(3) The objection that petty grievances are prolonged in order that the boards may be kept sitting might be obviated by charging the costs upon the parties, but the department of labor believes that there would be danger that justice would thus be crippled, owing to the cost of securing it. It is better for the country to bear the expense and to protect its weaker members.

(4) In the last report of the department for the year ending March 31, 1900, it is suggested that the permanent boards of conciliation might perhaps well be abandoned altogether. Their place would then be taken by special boards of conciliation to be constituted in separate trades and for the most part in connection with each particular dispute. This would be more economical, because continuous salaries would not be necessary. It would also be especially advantageous, because each board could be constituted of men familiar with the industry. At present, the department points out, members of the board have no technical knowledge of the conditions of most of the industries with which they have to deal, and, even with the assistance of experts, they have difficulty in reaching satisfactory conclusions. It is added, however, that such a change would involve a complete revision of the law, and careful consideration is therefore recommended before any definite steps are taken.

(5) Another vital amendment which has been proposed is that the parties to disputes shall be permitted to agree between themselves in advance to submit their differences directly to the court of arbitration without previous action by the boards of conciliation, as is now required.

It will be observed that most of these proposed amendments grow out of the fact that the boards of conciliation, as at present constituted, have largely failed to accomplish the results which was expected from them.<sup>1</sup>

**6. Various opinions as to working of law.**<sup>2</sup>—*Views of department of labor of New Zealand.*—The report of the department of labor of New Zealand for 1898 (p. v) comments on the growing use of "these beneficent measures" concerning industrial arbitration. It considers that the arguments brought against the boards and the court of arbitration are on the whole not well founded. Thus it is objected that these boards stir up strife "by enabling petty misunderstandings to be

<sup>1</sup> Report of the New Zealand Department of Labor, 1898, p. v 1900, p. iv

<sup>2</sup> See also testimony of Mr. H. H. Lusk, Reports of the Industrial Commission, Vol. VII, pp. 882-895, and article by him in appendix to this volume.

dragged into the full light of day and become serious; that the boards and court foment enmity between the employer and employed by binding employers under harassing restrictions and wasting the time of both parties in litigious proceedings." Replying to this, the report points out that many of the apparently small issues which come before the boards would, without them, doubtless become the cause of great strikes. The cost of settling many disputes by arbitration is less than the loss from a single strike.

The reports of the department for 1899 and 1900 also speak approvingly of the measure and its results.

*Opinion of Hon. W. H. Reeves.*—Mr. Reeves, the author of the New Zealand compulsory arbitration law, has repeatedly expressed his satisfaction with the working of the measure. He has said, among other things:<sup>1</sup>

"The object of the New Zealand conciliation and arbitration act is not only to stamp out sweating and improve the workers' condition. These, indeed, were not its immediate aims, though they are consequences—and very valuable consequences—which have flowed from it. Its special and primary object was to bring about industrial peace. \* \* \*

"It should be stated frankly that most of the cases brought before these tribunals have been initiated by trade unions and that most of the decisions have granted concessions of more or less value to the plaintiffs. The explanation of this is found in the prosperity which has marked the last 4 or 5 years in New Zealand. The labor market has been a rising market since the arbitration act came into use. Under the old conditions the workers whose wages had been cut down in the dull times of the previous decade would have struck on a rising market as they strike elsewhere. Instead of striking on a rising market they have arbitrated on a rising market, and instead of the industries of New Zealand being convulsed and disorganized, the factories have not been closed through labor troubles for one single day.

"Next to the wide use which has been made of the law in the colony the most striking feature of its history has been the respect that has been paid to its decisions. Where, as in certain cases, these have been disappointing to the trade unions they have been loyally obeyed; and though in a few instances the same can not be said for the employers, the recalcitrants have not been many, they have not been employers of great size or standing, and their attempts at resistance or evasion have been sufficiently dealt with by small fines and very moderate penalties \* \* \*

"The briefest and most convincing argument for disabusing the mind of anyone who may fancy that the New Zealand arbitration act had hampered industry is to be found in the following figures, which give the hands employed in the registered factories of the colony for the last 5 years. It may be explained that 'factory' in New Zealand means workshop, small or large, and that registration is universal.

Year	Hands employed	Increase
1895 . . . . .	29,879	4,028
1896 . . . . .	32,387	2,508
1897 . . . . .	36,918	4,531
1898 . . . . .	39,672	2,754
1899 . . . . .	45,305	5,633

"It may be, and, indeed, has been, stated that the strength of the law can not be fully tested until some powerful organization of labor or capital defies the decision of the court and is successfully dealt with. English doctrinaire critics lay great stress on this and are wont to ask triumphantly what could be done with the members of a large trade union without funds to enable them to pay the court's penalties for disobedience and at the same time stubbornly determined not to go to work under the conditions laid down by the court? The answer to that is surely found in a study of the history of labor disputes. These show that it is unions destitute of funds which carry on stubborn and ultimately successful strikes. And if impecunious workers can not successfully cope with the antagonism of employers whose resources are after all limited, how can they expect to cope with the power of a State tribunal, whose will is not to be bent, which has no factory to be closed or business to be injured, and which is backed by the forces of law and public opinion?

<sup>1</sup> Introduction by Mr. Reeves to Lloyd's A Country Without Strikes

"To my mind, however, the best recommendation to the New Zealand law is just that it has not so far led to any desperate trial of strength of this kind. By applying the good old motto that prevention is better than cure, it has taken labor disputes in hand before they have reached that pitch at which the passions of the disputants on both sides are inflamed and impel them to wild speech and wilder action. It gets at labor and capital before they have come to the unreasonable stage of their quarrel. It frankly accepts their two irresistible tendencies in modern times, the first of which is that they will differ, and the second that they will organize in order to settle their differences. There are philanthropists who think that the remedy for their conflicts is found in urging them not to quarrel and not to organize; there are some who would sternly forbid them to organize. The New Zealand law, on the contrary, frankly encourages their organization, admits that they are bound to differ, and only insists that if they can not settle their differences in a friendly and peaceful manner they must go to the State, which will provide them with machinery for doing so."

*Views of Hon. B. R. Wise.*<sup>1</sup>—Another favorable view of the success of the New Zealand measure was presented by the attorney-general of New South Wales, Hon. B. R. Wise, in moving the adoption of a somewhat similar bill in his own colony:

"I admit to the full that we can not press the example of New Zealand too far. I admit that the conditions of industry there differ to a very considerable extent from ours. I admit, further, that the years during which the enforcement of industrial awards has been permitted in New Zealand have been years of very great prosperity, which perhaps do not furnish a full test of the measure. But I assert that a large number of industrial struggles have been prevented in New Zealand, and I assert also that that has been done without any great injury to the community. I know it is almost as difficult to get facts about New Zealand as it is to get facts about Ireland. When you meet one set of people they will tell you that New Zealand is in the height of prosperity, and another set will tell you that it is in the lowest depths of commercial distress. But I prefer to take figures, about which there can be no dispute either as to their accuracy or as to their meaning; and I find that there is not the slightest evidence—to put it in the mildest way—that this regulation of industry, by means of decisions of courts of law, which is said to be such a disastrous thing for commerce, has produced any of the unfortunate results that were anticipated. The evidence is, in fact, all the other way. I find, for instance—and I am quoting from a letter by Mr. Reeves to the *Times* of January 6, 1899—that there were 75 large financial and industrial companies in New Zealand—Mr. Reeves says he has only taken the largest. Of these only 3 paid no dividends last year; 2 paid only 4 per cent., 8 paid 5 per cent., and the remainder paid dividends at rates from 6 to 17½ per cent. That is to say, 62 companies out of 75 paid dividends of from 6 to 17½ per cent. That does not look as if the industries were crushed by this provision for regulating industry. But I suppose there is even a better test, and that is the returns which are given from the income tax. In New Zealand during the last 3 years—those are the 3 years during which the enforcement of awards act has been in operation—the rate of income tax has not been altered. It is the same rate now as it was 3 years ago, and the returns from the income tax have increased 25 per cent in those 3 years, showing in the plainest possible manner the distribution all through the community of a very solid prosperity. I find, too, that trade, measured by imports and exports, increased 40 per cent; the number of factory hands has gone up from 36,000 to 39,000 in 3 years."

*Views of Mr. Henry Demarest Lloyd.*—Mr. Lloyd recently made a visit to New Zealand and investigated at first hand the working of the compulsory arbitration law. He presents a very favorable view of its results. He says:<sup>2</sup>

"First. Strikes and lockouts have been stopped.

"Second. Wages and terms have been fixed, so that manufacturers can make their contracts ahead without fear of disturbance.

"Third. Workingmen, too, knowing that their income can not be cut down nor locked out, can marry, buy land, build homes.

"Fourth. Disputes arise continually, new terms are fixed, but industry goes on without interruption.

"Fifth. No factory has been closed by the act.

"Sixth. The country is more prosperous than ever.

"Seventh. The awards of the arbitration court fix a standard of living which other courts accept in deciding cases affecting workingmen.

<sup>1</sup> Pamphlet copy of speech, Sydney, 1900.

<sup>2</sup> A Country Without Strikes, pp. 178-180.

"Eighth. Awards made by compulsory arbitration are often renewed by a voluntary agreement when they expire.

"Ninth. Trade unions are given new rights, and are called upon to admit all competent workmen in the trade.

"Tenth. Compulsion in the background makes conciliation easier.

"Eleventh. Compulsory publicity gives the public—the real arbitrator—all the facts of every dispute.

"Twelfth. Salaried classes, as well as wage-earners, are claiming the benefits of arbitration.

"Thirteenth. Peaceable settlement with their men has been made possible for the majorities of the employers who wanted to arbitrate, but were prevented by minorities of their associates.

"Fourteenth. Labor and capital are being organized into trade unions and associations, instead of mobs and monopolists.

"Fifteenth. Trade honesty is promoted by the exposure and prevention of frauds on the public.

"Sixteenth. Humane and law-abiding business men seek the protection of the law to save themselves from destruction by the competition of inhumane and law-breaking rivals.

"Seventeenth. The weak and the strong are equalized both among capitalists and the workmen.

"Eighteenth. The victory is given as nearly as possible to the right instead of the strong, as in war.

"Nineteenth. The concentration of wealth and power are checked.

"Twentieth. The distribution of wealth is determined along lines of reason, justice, and the greatest need, instead of along lines of the greatest greed.

"Twenty-first. Democracy is strengthened by these equalizations.

"Twenty-second. It furnishes the people their only cheap, speedy, and untechnical justice."

Mr. Lloyd declares further that one of the important uses of the court of arbitration is to destroy the power of a small minority of employers in a trade to control the action of all by refusing to join with the majority in giving fair wages, hours, and other conditions to their employees. The force of competition makes it very difficult for the best disposed to do better by their men than the worst disposed will do. Cases have arisen in which manufacturers have helped their employees to organize and appeal to the court of arbitration in order to get decisions which should bind not only themselves but their uncontrollable competitors. The benefits of legal enforcement of common rules have been especially conspicuous in the clothing trades. For instance, the master tailors' association of Dunedin, after long negotiations, had arranged a scale of prices with the employees. Forty-two employers of the 49 in the town had signed this "log" as satisfactory to them. Seven stood out. An appeal was made to the arbitration board. The board decided in favor of the agreement made by the union and the 42 employers. The other 7 remained obdurate, and the court of arbitration had to be called upon to make a decisive award.<sup>1</sup>

*Mr. Ewington's criticisms.*<sup>2</sup>—The following extracts from a paper by Mr. F. G. Ewington, honorary secretary of the New Zealand branch of the Liberty and Property Defense League (a strongly individualist organization), written in January, 1898, show the views of the opponents of State arbitration as to the effects of the New Zealand measure:

"It is most unfortunate that the act originated in a time of political turbulence, and was fathered by Mr. Reeves, who unnecessarily flaunted in people's faces the fact of his being a Fabian Socialist, and showed such bias against capitalists—as socialists usually do—that he provoked suspicion and resentment even when he attempted a good thing. Hence this act, which might prove a serviceable one if certain bad features were eliminated, has from the very first been ignored by all employers' associations in the colony. \* \* \*

"The act in question is a symbol of perpetual industrial war. It has been used as an instrument of political patronage to labor and of defiance to capital. Defeated parliamentary labor candidates have been consoled with seats on conciliation boards, even when their known bias against capitalists was conspicuous; and, as if some evil genius dreaded industrial peace, the opponents of employers were actually appointed by the Government to represent the employers, for the employers would not themselves appoint anyone after Mr. Reeves's hostile attitude.

"Actions have been taken against employers under the act, without any con-

<sup>1</sup> Lloyd, *A Country Without Strikes*, pp. 45, 91, 96.

<sup>2</sup> Pamphlet published by the British Liberty and Property Defense League, London, 1899.

ceivable reason, except to harass them. Hence this law generates political strife, resentment, suspicion, and reprisals, subversive of the State. It does not conciliate, but it exasperates, sets class against class, trade against trade, and becomes an engine for assault of big traders on little traders, and on vested interests; also on the freedom of employers and on nonunionist workmen. \* \* \*

"I do not say that the conciliation and arbitration act is the sole cause of the very serious industrial shrinkage which Government statistics disclose, but I do say that it is a very potent cause, because ever since Mr. Reeves's bill became law it has been a most disturbing element in trade and industry. \* \* \*

"Since the act was passed in 1894<sup>1</sup> 111 local industries have been closed entirely, 2,491 fewer workpeople are employed in the remaining industries, and £302,267 less yearly wages are paid. But further, 5,292 less horsepower machinery is used; hence iron foundries, machinists, coal miners, and laborers also have lost work, and farmers have been driven farther afield to sell their raw products. And all this coincidentally with an increase of the protective tariff, up to even 40 per cent in some instances, and a poll tax on foreign commercial travelers, which poll tax is now repealed. \* \* \*

"People abroad evidently note these things, hence our population has only increased by 4,620, by excess of arrivals over departures during 1894, 1895, and 1896—an average of 1,540 a year! It should be noted that I do not allude to natural increase. Wages, too, generally, have fallen, and there are over 17,000 breadwinners out of employment in this colony. \* \* \*

"People in England are led to believe that this act is only put into force when an industrial dispute arises between employers and employees, and a strike or lockout would result except for the operation of the act. That is not so. The act is set in motion for every little petty thing, and sometimes an official of one of the unions will go about making mischief, and himself start the law in motion where no dispute really exists."

*The New Zealand Herald on the act*—The following extract is quoted from the New Zealand Herald, of December 30, 1897, a paper strongly opposed to the arbitration act:

"The Auckland employers declined to have anything to do with the working of the act. The law provides that, if the employers do not elect a member of the conciliation board, then the government shall do so. The trade unions appointed as their representatives Mr. Fawcett and Mr. Lucas. The government appointed to represent the employers Mr. Shea and Mr. Holland. The former of these gentlemen is not an employer; he is a Liberal politician, who has an eye to getting into parliament again by popular vote. Mr. Holland is a member of the house, and a staunch, unreasoning supporter of ministers. The chairman is appointed by the members of the board, and is the Rev. G. Burgess, who is known to have extreme opinions in regard to single tax and other social questions. \* \* \*

"The representatives of labor are advocates of their side, pure and simple, who act against the witnesses of the employers and put leading questions to the labor witnesses. Large demands are made, in the expectation that the board will 'split the difference,' and this policy is frequently successful."

## II. NEW SOUTH WALES.

1. *The New South Wales strike commission*.—The movement in favor of the introduction of government arbitration in New South Wales took its origin in 1890. At that time there was a great sympathetic strike which completely disorganized the industries of the colony. Throughout the Australian colonies strong federations of trade unions exist. While these tend to facilitate the settlement of disputes in some instances, they also strengthen the opposition of their constituent unions and tend to prolong and embitter such disputes as fail of peaceful settlement. The great strike of 1890 led to a general recognition of the serious results which might follow very prolonged industrial disputes.

A government commission was instituted to inquire into this strike and possible methods of avoiding similar difficulties in the future.<sup>2</sup>

This commission made a thorough investigation, taking the testimony of many witnesses, and gathering information as to the working of arbitration and conciliation in other countries. After pointing out the tendency of federation among employers and employees to increase the extent and the violence of strikes, the commission declared that the great need in order to prevent labor disputes is

<sup>1</sup> This was written early in 1898.

<sup>2</sup> Report of Royal Commission on Strikes, New South Wales, p. 3-11.

knowledge of the facts by both parties and by the general public. Many disputes originate in misunderstanding and ignorance, and these may be dispelled by some method of friendly conference. It is desirable therefore to introduce methods for facilitating conciliation. While voluntary methods are advantageous the commission deems it wise to supplement them by a State board. "It seems to us that the work of conciliation would be greatly assisted if there were in this colony an established organization instituted by the State, and always ready to be called into action by either of the parties to a dispute. The evidence on this point is not unanimous, some witnesses on each side being of opinion that no good can come from any State board. But the great weight of the testimony is distinctly to the effect that the existence of a State board of conciliation would have a wholesome and moderating effect. Such an institution, clothed with the authority of the State, would stand before the public as a mediatory influence always and immediately available, and public opinion would be adverse to those who, except for very good cause shown, refused to avail themselves of its good offices."

While especially favoring conciliation and mediation, the commission believed that arbitration should be resorted to in the event of failure to settle difficulties otherwise. "When conciliation has failed then is the time for arbitration to begin. It is admitted that in some cases decisions have been given in error, and have been practically neutralized even by the consent of the parties. But in the immense majority of cases, both in France and England, the decisions given have been reasonably equitable, and have served to settle the dispute till circumstances altered and raised the same or a similar question again. It is impossible to resist the moral effect of the vast body of evidence which exists on this point. It is a demonstrated fact that decisions can be given as to industrial disputes which practically solve the immediate difficulty."

The commission discussed at some length the question whether the functions of conciliation and arbitration should both be performed by the same body or by separate bodies. Finally, for the sake of simplicity, it recommended that there should be a single body, part of whose members should be permanent and should have the power to render decisions as arbitrators, while the others should aid in efforts toward conciliation.

On the question whether the awards of the board of arbitration should be compulsory the commission gave a decision in the negative. On this point it says: "Most of the legal witnesses are in favor of such compulsion on the ground that a court that can not enforce its awards is not worthy of existence. But it should be remembered that a court of arbitration is not like an ordinary court of law. There is no fixed code of law which it interprets and its decision is only a declaratory statement as to what it thinks just and expedient."

"It has been said that if an arbitration court can not compel obedience to its decisions it will be useless. The answer to this is that experience is, though not wholly, almost wholly the other way. In England all the trade arbitrations have been outside the law, because the three laws passed for the purpose have been inoperative. And yet, though arbitrations have been very numerous, the cases are very few in which the decisions have not been loyally accepted. The reason of this is that the decisions have been reasonably fair, and both parties to the suit have felt that it was better to acquiesce in a decision with which they were not wholly contented than to prolong the strife. Public opinion, too, which counts for a great deal in matters of this kind, is always in favor of acquiescing in a decision given after a fair hearing. There is every reason to expect that in the very great majority of cases the decisions of arbitrators will settle the dispute, and it is not worth while, therefore, for the sake of making compliance universal, to introduce the repugnant element of compulsion. Moreover, as has been pointed out by witnesses on both sides, although a court of arbitration might inflict fines and penalties, it could not compel men to work for less wages than they were contented with, because they could all give their legal notice and quit their occupation; nor could an employer be compelled to keep on his business for a lower rate of profit than would, in his judgment, compensate him for his risk and trouble."

**2. Acts of 1891 and 1899.**—On the basis of these recommendations, an act was passed by New South Wales in 1891 which resembled more closely the statutes of the American States providing for boards of mediation and arbitration than it did any foreign system.<sup>1</sup>

"The act of 1891 divides New South Wales into 5 industrial districts; in each of these a council of conciliation is to be found, 2 members of which are to be

<sup>1</sup> Royal Commission on Labor, Foreign Reports, p. 33.

appointed on the recommendation of the organized employers, and 2 on the recommendation of the organized employees. The members are to hold office for 2 years. \* \* \* The application may be made either by joint agreement of the two parties or by either party singly. In case the council of conciliation fails to bring about a settlement the clerk of awards must report the case to the president of the council of arbitration. This council consists of 3 members, 1 selected from amongst the employers, 1 from amongst the employed, and the third impartial. The last is the president of the council, and must be appointed by the governor from 2 candidates nominated by the other 2 members. \* \* \* If both parties agree to the award, it may be made a rule of the supreme court on the application of either party. The act is to continue in force for 4 years, viz, till March, 1895." \* \* \*

It appears that comparatively little use was made of the facilities for arbitration and conciliation afforded by this act. In 1899 another measure was passed establishing a commission having, in addition to the powers possessed by the previous body, the right to mediate in industrial disputes upon its own initiative, somewhat after the fashion of various statutes of the American States.<sup>1</sup>

This act provides that where a difference exists or is apprehended the minister of labor and industry may, if he thinks fit, exercise all or any of the following powers:

- (a) Direct inquiry into the cause and circumstances of the dispute.
- (b) Take such steps as to him seem expedient for the purpose of enabling the parties to meet under the presidency of a chairman mutually agreed upon or nominated by the minister, with a view to an amicable settlement of the difficulty.
- (c) Failing such settlement, a public inquiry into the cause and circumstances of the difference on the application of either party. All such public inquiries shall be conducted by a judge of the supreme or district court or the president of the land court.
- (d) On the application of either party or of both parties, and after taking into consideration the circumstances, the minister may appoint a conciliator or a board of conciliation.
- (e) On the application of both parties he may appoint an arbitrator or arbitrators.

The minister of labor may also endeavor to secure the establishment of permanent boards in given trades or districts.

This act went into effect May 1, 1899. During that year only two cases came under the operation of the law. In one of these cases the intervention of the State proved unsuccessful, but in the other a formal decision was rendered by an arbitrator appointed by the government at the instance of the parties and its decision was accepted by both sides.

**3. Proposed compulsory arbitration.**—During the year 1900 a bill was introduced into the legislature of New South Wales to establish a system of compulsory arbitration essentially similar to that existing in New Zealand.

The speech of Hon. B. R. Wise, the attorney-general of the colonies, in moving the second reading of the bill, is a strong presentation of the case in favor of compulsory arbitration.<sup>2</sup> He points out that trade unions, owing to the absence of legal liability for their acts, are apt to prove disturbing rather than peace-making elements in labor difficulties. They are powerful as strike associations, but since they can not be held at law to carry out their agreements employers are little disposed to enter into collective bargains with them, while resort to arbitration is also hindered by the impossibility of enforcing the awards upon the members of the unions. The desirability of collective bargaining is strongly urged by Mr. Wise. He quotes with approval from the minority report of the British Royal Labor Commission favoring increased legal responsibility on the part of trade unions. He points out further that the opposition to this increased responsibility shown by labor leaders themselves grows out of the fear that, if the responsibility be unlimited, the funds of the trade unions will constantly be subject to danger from many directions. The bill proposed by Mr. Wise meets this difficulty in the same way as is done in New Zealand, by limiting the liability of trade unions both as to its character and as to its amount.

"It is provided in the bill that, although a trades union, by registering as an industrial union, is to become a body corporate, and to obtain a legal personality, it is only to get that position for the purpose of making a collective bargain. \* \* \*

"Its funds are in no danger from the ordinary process of a court, and it is only liable to be sued in respect of obligations incurred under the act, and then only

<sup>1</sup> Report of the Department of Labor and Industry, New South Wales, 1899, p. 9. The act is 63-64 Vic., Ch. 24, July 18, 1899.

<sup>2</sup> Speech by the Hon. B. R. Wise on the Industrial Arbitration Bill (pamphlet), Sydney, 1900.

for definite penalties awarded by the court, either in an award or for a breach of an agreement. That is a provision that obtains in New Zealand. It is a provision which has there removed the objection that was raised to these proposals by trade unionists in Great Britain."

Mr. Wise goes on to argue that, if collective bargaining is to be promoted, a court of arbitration must be established with power to interpret and enforce bargains, as well as to compel employers and employees to come to terms in the event of their unwillingness to agree voluntarily. He declares that collective bargains would amount to nothing if each employer or trade union could interpret them to suit himself. Courts of law have not the necessary machinery or forms of procedure to act properly in labor disputes. On the other hand, it is desirable that dignity be lent to the arbitration court by selecting one of the judges of the supreme court of the colony as its president. The other two members of the proposed court are to be appointed on the recommendation of organized employers and employees respectively.

The proposed bill provides that either party to a dispute may appeal to the court for arbitration, and that the decision shall be binding and enforceable by legal methods. In defending this compulsory plan Mr. Wise holds up the example of New Zealand, maintaining that compulsory arbitration there has prevented industrial disputes without in any way interfering with the prosperity of the colony. In his more general argument defending the system Mr. Wise uses in part the following language:

"The claim to a legal sanction to give effect to arrangements between employers and their workmen, and to secure that those arrangements are fair, rests in the first place upon the broad ground of principle, namely that the State—that is, the community as a whole—is vitally interested in preventing industrial warfare. It rests secondly upon the ground of practical expediency, because if the court has no power to bring before it anyone except those who come of their own free will, then the court will be utterly unable to establish any standard or common rule, and the result will be that a few men by holding out of a collective agreement will be able to profit in trade competition at the expense of those who are trying to conduct their business fairly, and to maintain the industrial conditions at a high level. Can it be seriously questioned that the community at large has a vital interest in the prevention of industrial strikes, and, to do it, may even interfere with a man's freedom? \* \* \* Free to do what? Free to dislocate the national industries; free to drive trades from this country to another; free to cause untold embarrassment and loss. All that might, perhaps, be permitted if the loss fell only on the combatants. But we know well that in an industrial war it is not the combatants who are the chief sufferers. \* \* \*

"People talk about compulsory arbitration, and they ask, 'How are you going to compel men to work?' and they seem to reason as if we were proposing by this bill to have an army of policemen to force open the gates, or even the cash box of the employer; or as if we were going to open jails in every district for the purpose of imprisoning bodies of men who decline to go to work at wages which they think insufficient. Those who speak like that absolutely forget what is the motive power behind almost every strike and every lockout. \* \* \* Under present arrangements a suspension of labor or business takes place in the belief that it is but temporary, and that it will starve the opposing side into submission. There is no object in a strike or lockout in New Zealand, because you can not starve an arbitration court into submission. If an employer shuts up there rather than obey the court, he has to retire from his business. If men leave off labor there, they have to change their occupation, unless they will resume it under the conditions laid down by the court." \* \* \*

Another interesting provision of the proposed New South Wales act, not found in the New Zealand law, is that an employer may not dismiss any employee in order to wreak vengeance upon him for calling upon the arbitration court. If an employer dismisses a man after the decision of the court, he must satisfy the court that it is not by reason of the fact that the employee was instrumental in appealing to the court in the first instance.

### III. WESTERN AUSTRALIA—COMPULSORY ARBITRATION.

That the New Zealand compulsory-arbitration act is considered to be advantageous by the neighboring colonies is evidenced by the passage of a substantially identical law in Western Australia, December 5, 1900, as well as by the strong movement made in the same year for the adoption of the act in New South Wales. The Western Australia law follows the New Zealand measure verbally

in most of its provisions, although there are a few changes, mostly in the nature of additions and more specific regulations. One of these provisions is a requirement that, before commencing proceedings for arbitration in the court of arbitration, an industrial union must deposit £25 where the number of members does not exceed 50; £50 where the number of members is between 50 and 100, and £100 where the number of members exceed 100, or must furnish security in these sums. By this means the enforcement of the award of the court, as well as the payment of costs, is to some extent guaranteed.

Another new provision is that no union of employers or employees, which has not satisfied all previous judgments of the court of arbitration, shall be entitled to bring another dispute before the court. The Western Australian act also contains more detailed provisions than those in New Zealand regarding the authority of boards of conciliation or of the court of arbitration to view any mines, factories, and other places in connection with their investigation of disputes.

In view of the experience of New Zealand that many disputes are brought before the boards of conciliation with no intention of abiding by the decision of those boards, but merely because under the law it is a necessary preliminary to bringing the dispute before the court of arbitration, Western Australia has provided that the parties to a dispute may agree to bring it before the court in the first instance, without action by the boards of conciliation.

The only important additional provision contained in the act of Western Australia with reference to the enforcement of awards by the court of arbitration is one allowing the issue of writs of mandamus and of injunctions and prohibitions to enforce the orders of the court. Persons or organizations refusing to obey such orders are guilty of contempt of court.

There has as yet been no sufficient experience under the Western Australian compulsory arbitration law to make it possible to draw any conclusions as to its working. It must be remembered that Western Australia is one of the least populous of the Australian colonies. The inhabitants of the colony by the census of 1891 numbered only 49,782. There has been a very rapid growth since 1891, and the estimated population in 1898 was no less than 168,139. The largest city of the colony is Perth, with an estimated population in 1898 of 30,400, no other town having a population greater than 3,500.<sup>1</sup>

#### IV. SOUTH AUSTRALIA.

The colony of South Australia adopted a law in 1894<sup>2</sup> which follows the New Zealand compulsory arbitration measure quite closely in some of its provisions, although its compulsory features differ very greatly from those in the sister colony. The law authorizes the registration of unions of employers or employees, and grants to such registered unions powers very similar to those granted by the New Zealand act, in particular providing that enforceable agreements with regard to conditions of labor and other matters may be made between such registered organizations or between them and other persons. Registered unions of employers or employees are also subject to the provisions of the conciliation act to an extent somewhat greater than are individuals and organizations not registered.

The South Australian law provides for local boards of conciliation, but does not require their establishment, as is the case in New Zealand. In fact, such local boards may be created only by the approval of at least one-half of the employers and one-half of the employees in the district and the trade to be affected. Each board covers only a particular industry in a particular locality. Each must consist of an equal number of employers and of employees, to be elected annually by the employers and employees in the district, respectively, and a chairman chosen by the other members, holding office for 2 years.

There is also a State board of arbitration, consisting of 7 members, appointed by the governor. Three of these are to be recommended by organizations of employers and three by organizations of employees, while the seventh is the president, who shall hold office for 5 years.

In any industry and locality where a local board of conciliation exists, employers and employees may agree to submit their differences to such a board. If such an agreement be a general one, it becomes a punishable offense for either party to order a strike or a lockout. When disputes are voluntarily laid before the board

<sup>1</sup> Western Australian Year Book, 1898-1899, p. 282

<sup>2</sup> Act of December 21, 1894

of conciliation it has power to make an enforceable award, or, if it prefers, to make a report with recommendations which shall not be enforceable.

One of the most important provisions of the law is that by which the governmental authorities may compel the submission of any dispute to the final decision of the State board of arbitration. While the act of South Australia does not make it possible for either party to a dispute to compel the other party, in the absence of a previous agreement, to resort to arbitration, the State may exercise compulsion where it deems it necessary. The act provides that it shall be lawful for the president of the State board of conciliation to inquire into the nature of any industrial dispute, and if he deems it necessary to resort to compulsory arbitration, he shall so report to the governor, who may then declare that all matters in dispute shall be referred to the State board of conciliation. The president of the board and the governor may in their order either provide that the decision of the board of conciliation in such a case shall be final and binding, or that it shall be simply in the nature of a recommendation, not enforceable. In either case the board of conciliation has all the powers of a court in making its investigations.

The provisions for the enforcement of such awards as, under the law, are made legally enforceable are very effective. Unless otherwise expressed therein, the award of any local board of conciliation, or of the State board in regard to any matter brought up to it from a local board, shall be, if by law enforceable, binding upon all the employers and employees in the particular locality and industry for which the local board is constituted. The application of the awards of the State board made in disputes brought before it in the first instance are applicable to the extent prescribed by the law. Every court has the power, on the application of the registrar of the State board of conciliation, to enforce compliance with awards as effectually as if they were decrees of the court. Any person willfully making default in compliance with any award shall, unless the award itself otherwise directs, be punishable by a fine of not over £20 or by imprisonment not over 3 months. Organizations may have damages assessed against them to the amount of £1,000 and their property may be seized for payment, or their members may be held liable to the amount of not over £10 each.

## V. PRIVATE BOARDS OF CONCILIATION AND ARBITRATION IN AUSTRALASIA.

So far we have been considering chiefly the legal provisions regarding the settlement of labor disputes by governmental boards. Long before arbitration laws had been established in any of the colonies, however, private boards of conciliation and arbitration, along the line of those in England, had been established to a moderate extent in these colonies, although they were less common and had worked less successfully than in Great Britain. Such boards are still in existence and have rather been facilitated than suppressed by the introduction of governmental methods of arbitration and conciliation. Information as to the working of these boards in Australia is not readily accessible. The following summary is taken from the report of the British Royal Commission on Labor:<sup>1</sup>

"Permanent boards of conciliation have existed in several trades for many years. There was formerly a board of this type established by the Federated Seamen's Union, and the Australasian Steamship Owners' Association, but in 1886 the workmen's union refused to submit a case to the board and the owners declared the agreement broken. A more successful board exists in the boot and shoe industry, 5 members being appointed by each side. The Amalgamated Society of Carpenters and Joiners also have a board of arbitration in connection with employers. It is very common in all the building trades to refer disputes to boards of conciliation or arbitration.

"The most frequent method, however, of settling disputes is by the intervention of the various federated labor organizations in the colonies. The majority of trade unions are now affiliated with some central body. If disputes can not be settled by the individual unions the federated body sends a deputation to the employers, or otherwise mediates. In many cases satisfactory results have been obtained by this practice. The system of joint annual agreements fixing the conditions of labor is also found in a considerable number of trades."

<sup>1</sup> Royal Commission on Labor, Foreign Reports, Vol. II, p. 32

## VI. DOMINION OF CANADA.

A very recent act passed by the central government of the Dominion of Canada<sup>1</sup> provides for voluntary boards of arbitration and conciliation. It also grants authority to the ministry to intervene in disputes, though not with compulsory authority to settle them. The act, in fact, follows very closely the English law of 1896 (see p. 469). It provides that any board voluntarily established by employers and workmen may be registered by the government and shall then make reports of its proceedings. The minister charged with the management of labor matters may appoint some person to inquire into the conditions of labor in any district or trade and endeavor to persuade employers and employees, if he thinks it desirable, to establish a conciliation board. The minister may also, at his discretion, inquire into the causes and circumstances of any dispute or take steps to persuade the parties to resort to conciliatory methods. On the application of either employers or employees he may appoint a board of conciliation, of course with authority merely to endeavor to bring about an amicable agreement. On the application of both parties to a dispute he may appoint an arbitrator or arbitrators. There are no provisions whatever with reference to the enforcement of the awards of arbitrators. The act, in fact, gives no greater authority to the government and no greater force to arbitration and conciliation proceedings than is conferred by the arbitration acts in the various States of our own country.

## ONTARIO.

Ontario has an act providing for arbitration and conciliation by State and local boards very similar to the laws existing in this country. A much earlier act, passed in 1873, provided for local boards of arbitration, but did not permit them to establish rates of wages, and practically no trades availed themselves of the opportunity to establish a registered council of conciliation under this law. The present act provides that councils of conciliation, to consist of 2 persons appointed by each party to a labor dispute, may be created and registered with the central government. If these councils can not bring about a voluntary settlement between the parties, the matter can be referred to the central councils of arbitration. There are 2 of these central councils, one for steam and street railway companies and their employees, and the other for other employments. Each consists of 3 members. One member of each is appointed on the recommendation of the employers and the other on the recommendation of the employees, so far as employers and employees are organized. The third member of each board is appointed by the other two. Disputes may be referred directly to these councils of arbitration or they may be appealed to them from councils of conciliation. On the request of one party to a dispute, providing the other party has refused to enter into conciliation, the central council of arbitration may investigate, fixing the responsibility for the difficulty. There is no provision for the enforcement of awards, unless both parties agree thereto.<sup>2</sup>

It does not appear that any considerable use has been made of the opportunities for conciliation and arbitration provided by the Ontario law.

## CHAPTER I.

### GENERAL CONSIDERATIONS.

1. **Law of criminal conspiracy.**—The underlying principle upon which statutes and court decisions regarding strikes, boycotts, and certain actions of trade unions rest is the old common-law doctrine of criminal conspiracy. In many States the English common law of conspiracy is still in force. In others it has been distinctly repealed, either generally or as regards strikes in particular. But in such States statutes have usually been enacted declaring criminal certain acts by combinations of persons. These statutes are frequently so general in their terms that the courts in interpreting them reach essentially the same results as are reached in the States where the common-law doctrine is still in force.

The doctrine of the common law, as repeatedly stated by the courts, is that an unlawful conspiracy is a combination of two or more persons to accomplish an unlawful purpose by means which may be either unlawful or lawful, or to accomplish a lawful purpose by criminal or unlawful means. Thus it is said in the case of *State v. Stewart*.<sup>1</sup> "A combination of two or more persons to effect an illegal purpose, either by legal or illegal means, whether such purpose be illegal at common law or by statute, or to effect a legal purpose by illegal means, whether such means be illegal at common law or by statute, is a common-law conspiracy."

It has even been held in various cases that a combination to accomplish an immoral purpose, or to accomplish a legal purpose by immoral means, is a conspiracy. In other words, the courts often make the definition very broad.

Stimson points out<sup>2</sup> that a combination to do financial harm to a definite person, although action by a single individual toward the same end would not be illegal, is usually regarded as a criminal conspiracy.

2. **Intent as a factor in conspiracy.**—It is especially significant that the courts lay great stress upon the element of intent in determining the criminal character of a combination. The question of intent is, of course, considered in determining the character of overt acts of a criminal nature, whether done by individuals or by a combination. In the case of a combination, however, the intent is usually treated as of greater significance than in the case of acts of individuals. In the case of conspiracy it is even held that an intent to do an unlawful thing is in itself criminal, whether there be overt acts or not. Stimson says:<sup>3</sup> "The law of conspiracy is one of the rare instances where the law goes solely into the intent and purposes of the act. It is the combining with such wrong intent or purpose that makes the participators liable to the criminal law, not the ultimate motive, nor the acts which they do, even though these be criminal in themselves, or though they do no acts whatever."

Again Justice Harlan, in *Arthur v. Oakes*,<sup>4</sup> says: "An intent upon the part of a single person to injure the rights of others or of the public is not in itself a wrong of which law will take cognizance, unless some injurious act be done in execution of the unlawful intent. But a combination of two or more persons with such an intent, and under circumstances that give them, when so combined, a power to do an injury they would not possess as individuals acting singly, has always been recognized as in itself wrongful and illegal."

While the general trend of the court decisions is as has been outlined, there have been from time to time decisions, some of which will be noted in the study of particular classes of acts of unionists and strikers, which tend to hold that persons acting collectively may do anything which they might do as individuals, and that the question of intent should at least not be considered of controlling importance. Perhaps the strongest statement of this attitude is found in the dissenting opinion of Judge Caldwell, of the United States circuit court, in a recent boycott case.<sup>5</sup> He declares that the right of wage-earners in particular to combine is an inherent

<sup>5</sup> *Hopkins v. Oxley Street Co.*, 83 Fed. Rep., 931.

one; that the proposition that it is unlawful for men to do collectively what they may do without wrong individually is a relic of the dark ages, and that people can only free themselves from oppression by organized force. The old doctrine of conspiracy, he continues, "compels every man to be a stranger in action to every other man. \* \* \* It is a doctrine abhorrent to free men. It is in hostility to the law of man's nature, which prompts him to associate with his fellows for his protection, defense, and improvement." A somewhat similar position was taken by Judge Holmes, of Massachusetts, in his dissenting opinion in the case of *Vegelahn v. Guntner*:<sup>1</sup>

"There is a notion, which latterly has been insisted on a good deal, that a combination of persons to do what any one of them lawfully might do by himself will make the otherwise lawful conduct unlawful. It would be rash to say that some as yet unformulated truth may not be hidden under this proposition. But in the general form in which it has been presented and accepted by many courts, I think it plainly untrue, both on authority and principle. \* \* \*

"It is plain from the slightest consideration of practical affairs, or the most superficial reading of industrial history, that free competition means combination, and that the organization of the world, now going on so fast, means an ever-increasing might and scope of combination. It seems to me futile to set our faces against this tendency. Whether beneficial on the whole, as I think it, or detrimental, it is inevitable unless the fundamental axioms of society, and even the fundamental conditions of life, be changed."

*Reason for considering intent in conspiracy.*—Various reasons have been advanced by the courts for laying such special stress upon the element of intent in the case of criminal conspiracy. The general idea is that by the acting together of a number of persons with a common intent, their power to carry out the intention is so greatly increased above that which a single individual would possess as to make the intent itself a menace to other persons and to the public. Thus it is stated in *State v. Gihdden*:<sup>2</sup> "Numbers can accomplish what one man can not, evil as well as good, and that is the reason of the combination. \* \* \* Any one man, or any one of several men, acting independently, is powerless; but when several combine, and direct their united energies to the accomplishment of a bad purpose, the combination is formidable. Its power for evil increases as its numbers increase. \* \* \* The agreement is a step in the direction of accomplishing the purpose." In *Mogul Steamship Company v. MacGregor*<sup>3</sup> Lord Justice Bowen says: "A combination may make oppressive or dangerous that which, if it proceeded only from a single person, would be otherwise; and the very fact of the combination may show that the object is simply to do harm, and not to exercise one's own just rights."<sup>4</sup>

This last quotation suggests an element which also apparently enters into the attitude of the courts as to conspiracy, namely, that the fact of combination tends to make more certain the evil intent in the overt acts; that it is an element of evidence as to the character of the acts. This thought is brought out more fully by Judge Taft in *Moore v. Bricklayers' Union*:<sup>5</sup> "It is thus apparent that in determining whether a concerted act or series of acts like those at bar are actionable, the combination is material in two ways, first, in giving the act a different character from a similar act of an individual by reason of its greater, more dangerous, and oppressive effect; and, second, in being strong evidence of the malice with which the act is done."

*What is necessary to constitute criminal intent.*—Where the law endeavors to take cognizance especially of malicious intent, it becomes necessary for the courts to draw very careful distinctions as to what constitutes malice, and also to exercise very careful judgment as to what was the real intent of the persons, acting individually or in combination. It is but natural that the application of the doctrine of malicious intent to specific cases should be difficult, and should result in many more or less contradictory decisions. It is impossible to lay down any definite conclusions as to the attitude of the courts on this subject, but a survey of the cases hereafter discussed seems to show that their general tendency as regards labor disputes is to extend quite broadly the doctrine of malicious intent. Many acts which by labor organizations are considered ordinary and necessary for the furtherance of their objects have been held to show malicious intent. The opinions of the courts as to the intent in various classes of acts are brought out under

<sup>1</sup>44 N. E. Rep., 1081.

<sup>2</sup>8 Atl. Rep. 895.

<sup>3</sup>1 R. 23, Q. B. D., 598; 66 L. T., 1.

<sup>4</sup>See also charge of Judge Morrow in *United States v. Cassidy* (67 Fed. Rep. 703), where he says: "A conspiracy becomes powerful and effective in the accomplishment of its illegal purpose in proportion to the numbers, power, and strength of the combination to effect it."

<sup>5</sup>23 Weekly Lab. Bul., 63.

the general discussion of those acts below. At this point we may, however, indicate some of the general expressions of opinion made by the courts as to the significance of malicious intent.

It is usually held that it is not necessary that the combination should have formally agreed upon an unlawful purpose. If the members have a tacit mutual understanding, it is sufficient. Persons who afterwards join a combination which has an illegal intent in its origin are supposed to connive in the illegal purpose.<sup>1</sup>

It is not necessary, according to certain court decisions, that the malicious intent which makes the conspiracy illegal shall arise from personal spite or ill feeling. Thus it has been held in the case of a boycott that the desire to injure a man in his business in order to force him not to do what he had a perfect right to do, regardless of other elements of malice, was itself an illegal intent.<sup>2</sup> Nor may the parties to the conspiracy disclaim the intention to injure if the natural result of the acts which they plan must be injury.<sup>3</sup>

Out of this doctrine regarding intent in conspiracy grows the further doctrine that each conspirator is deemed equally liable for any overt act done in pursuance of the conspiracy, whether he takes an actual part in it or not. Thus in the cases growing out of the strike of coal miners in Indian Territory in 1899,<sup>4</sup> Judge Rogers said:

"In the pursuit by various parties of an unlawful conspiracy, each is responsible for the acts and doings of the others. \* \* \*

"Suppose three or four men form a purpose to commit burglary, and break into a house for the purpose of committing that burglary. That is all they intend to do. That is the unlawful act, and the single unlawful act, which they set out to accomplish. They get into the house. Somebody wakes up, and one of the party shoots and kills. Now, the three or four persons who went into that house never formed beforehand an intent to kill anybody. They simply went in there to commit burglary. But, combining to do that unlawful thing, in the prosecution of that burglary, and to make it successful, one of the party shoots and kills, and the law comes in, and says: 'All of you are guilty of murder. We do not discriminate between you. You broke into that house to commit burglary. In the prosecution of that burglarious entrance one of your party committed murder. All are guilty.' Now, that is a reasonable rule, when you stop to think of it."

A similar doctrine was stated less in detail, as being a generally accepted principle, by the United States circuit court in the Debs case, Debs and his associates being held criminally liable for the acts of violence of the strikers associated in the so-called conspiracy.<sup>5</sup>

The most difficult questions as to intent arise where parties seek their own advantage by some action which tends to the injury of others. The question then is whether the desire to injure was the fundamental motive, or the desire to benefit the persons doing the acts. A recent writer on labor combinations has suggested that the proper distinction to be made is this, that any act which is "the natural incident or outgrowth of some existing lawful relation" is lawful, though resulting in injury to others.<sup>6</sup> Malicious acts would then be those done with malice in the absence of any such existing lawful relation, of which the act is a natural outgrowth. This doctrine, according to the author, justifies acts on the part of employers or employees which grow out of that relation, whether or not they are done with the direct intent to injure the other party.<sup>7</sup>

A somewhat similar point of view has been taken by the highest English courts in several recent cases. These cases, to be sure, were under the civil law rather than the criminal law, but it seems that the same principle would apply, at least in part, to criminal procedure. Thus in the famous *Mogul Steamship Company* case, decided by the House of Lords in 1892, it was held that acts done in the ordinary competition of trade can not be considered illegal, no matter how greatly they injure a trade competitor, and thus despite the element of combination. This was a case where the defendants, several firms of shipowners, formed an agreement with a view to obtaining a monopoly of a certain class of trade with China. Special inducements were offered to merchants to ship exclusively in the vessels of the firms in the combination, and penalties were imposed upon those who shipped by other vessels, but who also desired to make use of the vessels of the firms in the combination. The court refused to grant relief to the plaintiffs, who, being excluded from the association, suffered damage in consequence.<sup>8</sup>

<sup>7</sup> *Ibid.*, see 6.

<sup>8</sup> 66 L. T. R. N. S., 1, L. R., 23, Q. B. D., 538.

A still more recent case before the House of Lords was that of *Allen v. Flood*, again a case of suit for damages. The element of combination, although apparently present in fact, was denied in the pleadings and was not considered by the court. The whole trend of the decision, however, was to the effect that workmen might seek their own advantage, whether the intent was apparently malicious or not, to the injury of other workmen or of employers, so long as the act was a natural incident of the relation between employer and employee. It was held especially that there is no essential distinction between the acts of laborers in competition in the labor market and those of traders in competition.<sup>1</sup>

3. *Effect of combination as regards civil liability.*—It is not by any means easy to distinguish, amid recent court decisions, the line between those acts in labor disputes which are considered criminal and those considered unlawful at civil law. There has been in a general way from the earliest times an attempt to distinguish between the considerations which shall enter into a decision as to whether an act is criminal and those which shall enter into a decision as to whether it constitutes a cause of action for the collection of damages at civil law. Apparently the original attitude of the courts was that the question of intent should be considered as an element of crime, but not as an element affecting civil liability; and also that the fact of combination should be considered as an element in crime, but not as an element in determining civil liability.

But the decisions are so conflicting that it is difficult to determine whether certain acts in labor disputes are criminal but not actionable, or actionable but not criminal, or both criminal and actionable.

On the question as to the effect of combination upon civil liability Cooke says in his book on *The Law of Trade and Labor Combinations*: " \* \* \* The doctrine seems well established that a combination to commit a crime or (with certain limitations) any other unlawful act subjects the members of the combination to criminal liability, though the act proposed be not done. But, at least until recently, it seems to have been equally well established that under these conditions no civil liability exists, or, as has been said, 'an action will not lie for the greatest conspiracy imaginable, if nothing be put in execution.' " \* \* \* Quite recently has sprung into recognition the doctrine that an act, entirely lawful if done by a single individual, may be [civilly] unlawful by reason of being done in pursuance of a combination of individuals to do the same act." This doctrine, in Mr. Cooke's opinion, is in itself unjust, and is not warranted by the older authorities or by the highest recent authorities.

The contrary opinion of Mr. A. J. Eddy, in his recent text-book on *Combinations*, is referred to below in connection with other quotations from this writer as to the effect of intent.<sup>2</sup> He holds that the greater power of combinations to do oppressive acts should render some of their acts civilly actionable, though the same acts would not be actionable if done by an individual.

Among recent American cases which seem to hold that the element of combination should be considered in determining civil liability, may be mentioned *Barr v. Essex Trades Council*. This was a boycott case, and the fact of combination seemed to be essential to the accomplishment of the injury against the plaintiff, as was repeatedly pointed out by the court. The court held that the boycott, while, perhaps, not criminal and punishable as such, was an actionable wrong.<sup>3</sup>

Again, in the New York case of *Curran v. Galen*,<sup>4</sup> a combination of men was held civilly liable for threatening to quit work unless an employee not belonging to the trade union should be discharged. Here again the combination was necessarily considered as an essential element in the case.

An interesting position on this subject is that taken by Judge Taft in the *Toledo and Ann Arbor Railroad case*.<sup>5</sup> The engineers on certain other railways had collectively refused to haul cars coming from that railroad. The court held that the combination increased the possibility of injury, and should therefore be considered in the decision, although the mere fact of combination in itself was not actionable. "The gist of any such action must be not in the combination or conspiracy, but in the actual loss occasioned thereby. \* \* \* Ordinarily the only difference between the civil liability for acts in pursuance of a conspiracy and for acts of the same character done by a single person is in the greater probability that such acts when done by many in a combination will cause injury." The act of a single engineer in quitting, under certain circumstances, might cause a loss which would be a proper subject for an action for damages, but the injury would

<sup>1</sup> *Allen v. Flood*, L. R. 1898, 2 A. C. 1, see especially opinion of Lord Shaud, pp. 166, 167.

<sup>2</sup> Cooke, *Labour Combinations*, sec. 4.

<sup>3</sup> P. 556.

<sup>4</sup> 30 Atl. Rep. (N. J.), 881.

<sup>5</sup> 46 N. E. Rep. 297.

<sup>6</sup> 54 Fed. Rep., 729, 739.

not be apt to be sufficiently serious to become actionable. On the other hand, the court held, should the engineers of several companies all combine to do the same unlawful acts, the intended loss to the railway companies would become not only probable but inevitable.

There is, however, strong authority for the position that combination should not be considered in determining civil liability. We have already noted the opinions of Judges Holmes and Caldwell as to conspiracy. The English courts have recently held<sup>1</sup> that "conspiracy to do certain acts gives a right of action only where the acts agreed to be done, and in fact done, would, had they been without preconcert, have involved a civil injury to the plaintiff." This was a suit brought for damages against persons conspiring to induce an employer not to employ the plaintiff. The court held that there was no cause for action.

The important English case of the *Mogul Steamship Company*, already referred to, would seem also to indicate the trend of English judicial opinion toward holding combination in itself not to be an essential element in determining civil liability, although the main stress in this case was laid on the discussion of intent rather than on that of combination.

Sir Frederick Pollock, in summarizing the English law with reference to labor combinations and strikes, enumerates various acts of strikers which, under the court decisions in that country, are not considered actionable. He goes on to say as to the effect of conspiracy:

"Any of the acts above mentioned which is not wrongful in itself does not become wrongful (a) merely because done by a number of persons acting in concert or (b) merely because those persons give notice to an employer or other person concerned of their intention to do such acts.

A leading American case which takes the same position is that of *Bohn Manufacturing Co. v. Hollis*,<sup>2</sup> more fully referred to below. The court said:

"What one man may lawfully do singly, two or more may lawfully agree to do jointly. The number who unite to do the act can not change its character from lawful to unlawful. The gist of a private action for the wrongful act of many is not the combination or conspiracy, but the damage done or threatened to the plaintiff by the acts of the defendants. If the act be unlawful the combination of many to commit it may aggravate the injury, but can not change the character of the act."

**4. Effect of intent as regards civil liability.**—Turning now to the question of the effect of malicious intent in regard to civil liability, we find the decisions of the courts again conflicting.

Cooke,<sup>3</sup> who strongly opposes the consideration of the question of intent to injure as an element of civil liability, says with regard to this matter:

"Great confusion and conflict in the decisions relating to the legality of trade and labor combinations have resulted from the introduction of intent to injure, as constituting an element of civil liability. It is clear that an injury may be actionable, though without the existence of the slightest intent to injure. But, on the other hand, supposing an act producing injury to be otherwise *damnum absque injuria*, and to give the injured party no right of action, is such a right of action created by the circumstance that the act was done with intent to injure?"

\* \* \*

"Until recently at least, the weight of opinion seems to have favored the view that no right of action is created under these conditions. But recently, and especially in connection with the determination of the legality of acts of trade and labor combinations, the doctrine seems to have gained ground that an act producing injury, though otherwise giving the injured party no right of action, may be actionable if done with an intent to do the injury. The confusion and uncertainty resulting from bringing so subtle an element into consideration have frequently been recognized, and in our view there is absolutely no necessity for it. In this view, in determining whether a right of action arises from an act producing injury, attention should be directed, not at all to the intent with which the act was done, but to the existing relation, if any, of the party doing the injury, to the conditions out of which arose the act. In other words, the test of liability is *whether the act was the natural incident or outgrowth of some existing lawful relation.*"

A very detailed analysis and discussion of this subject has recently been published by Mr. A. J. Eddy, of the Chicago bar, in his work on *Combinations*.<sup>4</sup> His judgment, based rather on general reasoning than on an attempt to reconcile conflicting court decisions, is that malicious intent should be considered as affect-

<sup>1</sup> *Hutley v. Simmons*, 1 L. R. Q. B. D., 1898, 185.

<sup>2</sup> 55 N. W. R., 1121.

<sup>3</sup> *Labor Combinations*, sec. 2.

<sup>4</sup> Eddy, *The Law of Combinations*, 1901, secs. 469 ff.

ing civil liability for damages, when, and only when, the element of combination also enters in. He distinguishes three classes of damages which may be inflicted either by an individual or by a combination:

(1) Damage occasioned by an act not in itself unlawful, done by one in the legitimate pursuit of his own lawful business and with no intention of damaging the party injured.

(2) Damage occasioned by an act not in itself unlawful, done by one in the legitimate pursuit of his own lawful business, but at the same time with the intent to damage the party injured.

(3) Damage occasioned by an act not in itself unlawful, done by one for the sole purpose of inflicting injury upon the party damaged.

In discussing the legality of acts of these sorts, when done only by individuals, the author continues:

"An act not in itself unlawful, done by one in the legitimate pursuit of his own lawful business, even though it be also done with the malicious intent to injure another, does not thereby become either unlawful or wrong, as the term 'wrong' must necessarily be understood in the administration of the law. The civil law does not aim to punish motives; it takes cognizance of acts and their consequences, though in a number of instances it considers the motives as a part of the entire case. The element of wrong of which the civil law takes cognizance in the administration of justice between man and man, in the enforcement of rights and the application of remedies, is that character of wrong which contains within it not only the element of malice but of malice rendered effective in conduct.

"That is to say, the mere presence of malice does not give rise to a cause of action, even though damage results from the entire transaction in which malice enters as one of the motives. The law will not attempt the impossible task of disintegrating the final results and saying that so much of the result—namely, the damage caused, was due to acts influenced wholly by malice, and so much of the result was due to acts influenced wholly by legitimate motives.

"But when it clearly appears that there is an entire absence of legitimate motives, and that the damage is occasioned by acts which are the result of a deliberate intent to injure, then the law has, or should have, no difficulty in stamping the transaction, considered as an entirety, unlawful, and awarding the party injured whatever damages he has suffered. Such a conclusion does not involve the proposition that malice in and of itself is a cause of action, since a man may do many things not in themselves unlawful in the legitimate pursuit of his own lawful business but at the same time with the malicious intent to injure others; but a man may not do wantonly and without any hope or expectation of profits or legitimate advantage to himself that which he knows must, and he intends shall, inflict damage upon another. The practical question for court and jury is not so much whether or not malice exists as it is whether or not the acts complained of were done in the legitimate pursuit of a legitimate business, or the legitimate exercise of some personal privilege. If so, then there is no redress for the party injured, since the law can not undertake to distribute the damage according to the preponderance of the motives.

"It follows, therefore, that no cause of action arises in the cases embraced within categories 1 and 2, but a cause of action is found in cases embraced in category 3."

The author goes on to say, however, that if the element of combination be added, acts which, as above set forth, would be lawful may become unlawful. He believes that so far as strictly criminal acts are concerned a combination may lawfully do whatever an individual may lawfully do. But when the oppression or injury of another is involved, the power of the combination is greater than that of the individual, and it may not lawfully do what individuals may do. The combination is in itself "the consummation of a purpose, although it is a means to an end." While the law may not investigate the motives of individuals, it may determine whether or not civil damages are occasioned by a conspiracy, the object of which was to cause the injury.

In view of these distinctions, Mr. Eddy holds that in the case of damages occasioned by acts not in themselves unlawful but done by a combination in the legitimate pursuit of its own lawful business, but also with intent to injure—a case corresponding to the second category but with combination added—will give a cause of action if it can be shown that the act in question is done as a result of a conspiracy to injure the party damaged. It is a question of fact, susceptible of proof, as to the presence of this motive.

It is important to observe, however, that the courts have seldom, in their decisions, attempted to draw the elaborate lines of distinction suggested by this author,

and that it would be difficult to show in many cases that the decisions conformed strictly to the tests suggested by him.

Several recent American cases seem clearly to hold that malicious intent must be considered as an element of civil liability, especially in cases involving combination.

Thus Judge Taft, in a recent important boycott case growing out of the Pullman strike,<sup>1</sup> seems to hold distinctly that the question whether or not the act of the defendant in inciting employees to strike as a means of boycotting Pullman cars was malicious was significant as regards civil liability. After pointing out that the desire to better the condition of those whom the defendant was inciting to strike did not enter into the motive, since they were content with the condition of their employment, the court says:

"The real question is, therefore, whether the act of Phelan in instigating and inciting the employees of the receiver to leave his employ was without lawful excuse, and therefore malicious. The question is not whether such an act would subject Phelan to punishment by indictment and trial under the criminal laws, but whether the act was unlawful in the sense that he could be made to pay damages for the loss occasioned. Of course, if the act would subject him to punishment for an indictable misdemeanor and crime a fortiori would the act be unlawful; but his act may be a contempt without being a crime."

Again, in *Barr v. Essex Trades Council*<sup>2</sup> the New Jersey supreme court says: "Malicious injury to the business of another has long been held to give a right of action to the injured party. \* \* \* This renders necessary an inquiry as to the intent of the defendants, to ascertain if the case falls within the class in which it is held that a malicious motive in the defendant may make an act which would not be wrongful without the malice, a wrongful act when done with malice."

There is, however, some recent American authority on the other side in the picketing case of *Vegetahn v. Guntner*.<sup>3</sup> Chief Justice Field, of Massachusetts, dissenting, said: "Whether to persuade a person who is free to choose his employment not to enter into the employment of another person gives a cause of action to such other person, by some courts has been said to depend upon the question of actual malice; \* \* \* For myself, I have been unable to see how malice is necessarily decisive. To persuade one man not to enter into the employment of another, by telling the truth to him about such other person and his business, I am not convinced is actionable at common law, whatever the motive may be."

The English courts appear now to be definitely committed to the rule that intent shall not be considered as an element in civil liability. The case of *Allen v. Flood*, decided by the House of Lords in 1898, has already commenced to exercise some influence on American decisions. In this case, which is more fully described under another heading,<sup>4</sup> the House of Lords held that it was lawful for employees to quit work, or to threaten to do so, on account of the employment of other persons obnoxious to them. Among other points, by which the court upheld this decision, it was declared that the question of the intent of the workmen could not be considered.

This opinion<sup>5</sup> was most strongly stated by Lord Watson, who said: "Although the rule may be otherwise with regard to crimes, the law of England does not, according to my apprehension, take into account motive as constituting an element of civil wrong. \* \* \* A wrongful act, done knowingly and with a view to its injurious consequences, may, in the sense of law, be malicious; but such malice derives its essential character from the circumstance that the act done constitutes a violation of the law. \* \* \*

"There are, in my opinion, two grounds only upon which a person who procures the act of another can be made legally responsible for its consequences. In the first place, he will incur liability if he knowingly and for his own ends induces that other person to commit an actionable wrong. In the second place, when the act induced is within the right of the immediate actor, and is therefore not wrongful in so far as he is concerned, and it may yet be to the detriment of a third party; and in that case, according to the law laid down by the majority in *Lumley v. Gye* (2 E. & B., 216), the inducer may be held liable if he can be shown to have procured his object by the use of illegal means directed against that third party."

Lord Herschell, taking the same position, said:<sup>6</sup> "I can imagine no greater danger to the community than that a jury should be at liberty to impose the penalty of paying damages for acts which are otherwise lawful, because they choose, without any legal definition of the term, to say that they are malicious."

<sup>1</sup> *Thomas v. C. N. O. and T. P. Ry. Co.*, 62 Fed. Rep., 816.

<sup>2</sup> 30 Atl. Rep., 886, 887.

<sup>3</sup> 44 N. E. Rep., 1077, 1079.

<sup>4</sup> P. 573.

<sup>5</sup> L. R. 1898, 2 A. C. 92-96.

<sup>6</sup> *Ibid.*, 118.

Lord Halsbury, the Lord Chancellor, and several other of the law lords, however, dissented from the opinion of the majority. Lord Halsbury said on the subject of intent:<sup>1</sup>

"It appears to me that no better illustration can be given of the distinction on which I am insisting between an act which can be legally done and an act which can not be so done because tainted with malice, than such a colloquy between the representative of the master and the representative of the men as might have been held on the occasion which has given rise to this action. If the representative of the men had in good faith and without indirect motive pointed out the inconvenience that might result from having two sets of men working together on the same ship, whose views upon the particular question were so diverse that it would be inexpedient to bring them together, no one could have complained; but if his object was to punish the men belonging to another union because on some former occasion they had worked on an iron ship, it seems to me that the difference of motive may make the whole difference between the lawfulness or unlawfulness of what he did."

It is noticeable that a leading American court has recently denied the authority of *Allen v. Flood* as regards the effect of malicious motives in labor disputes. In the case of *Plant v. Woods*<sup>2</sup> the supreme judicial court of Massachusetts declared that a combination of workmen to compel other men to join a union or otherwise to force their discharge was illegal at civil law, because of the malicious intent of the action. The following is quoted from the decision in that case:

"It is said also that, where one has the lawful right to do a thing, the motive by which he is actuated is immaterial. One form of this statement appears in the first headnote in *Allen v. Flood*, as reported in (1898) App. Cas. 1, as follows: 'An act lawful in itself is not converted, by a bad or malicious motive, into an unlawful act, so as to make the doer of the act liable to a civil action.' If the meaning of this and similar expressions is that, where a person has the lawful right to do a thing irrespective of his motive, his motive is immaterial, the proposition is a mere truism. If, however, the meaning is that where a person, if actuated by one kind of a motive, has a lawful right to do a thing, the act is lawful when done under any conceivable motive, or that an act lawful under one set of circumstances is therefore lawful under every conceivable set of circumstances, the proposition does not commend itself to us as either logically or legally accurate. In so far as a right is lawful it is lawful, and in many cases the right is so far absolute as to be lawful whatever may be the motive of the actor, as, where one digs upon his own land for water (*Greenleaf v. Francis*, 18 Pick., 117), or makes a written lease of his land for the purpose of terminating a tenancy at will (*Gronstra v. Bourge*, 141 Mass., 7, 4 N. E., 623); but in many cases the lawfulness of an act which causes damage to another may depend upon whether the act is for justifiable cause, and this justification may be found sometimes in the circumstances under which it is done, irrespective of motive, sometimes in the motive alone, and sometimes in the circumstances and motive combined. This principle is of very general application in criminal law, and also is illustrated in many branches of the civil law, as in cases of libel, and of procuring a wife to leave her husband. *Tasker v. Stanley*, 153 Mass., 148, 26 N. E., 417, 10 L. R. A., 468, and cases therein cited. Indeed, the principle is a prominent feature underlying the whole doctrine of privilege, malice, and intent."

## CHAPTER II.

### ENGLISH LAW AS TO STRIKES AND LABOR COMBINATIONS.

Before going into a more detailed analysis of the American law relating to labor disputes, it will be interesting to consider the summary of the law on the same subject in Great Britain as prepared by the great jurist, Sir Frederick Pollock, for the final report of the British Royal Labor Commission.<sup>3</sup> Unfortunately there is no similar summary from any high American authority as to the law in this country. The statement was written before the decision in *Allen v. Flood*, already referred to, which has tended to make the doctrines as to various matters connected with labor disputes even more liberal.

<sup>1</sup> L. R. 1898, 2 A. C. 84, 85.

<sup>2</sup> 57 N. E. Rep., 1011, 1014.

<sup>3</sup> Appendix II.

It must be remembered, in interpreting the meaning of this statement, that statute law in Great Britain greatly affects the decisions of the courts on labor matters. The British legislation passed during the seventies not merely legalized trade unions as organizations and provided for their official registration, but also removed the ban of law from various acts of trade unions, or of collective bodies of workmen, particularly in connection with strikes. The famous conspiracy and protection of property act of 1875<sup>1</sup> declared that nothing done by a combination of men in a trade dispute should be considered as a conspiracy if the act committed by one person is not to be punishable as a crime.<sup>2</sup>

Sir Frederick Pollock's statement follows:

"I submit the following propositions as being fairly deducible:

"1. Neither an agreement for a strike, immediate or contingent, among workmen in any trade, nor an agreement for a lockout among masters, is an enforceable contract; but neither is in itself punishable or wrongful.

"2. A strike (or lockout) begun without breach of any existing contract does not necessarily involve any wrongful act.

"3. But if a strike is begun by stopping work in breach of an existing contract, the employer probably has a right of action against the promoters of the strike for procuring that breach of contract. A workman would have the same right against anyone who procured his employer to dismiss him in breach of existing terms, either individually or by way of general lockout. And generally whatever can be said of a workman's freedom to choose his employer may be said of an employer's freedom to choose his workmen.

"4. Individual workmen are free to renew or not to renew their contracts, or to enter or not to enter into contracts with other employers, as they think fit. And all persons are free, if they think fit, to lay before workmen, individually or collectively, facts and reasons in favor of their doing or not doing any of these things. The like as to customers resorting or not resorting to any particular place of business or dealing with any individual trader.

"5. But no one is free to deprive an employer of his workmen's services, or of the custom of those who may deal with him, by violence or unlawful interference of any kind with person or property, nor by threats thereof. Any such act is a trespass against the employer as well as against the workman or customer intimidated. And the rule seems to extend to threats of doing harm by means of a breach of contract or other definite civil wrong.

"6. An agreement not to work with or not to employ any particular class of persons (as a rule of a trades union not to work with nonunion men, or of an association of masters not to employ members of a particular union) is probably "in restraint of trade" and not enforceable, but it is not wrongful.

"7. Any of the acts above mentioned, which is not wrongful in itself, does not become wrongful—

"(a) Merely because done by a number of persons acting in concert; or

"(b) Merely because those persons give notice to an employer or other person concerned of their intention to do such acts.

"It seems, therefore, that an employer has not any civil right of action against, e. g., the officers of a trade union who threaten him with a strike of union hands (not involving violence or breach of contract) if he continues to employ nonunion men in general, or particular men objected to by the union.

"8. It is not clear that interference with a man's business by persons having no definite interest of their own to serve thereby (for example, an agreement not to deal with a certain trader at all, or to prevent others from doing so) might not be held to be without just cause or excuse, and therefore an actionable wrong, even if it did not involve the committing, procuring, or threatening of any breach of the peace, or breach of contract, or other specific wrongful act.

"If anyone thinks that the law as laid down by the House of Lords does not sufficiently protect individual freedom of action, he may partly console himself by reflecting on the obvious fact that, whatever the law may be, there will still be a thousand ways beyond the reach of legal process in which a majority in any trade or society can make it unpleasant for the minority to differ with them. Ultimately the rights of minorities can be secured only by securing general respect for every citizen's lawful freedom of action and discussion; and this must be the work of enlightened public opinion, and not of legal definitions. Judgments and statutes, which embody, or ought to embody, the best wisdom and experience of the nation, may do something to guide and form public opinion; they can not take its place.

\* \* \* \* \*

<sup>1</sup> 38 and 39 Vict., ch. 86.

<sup>2</sup> This act is more fully described in the preceding chapter.

"This statement concludes nothing as to the criminal law. Many civil wrongs (including some of those above mentioned) are certainly not criminal offenses; on the other hand, acts which are not a civil wrong to any definite person may be deemed so contrary to the public welfare that they are made punishable offenses. 'There are some forms of injury,' both civil and criminal, 'which can only be effected by the combination of many persons.'

"Things which are harmless or trifling when done by one or by a few may be a nuisance or a danger to the public peace, and therefore criminal, when done and repeated by the multitude. \* \* \*

"Difficulties arise when we have to do with a state of things not necessarily unlawful in itself, and not necessarily tending to breach of the peace or specific offenses against person or property, but often having such a tendency in fact. It is a matter of common knowledge that almost every considerable strike has been more or less accompanied by instances of this kind.

"The offense of conspiracy is commonly defined as consisting in an agreement either to do something unlawful, or to do something not in itself unlawful by means which are unlawful. It is a question of great difficulty to what extent the term 'unlawful' includes, for this purpose, acts which are civilly but not criminally wrongful, such as ordinary trespasses or breaches of contract. But this difficulty does not arise with regard to trade combinations since the act of 1875, which expressly declares that a trade combination is not a criminal conspiracy unless it contemplates acts which would be criminal if committed by a single person. Another section of the act declares certain specific forms of molestation, exercised 'with a view to compel any other person to abstain from doing or to do any act which such other person has a legal right to do or abstain from doing,' to be substantive criminal offenses.<sup>1</sup> There is no doubt that the intention of this section was to draw the line between legitimate and illegitimate picketing. Certainly most, and I am disposed to think all, of the acts specified, being done with the intent mentioned, would be civilly wrongful, apart from any legislation, and an agreement to commit them would probably have been an indictable conspiracy without the aid of any of the more extensive theories of 'restraint of trade.' Be that as it may, the enactment is sufficiently clear, with one exception; and, subject to that exception, the difficulties that occur in its application are such difficulties in obtaining sufficient evidence against ascertained persons as can not be abolished by the wisdom of any legislature or the skill of any draftsman. The exception lies in the word 'intimidates.' Must intimidation be a threat of something which, if executed, would be a criminal offense against person or tangible property; or does it include the threat of doing that which would be civilly, though not criminally, wrongful; or, lastly, can it include the announcement of an intent to do or cause to be done something which, without being in itself wrongful, is capable of putting moral compulsion on the person threatened? A specially constituted court of the Queen's bench division, proceeding on the intention of Parliament as shown in the trade-union act of 1871, as well as in the act of 1875, has pronounced the first of these interpretations to be the correct one."<sup>2</sup>

## CHAPTER III.

### LEGALITY OF STRIKES IN THEMSELVES.

1. *Court decisions as to legality of ordinary strikes.*—It seems clear that the courts will not now, under ordinary circumstances, hold the act of quitting employment, whether individually or collectively, to be either criminal or the ground for a civil action for damages. It is well known that the early law in England was quite the opposite to this. Concerted action by employees in almost any form was reprehensible under the statutes and under the common law. This attitude

<sup>1</sup> These provisions are quoted in full under the head of Picketing, p. 583.

<sup>2</sup> Mr. and Mrs. Sidney Webb, writing in 1897 (*Industrial Democracy*, pp. 853-862), expressed the opinion that the British courts were showing a growing inclination to restrict the rights of trade unions, even going so far as practically to violate the spirit of the trade-union acts of 1871 and 1875.

They state that although picketing is expressly declared lawful by these acts, judges sometimes prohibit the practice, or punish it on minor grounds, such as obstruction of streets and interference with the public welfare. This action of the courts, however, is considered of little importance in itself, since the practice of picketing is less and less employed by strong trade unions.

On the other hand the tendency of the courts to hold various acts of trade-union officials or of strikers actionable at civil law, or criminal, is believed by Mr. and Mrs. Webb to be a very serious

of the law is attributed by Mr. Stimson<sup>1</sup> partly to the fact that by a statute of Elizabeth wages were, at least nominally, to be fixed by law, through a machinery of magistrates. A combination to raise wages would therefore become technically illegal. Numerous other statutes regarding trade combinations were passed during the early part of this century. Later, however, more liberal legislation has been introduced, until finally the conspiracy and protection of property act of 1871 definitely legalized trade combinations and strikes.<sup>2</sup>

The English common law appears to have been followed by the American courts in one or two early cases, which held the mere act of striking illegal; but all recent authorities are on the other side. Stimson says: "The mere quitting of work by an individual is never criminal, nor even gives the employer any action for civil damage, unless there is a breach of a definite time-contract."<sup>3</sup> In many recent cases affirming the illegality of certain acts of strikers the assertion is incidentally made that the mere act of striking in itself is not illegal. The courts do hold, however, that under certain circumstances, or if done in pursuance of certain motives, the quitting of employment may become criminal or at least actionable.<sup>4</sup>

menace to the cause of unionism. The attitude of the courts is not entirely clear as to the criminal character of acts violating some actionable private right, when done by a combination formed for lawful purposes and using only lawful means. Although the trade-union act of 1875 declares that any agreement or combination to do or procure any act in furtherance of a trade dispute shall not be indictable as a conspiracy, if such act committed by one person would not be punishable as a crime, the judges have exhibited of late a disposition to narrow the scope of this section in such a way as to bring many ordinary incidents of a strike once more within the range of the criminal law.

More important still, however, continue these writers, is the danger that acts of trade unionists may be held actionable at civil law as violations of the rights of employers. Though a trade union itself can not be sued, its officers are held to be liable for damages if they commit an actionable wrong against any individual. Thus in the case of *Temperton v. Russell*, the officers of the unions of the various building trades in Hull were held liable in damages to an employer, merely for having persuaded workmen not to renew their engagements, with no coercion or intimidation. The court of appeal held also in *Flood v. Allen* that it was an actionable wrong for even a single person "unlawfully" to procure the discharge of workmen to their detriment. This was in a case where unionists refused to work with two nonunion men.

The error in these decisions, according to Mr. and Mrs. Webb, is the failure to recognize that such acts of union men or union officers are not done "unlawfully," or without adequate motive, but for the clear purpose of furthering the interests of the members of the trade. According to English law, for example, any manufacturer or trader may, individually or in combination do acts primarily for the advantage of his own trade, which, as an incident, result in harm to other people. The only condition is that the act be done for a lawful purpose and not maliciously, and without possible gain to the doer. But since trade-union officials do not act primarily with a view to their own personal gain the courts have overlooked the fact that they and other unionists have, in the promotion of the general trade interests, an adequate lawful motive for doing acts, such as refusing to work with nonunion men, which incidentally result to the detriment of other persons.

In view of these recent decisions of the English courts Mr. and Mrs. Webb expressed (in 1897) considerable solicitude lest still further encroachments should be made upon the privileges previously won by trade unionists.

The House of Lords, the ultimate court of appeal in Great Britain, has, since Mr. and Mrs. Webb wrote, taken a long step toward restoring the freedom of trade unions. It has definitely reversed the decisions of the lower courts as to the right of unionists to refuse to work with non-unionists.

<sup>1</sup>Stimson, *Handbook to the Labor Law*, 200.

<sup>2</sup>See this volume, p. 617.

<sup>3</sup>*Handbook to the Labor Law*, 195.

<sup>4</sup>See also Cooke, *Law of Trade and Labor Combinations*, section 8.

<sup>5</sup>There are occasional expressions from law writers and courts to the effect that strikes under any circumstances are to be considered illegal. These expressions seem to be rather the outgrowth of the personal opinion of the writers than to accord with the general trend of judicial decisions in this country or in England. The decisions of judges in two or three cases, which are alluded to below in the text, restraining strikes under special circumstances, contain phrases to the effect that under modern conditions practically all strikes are illegal, but these expressions seem to be in the nature of obiter dicta. The following quoted from a recent text-book writer on strikes and labor organizations (Cogley, *Strikes*, pp. 223-227) represents beyond question an extreme point of view.

"From the definition given, all strikes are illegal. The wit of man could not devise a legal one. Because compulsion is the leading idea of a strike. Men seek to compel by force of numbers, employers or employees to do that which they well know could not be done by single individuals. It is apparent to any sane mind that there is something in the mere assembling together in large numbers, that inspires, if not actual fear, at least solicitude or apprehension in the mind of the bravest man, and in the timid actual fear and indescribable dread. The purpose invariably is to produce this very result. It is intended to have an effect on the mind, and when the mind is affected as the strikers desire, exert some concession that they know they could not otherwise obtain. It is idle to talk about strikers being actuated by nonoffensive purposes in organizing a strike. They know and fully intend all the evil consequences that result from simultaneously and by preconcert quitting the service of their masters. They know and fully intend that by quitting in a body in the midst of the busiest time, that their masters will be left without sufficient employees to carry on business, and they hope that the certainty of financial loss resulting from their action, will compel the employers to yield to their demands. Their purpose is to compel the employer, by putting him in mental duress, to agree to something that he would not agree to if left free to exercise his right of volition. In any other of the affairs of life, a contract so obtained, would be promptly declared by the courts, illegal. A contract must be the free, voluntary and unbiassed agreement of the parties entering into it. \* \* \*

"Undoubtedly the employer has the advantage, because he has the most means, and can get along without employees for a longer time than the latter can without employment. But that is

**2. Legislation as to strikes and labor combinations.**<sup>1</sup>—The common law regarding conspiracy has, moreover, been somewhat modified in a number of the States by statutes. It does not appear that these statutes greatly depart from the modern court interpretations as to the proper relations between employers and employees. There are several States in which such legislation refers in terms to labor combinations and strikes. Thus, in Pennsylvania an express statute declares that employees "acting either as individuals or as members of any union may refuse to work for any person whenever in their opinion the wages paid are insufficient or the treatment unjust or offensive, or whenever the continued labor by them would be contrary to the rules of any union;" but there is a proviso that this statute shall not prevent prosecution, under any other law than conspiracy, of any person who uses force or threats to hinder persons who desire to labor from doing so.

There is a somewhat similar statute in New York declaring that it is lawful for any person to demand an increase of wages, or for persons to assemble and use all legal means to induce employers to pay such wages as shall be just and fair.

New Jersey has a statutory provision defining conspiracy and especially declaring that lawful persuasion to persons to enter into combination for or against leaving or entering employment, or combination itself for such purposes, shall not be prohibited.

The Maryland statute copies closely that of Great Britain relating to labor combinations. Its provision is as follows: "An agreement or combination by two or more persons to do, or procure to be done, any act in contemplation or furtherance of a trade dispute between employers and workmen shall not be indictable as a conspiracy, if such act, committed by one person, would not be punishable as an offense; nothing in this section shall affect the law relating to riot, unlawful assembly, breach of the peace, or any offense against any person or against property."

Colorado has a somewhat more detailed statute, declaring ordinary strikes and labor combinations lawful, as well as peaceful persuasion of others, but excluding from its scope threats, intimidation, and boycotts. Texas also has a very similar law passed in 1899, which makes it lawful to strike, form labor organizations, or to attempt to induce, by peaceable and lawful means, any person to accept or quit employment, or to refuse to enter employment.<sup>2</sup>

The laws of New York, Montana, Minnesota, and North Dakota declare that it is not a criminal conspiracy to assemble peaceably or to cooperate for the purpose of obtaining an advance in wages or of maintaining wages.

The States already named, and likewise South Dakota, Oklahoma, and Mississippi, have expressly repealed the common law of conspiracy. All of these States, however, have added various definitions of conspiracy, some of which apply to acts of strikers and labor organizations, though not to the mere cessation of employment. These definitions are specially referred to under the head of picketing and intimidation.

**3. Strikes under special circumstances.**—Ordinarily any loss which comes to an employer through the cessation of work by his employees must be borne by him and gives no cause for action. Under certain circumstances, however, where the cessation of employment involves bad faith or results in a specially severe injury to property or in the endangering of life and limb, the courts have held that it is unlawful for employees, individually or collectively, to quit work. The most remarkable case in this direction (which would scarcely be followed by most

simply the good fortune of the one party and the hard luck of the other, and is not the fault of the law.

\* \* \* \* \*

"But while the law certainly does concede to workmen the right to receive as high wages as possible, yet it will not permit them to extort, by threats, intimidation, coercion, interference or molestation, a contract from the master to pay these prices \* \* \*

"If [a workman] agrees to work for a specified time at a specified rate he has no legal right to quit before the expiration of his term of service. The law holds the employer to his side of the contract, and it certainly holds the employee to his."

<sup>1</sup>For fuller digest and quotations see Reports of Industrial Commission, vol. v, pp. 129-132.

<sup>2</sup>The Texas statute, in part, follows (Laws 1899, ch. 153).

SECTION 1. From and after the passage of this act it shall be lawful for any and all persons engaged in any kind of work or labor, manual or mental, or both, to associate together and form trade unions and other organizations for the purpose of protecting themselves in their personal work, personal labor, and personal service in their respective pursuits and employments.

SEC. 2. And it shall not be held unlawful for any member or members of such trade unions or other organization or association, or any other person, to induce or attempt to induce by peaceable and lawful means, any person to accept any particular employment, or quit or relinquish any particular employment in which such person may then be engaged, or to enter any pursuit, or refuse to enter any pursuit, or quit or relinquish any pursuit in which such person may then be engaged. *Provided* That such member or members shall not have the right to invade or trespass upon the premises of another without the consent of the owner thereof.

courts) was decided by the Nebraska supreme court in 1879.<sup>1</sup> In this case journeymen tailors, who had been given out garments to work up, quit and returned the garments in an unfinished state, in which state they were worthless. The court held that this gave a cause for action, not only because of the loss on the goods themselves, but because of the injury to the reputation of the tailor with his customers through failure to deliver finished goods.

Another extreme case is that of the Northern Pacific Railway strike in 1894. Here the Federal circuit court, which was, however, afterwards overruled by the circuit court of appeals, issued an injunction prohibiting the employees of the company "from combining and conspiring to quit, with or without notice, the service of said receivers, with the object and intent of crippling the property in their custody, or embarrassing the operation of the railroad, and from so quitting the service of the said receivers, with or without notice, as to cripple the property, etc." The latter clause of the injunction amounted to a distinct prohibition of concerted or individual cessation of work. Judge Jenkins held that for the great body of the employees to leave suddenly would involve an injury to the company and an interference with the welfare of the public so great as to justify the action taken. He said in this connection: "But it does not follow that one has the absolute right to abandon a service which he has undertaken, without regard to time and conditions. It is absurd to say that one may do as he will without respect to the rights of others. \* \* \* It would be monstrous if a surgeon, upon demand and refusal of larger compensation, could lawfully abandon an operation partially performed, leaving his knife in the bleeding body of his patient. It would be monstrous if a body of surgeons, in aid of such demand, could lawfully combine and conspire to withhold their services. \* \* \* Whether the effect be the destruction of life or the destruction of property, the principle is the same." The court in this case really went far beyond the position that a person may not quit employment with such suddenness or under such extreme circumstances as to greatly endanger the public welfare. In several States railway employees are forbidden to leave their trains before completing a run or in such a way as to endanger passengers. But the decision of Judge Jenkins applied to all cessation of employment, even with notice, and where the result would be only public inconvenience and financial loss, without the possibility of endangering life and limb.

Indeed the judge, perhaps somewhat in the way of an *obiter dictum*, went much further even than this, and practically declared that all strikes, under modern conditions, are illegal. In this connection the point was made that strikers do not actually in good faith quit service, but have the definite intention of going back into employment after, by the temporary cessation, forcing the employer to grant their demands. "The cessation of labor is not a bona fide dissolution of contractual relations and an abandonment of the employment, but is designed as a means of coercion to accomplish the desired result." The abandonment of service, in order to be lawful, must be actual and not pretentious. Moreover the court declared that it is the universal practice of strikers to try to prevent, if necessary by forcible means, others from taking their places. "It is idle to talk of a peaceable strike. None such ever occurred. \* \* \* No strike can be effective without compulsion and force. That compulsion can come only through intimidation."

The circuit court of appeals<sup>2</sup> modified the injunction issued in this case by omitting the part relating to quitting employment in such a way as to embarrass the receivers. The court, by Mr. Justice Harlan, declared that it would be an invasion of one's natural liberty to compel him to work for or to remain in the personal service of another. Nor, in its opinion, were the principles which have always ruled on this subject inapplicable to the case of employees of a railroad company, notwithstanding the injurious effect of simultaneous cessation of work by such employees. The evils of railway strikes, "great as they are, and although arising in many cases from the inconsiderate conduct of employees and employers, both equally indifferent to the general welfare, are to be met and remedied by legislation restraining alike employees and employers so far as necessary adequately to guard the rights of the public. \* \* \* In the absence of legislation to the contrary, the right of one in the service of a quasi public corporation to withdraw therefrom at such time as he sees fit, and the right of the managers of such a corporation to discharge an employee from service whenever they see fit, must be deemed so far absolute" that no injunction to restrict the right can be issued. The court did, to be sure, continue that part of the injunction which prohibited the employees from combining and conspiring to quit with the intention of crippling the property, but it was explained by the court that this prohibition referred primarily to violent interference, intimidation, etc.

<sup>1</sup> Mapstick v. Ramge, 2 N. W. Rep., 739.

<sup>2</sup> Arthur v. Oakes, 63 Fed. Rep., 310, 317, 319.

Perhaps the most important case in upholding the doctrine that employees may not lawfully quit service, especially with railways, under circumstances such as clearly to show bad faith or as to result in special injury, is that of the Toledo, Ann Arbor and Northern Michigan Ry. Co. v. The Pennsylvania Ry. Co. et al.<sup>1</sup> Here an injunction was issued against several railway companies and their employees restraining them from refusing to handle cars from the Ann Arbor road. The question of motive for the refusal of course entered into the case (see below, p. 601); but apparently, aside from the question, the Federal circuit court held, by Judge Ricks, that the employees had no right, individually or collectively, to cease employment without proper notice, especially if the quitting was not a bona fide termination of employment. Several engineers had refused to take out trains at all, and the acts of these were not held to be contempt of court. One engineer, Lennon, however, took out his train as usual. On reaching a certain station, and being told to couple on a car from the Ann Arbor road, he refused to do so and declared that he would quit employment. The court held that the quitting here was virtually a breaking of contract. It is the custom to pay railway employees by the run, and the judge declared that after beginning a run the engineer was virtually under contract to complete it. "Will it be claimed that this engineer and fireman could quit their employment when the train is part way on its route and abandon it at some point where the lives of the passengers would be imperiled and the safety of the property jeopardized? The simple statement of the proposition carries its own condemnation with it." It was also held that Lennon's statement that he would quit employment was not made in good faith, since he remained with his engine, and since, a few hours later, on receiving orders from the union to proceed, notwithstanding the presence of the Ann Arbor cars, he did so. Other expressions of Judge Ricks in this case seemed to imply the possibility that concerted cessation of employment, even under less extreme circumstances than those under which Lennon quit, might be held illegal on account of the interference with commerce and the injury to the property of the railway and of shippers, though an injunction would not issue to prohibit a general strike.

There are numerous statutory provisions as to quitting employment on railways and as to obstruction of transportation. These are summarized in Chapter VIII below.

**4. Strikes with indirect or sinister motives.**—The most controverted questions regarding strikes arise where the motive of the strikers is not purely and simply to improve their own conditions. There are several classes of cases in which such indirect motives enter into the action of strikers. Thus there is the strike or threatened strike to compel the employer to discharge a third person. This is considered in a separate section, but it may be stated here that in this country such action has usually been held illegal by the courts. Again, there may be the refusal to work for an employer who handles the goods of a third person. This is closely allied with the ordinary boycott, or refusal to buy goods on account of the action of the seller, but there is some distinction between the two classes of cases. These acts are also usually held to be unlawful or criminal. Finally, there is the ordinary sympathetic strike.

It is evident that the question of determining the real motive of strikers under these various circumstances, and of judging to what extent they expect themselves to be benefited by their acts, is a very difficult one. On this point Stimson says:<sup>2</sup> "Employees having an undoubted right to strike, it will in many cases be impossible to tell whether they strike simply for the purpose of increasing their own wages \* \* \* or whether they strike in order to injure the employer. All strikes injure the employer somewhat, and employees will naturally and very properly choose a time when press of business or other reasons make a strike peculiarly inconvenient to the employer. In the writer's opinion, this doctrine of malicious intent should, in the case of strikes, be very carefully restricted; where it is clear that the strikers did have a legitimate object at all, such as the increasing their own wages, it does not seem the court should go into the analysis of possible other motives. In the case of boycotts it is otherwise."<sup>3</sup>

<sup>1</sup> 54 Fed. Rep., 730

<sup>2</sup> Handbook to Labor Law, 211

<sup>3</sup> Mr. Stimson's further discussion as to strikes of this general character is interesting:

"But the most difficult case of all to decide is that of a strike carried on by employees with a motive of benefiting themselves in some way, but where the immediate object is to force the employer to adopt some definite line of action, either toward them or in the conduct of his own business, or toward third persons. In the first case, when the object desired is merely to alter his treatment of the striking employees themselves, it is clear that the object is a benefit to them, or deemed by them to be a benefit, and it is consequently lawful. The second case is more doubtful. If there be no element of a boycott in the case, but still the strikers desire to molest the employer or control his action in some way, the end in view is, under the decision in *State v. Stewart*, unlawful. Take, for

The case of the sympathetic strike, pure and simple, has apparently never been before the higher courts. The sympathetic strike, however, is closely related to the action of employees in some of the recent great railway strikes, in refusing to haul trains to which certain cars, belonging to companies whose employees were on strike, were attached. This case is complicated by the element of boycott, as well as by the element of interference with interstate commerce. The case of the Ann Arbor Railroad, already referred to, was the first in which it was strongly held that the employees of a railway could not lawfully quit employment because the railway sought to compel them to haul cars from another road on which a strike was in force. We have already seen that in the actual punishment for contempt of court in that case the act of quitting employment which was condemned took place under special circumstances. The injunction order issued, however, had been much more general, and had prohibited the different companies, their employees and servants, from refusing to receive and deliver cars of interstate freight from the Ann Arbor road, as they were required to do under the interstate-commerce act. Judge Taft said in regard to this order that the employees might avoid the injunction by quitting employment, but that quitting under such circumstances would be civilly unlawful and even criminal. While ordinarily a man may quit service when he pleases, if not in violation of contract, "if he uses the benefit which his labor is or will be to another, by threatening to withhold it or agreeing to bestow it, or by actually withholding or bestowing it, for the purpose of inducing, procuring, or compelling that other to commit an unlawful or criminal act [such as the refusal to haul interstate traffic], the withholding or bestowing of his labor for such a purpose is itself an unlawful and criminal act." The fact that the employees concerned were not seeking to benefit themselves directly was pointed out especially, the court holding that their motive was maliciously to injure the Ann Arbor Company. As to the propriety of this point of view Cooke expresses the following opinion:

"The question is whether the intent was to do anything unlawful. Stress was laid on the circumstance that the employees taking such action 'were not dissatisfied with the terms of their employment.' But the point was, not what were their relations to their immediate employers, but what to the boycotted company. Was not their interest as members of a large labor organization sufficient to justify the boycott, because of the refusal of the boycotted company to discharge persons objectionable to them as not being members of the union?"<sup>1</sup>

Several of the cases arising out of the Pullman strike involved questions similar to those in the Ann Arbor case. (See post, p. 600.) It was not merely held unlawful to interfere with interstate commerce by violence and intimidation, or by refusal to haul cars while continuing in employment, but it was further held, at least in the case of *Thomas v. Cin., N. O. and T. P. R. R.*,<sup>2</sup> that the concerted action of the employees of a railway company in quitting for the sake of compelling the Pullman Company to grant the demands of its employees was in itself an unlawful conspiracy. "It is the motive for quitting, and the end sought thereby, that made the injury inflicted unlawful."

instance, the case of a conspiracy to strike unless the employer manufactured one kind of goods rather than another. Here there is no element of injury to third persons, and it would seem, perhaps, hard to say that the employees might not agree to leave their employment in a kind of work which they did not prefer. As the law now stands, however, we have to call such a strike a combination technically unlawful, though, it may be doubted whether an American court would ever go so far in an actual case. But the third case, where the strikers seek to control the employer in his action concerning third persons, and to their injury, presents no doubt. The best possible illustration of this is a strike against an employer to force him not to employ nonunion men. There can be no doubt that in the absence of statutes, such as have been recently passed in England, such a strike, if evidenced by any letter or communication threatening the employer with the strike in case he did not cease to employ nonunion men, would be a criminal conspiracy. Of course, if the strikers simply left, without making any threat or giving any reason, it might be impossible to get evidence that such was their object. The threat of a strike may well be unlawful when the strike itself is not."

<sup>1</sup> Cooke, Trade and Labor Combinations, sec. 12, p. 55, note.

<sup>2</sup> 42 Fed. Rep. 803.

## CHAPTER IV.

## ENTICEMENT OF EMPLOYEES.

1. **Statutory provisions.**—By the statutes of several States it is illegal for any person to entice an employee away from his employer. This was the old common-law doctrine, but in the absence of statute would probably scarcely be applied by the American courts to-day.

The American statutes on this subject are confined to the Southern States and apply only in the case of the enticement of persons under contract for employment.<sup>1</sup> Often they are combined with prohibitions direct against the breaking of the contract of labor by the employee.

In most of the States the act of enticement is a misdemeanor, but in one or two it gives the employer a right of action. These statutes are apparently specially designed to prevent the enticement of negro farm laborers who have contracted for work throughout the season.

In addition to statutes of this type there are found in a large number of States statutes prohibiting interference with the employment of any person by intimidation or force. While these, in general, have no reference to collective action, they may sometimes be applied to restrain the action of strikers. So far as this is the case, they will be more fully considered under the head of picketing and intimidation.<sup>2</sup>

2. **Common law and court decisions.**—The old common-law doctrine with regard to enticing an employee away from his employer is thus stated by Mr. Cooke:

"We find the prevailing rule to be that 'any person who knowingly entices away the servant of another and thereby induces him to violate his contract with his master, or who thereby deprives the master of the services of one then actually in his service, whether under a contract to serve or not, is liable to the master for his actual loss therefrom.'"

Commenting upon this doctrine, Cooke says:

"We understand the origin of this anomalous doctrine on learning that at the time of such origin servants were in effect, if not in a strict legal sense, serfs or slaves, so that an inducement to leave one's employment was not a mere inducement to refuse to continue to deal, but was an interference with a chattel belonging to the employer, being thus tantamount to trespass or larceny. If such inducement is wrongful when the act of a single individual, it is, according to authorities already considered, a fortiori wrongful when done in pursuance of a combination to do such act. \* \* \*

"There is doubtless a growing consciousness in the judicial mind that a doctrine so anomalous, and originating in conceptions of social relations that are utterly repugnant to those now prevailing, is ill adapted to present conditions."<sup>3</sup>

The leading case in the United States as to the illegality at common law of acts of combinations of workmen in persuading others to quit their employment is that of *Walker v. Cronin*, decided by the supreme court of Massachusetts in 1871.<sup>4</sup> In this case the workmen concerned were under contract with the complainants. The defendants, while knowing of this contract, "with the unlawful purpose of hindering the complainants from carrying on their business, induced said persons to refuse and neglect to perform their contract, whereby the complainants suffered great damage in their business." It appears also that the court held illegal the act of persuading persons who were about to enter the employment of the complainants to refrain from doing so. The ground was the interference with the business of the complainants.

Another early case, somewhat similar to that of *Walker v. Cronin*, in the same State, was *Carew v. Rutherford*.<sup>5</sup>

The court held that "a conspiracy to obtain from a master mechanic, whose business requires the employment of workmen, money which he is under no legal liability to pay, by inducing or threatening to induce workmen to leave his employ-

<sup>1</sup> These statutes are: Kentucky, General Statutes, sec. 1349, Arkansas, Digest, sec. 4792, Louisiana, Acts of 1890, chap. 138, South Carolina, Criminal Law, sec. 291, Georgia, Code, sec. 4500, Tennessee, Code, secs. 3438, 3439, North Carolina, secs. 3119, 3120, Mississippi, sec. 1068, Florida, sec. 2405; Alabama, secs. 3757-3761.

<sup>2</sup> For fuller account of these laws see Reports of Industrial Commission, vol. v, pp. 68-74.

<sup>3</sup> Cooke, Labor Combinations, sec. 10.

<sup>4</sup> 107 Mass., 555.

<sup>5</sup> 106 Mass., 1, see Stimson, Handbook to the Labor Law, p. 251.

ment, and deterring or threatening to deter others from entering it, so as to render him reasonably apprehensive that he can not carry on business without making the payment, is illegal; and in an action of tort he may recover the sum so paid, and damages for the injury of his business by the acts of the conspirators." The facts were that the defendants extorted from the plaintiff a fine of \$500 for employing workmen in New York, although he was unable to procure workmen to do that particular work in Boston; and he was compelled to pay the fine, because, after the withdrawal of the defendants, he could not procure other stonecutters, not members of their association, who had sufficient skill to carry out the contract in hand.

In *Old Dominion S S Company v. McKenna et al.*,<sup>1</sup> a Federal court held that the inducement of employees to quit work, without sufficient cause, is illegal. "The facts stated in the complaint and affidavit constitute a legal cause of action against all the defendants, for the actual damages suffered, for the following reasons: (a) The plaintiff was engaged in the legal calling of a common carrier, owning vessels, lighters, and other craft used in its business, in the employment of which numerous workmen were necessary, who, as the complaint avers, were employed 'upon terms as to wages which were just and satisfactory.' (b) The defendants, not being in plaintiff's employ, and without any legal justification, so far as appears, a mere dispute about wages, the merits of which are not stated, not being any legal justification, procured plaintiff's workmen in this city and in southern ports to quit work in a body, for the purpose of inflicting injury and damage upon the plaintiff until it should accede to the defendant's demands, and pay southern negroes the same wages as New York longshore-men, which the plaintiff was under no obligation to grant; and such procurement of workmen to quit work being designed to inflict injury on the plaintiff, and not being justified, constituted in law a malicious and illegal interference with the plaintiff's business, which is actionable."

This case approaches toward a declaration that the sympathetic strike is illegal, although the defendants were not the employees of the steamship company, but others who induced them to quit work. Some of the wide-reaching injunctions issued by the Federal courts in recent strike cases have prohibited interference with persons remaining in employment not only by threats and intimidation, but even by persuading them to quit work. This was true, for instance, of the famous *Debs* injunction. (See *post*, p. 599.)

It seems probable, however, that the courts would not usually at the present time hold mere peaceful persuasion to quit employment under ordinary circumstances, and especially where no contract exists, to be unlawful. The recent cases which have actually come before the courts have usually been those in which a certain degree of coercion, by intimidation or force, was alleged to have been employed to prevent persons from continuing in or from entering employment. Cases of this kind are considered under the head of picketing.

A leading case in which the legality of peaceful persuasion to strike is upheld is that of *Johnston Harvester Co. v. Menhardt et al.*,<sup>2</sup> decided by the supreme court of Michigan in 1880. The facts showed a combination of the defendants and an enticement by them of laborers from the plaintiff's shops, and of others who were about to enter the employ of the plaintiff, by means of arguments, persuasion, and personal appeals, accompanied by payment of traveling expenses to other localities. The court said: "There being in this case no sufficient evidence of violence, force, intimidation, or coercion on the part of the defendants against the plaintiff's laborers, the learned counsel for the plaintiff is forced to and does take the position that a confederation of persons to entice away workmen or servants from the plaintiff's employ is an unlawful act, and may be restrained by injunction."

"I am disinclined to extend, by any judgment of mine, the doctrine of recovery for enticing away servants where, both in fact and theory, the person enticed is a free agent to come and go as he will, responsible only, like other persons, for the violation of his contract or his duty. \* \* \* It would seem that the wisest rule of political economy would demand that there should be no legislation upon this subject beyond preserving both employer and employed against violence and breaches of the peace, or acts in the nature of trespass, which have a tendency to bring about breaches of the peace."

A New York decision by one of the intermediate courts also distinctly denies that the common law regarding liability for enticing away servants is still in force in New York. The plaintiff sought an injunction to prohibit members of a trade union from persuading persons in the plaintiff's employ to quit. The court

<sup>1</sup> 130 Fed. Rep., 18, 19.

<sup>2</sup> 40 How. Pr., 108.

refused the injunction, saying, "But this doctrine, although never overruled, has never, to my knowledge, been explicitly held in the courts of this State. I am not satisfied with the reason of the rule. In the case of no other contract does a man render himself liable as for tort by inducing its violation by persuasion. I can see no reason why the contract of service should be made an exception. The servant is the equal in law of the master. He contracts with the master upon equal footing. Under the old common law, the servant's position was quite different. His position was more that of a slave. With the advance of civilization the reason for the rule has entirely passed away. It is, at least, a matter of grave doubt whether such right of action will ever be sustained in this State."<sup>1</sup>

Notwithstanding this decision and others of similar tenor in New York, we find lower courts from time to time restraining peaceful methods of encouraging men to strike or to refrain from seeking employment. Such a case of restriction of the members of trade unions in furthering strikes was that in connection with the strike of the cigar makers in New York City during the year 1900. Judge Freedman, of the supreme court of New York County, issued a restraining order which not only prohibited picketing in every form, but forbade the members and officers of the various trade unions concerned to pay, or promise to pay, to any former employee of the plaintiffs any sum of money for the purpose of inducing them to refuse to enter plaintiff's employment, or to pay to any former employee any sum for the purpose of continuing concerted action on the part of the former employees. This seemed to prohibit ordinary strike benefits. Mr. Justice Andrews, however, in special term of the supreme court, refused to extend this injunction, holding that it was legitimate for the strikers to pay money for the sake of making the strike successful.

A very recent decision of the New Jersey court of chancery clearly upholds the right of workmen to persuade others to strike. This, however, was under the statute of that State which specifically legalizes combinations of workmen and persuasion to strike.<sup>2</sup>

**3. Acts of officers of trade unions and others in abetting strikes.**—Several important recent cases have involved the question as to the legality of acts of trade union officers and other leaders in aiding and abetting strikes. Where the courts have held strikes themselves unlawful, it has naturally followed that they have considered the acts of leaders in promoting the strikes as unlawful. Such decisions have been especially numerous in railroad cases. Thus, in the *Ann Arbor* case, the *Northern Pacific* case, and the cases growing out of the *Pullman* strike, above referred to, the officers of labor organizations were enjoined from issuing orders to strikers and from advising them to strike or to do other forbidden acts. It seems, moreover, that in the case of the *Northern Pacific* strike the circuit court of appeals, while overruling that part of the injunction issued by Judge Jenkins which prohibited the employees from a concerted quitting of employment, did not overrule that part which prohibited the officers of the railway organizations from directing the employees and issuing orders regarding the strike.<sup>3</sup> The circuit court of appeals scarcely presented an entirely clear statement as to what it considered the law in the case, but apparently this part of the injunction was allowed to stand regardless of the element of motive. Further discussion of these railway cases is given in the chapter on railway strikes, below.

## CHAPTER V.

### COMBINATIONS TO PROCURE DISCHARGE OR PREVENT EMPLOYMENT.

**1. American decisions holding such combinations unlawful.**—A very common form of the action of employees, especially of those belonging to trade unions, is a demand for the discharge of certain other, to them obnoxious, employees, or a demand that such persons shall not be employed. Such action is usually taken against nonunion men. We have seen in another connection that many trade unions, where they are sufficiently strong, refuse to allow their members to work in the same establishments as nonunion men (see summary, Chapter I). Either by actually quitting work in case of the employment of such men or by threatening to quit work or in

<sup>1</sup> *Rogers v. Everts*, supreme court, special term, Broome County, 1891, 17 N. Y. Supp., 267.

<sup>2</sup> *Cumberland Glass Manufacturing Company v. Glass Blowers' Association*, 46 Atlantic Reporter, 208.

<sup>3</sup> *Farmers' L. & T. Co. v. Northern Pacific R. R. Co.*, 60 Fed. Rep., 803.

some other way influencing the employer, they endeavor to secure the discharge or prevent the employment of nonunion men. Occasionally similar methods are employed against members of competing unions in the same trade, or of unions in allied trades seeking to do work claimed by the complaining union as within its exclusive sphere. Attempts of this sort to exclude men from employment bear a resemblance to the boycott in some regards and are sometimes called by that name. The arguments of unionists in favor of such an exclusive policy have also been summarized.

Such action has been frequently held illegal by the courts, both in this country and in England. In fact, in the United States, the decisions have in a large majority of cases condemned combinations to procure the discharge or prevent the employment of third persons. Certain decisions have held them to be criminal conspiracies.<sup>1</sup> The principle relied on in these decisions has been that such combinations involve an intent to injure either the employer or the employee against whom the action was directed, or both. In other cases such action has been held to render those engaged liable in civil damages to the employer on account of the injury to his business,<sup>2</sup> or to the employee on account of the injury in preventing him from securing employment.<sup>3</sup>

One of the leading American cases as to the illegality of combinations to secure the discharge or prevent the employment of third persons is *State v. Stewart*,<sup>4</sup> decided by the supreme court of Vermont in 1887. The facts were that the defendants, members of a trade union, undertook to prevent the employment of certain granite cutters by the Ryegate Granite Works. They threatened the company that the works would be declared "scab" works, and threatened the workmen that they would be considered scabs and would have their names published in the scab list in the Granite Cutters' Journal. There does not seem to have been any direct threat to strike, nor does it appear that the persons especially concerned in the interference were themselves employees of the Ryegate Granite Works. The court held this action to be a criminal conspiracy under the English and American common law. "No employer can say to a workman he must not work for another employer, nor can a workman say to an employer he can not employ the service of another workman. \* \* \* The principle upon which the cases, English and American, proceed, is that every man has a right to employ his talents, industry, and capital as he pleases, free from the dictation of others; and, if two or more persons combine to coerce his choice in this behalf, it is a criminal conspiracy. The labor and skill of the workman, be it of high or low degree, the plant of the manufacturer, the equipment of the farmer, the investments of commerce, are all in equal sense property. \* \* \* Suppose the members of a bar association in Caledonia County should combine, and declare that the respondents should employ no attorney not a member of such association to assist them in their defense in this case, under the penalty of being dubbed a "scab" and having his name paraded in the public press as unworthy of recognition among his brethren, and himself brought into hatred, envy, and contempt, would the respondent look upon this as an innocent intermeddling with their rights under the law? The proposition has only to be stated to disclose its utter inconsistency with every principle of justice that permeates the law under which we live."<sup>5</sup>

Another interesting case is that of *Curran v. Galen*, decided by the New York court of appeals in 1897.<sup>6</sup> The defendants were held liable in damages for having induced a brewing company to discharge the plaintiffs. They had set up as a defense the fact that the Brewery Workmen's Assembly in the city of Rochester

<sup>1</sup>*State v. Glidden*, 8 Atl. Rep., 890, *State v. Stewart*, 9 Atl. Rep., 559, *State v. Dyer*, 32 Atl. Rep., 814. One of the earliest of such cases is *State v. Donldson*, decided in New Jersey in 1867 (32 N. J. Law, 151). The supreme court of New Jersey have very little doubt of the law, but are at some trouble not to expressly differ from the Massachusetts case of *Commonwealth v. Hunt* (see below). The indictment in the New Jersey case alleged that the defendants, being journeymen workmen employed by Ward and others in making patent leather, maliciously, to control, injure, terrify, and impoverish their employers and force them to dismiss from their employment certain persons, to wit, Charles Beggan and William Frendegast, and to injure said Charles and William, unlawfully did conspire, etc. The court held that it did not come within the express language of the New Jersey statutes aimed at the conspiracies to the injury of trade, but that the conspiracy was criminal under the common law, as an unwarrantable attempt to control the plaintiff in his business and to the oppression of the obnoxious workmen.

<sup>2</sup>*Carew v. Rutherford*, 106 Mass., 1. See above.

<sup>3</sup>*Lucke v. Clothing Cutters' Assembly*, 26 Atl. Rep., 505. In this case the employer was notified by a labor union that if he retained the plaintiff in his employ all labor organizations in the State would be notified that his house was a nonunion one. See also *Perkins v. Pendleton*, 38 Atl. Rep., 96 (Maine), where the circumstances were very nearly the same as in the case of *State v. Stewart*. In *Curran v. Galen*, discussed in the text, damages were also granted to the employee.

<sup>4</sup>9 Atl. Rep., 559, 566-568.

<sup>5</sup>*State v. Dyer*, 32 Atl. Rep., 814, also decided by the supreme court of Vermont, the facts were almost precisely the same as in *State v. Stewart*, and an indictment was upheld.

<sup>6</sup>46 N. E. Rep., 297, 298.

had a contract or agreement with the Ale Brewers' Association that all of the brewing companies should employ only members of the trade union, and that no employee should work longer than 4 weeks without becoming a member. The court held that this agreement itself was unlawful and could not be pleaded as a defense. This is especially significant in view of the fact that large numbers of trade unions in various branches of industry have such agreements with employers for the exclusive employment of union men. The court said: "Public policy and the interest of society favor the utmost freedom in the citizen to pursue his lawful trade or calling, and if the purpose of an organization or combination of workmen be to hamper or to restrict that freedom, and, through contracts or arrangements with employers to coerce other workmen to become members of the organization and to come under its rules and conditions, under the penalty of the loss of their positions and of deprivation of employment, then that purpose seems clearly unlawful and militates against the spirit of our government and the nature of our institutions."

*Fischer v. State*<sup>1</sup> was a case under the statute of Wisconsin prohibiting the use of threats and intimidation or coercion to prevent any person from engaging in a lawful work or employment. The persons concerned were union men, and it was charged that, in the presence of certain nonunion men, they declared that the building upon which the latter were employed could never be constructed—that construction would be fought all summer. The supreme court held that this was sufficient to uphold the indictment.

In two or three cases where the courts have held combinations to compel the discharge of employees or to prevent their employment to be illegal, the matter has been complicated by the employment of the boycott as a means of enforcing the demand. As we shall see, boycotts are themselves frequently declared illegal, regardless of the purpose sought by those instituting them. In the leading case of *State v. Glidden*,<sup>2</sup> decided by the supreme court of errors of Connecticut, in 1887, an indictment was upheld which charged conspiracy to compel a publishing company to discharge its workmen and to employ such persons as the defendants and their societies should name and to injure the workmen concerned. The method pursued was primarily that of endeavoring to persuade patrons of the publishing company to withhold their patronage. The decision of the court laid stress upon the illegality of the attempt to dictate to the employing company how it should conduct its business. The court also declared that it was a criminal act to interfere with the employment of workmen. "The workmen named have just as good a right to work for the corporation as the defendants have, and their right is entitled to the same consideration and the same protection. \* \* \* It is proposed wantonly to deprive [them] of a livelihood, and practically of all means of support."

Another case along the same line is that of *Beck v. Railway Teamsters' Protective Association*.<sup>3</sup> Here employees used the boycott and the picket in pursuance of their attempt to compel the plaintiff to discharge his nonunion men. An injunction was issued restraining them from all these practices.

2. *American cases denying illegality of such combinations.*—While there are thus numerous decisions affirming the illegality of acts of the kind under consideration, there are also a number of decisions on the other side. An early American case which took this position was that of *Commonwealth v. Hunt*,<sup>4</sup> decided by Chief Justice Shaw, of Massachusetts, in 1842. The indictment in this case charged certain boot makers with entering into an agreement not to work for any master who should employ a workman not belonging to their society after notice given him to discharge such workman. In pursuance of this agreement they compelled one Wait to turn out of his employment one Horne, because Horne would not pay a sum of money due to the society as a penalty. The grounds on which the indictment was held insufficient are not clear, but the court used the language that it is a legal right of persons to "form themselves into a society and agree not to work for any person who should employ any journeyman or other person not a member of such society after notice given him to discharge such workman."

Almost the only recent case which has been decided, under common law, by a court of last resort in the United States in conformity with the decision in *Commonwealth v. Hunt* is that of *Clemitt v. Watson*,<sup>5</sup> decided by the appellate court of Indiana in 1895. In this instance certain workmen in a coal mine actually quit work in order to compel an employer to discharge Watson. In the lower

<sup>1</sup> 76 Northwestern Reporter, 594.

<sup>2</sup> 48 Atl. Rep., 890, 895.

<sup>4</sup> 7 N. W. Rep., 13.

<sup>5</sup> 4 Met., 111.

court he recovered damages by reason of being thrown out of work. The appellate court reversed this decision. It said: "The right to control his own labor, and to bestow it or withhold it where he will, belongs to every man. \* \* \* Each one could have quit without incurring any civil liability to him. What each one could rightfully do certainly all could do if they so desired, especially when their concerted action was taken peaceably, without any threats, violence, or attempts at intimidation. There is no law to compel one man or any body of men to work for or with another who is personally obnoxious to them. \* \* \* Under our law, every workman assumes many risks arising from the incompetency or negligence of his fellow-workmen. It would be an anomalous doctrine to hold that, after his fellows have concluded that he was not a safe or even a desirable companion, they must continue to work with him, under the penalty of paying damages if, by their refusal to do so, the works are for a time stopped and he thrown out of employment."

The criminal court of Cook County, Ill., has recently decided that a state of facts essentially similar to that in the Indiana case did not constitute criminal conspiracy under the statute of that State.<sup>1</sup> The defendants threatened to call off union men unless two nonunion men were discharged. The statute defines conspiracy to be "combination with a fraudulent or a malicious intent wrongly and wickedly to injure," etc. The court held that while the intent in this case might be malicious, the means were not, as required by the statute, themselves wrongful and wicked.

The statutes of various States legalizing labor combinations have been referred to in some decisions as upholding efforts to prevent the employment of nonunion men. Thus the supreme court of New Jersey took such a position in *Mayer v. Stonecutters' Association*.<sup>2</sup> In this case all the members of the Master Stonecutters' Association of the city of Newark, together with two workmen, filed a bill against the Journeymen Stonecutters' Association, praying that the association be required to admit the two workmen and all other journeymen stonecutters in Newark as members, upon payment of the customary dues and compliance with the by-laws, and that the association, its officers, and all connected therewith be enjoined from denouncing the two workmen in question as "scabs" or in any manner persecuting or injuring them, and that the association be enjoined from attempting to coerce or intimidate the master stonecutters from employing the two workmen or any other skillful journeymen, whether members of the union or not.

From the statement of the facts by the courts it appeared "that under the practice and regulations of the association, [the] 'shop steward' is required immediately to order a strike of all the workmen in any shop, if the employer allows any journeyman to work, unless he produces a card of the association showing that he is a member thereof in good standing, and, if such strike should prove inefficient, it is the policy and practice of the association to coerce the employer further, by boycotting and other alleged unlawful deeds; that in the month of May, 1889, or about that time, the association by resolution determined to admit no more members for the space of one year, thus excluding from employment all stonecutters seeking work not already admitted to membership."

Regarding the rights of labor organizations to make such by-laws and rules for admission, the court said: "These organizations are formed for purposes mutually agreed upon; their right to make by-laws and rules for the admission of members and the transaction of business is unquestionable. They may require such qualifications for membership, and such formalities of election, as they choose. They may restrict membership to the original promoters, or limit the number to be thereafter admitted. The very idea of such organizations is association mutually acceptable, or in accordance with regulations agreed upon. A power to require the admission of a person in any way objectionable to the society is repugnant to the scheme of its organization."

The decision of the court in this case was influenced by the New Jersey statute, legalizing labor combinations. This act<sup>3</sup> provides: "It shall not be unlawful for any two or more persons to unite, combine, or bind themselves by oath, covenant, agreement, alliance, or otherwise to persuade, advise, or encourage, by peaceable means, any person or persons to enter into any combination for or against leaving or entering into the employment of any person or persons or corporations;" by this provision, says the court, "the policy of the law, with reference to such combinations, was revolutionized, and what, before that time, would have been held to be an unlawful combination and conspiracy became, in this state a lawful association, and acts which had been the subject of indictment became

<sup>1</sup> *People v. Davis et al.*, Chicago Legal News, vol. 30, p. 212.

<sup>2</sup> 20 Atl. Rep., 192-194.

<sup>3</sup> Supp. Rev., p. 774, § 30.

inoffensive to any provision of our law. Nothing has been proved in this case to warrant a finding that the defendants have done or threatened aught that is not legalized by this act of the legislature. It is true that much of intent is charged in the bill which might overstep the boundary line defined by the law, but there is no evidence to sustain the assumption that any unlawful act to the injury of the complainants' rights of property is threatened by the defendants. They have agreed not to work with any but members of their association, and not to work for any employer who insists on their doing so, by withdrawing from his employment; so long as they confine themselves to peaceable means to effect these ends, they are within the letter and spirit of the law, and not subject to the interference of the courts. These considerations result in the conclusion that this court has no jurisdiction to grant the relief prayed for, and that the bill must be dismissed."

Several recent decisions by the courts of New York City (the supreme court) have also upheld the right of unionists to refuse to work with nonunionists. New York has a statute somewhat similar to that of New Jersey, but it was not specially referred to in the decisions. Judge Giegerich, in *Tollman v. Gaillard* (1899), upheld the action of the United Brotherhood of Carpenters and Joiners in striking to compel the replacement of members of another carpenters' organization by their own members. The appellate division of the supreme court made a similar decision in *Davis v. United Portable Hoisting Engineers*.<sup>1</sup> The court said: "But there can be no doubt that members of trades unions, as well as other individuals, have a right to say that they will not work with persons who do not belong to their organizations; and whether they say it themselves, or through their organized societies can make no difference."

Another action in some respects similar to the above was that of the Reform Labor Club of Masons and Plasterers' Laborers of Manhattan borough, New York City, against Delegates Connaughton and Mazza, of the General Council Laborers' Union Protective Society. The latter organization was formed in 1843, is large in membership, and has an annual agreement with the Mason Builders' Association, while the Reform Labor Club was instituted in 1899. Rivalry and competition exist between the two. It was charged by the plaintiff club that the officials named were responsible for the nonemployment of members of that club, in having persuaded employers to refuse to give them work; but Justice Leventritt, of the New York County supreme court, before whom the cause was argued, found no evidence of unlawful acts by the defendants, and therefore declined to grant relief by injunction to the Reform Labor Club, the court being of the opinion that "employers may legally refuse to employ men who belong, or who do not belong, to a particular organization, and one who merely induces an employer to act accordingly is not guilty of a wrongful or illegal act."<sup>2</sup>

The court quotes the decision of the House of Lords of February, 1898, in affirming the right of unionists to refuse to work with nonunionists. (See *Allen v. Flood*, below.)

The most recent decision of the New York courts on this subject was rendered by the appellate division of the supreme court, in July, 1900, in the case of *National Protective Association v. Cumming*.<sup>3</sup> One McQueed had sought to join the Enterprise Association of Steam and Hot-Water Fitters, but had been unable to pass the required examination. In connection with others he organized the plaintiff association. The Enterprise Association refused to permit its members to work upon any job where the members of the plaintiff organization were employed. The only question before the court was as to the legality of this refusal, and the court declared that it was legal: "It can not be seriously questioned but that every workman has the right, in the first instance, to say for whom and with whom he will work. \* \* \* And if one has this right, acting

<sup>1</sup>28 App. Div., 396, 398.

<sup>2</sup>Bulletin, New York Bureau of Labor Statistics, June, 1900, p. 159.

Another case involved President O'Leary, Delegate Seales, and other officials of the New York Stone Workers and Hand Rubbers' Union. Before Justice Jenks, in the Kings County supreme court, they were accused by Jacob Hanz, a nonunion man, with conspiring to prevent him from obtaining work, compelling his discharge by Boeff & Co., of Brooklyn borough, New York City, and with refusing him admittance to the union. The plaintiff sought an injunction to restrain the defendants from committing alleged unlawful acts in interfering with him in securing or continuing employment. It was admitted by the defendants that their members did not desire to continue work with the plaintiff, but that his discharge was not demanded by them. Justice Jenks held: "There is no question of any contract right or the violation thereof presented before me. The organization or cooperation of workmen is not itself counter to public policy, but has received the sanction of statute and of judge-made law. I know of no law that compels any man or any association of men, against his or its will, to work for any employer. Were there such law, it would be a law for serfs and slaves. If a man is not compelled to work, then he may quit work, and that for any good and sufficient reason as it may appear to him."

<sup>3</sup>53 App. Div., 227, 231, 232.

in his individual capacity, he does not lose it when acting with others, clothed with an equal right, so that employers may combine and say they will not employ persons who are members of labor organizations, and laborers may combine and say that they will not work for employers who engage any but members of labor organizations. \* \* \* It can not be questioned but that one may, by lawful means, obtain employment either for himself or another. He may procure the discharge, by lawful means, of another person in order that he may obtain employment, either for himself or another." The court quoted the case of *Allen v. Flood* with approval. It endeavored to distinguish the circumstances in the case at bar from those in *Curran v. Galen*, above described, by saying that in the earlier case the defendants sought to prevent the plaintiff altogether from obtaining employment and prosecuting his livelihood, while the Enterprise Association in the present case did not try to prevent the members of the plaintiff organization from getting work, except in places where its own members were employed.

None of these recent cases in New York has been carried to the court of appeals, the ultimate authority, and it is uncertain whether it would still maintain the doctrine of *Curran v. Galen*, that such exclusive action of unionists is unlawful.

3. *The English case of Allen v. Flood.*—The decision of the House of Lords in the case of *Allen v. Flood*,<sup>1</sup> 1898, has probably definitely settled the law in Great Britain to the effect that it is lawful for employees to quit work, or to threaten to quit work, with the intention of compelling an employer to discharge persons obnoxious to them. This case went directly contrary to the decision in *Temperton v. Russell* (Queen's Bench division, 1893), and to various other earlier English decisions. It is held, however, by some of the learned judges in *Allen v. Flood* that their decision is, after all, in conformity with the most authoritative earlier precedents. While several of the law lords dissented from the prevailing opinion, fully two-thirds of them were agreed as to the legality of the acts in question.

The facts material to this appeal were as follows: "In April, 1894, about 40 boilermakers, or 'iron-men' were employed by the Glengall Iron Company in repairing a ship at the company's Regent dock in Millwall. They were members of the boilermakers' society, a trade union, which objected to the employment of shipwrights on ironwork. On April 12 the respondents, Flood and Taylor, who were shipwrights, were engaged by the company in repairing the woodwork of the same ship, but were not doing ironwork. The boilermakers, on discovering that the respondents had shortly before been employed by another firm (Mills & Knight) on the Thames in doing ironwork on a ship, became much excited and began to talk of leaving their employment. One of them, Elliott, telegraphed for the appellant, Allen the London delegate of the boilermakers' society. \* \* \* Allen then had an interview with Halkett, the Glengall company's manager, and Edmonds the foreman, and the result was that the respondents were discharged at the end of the day by Halkett." The threat that the members of the boilermakers' society would be "called out" was used in the interview.

We have already noted, in another connection, that the House of Lords held that the question of malicious intent of the Boilermakers and of Allen could not be considered as an element in determining civil liability.<sup>2</sup>

The majority of the judges further ruled in the most unequivocal way that every workman has an absolute right to quit work for any cause which seems to him sufficient, and to give notice to the employer of his intention. Thus Lord Watson said:<sup>3</sup> "It is, in my opinion, the absolute right of every workman to exercise his own option with regard to the persons in whose society he will agree or continue to work. It may be deplorable that feelings of rivalry between different associations of working men should ever run so high as to make members of one union seriously object to continue their labor in company with members of another trade union, but so long as they commit no legal wrong, and use no means which are illegal, they are at perfect liberty to act upon their own views. \* \* \*

"Not only so; they were, in my opinion, entitled to inform the Glengall Iron Company of the step which they contemplated, as well as of the reasons by which they were influenced, and that either by their own mouth, or, as they preferred, by the appellant as their representative. \* \* \* It was clearly for the benefit of the employers that they should know what would be the result of their retaining in their service men to whom the majority of their workmen objected; and the giving of such information did not, in my opinion, amount to coercion of the employers, who were in no proper sense coerced, but merely followed the course which they thought would be most conducive to their own interests."

<sup>1</sup> L. R., 1898, 2 A. C., 1.

<sup>2</sup> See p. 557.

<sup>3</sup> Loc. cit., pp. 98, 99.

Similarly Lord Shand said:<sup>1</sup>

"A servant is surely entitled, for any reason sufficient in his judgment, or even from caprice, I should say, to resolve that he will no longer continue, after the expiry of a current engagement, in service with another servant in the same employment. This being unquestionable, the only limitation on his right to act is that he must not use unlawful means to induce his employer to dispense with the services of his fellow-servant. \* \* \*

"In the like manner, and to the same extent as a workman has a right to pursue his work or labor without hindrance, a trader has a right to trade without hindrance. That right is subject to the right of others to trade also, and to subject him to competition—competition which is in itself lawful, and which can not be complained of where no unlawful means (in the sense I have already explained) have been employed. The matter has been settled in so far as competition in trade is concerned by the judgment of this House in the *Mogul Steamship Company case*. (1892, A. C. 25.) I can see no reason for saying that a different principle should apply to competition in labor. In the course of such competition, and with a view to secure an advantage to himself, I can find no reason for saying that a workman is not within his legal rights in resolving that he will decline to work in the same employment with certain other persons, and in intimating that resolution to his employer."

Lord Herschell declared that it was not unlawful for a man to persuade another to do a lawful act with the purpose of benefiting himself at the expense of a third person.<sup>2</sup> "The law certainly does not profess to treat as a legal wrong every act which may be disapproved of in point of morality; but, further, I can not agree that all persuasion where the object is to benefit the person who uses the persuasion at the expense of another is morally wrong. Numberless instances might be put in which such persuasion, which is of constant occurrence in the affairs of life, would not be regarded by anyone as reprehensible. \* \* \*

"If the judgment under appeal is to stand, and the fact that the act procured was unlawful as being a breach of contract be immaterial, it follows that every person who persuades another not to enter into any contract with a third person may be sued by that third person if the object were to benefit himself at the expense of such person. \* \* \*

"I do not think it possible to maintain such a proposition. It would obviously apply where one trader induced another not to contract with a third person with whom he was in negotiation, but to make the contract with himself instead, a proceeding which occurs every day, and the legitimacy of which no one would question."

Further questions raised in the case of *Allen v. Flood* were as to whether the action of the defendants in threatening to quit work on account of the employment of men distasteful to them was an unlawful interference with the rights of the employers, and as to whether it amounted to illegal coercion of them. The majority of the court answered both of these questions in the negative.

Thus Lord Herschell said:<sup>3</sup> "I do not doubt that everyone has a right to pursue his trade or employment without 'molestation' or 'obstruction' if those terms are used to imply some act in itself wrongful. \* \* \* If it be intended to assert that an act not otherwise wrongful always becomes so if it interferes with another's trade or employment, and needs to be excused or justified, I say that such a proposition in my opinion has no solid foundation in reason to rest upon. A man's right not to work or not to pursue a particular trade or calling, or to determine when or where or with whom he will work is in law a right of precisely the same nature, and entitled to just the same protection as a man's right to trade or work."

On the matter of coercion, Lord Herschell continued:<sup>4</sup>

"In another passage in his opinion the learned judge (below) says that there is no authority for the proposition that to render threats, menaces, intimidation, or coercion available as elements in a cause of action, they must be of such a character as to create fear of personal violence. I quite agree with this. The threat of violence to property is equally a threat in the eye of the law. And many other instances might be given. On the other hand it is undeniable that the terms "threat," "coercion," and even "intimidation," are often applied in popular language to utterances which are quite lawful and which give rise to no liability either civil or criminal. They mean no more than this, that the so-called threat puts pressure, and perhaps extreme pressure, on the person to whom it is addressed to take a particular course. Of this again numberless instances might be given. Even then if it can be said without abuse of language that the employers were "intimidated and coerced" by the appellants, even if this be in a

<sup>1</sup> Pp. 166, 167.

<sup>2</sup> Pp. 120, 126, 127.

<sup>3</sup> P. 138.

<sup>4</sup> Pp. 128, 129.

certain sense true, it by no means follows that he committed a wrong or is under any legal liability for his act. Everything depends on the nature of the representation or statement by which the pressure was exercised. The law can not regard the act differently because you choose to call it a threat or coercion instead of an intimidation or warning."

Lord Watson said on this point:<sup>1</sup>

"According to my opinion, coercion, whatever be its nature, must, in order to infer the legal liability of the person who employs it, be intrinsically and irrespectively of its motive a wrongful act."

4. *Effect of Allen v. Flood on American decisions.*—To what extent the American courts will follow the decision of the House of Lords in *Allen v. Flood* is a matter of great uncertainty. We have already noticed that an intermediate court of New York City quoted that decision recently with approval, and that there have been several other decisions in that city taking the same position as to actions of unionists in seeking to exclude others from employment. Almost the only important case before a court of last resort in which direct reference has been made to the English decision is that of *Plant v. Woods*,<sup>2</sup> decided by the supreme judicial court of Massachusetts in 1899. The majority of the judges in this case held that *Allen v. Flood* was not good authority in this country, the opinion of the dissenting law lords being approved in preference. Judge Holmes, who had disagreed with the opinion of the majority of the supreme judicial court of Massachusetts in other cases, took the opposite stand in this case also, upholding the decision of the majority of the law members of the House of Lords.

The importance of the case will merit somewhat extended discussion. The case arose out of a conflict between two trades unions in the painting craft, the workmen of the plaintiff union having withdrawn from the defendant union in 1897. The defendants undertook to prevent the members of the other union from obtaining and continuing in work. Their representatives made it a practice to visit every shop where any of the plaintiffs were at work and to inform the proprietor that the members of the defendant union had voted to refuse to work in the same shops with them. They made no request that the members of the plaintiff union should be discharged, but only that they should be induced by the employer to sign applications for reinstatement in the defendant union. The court held, however, that this action of the defendants implied distinctly a threat of strike in case employers retained members of the other union who declined to seek reinstatement, and that this threat to strike involved a degree of coercion such as to give the plaintiffs a right to an injunction. On this point the court said:

"It is well to see what is the meaning of this threat to strike, when taken in connection with the intimation that the employer may 'expect trouble in his business.' It means more than that the strikers will cease to work. That is only the preliminary skirmish. It means that those who have ceased to work will by strong, persistent, and organized persuasion and social pressure of every description, do all they can to prevent the employer from procuring workmen to take their places. It means much more. It means that, if these peaceful measures fail, the employer may reasonably expect that unlawful physical injury may be done to his property; that attempts in all the ways practiced by organized labor will be made to injure him in his business, even to his ruin, if possible; and that, by the use of vile and opprobrious epithets and other annoying conduct, and actual and threatened personal violence, attempts will be made to intimidate those who enter or desire to enter his employ."

As to the nature of the coercion employed by the union, the court continued:

"The purpose of these defendants was to force the plaintiffs to join the defendant association, and to that end they injured the plaintiffs in their business, and molested and disturbed them in their efforts to work at their trade. It is true they committed no acts of personal violence, or of physical injury to property, although they threatened to do something which might reasonably be expected to lead to such results. In their threat, however, there was plainly that which was coercive in its effect upon the will. It is not necessary that the liberty of the body should be restrained. Restraint of the mind, provided it would be such as would be likely to force a man against his will to grant the thing demanded, and actually has that effect, is sufficient in cases like this."

On the fundamental question as to whether men have the right to quit work or to threaten to do so for the purpose of procuring the discharge of others, the court took a stand opposite to that of the House of Lords, holding especially that the element of malicious motive is to be considered.

"It was not the intention of the defendants to give fairly to the employer the option to employ them or the plaintiffs, but to compel the latter against their will to join the association, and to that end to molest and interfere with them in their efforts to procure work by acts and threats well calculated by their coercive and intimidating nature to overcome the will. The defendants might make such lawful rules as they pleased for their own conduct, but they had no right to force other persons to join them. \* \* \*

"The defendants contend that they have done nothing unlawful, and in support of that contention they say that a person may work for whom he pleases, and, in the absence of any contract to the contrary, may cease to work when he pleases, and for any reason whatever, whether the same be good or bad; that he may give notice of his intention in advance, with or without stating the reason; that what one man may do several men acting in concert may do, and may agree beforehand that they will do, and may give notice of the agreement; and that all this may be lawfully done, notwithstanding such concerted action may, by reason of the consequent interruption of the work, result in great loss to the employer and his other employees, and that such a result was intended. In a general sense, and without reference to exceptions arising out of conflicting public and private interests, all this may be true."

The court declared, however, that such a right did not exist where the motive was maliciously to injure another person. The opinion in *Allen v. Flood* regarding the effect of malice in such a case was directly opposed by the Massachusetts court,<sup>1</sup> which concluded:

"Such acts are without justification, and therefore are malicious and unlawful, and the conspiracy thus to force the plaintiffs was unlawful. Such conduct is intolerable, and inconsistent with the spirit of our laws." \* \* \*

Finally, the court specifically repudiates the authority of *Allen v. Flood*, saying: "Some phases of the labor question have recently been discussed in the very elaborately considered case of *Allen v. Flood*, *ubi supra*. Whether or not the decision made therein is inconsistent with the propositions upon which we base our decision in this case, we are not disposed, in view of the circumstances under which that decision was made, to follow it. We prefer the view expressed by the dissenting judges, which view, it may be remarked, was entertained not only by three of the nine lords who sat in the case, but also by the great majority of the common-law judges who had occasion officially to express an opinion. There must be, therefore, a decree for the plaintiffs. We think, however, that the clause, 'or by causing or attempting to cause any person to discriminate against any employer, or members of plaintiffs' said association (because he is such employer)' in giving or allowing the performance of contracts to or by such employer, is too broad and indefinite, inasmuch as it might seem to include mere lawful persuasion and other similar and peaceful acts; and for that reason, and also because, so far as respects unlawful acts, it seems to cover only such acts as are prohibited by other parts of the decree, we think it should be omitted."

The following is quoted from the dissenting opinion of Judge Holmes in the case of *Plant v. Woods*:

"I agree that the conduct of the defendants is actionable unless justified.<sup>2</sup> I agree that the presence or absence of justification may depend upon the object of their conduct: that is, upon the motive with which they acted. \* \* \* On the other hand, I infer that a majority of my brethren would admit that a boycott or strike intended to raise wages directly might be lawful, if it did not embrace in its scheme or intent violence, breach of contract, or other conduct unlawful on grounds independent of the mere fact that the action of the defendants was combined. A sensible workman would not contend that the court should sanction a combination for the purpose of inflicting or threatening violence, or the infraction of admitted rights. To come directly to the point, the issue is narrowed to the question whether, assuming that some purposes would be a justification, the purpose in this case of the threatened boycotts and strikes was such as to justify the threats. That purpose was not directly concerned with wages. It was one degree more remote. The immediate object and motive was to strengthen the defendants' society as a preliminary and means to enable it to make a better fight on questions of wages or other matters of clashing interests."

"I differ from my brethren in thinking that the threats were as lawful for this preliminary purpose as for the final one to which strengthening the union was a means. I think that unity of organization is necessary to make the contest of labor effectual, and that societies of laborers lawfully may employ in their preparation the means which they might use in the final contest."

<sup>1</sup> For further quotation of the decision with reference to malicious intent see above, p. 568.

## CHAPTER VI.

## INTIMIDATION AND PICKETING.

1 **Summary.**—We have already discussed the court decisions and statutes relating to the acts of combinations of workingmen in attempting to exclude others from employment by persuading the employer or threatening him, as well as in attempting to entice actual employees to quit. Another method often resorted to by labor organizations and strikers, is to attempt to prevent persons from entering the service of an employer by persuading or threatening those persons themselves. Attempts to compel those already in employment to quit, by threats and intimidation, are in practice and in law considered as more closely allied to the latter class of acts than to enticement. Measures of this sort occur, for the most part, only during the actual existence of a strike or lockout. The ordinary terms used by the courts to define these acts of strikers are "coercion," "intimidation," "picketing," and "patrolling." The terms picketing and patrolling are practically of the same meaning, and refer to the practice of stationing men, usually a limited number only, in the vicinity of the plant of the employer against whom the strike is directed, in order that they may accost persons seeking employment, inform them as to the conditions, and influence them, by one means or another, to refrain from entering employment. Workingmen usually hold that picketing is merely a form of persuasion, and that it is necessary to the success of strikes, especially because employers often advertise for men without informing them of the existence of a strike. The acts of even a small number of pickets themselves may, of course, take on a character which makes the term intimidation applicable to them. Intimidation is more likely to result where crowds of men assemble in the vicinity of the works struck against in which case the term picketing can not properly be applied.

The general consensus of opinion among the higher American courts seems to be that wherever the acts of strikers toward those seeking employment amount to threats, intimidation or actual violence, they are criminal, while almost all the more recent decisions also sanction the use of the injunction to restrain acts which take on this character. The number of injunctions restraining such unlawful picketing, intimidation, and interference during recent years has been very great indeed. On the other hand, it is perhaps the more usual opinion of the higher courts that where picketing, or the other methods of persuading persons seeking employment to refrain from doing so, contain none of the elements above described, but are peaceful, they are not illegal. It must be observed, however, that these statements of the American courts upholding the legality of peaceful picketing are, for the most part, found as obiter dicta in connection with decisions affirming the illegality of intimidation and threats, the contrast between the two classes of acts being drawn for the purpose of enforcing the idea of the illegality of the latter class. There have been, in fact, two or three decisions of high courts holding that even peaceful picketing is illegal, and it is not entirely certain what would be the attitude of these courts if more cases of this character should be brought before them. Moreover, in several recent cases lower courts have issued injunctions prohibiting even peaceful persuasion to induce persons not to enter employment. It is obvious that the line of distinction between persuasion and intimidation is by no means a sharp one, and that opinions may differ greatly as to whether certain specific acts amount to intimidation or otherwise. It is accordingly necessary to describe briefly the actual state of facts in connection with the more important cases, and to state the decisions of the courts in the light of these facts.<sup>1</sup>

<sup>1</sup>The law of picketing in the United States is stated by Mr. Stimson as follows (Handbook to the Labor Law, pp. 290, 299):

"We may state at once that the law, both English and American, is pretty well settled down to the view that picketing, for the purpose of mere persuasion of workmen not to take employment, and not attended with any disorder or physical or moral intimidation, is now well legal, at least when conducted in a reasonable manner and with not too great a crowd. Indeed, the recent English decisions have gone so far as almost to prescribe that the picket of two persons, which may be relieved by others, like a guard, is about the extent to which the law will allow it, and these two persons must, of course, not be guilty of intimidation as above defined. \* \* \*

"In the United States to-day only the most reasonable and peaceable picketing, for mere purposes of information and observation, is lawful, and only quiet and peaceable persuasion, by workmen of workmen, and conducted in such a way as not to amount to an elaborate conspiracy to prevent the plaintiff from getting help; though it is not probably necessary to render such action lawful that the

We may first, however, point out the general principle laid down by the courts as underlying their attitude in holding any action which amounts to intimidation to be an illegal interference with the rights of both employers and those seeking employment. That principle, which is also stated repeatedly by the courts in decisions as to boycotts and other methods of labor organizations, is that each man has a right to carry on his lawful business or labor without let or hindrance. Thus it is said by the United States circuit court in Ohio, in *American Steel and Wire Company v. Wire Drawers' Union*.<sup>1</sup> "The right to work as one pleases, and to contract for labor as one chooses, is protected by law. It is the right, not so much of property as of that liberty which every man enjoys in this country as his birthright; \* \* \* which is not confined to political rights alone, but extends as well to personal activities in and about one's daily business, be he laborer or capitalist, \* \* \* which not even State legislatures can impair; and certainly not strike organizations." So, too, the supreme judicial court of Massachusetts declared in a recent case:<sup>2</sup> "An employer has a right to engage all persons who are willing to work for him, at such prices as may be mutually agreed upon, and persons employed or seeking employment have a corresponding right to enter into or remain in the employment of any person or corporation willing to employ them. These rights are secured by the constitution itself. No one can lawfully interfere by force or intimidation to prevent \* \* \* the exercise of these rights."

**2 Legislation as to intimidation.**—A large number of States have special statutes prohibiting the use of intimidation or force to interfere with the entrance into or continuance in employment of any person. These statutes for the most part refer in terms to acts of individuals, and in legal theory belong rather to matters of police and preservation of order than to the law of combination and conspiracy. Nevertheless they may easily be applied to intimidation and picketing (if amounting to intimidation) by bodies of strikers. The States having statutes of this sort prohibiting intimidation of ordinary employees are New Hampshire, Massachusetts, Maine, Rhode Island, Vermont, Wisconsin, Missouri, Oregon, North Dakota, Georgia, Alabama, Texas, Oklahoma, and Mississippi. While the terms of these statutes differ very considerably it is probable that by the interpretation of the courts they would reach practically the same end. Indeed it is likely that under the common law alone, without statute, essentially the same attitude would be taken by the courts on this subject as under the various enactments. There are also special laws in a few States prohibiting intimidation of employees on railways and in mines.

In those States which, as we have seen in another connection (p. 562), have expressly by statute legalized strikes, repealing the common law of conspiracy, there are very generally found qualifying provisos prohibiting combination to commit various unlawful acts, among which are usually found the use of force, threats, and intimidation to prevent any person from entering or continuing in employment. The States having provisions of this sort are Pennsylvania, New York, Minnesota, Mississippi, North Dakota, and Illinois, while in several other States the definitions of unlawful conspiracy are less definite, but might be applied to acts of strikers.

Those States which expressly legalize strikes for the most part also declare it lawful to persuade persons to quit employment or to refrain from entering employment, provided only peaceful means are used. This is the case in New Jersey, Minnesota, Pennsylvania, and Texas, while the Maryland statute, which follows that of Great Britain, is so general as doubtless to render such peaceful persuasion distinctly lawful.

**3. Specific American cases of picketing and intimidation.**—Turning, now, to a more detailed study of the decisions, we may first describe several cases in which the element of intimidation was clearly and conspicuously present in the actions of the strikers.

Thus, in the case of the *American Steel and Wire Company v. Wire Drawers' Union*,<sup>4</sup> the evidence, the court declared, showed that the strikers maintained pickets in the vicinity of the works against which the strike was being conducted, (in Cleveland) and that a larger body of men was also kept constantly in the

persons doing it should be actually employees of the plaintiff, if they are members of the labor union concerned or engaged in the trade, so as to have a solidarity of interest, that will be sufficient but picketing for the purpose of interfering with the plaintiff's trade, as by driving away his customers, is never lawful."

<sup>1</sup> 90 Fed. Rep., 608, 613.

<sup>2</sup> *Vegeblum v. Guntner*, 14 N. E. Rep., 1077.

<sup>3</sup> See fuller digest in Reports of Industrial Commission, vol. x, pp. 69, 131.

<sup>4</sup> 90 Fed. Rep., 608, 614.

vicinity. If the patrols failed to persuade persons seeking employment to refrain from doing so, the larger body would come forth on signal, and actually obstruct the way, threaten those seeking employment, and in one or two cases, at any rate, it entered into violent conflict with them. The court held that, even in the absence of violence, the exhibition of substantial force in the presence of large bodies of men, amounted to intimidation. "The whole fallacy of the defense against this bill, and the proof offered to sustain it, lies in a convenient misapprehension or a necessary misunderstanding of the character of that force or violence which all agree is not permitted in the conduct of a strike. It seems to be the idea of the defendants that it consists entirely of physical battery and assaults, and that if they appear in the proof, and they can be justified, as they might be on a criminal indictment or in a police court, that ends the objection, and the justified assaults and battery will not support an injunction. The truth is that the most potent and unlawful force or violence may exist without lifting a finger against any man, or uttering a word of threat against him. The very plan of campaign adopted here was the most substantial exhibition of force, by always keeping near the mill large bodies of men, massed and controlled by the leaders, so as to be used for obstruction if required.

Another case, which was very similar and which was decided by the same court somewhat earlier, was that of the Consolidated Steel and Wire Company v. Murray.<sup>1</sup> The court declared that the averments of the bill of the complainant were substantially upheld by the evidence, which showed that there was "continuously a riotous assemblage," that, while it maintained a semblance of law and order, actually threatened, followed, intercepted, and in some cases maltreated the employees of the complainant. An injunction was accordingly issued.

In another recent case a Federal court held that certain demonstrations intended to keep men from entering or continuing in employment were illegal as interfering with the free use of the public highways. "The marching men seem to think that they could go and come on and over the country road as they pleased, because it was a public highway. But this was a mistake. The miners working at Montana had the same right to use the public road as the strikers had, and it was not open and free to their use when it was occupied by over 200 men stationed along it at intervals of 3 and 5 feet, men who, if not open enemies, were not bosom friends. That some miners passed through this line is shown. That others feared to do so is plain. That the marching column intended to interfere with the work at the mines would be foolish to deny. A highway is a way over which the public at large have a right of passage. It is a road maintained by the public for the general convenience. True, the strikers had a right to march over it as passengers just the same as all other citizens, but they had no right to make it a parade ground or stop on its sideways at frequent intervals, and by the hour, at times when other people who had the same right to its use were in the habit of using it for purposes connected with their daily avocations. \* \* \* No one portion of the community has a right to march along those streets day after day, night after night, and station themselves along them at intervals of 3 or 5 feet, for hour after hour, thereby preventing the owners of property located thereon from reaching the same in person, or by their clerks or other employees, for purposes connected with their regular business."

The supreme court of Pennsylvania in 1892, in the case of *Murdock v. Walker*,<sup>2</sup> upheld the issue of an injunction by a lower court to restrain picketing and intimidation. The opinion of the lower court had declared that, while there was no physical violence or threat thereof, "there can be no doubt that a number of the defendants, with others, have been in the habit of collecting in crowds about the establishment of the plaintiffs, have followed their workmen to and from their boarding houses, and purposely interfered with them in passing along the public streets, in some instances even resorting to actual force. \* \* \* The whole course of those actively engaged in these movements was a menace to the workmen of the plaintiffs, as well as to the public peace." The opinion of the court announces clearly the principle that a court of equity will enjoin even discharged employees--they were, in fact, members of the labor union--from gathering about the plaintiff's place of business, and from following his employees to and from work, and from gathering about their boarding places, and from any and all manner of threats, intimidation, ridicule, and annoyance.

The same court, two years later, in *Wick Chua Company v. Brown*<sup>3</sup> upheld an injunction under very similar circumstances, declaring that the evidence sustained the averments of the complainant, that the defendants had used "threats, menaces, intimidations, opprobrious epithets addressed to the Wick Chua Com-

<sup>4</sup> 30 Atl. Rep., 261.

pany's officers and workmen," had gathered in crowds at the company's establishment and at the boarding places of their workmen, and had followed the workmen and held them up to the ridicule of the bystanders.

The most recent case on picketing brought before a court of final resort was decided by the court of chancery of New Jersey in December, 1899, *Cumberland Glass Manufacturing Company v. Glass Blowers' Association*.<sup>1</sup> This decision is interesting, because it very clearly and emphatically affirms that the general consensus of court opinion is that peaceful picketing and persuasion are probably legal, but that violence or threats or intimidation are always illegal. To quote the language of the court: "It is entirely settled that the moment that individuals, either singly or in company, for the purpose of compelling a master to accede to their views, use force or threats of force, or in any way injure or threaten to injure either the master, or those working or wishing to work for him, the act becomes illegal. Interference with the movement of employees in passing in and out of their employer's factory, or the use of abusive language, upon the streets or elsewhere, toward such employees, indeed, any conduct which is calculated to induce those working or wishing to work, against their wish, to abandon their work, or their intention to seek work, is within the limits of coercive conduct. There is no contrariety of judicial view in respect to the illegality in the use of any act which is calculated to coerce, but in respect to what acts are to be regarded as coercive there is naturally more difference in judicial sentiment. \* \* \*

"I can not say that the law is so settled that a preliminary injunction can go upon the notion that picketing, without some other act evidential of coercion, is in itself evidence of intimidation. The decision of the question, I think, must depend upon the circumstances surrounding each case. There must be taken into account the size of the guard, the extent of their occupation of the street, and what they say and do. Taking every circumstance into account, if it appears that the purpose of the picketing is to interfere with those passing into or out of the works, or those wishing to pass into the works, by other than persuasive means, it is illegal. If the design of the picketing is to see who can be the subject of persuasive inducements, such picketing is legal."

In view of these doctrines, the court held that the acts of the strikers in this case were illegal. It was proved, so the court declared, that large bodies of men were almost continuously in and around the factory of the complainant, and that large bodies met each incoming train and intercepted the workmen. "The newcomers were surrounded and jostled, and pushed along, until they were landed in the headquarters of the strikers. It was almost a physical impossibility for the workmen to move otherwise than according to the will of the crowd." The strikers in the vicinity of the factory occasionally attacked property, used abusive language toward employees, and even interfered with those seeking to enter the yard, and thus "became a coercive instrument."

Turning now to those American cases in which the element of intimidation has been less conspicuous, we find one of the earliest of the important decisions in *Sherry v. Perkins*,<sup>2</sup> decided by the supreme judicial court of Massachusetts in 1888. Here the defendants, members of the Lasters' Protective Union, were enjoined from patrolling in front of the premises of P. P. Sherry, and carrying banners inscribed with the words: "Lasters are requested to keep away from P. P. Sherry's. Per order L. P. U.," and "Lasters on strike; all lasters are requested to keep away from P. P. Sherry's. Per order L. P. U." The court declared that "the act of displaying banners with devices, as a means of threats and intimidation, to prevent persons from entering into or continuing in the employment of the plaintiff, was injurious to the plaintiff, and illegal at common law and by statute." The injury was to the plaintiff's business and justified an injunction. The report of the case does not show that there were any other acts on the part of the strikers to which objection was made, except that described.

The same court took a very similar stand in the case of *Vegelahn v. Guntner*, decided in 1896.<sup>3</sup> In this case the patrol was combined with "social pressure, threats of personal injury, or unlawful harm," but the decision does not specify the more precise acts constituting such threats and pressure, apparently considering that the presence of the patrol itself amounted to intimidation. The patrol, which was "maintained from half past 6 in the morning until half past 5 in the afternoon on one of the busiest streets of Boston \* \* \* was maintained as one of the means of carrying out the defendant's plan. \* \* \* It was thus one means of intimidation, indirectly to the plaintiff, and directly to persons actually employed, or seeking to be employed, by the plaintiff, and of rendering such employment unpleasant or intolerable to such persons. \* \* \* Intimidation is

<sup>1</sup> 16 Atl. Rep., 208-211.<sup>2</sup> 17 N. E. Rep., 307, 309.<sup>3</sup> 44 N. E. Rep., 1077.

not limited to threats of violence or of physical injury to persons or property. It has a broader signification, and there also may be a moral intimidation which is illegal." Other language used shows that the mere element of picketing was in itself considered illegal aside from direct threats, the court especially referring to the case of *Sherry v. Perkins*, and stating that picketing under the circumstances in the present case "has elements of intimidation like those" in the other case.

It should be noticed that strong dissenting opinions in this case of *Vegelahn v. Guntner* were submitted by Chief Justice Field and by Judge Holmes. Chief Justice Field appeared somewhat uncertain as to whether picketing was legal under the circumstances, but declared that at any rate it was not a sufficient cause for the use of the extraordinary remedy of the injunction. He added that he did not see that the question of malicious motive would have any influence in the decision as to the legality or illegality of persuading a person not to enter the employment of another. If the patrol involves intimidation or force it is illegal. "If it does not amount to intimidation, but interferes with the use by the plaintiff of his property, it may be illegal, but will not justify an injunction. If it is merely a peaceful mode of finding out the persons who intend to enter the plaintiff's premises to apply for work and of informing them of the actual facts in the case in order to induce them not to enter the plaintiff's employment, in the absence of any statute relating to the subject, I doubt if it is illegal."

Judge Holmes went further. He said "It appears to me that the opinion of the majority turns in part on the assumption that the patrol necessarily carries with it a threat of bodily harm. That assumption I think unwarranted. \* \* \* Furthermore, it can not be said, I think, that two men walking together up and down a sidewalk and speaking to those who enter a certain shop do necessarily and always thereby convey a threat of force. I do not think it possible to discriminate and to say that two workmen, or even two representatives of an organization of workmen, do, especially when they are and are known to be under an injunction of this court not to do so." The latter sentence quoted from Judge Holmes refers to the fact that he approved the issue of an injunction prohibiting the use of force or of threats, but was unwilling that it should extend to the prohibition of a patrol altogether.

Another case in which picketing was declared illegal in itself was that of *Boeck v. Railway Teamsters Protective Union*,<sup>1</sup> decided by the supreme court of Michigan in 1898. A lower court had enjoined certain classes of acts on the part of strikers and appeal was taken to make the injunction broader in its scope. The supreme court upheld the appeal and modified the order so as to prohibit altogether the use of the boycott or of pickets. The facts of the case showed, as stated by the court, that groups of men had followed the teamsters employed by the complainant, howling at them and using abusive language. They also distributed circulars to the customers of the complainants urging them to withhold patronage. The court, however, did not confine itself to holding these more overt acts of intimidation and of boycotting illegal, but prohibited picketing altogether. It justified its order in this regard in the following language. "To picket complainants' premises in order to intercept their teamsters or persons going there to trade is unlawful. It itself is an act of intimidation and an unwarranted interference with the right of free trade. The highways and public streets must be free to all for the purpose of trade, commerce, and labor. The law protects the buyer, the seller, the merchant, the manufacturer, and the laborer in the right to walk and use the streets unmolested." Yet the court apparently qualifies this remark by adding: "It will not do to say that these pickets are thrown out for the purpose of peaceable argument and persuasion. They are intended to intimidate and coerce." Whether this last statement is made in view of the actual use of intimidating language by the pickets, or whether it means that the mere presence of the pickets, regardless of their further action, always amounts to intimidation and coercion is not clear.

The most recent utterance of the supreme court of Pennsylvania on the subject of picketing, goes further than the earlier decisions above referred to, declaring that picketing in almost any form is illegal; that even peaceful persuasion of those seeking employment is unlawful, on the somewhat curious ground that their time may not lawfully be taken up in this way. This is in the case of *O'Neil v. Behanna*,<sup>2</sup> decided in 1897. It appears that the acts of the pickets and strikers did amount to a degree of intimidation; that considerable numbers of strikers met the men seeking work, called them "scabs" and "blacklegs," and even tried to pull them away. The court declared that it was a most serious misconception to suppose that strikers could do anything to attain their end short of actual physical

<sup>1</sup> 77 N. W. Rep., 13, 22.

<sup>2</sup> 37 Atl. Rep., 843, 844.

violence. "The 'arguments' and 'persuasion' and 'appeals' of a hostile and demonstrative mob have a potency over men of ordinary nerve which far exceeds the limits of lawfulness. The display of force, though none is actually used, is intimidation, and as much unlawful as violence itself." So far the decision conforms to that in earlier cases, but the court adds: "It is further urged that the strikers, through their committees, only exercised ('insisted on' is the phrase their counsel use in this court) their right to talk to the new men to persuade them not to go to work. There was no such right. These men were there presumably under contract with the plaintiff, and certainly in search of work, if not yet actually under pay. They were not at leisure, and their time, whether their own or their employer's, could not lawfully be taken up, and their progress interfered with, by these or any other outsiders, on any pretense or under any claim of right to argue or persuade them to break their contracts. Even, therefore, if the arguments and persuasion had been confined to lawful means, they were exerted at an improper time, and were an interference with the plaintiff's rights, which made the perpetrators liable for any damages the plaintiff suffered in consequence. But, in fact, their efforts were not confined to lawful means."

An injunction issued by a Federal court in a recent case<sup>1</sup> appears to go further than the courts usually go in its restrictions upon pickets and strikers seeking to prevent others from taking employment. The injunction prohibits all persons from "compelling, inducing, or attempting to compel or induce by threats, intimidation, unlawful persuasion, force, or violence," any of the employees of a certain coal company to refuse to perform their duties or to quit service; and also prohibits in similar language endeavors to prevent any person from entering the service of the company. The words "unlawful persuasion" are vague, but apparently any form of persuasion might be held unlawful under this language.

There have been numerous court decisions touching on the question of intimidation in connection with railroad strikes. Usually the courts have held such action unlawful on account of its interference with interstate commerce or its obstruction of the mails, rather than because of the intimidation itself. Cases of this sort are considered under another head (see page 596). We may here, however, quote from one of the somewhat earlier decisions of the Federal courts, drawing a line of distinction as to what constitutes intimidation where no physical violence is directly threatened:

"I think there was no one that heard the testimony but felt that that demonstration was made with the intent to overawe those engineers—to make them feel that it was not personally prudent to run those trains, that there was a risk to themselves in continuing to continue the operations of the road there; and that these engineers acted under a reasonable sense of personal danger accruing from the demonstration that was made in their presence. I have no doubt that some men, who are excessively bold, might have laughed at it, and waited, believing that no personal violence would be used; but men are not all equally bold and courageous; the average man has a feeling that it is his duty to regard his personal safety; we all know that, and we act upon that presumption; and when these men met there in that fever of excitement, when the crowd surged backward and forward, from one end of that yard to the other, approaching now this engine and now that, they knew, and every man knows, that that kind of a demonstration was calculated to intimidate; and they knew, and every man knows, that ordinarily prudent men are not going to risk their personal safety when there is nothing to be gained by it."

Another somewhat broad interpretation of intimidation was made by a Federal court in an earlier case involving the employees of a receiver of a railroad.<sup>2</sup> A strike had been ordered among the employees of the shops of the Wabash railroad at Moberly, Mo. The chairman of the striking employees sent notices to the foreman of the shops requesting them to quit work. The following language was used in one of these notifications: "You are requested to stay away from the shop until the present difficulty is settled. Your compliance with this will command the protection of the Wabash employees; but in no case are you to consider this an intimidation." The court declared that in ordinary life the use of such language to a foreman or other person would be considered as involving an implied threat such as would justify the placing of the writers under peace bonds. "The statement in all of these notices that they are not to be taken as intimidations go to show beyond a doubt that the writer knew he was violating the law, and by this subterfuge sought to escape its penalties."

<sup>1</sup> United States v. Sweeney, 95 Fed. Rep., 431.

<sup>2</sup> U. S. v. Kane et al., 23 Fed. Rep., 748, 754.

<sup>3</sup> In re Wabash Railroad Company, 24 Fed. Rep., 217, 220.

Notwithstanding these decisions of several of the higher courts there are various States in which in all probability the courts of ultimate resort would not uphold the proposition that picketing, if free from more conspicuous forms of threats and intimidation, is in itself illegal. A recent decision of the special term of the supreme court of New York County, expressly affirms the legality of peaceful picketing. This was in a case arising out of the cigar makers' strike of 1900. Judge Freedman, of the supreme court, had issued an injunction restraining the strikers altogether from picketing, patrolling, and loitering about the premises of the plaintiffs. In special term the court, by Justice Andrews, refused to extend the injunction. He declared that while it was unlawful for strikers to insult, annoy, and follow persons seeking employment from the plaintiffs, mere loitering around, standing upon the sidewalk in front of, picketing and patrolling the plaintiff's premises would not be unlawful unless accompanied by some of the other unlawful acts above-mentioned or of a similar character.<sup>1</sup>

One of the intermediate courts in Chicago also recently decided that peaceful picketing was not illegal, so far as picketing meant, merely "the active watch by workmen belonging to those lodges or associations or unions, of others, so that they may know what is going on and what is done."

**4. English legislation and decisions.**—The British conspiracy and protection of property act of 1875 specifically legalizes picketing by strikers, but lays certain restrictions upon the methods employed, so as to prohibit all forms of intimidation. The act merits quotation:

"7 Every person who, with a view to compel any other person to abstain from doing or to do any act which such other person has a legal right to do or abstain from doing, wrongfully and without legal authority,

"1. Uses violence to or intimidates such other person or his wife or children, or injures his property; or,

"2. Persistently follows such other person about from place to place; or,

"3. Hides any tools, clothes, or other property owned or used by such other person, or deprives him of or hinders him in the use thereof; or,

"4. Watches or besets the house or other place where such other person resides, or works or carries on business or happens to be, or the approach to such a house or place; or,

"5. Follows such other person with two or more other persons in a disorderly manner in or through any street or road,

shall, on conviction thereof by a court of summary jurisdiction, or on indictment as hereinafter mentioned, be liable either to pay a penalty not exceeding £20, or to be imprisoned for a term not exceeding 3 months, with or without hard labour.

"Attending at or near the house or place where a person resides, or works, or carries on business, or happens to be, or the approach to such house or place, in order merely to obtain or communicate information, shall not be deemed a watching or besetting within the meaning of this section."

The judicial interpretation of these provisions by the English courts has not always been consistent, but it seems that the general disposition has been to restrain picketing very closely on the ground that it involves a degree of intimidation of the employer and the persons seeking employment. Thus, as early as 1876, Baron Huddleston said with regard to picketing:<sup>2</sup>

"It is so dangerous a thing to do at all that it is difficult to guard against the abuse of the practice, and, therefore, if you assert a right to 'picket' you are almost certain to get into difficulty, for whatever you may intend by it, others will go beyond it. Most certainly watching and besetting, unless it is only for information, is illegal. If, then, you do not wish to go beyond the law, it is better to avoid such acts altogether, as it is illegal to follow anyone about in the streets."

As to the proviso allowing picketing for the purpose of obtaining information, he said:

"The intention of the legislature in inserting this clause in the section was for the purpose of enabling workmen on strike to find out whether any of their fellow-workmen, who, as members of their trade union, might be drawing strike allowances, were 'traitors' to their union, and were going back to work and so getting money from both sides."

A recent important English case is that of *Lyons v. Wilkins*, in which an injunction was issued to restrain the defendants from watching or besetting the

<sup>1</sup> See Bulletin of the New York Bureau of Labor Statistics, September, 1900.

<sup>2</sup> See Case and Comment, August, 1899.

<sup>3</sup> 38 and 39 Viet., ch. 86.

<sup>4</sup> *Regina v. Bauld*, 13 Cox C. C., 283, 292.

premises of the plaintiff except for the purpose of obtaining or communicating information. The master of the rolls said:

"The truth was that to watch or beset a man's house with a view to compel him to do or not to do what it was lawful for him to do was wrongful and without lawful authority, unless some reasonable justification for it was consistent with the evidence. Such conduct interfered with the ordinary comfort of human existence and the ordinary enjoyment of the house beset, and would support an action for nuisance at common law; and proof that the nuisance was for the purpose of peacefully persuading other people would afford no defense to such action. Persons might be peacefully persuaded, provided that the method employed to persuade was not a nuisance to other people. \* \* \* It was all very well to talk about peaceable persuasion, and to draw fine lines between persuasion and giving information. The line might be fine; but in this case there was no difficulty whatever in coming to the conclusion that what was done was watching and besetting, as distinguished from attending in order merely to obtain or communicate information."<sup>1</sup>

Again in 1897, in the case of *Bailey v. Pye*, the plaintiffs were granted damages for injury caused by picketing, and an injunction to restrain picketing was also granted.

The general trend of other decisions seems to have been in the same direction as indicated by the above-mentioned cases. The workmen of England, while they express themselves usually to the effect that the act of 1875 has materially improved their position in labor disputes, complain that the limitation of the power to picket is unjustly severe.<sup>2</sup>

## CHAPTER VII.

### BOYCOTTS.

1. **Court decisions affirming illegality of boycotts.**—In the majority of cases in which boycotts have been brought before the courts they have been held illegal. While the name boycott is sometimes applied by the courts to cases of refusal to work with obnoxious persons, or of endeavors to procure their discharge, the stricter meaning of the word appears to refer exclusively to attempts to interfere with the business of employers in the buying and selling of goods. Of course every individual has the right himself to refuse to buy goods. Concerted refusal to purchase, however, is usually considered a boycott.<sup>3</sup> The courts quite frequently speak as if a further element were necessary to constitute a boycott, or at least to render it unlawful, namely, the endeavor to persuade others, aside from those in the combination itself, to cease dealing with the person boycotted.<sup>4</sup> It is somewhat doubtful whether the courts would ordinarily hold concerted refusal, on the part of those actually interested in the action of an employer, to deal with him to be unlawful. Certainly action of this sort has scarcely ever, if at all, been brought under judicial consideration. In the cases where boycotting has been held illegal there has almost always been either concerted action by a much larger body of persons than those directly connected with the employer boycotted, or efforts to persuade others not in the combination to withhold their patronage, and frequently both of these elements have been present.<sup>5</sup>

<sup>1</sup> Quoted in Bulletin of Department of Labor, March, 1901.

<sup>2</sup> See discussion of this act by A. Maurice Low, in Bulletin of Department of Labor, March, 1901, pp. 305-322.

<sup>3</sup> This is the definition of the Century Dictionary.

<sup>4</sup> For definitions which include this idea see Anderson's Law Dictionary, Black's Law Dictionary, Moore's Bricklayers' Union, 23 Weekly Law Bulletin, 18, Toledo, Ann Arbor and N. M. Ray Co. v. Penna. Co., 54 Fed. Rep. 730.

<sup>5</sup> The following is a somewhat extreme expression of legal opinion regarding boycotts. "It undoubtedly conforms more or less to the general tenor of court decisions, but the form of expressions is stronger than in the case of ordinary court decisions. The writer is Mr. Cogley, of the New York bar. "A boycott is one of the most serious forms of intimidation resorted to during strikes. It may be and frequently is accompanied by violence to person or property, or it may be a complete social or business ostracism, or both, of the parties boycotted. Usually it is directed against the party or parties struck against, but when necessary for the strikers to carry their point, it is directed against persons patronizing them, and sometimes against the entire public. The purpose is to utterly destroy the person or persons against whom the boycott is directed by destroying their business and preventing them from even procuring food to sustain life."

"Undoubtedly every person has the right to select those upon whom they wish to bestow favors or their patronage. But men who will wantonly conspire to boycott inanimate objects, simply because men of their own trade and calling who did not belong to their association built them, are monsters who place themselves outside the pale of the law and should be exterminated from the face of the earth. They place themselves on a level of the anarchist, whose religion and creed is the destruction of all existing systems of property, society, government and religion." (Cogley on Strikes and Lockouts, pp. 248, 249.)

In several cases the courts have held boycotts to be criminal offenses, either under the law of conspiracy or under statute.<sup>1</sup> In other instances the courts have granted damages to persons injured by boycotts, either the persons against whom the original boycott was directed or others who were themselves boycotted in order to compel them to refrain from dealings with the first party.<sup>2</sup>

In quite a number of instances injunctions have been granted to prevent the continuance of a boycott. Granting that the boycott is illegal, the injunction is perhaps a natural remedy in a case of this kind, as the courts have from time to time pointed out, because of the fact that the injury is a continuing one, and because the persons inflicting it are often insolvent and unable to pay pecuniary damages, and are so numerous that a multitude of petty suits would have to be brought to enforce the civil liability.<sup>3</sup>

A few typical cases of boycott which have come before the courts may perhaps be briefly described.

The first case in which the word "boycott" was used in an American legal decision was that of *State v. Glidden*,<sup>4</sup> decided by the supreme court of errors of Connecticut in 1887. The case was based on an information charging conspiracy. The defendants were members of a labor organization of printers, and they attempted to compel a publishing company to discharge certain nonunion men and to employ members of the organization. The means used were a threat of concerted withdrawal of patronage from the company. The defendants were associated with various labor organizations, including, according to the charge of the indictment, fully 1,000 persons, who could, by stopping their patronage and by influencing others to do so, greatly injure the business of the plaintiff. The court declared that this was an unlawful interference with the right of the publishing company to carry on its business in its own way, and at the same time an unlawful infringement upon the rights of nonunion workmen, whom the boycotters sought to deprive of employment. The court related in its decision the origin of the term of "boycott," in the combination of certain tenants in Ireland to exclude one Captain Boycott from intercourse with his neighbors and to shun him and hold him up to public contempt, while at the same time threatening injury to any person who should pay rent to him.

An almost precisely parallel case to that of *State v. Glidden* was decided by the Federal circuit court in Ohio in 1891. *Casey v. Cincinnati Typographical Union*.<sup>5</sup> Here an injunction was issued to restrain the union from boycotting the publisher of a newspaper because of his refusal to discharge nonunion men and employ only members of the union. The defendants circulated large handbills calling upon all persons to withdraw their patronage from the newspaper, and sent circulars to advertisers requesting them to withdraw their advertisements. While the defendants denied that these circulars directly threatened loss of business to such persons as should continue to patronize the plaintiff, the court declared that the language of the circulars could have no doubtful meaning. "It was an organized conspiracy to force the plaintiff to yield his right to select his own workmen." One letter is quoted by the court, which was sent to certain agents for the sale of the newspapers and contained the words, "This union will consider it a great favor for you to give up the agency of the Commonwealth. If you do not do so we will have to consider you the enemy of organized labor."

A more recent and more elaborate decision of the Federal courts is that in *Hopkins v. Oxley Slave Company*,<sup>6</sup> decided by the circuit court of appeals in 1897, on appeal from the United States circuit court for the district of Kansas. Some of the appellants, who were the defendants below, were members of a union of coopers, and others were members of the Trades Assembly, a federated labor organization in Kansas City, Kans. The Oxley Slave Company manufactured barrels and casks for packing meats and other commodities. The company had introduced into its plant certain machines for hooping barrels, to which objection was made by the coopers' union. On the refusal of the company to discontinue the use of the machines the coopers' union called to its assistance the Trades

<sup>1</sup> *State v. Glidden*, 8 At. Rep., 890; *Baughman's case*, 11 Va. Law Journal, 321; *People v. Wilzig*, 1 N. Y. Crim. Rep., 103 (in this case picketing was combined with boycotting); *People v. Kostka*, 1 N. Y. Crim. Rep., 129. See also railway cases referred to below, page 596.

<sup>2</sup> *Moore v. Bricklayers Union*, 23 Weekly Cincinnati Law Bulletin, 48.

<sup>3</sup> Injunctions have been issued and their issue upheld for the reasons given in *Hopkins v. Oxley Slave Co.*, 85 Fed. Rep., 912; *Casey v. Cincinnati Typographical Union*, 15 Fed. Rep., 135; *Beck v. Railway Teamsters' Protective Union* (Michigan), 77 N. W. Rep., 11; *Brace v. Evans* (Pennsylvania), 3 Rwy. and Corp. Law Journal, 561; *New York Sun case*, appellate court of New York County, 1899. An injunction was refused in *Oregon*, where the boycotting acts in this case were less conspicuous and had apparently been discontinued. *Longshore Printing Co. v. Howell*, 26 Oreg., 527.

<sup>4</sup> 8 At. Rep., 890.

<sup>5</sup> 45 Fed. Rep., 135.

<sup>6</sup> 83 Fed. Rep., 912.

Assembly, and a boycott of the product of the plaintiff was inaugurated. The members of the two organizations declared and published that they would refuse to use goods packed in packages, barrels, etc., made by the Oxley Company, and especially gave notice to Swift & Company, large packers, of this intention.

The court declared this boycott unlawful, and asserted that courts generally have condemned boycotts intended to interfere, otherwise than by lawful competition, with the business affairs of others. Employees have a right to abandon service but not dictate to the employer what kind of implements he shall use.

**2. Denial of the illegality of boycott.**—There are almost no American cases which affirm the legality of boycotts by labor organizations. This may be due to the fact that only the more extreme cases have come before the courts. There are countless minor boycotts, usually merely consisting of the publication of "unfair lists" by trade unions, which have never been brought under judicial cognizance. The following extract from the dissenting opinion of Judge Caldwell, of the United States circuit court, in the Oxley Stave Company case, just described, is, however, noteworthy. After urging that the law of conspiracy applies, if at all, to combinations for accomplishing highly criminal and evil purposes, and insisting that men have the right to do collectively what they may do without wrong individually, Judge Caldwell proceeds:

"A conspiracy is defined to be 'any combination between two or more persons to accomplish an unlawful purpose, or a lawful purpose by unlawful means.' Let the defendants' action be tested by this rule. Their purpose was to drive the plaintiff's barrels out of the market, by giving preference to the barrels produced by their labor, and this purpose was to be accomplished by means of the coopers' and trades' unions everywhere refusing to buy the barrels manufactured by the plaintiff, or any of the commodities packed in them by anyone. Divested of the legal epithets and verbiage, this is precisely what the defendants propose to do and all they propose to do. And it is this the court has enjoined them from doing. They are enjoined from refusing to buy the barrels, and the commodities packed in the same. If the defendants are not allowed to determine for themselves what they will not buy, they ought not to be allowed to determine what they will buy; and the court's guardianship should go a step further, and tell them what to buy. If the court can enjoin the defendants from withdrawing their patronage and support from the plaintiff, and persuading others to do the same, it is not perceived why it can not, by a mandatory injunction, make it obligatory upon the defendants to purchase the plaintiff's barrels and their contents, and persuade others to do the same. The invasion of the natural rights and personal liberty of the defendants would be no greater in the one case than in the other."

To the objection that the action of the members of the union in boycotting the barrels of the plaintiff was without proper motive, since there was no present complaint as to the conditions of labor, Judge Caldwell urges that there certainly was danger that the action of the plaintiff, which the defendant sought to prevent by the boycott, would ultimately endanger their wages, and that moreover it is legitimate and necessary that laborers not directly interested should cooperate with others to strengthen their general cause. "The cause of one laborer is the cause of all laborers. Organized labor must give to each of its members its collective force and influence, else they will fall one by one a sacrifice to the greed of their employers. If labor organizations did not have the right to protect and defend the interests of their members, individually as well as collectively, they would be of no utility and would soon come under abject submission to capital, which grants nothing of fundamental value to wage-earners which it is not coerced to grant by the combined power of the labor organizations or legislation brought about usually through their influence."

The language of this last paragraph would likewise apply to the sympathetic strike, and probably also to refusal to work with nonunion men.

There is another recent case in Oregon,<sup>1</sup> in which an injunction to restrain a boycott was refused. In this case, however, the acts of the boycotters had been extremely moderate and had not been long continued. The court was disposed to admit that there might be a cause of action on account of the injury done, but was unwilling to employ the extraordinary remedy of the injunction on the ground that there was no continuing danger of an irreparable injury.

**3. Combination as an element in boycott.**—It has already been pointed out that the elements of combination and of malicious intent are held to be fundamentally important in determining the character of the action of persons engaged in strikes and boycotts. In several boycott cases the courts have laid stress upon the dangerous power against the person boycotted which results from the combination

<sup>1</sup> Longshore Printing Co. v. Howell, 26 Oreg., 527.

of a large number of persons. Thus, in *Barr v. Essex Trades Council*<sup>1</sup> (New Jersey), the court dwells on the power of the great combination of workmen represented in the trades council, with their purchasing power of \$400,000 weekly. In *State v. Glidden*,<sup>2</sup> the court points out that numbers can accomplish what one man can not.<sup>3</sup>

On the other hand, as above shown, the courts in certain instances have held that combination itself is not an element to be considered in a civil action for damages, declaring that the action must be based upon actual injuries which, aside from the combination, would have been actionable. On this point the court of civil appeals of Texas said, in a case of trade (not labor) boycott:<sup>4</sup> "A conspiracy (at common law) can not be made the subject of a civil action, although damages result, unless something is done which, without the conspiracy, would give a right of action. In other words, an act which, if done by one alone, constitutes no ground of action, can not be made the ground of such action by alleging it to have been done by and through a conspiracy of several. The true test as to whether such action will lie is whether or not the act accomplished after the conspiracy has been formed is itself actionable."

Again in *Bohn v. Holts*,<sup>5</sup> the supreme court of Minnesota held in most emphatic terms that the element of combination is not significant as a ground for civil damages in connection with the trade boycott.<sup>6</sup>

**4 Malicious motive in boycott.**—In those cases where boycotts have been held illegal stress is frequently laid by the courts upon the fact that the motive of those engaged in the boycott is malicious; that while there may be some thought of benefiting themselves, the desire to injure the person boycotted is conspicuous and perhaps the primary motive. On this point Stinson says:<sup>7</sup>

"A combination primarily to injure a definite person or class of persons is an unlawful conspiracy, though none of the acts committed in carrying it out are unlawful in themselves, still more, of course, when the acts in themselves are unlawful. The prime question in the law of boycott is that of intent. Was the intent primarily to injure another person, to molest him, or to control him in his lawful rights and liberties; or was it a combination, by doing acts which the persons combining had lawful right to do, primarily to better their own condition by getting the employer to alter his conduct in relation to the persons combining themselves? It may be said in the beginning that, just as simple strikes are nearly always lawful, so boycotts are nearly always unlawful. It is difficult to conceive of a boycott conducted solely by lawful acts, and with the sole object of benefiting the persons actually taking part, for the reason that nearly the only lawful act the persons combining can do which has relation to their employers, solely, is to refuse to work for him. And this falls at once under the head of strike. So, when they peaceably persuade others not to work for him, and establish a reasonable patrol or picket about his place of employment in so doing, this falls under the technical head of picketing, which is one of the usual adjuncts of a strike. But boycotts, or unlawful conspiracies, commonly entitle persons actually injured to damages; they may be restrained by injunction, and they subject the members thereof to criminal liability, whether any act be done or any injury actually result to the public or not."

In the case of *Barr v. Essex Trades Council*<sup>8</sup> the action of the boycotters was held to be malicious injury, the element of malice making wrongful acts which would not have been wrongful if done without malice. Malice, continued the court, need not be spite against the person boycotted, but the desire "to injure him in his business in order to force him not to do what he had a perfect right to do."

So, too, in the case of *Hopkins v. Oxley Stave Company*<sup>9</sup> the United States circuit court of appeals dwelt upon the fact "that the conduct of which the defendants below were accused can not be justified on the ground that the acts contemplated were legitimate and lawful means to prevent a possible future decline in wages, and to secure employment for a greater number of coopers. No decrease in the rate of wages had been threatened by the Oxley Stave Company, and, with one exception, the members of the combination were not in the employ of the plaintiff company."

In the Toledo and Ann Arbor case,<sup>10</sup> described below (pp. 595, 601), the court held that the employees of other railroads who refused to haul cars from the Ann Arbor Railroad, not having themselves any grounds for complaint against their own

<sup>10</sup> 51 Fed. Rep., 730, 738

employers, were swayed by an evil motive—the desire to injure the Ann Arbor Company—and that “though the acts in themselves and considered singly as innocent, when the acts are done with malice, i. e., with the intention to injure another without lawful excuse,” they are unlawful.

Again, in *State v. Glidden*,<sup>1</sup> the court declared that the fact that the defendant sought to better their condition by the boycott did not divest their action of the element of malice. “It is no answer to say the conspiracy was for a lawful purpose, to better their condition, to fix and advance their rate of wages. \* \* Neither will these defendants be permitted to advance their material interests \* \* by any such reprehensible means. \* \* In such a case the direct and primary object must be regarded as the destruction of the business. The fact that it is designed as a means to an end, and that end, in itself considered a lawful one, does not divest the transaction of its criminality.”

It is evidently extremely difficult to decide in any particular case of boycott whether the malicious motive is present, and especially whether it is paramount to the legitimate motive of benefiting one's own condition. In several cases of trade boycott, that is, of boycotts instituted by one group of manufacturers or traders against another, rather than by workmen, the courts have held that the primary motive of the persons engaging in the combination was to benefit their own trade, and that their acts could not be considered malicious.<sup>2</sup> Thus is said in *Bohn v. Holts*,<sup>3</sup> a case of trade boycott: “The mere fact that the proposed acts of the defendants would have resulted in plaintiff's loss of gains or profits does not, of itself, render those acts unlawful or actionable. That depends on whether the acts are, in and of themselves, unlawful.” The court in this case went further, and held that, provided the acts which result in injury to the parties were themselves lawful, the fact that they might be done with malicious intent would not render them unlawful. The court referred to several high authorities in support of this position.

The leading English case of *Allen v. Flood*, as already pointed out, while applying to a state of facts somewhat different from the ordinary boycott, seems probably to have decided the law in England that malicious intent can not make otherwise lawful acts actionable.

On the other hand, several recent American cases of trade boycotts have held distinctly that the desire to interfere with the business of another person is malicious, and that the element of malice should be considered as rendering the acts done unlawful. Thus, *Jackson v. Stanfield*, decided by the supreme court of Indiana in 1891,<sup>4</sup> specifically dissents from *Bohn v. Holts*. In *Oliver v. V. Patten*,<sup>5</sup> the court of civil appeals of Texas, following the previous decision of the same court in *Delz v. Winfree*, held a trade boycott, precisely similar to that in the *Bohn* case, to be illegal, and said: “We must hold, in the case before us, that the petition set up a good cause of action, in charging that defendants had maliciously influenced others not to deal with plaintiffs, to their injury. It can not be held that defendants had the right to prevent plaintiffs from selling to consumers or that such interference by them (defendants) was serving a legitimate purpose connected with their own business.”

**5. Coercion as an element in boycott.**—Another thought which enters into the considerations on the matter of boycotts is that of the right of employers to carry on their business without hindrance, and of the illegality of coercion. It is held that the actions of boycotters tend to infringe both on the right of property and on the right of personal liberty. In the *Barr* case<sup>6</sup> the court specifically says: “man's business is his property. By the first section of the bill of rights of the constitution of New Jersey, the right of acquiring, possessing, and protecting property is classed as a natural and inalienable right which all men have. \* \* A harmful interference with the circulation and with the advertising in [Mr Barr's] paper was therefore an injury to his property.” And in the *Oxley Star Company* case it was said: “The right of an individual to carry on his business as he sees fit and to use such employment of processes of manufacture as he desires to use, provided he follows a lawful avocation and conducts it in a lawful manner is entitled to as much consideration as his other personal rights; and the law should afford protection against the efforts of powerful combinations to rob him of that right and coerce his will by intimidating his customers and destroying his patronage.”

<sup>1</sup> 8 Atl. Rep., 890, 896.

<sup>2</sup> See, for example, the leading English case of *Mogul Steamship Co. v. McGregor*, 23 Q. B. Div., 51 App. cases, 25.

<sup>3</sup> 35 N. W. Rep., 1119, 1121.

<sup>4</sup> 36 N. E. Rep., 345.

<sup>5</sup> 25 S. W. Rep., 428, 430.

<sup>6</sup> *Barr v. Essex Trades Council*, 30 Atl. Rep., 881, 888, 889.

As to the nature of the coercion involved in the boycott<sup>1</sup> the court says: "But, even in criminal law, I do not understand that intimidation, even when a statutory ingredient of crime, necessarily presupposes personal injury or the fear thereof. The clear weight of authority undoubtedly is that a man may be intimidated into doing, or refraining from doing, by fear of loss of business, property, or reputation, as well as by dread of loss of life, or injury to health or limb; and the extent of this fear need not be abject, but only such as to overcome his judgment, or induce him not to do or to do that which otherwise he would have done or have left undone."

Again, in the leading English case of *Regina v. Druiitt*,<sup>2</sup> Lord Bramwell said:

"No right of property or capital, about which there had been so much declamation, was so sacred or so carefully guarded by the law of this land as that of personal liberty. \* \* \* But that liberty was not liberty of the body only. It was also a liberty of the mind and will; and the liberty of a man sound and will, to say how he should bestow himself and his means, his talents, and his industry, was as much a subject of the law's protection as was that of his body. Generally speaking, the way in which people had endeavored to control the operation of the minds of men was by putting restraints on their bodies, and therefore we had not so many instances in which the liberty of the mind was vindicated as was that of the body. Still, if any set of men agree among themselves to coerce that liberty of mind and thought by compulsion and restraint, they would be guilty of a criminal offense, namely, that of conspiring against the liberty of mind and freedom of will of those towards whom they so conducted themselves. He was referring to coercion or compulsion—something that was unpleasant and annoying to the mind operated upon; and he laid it down as clear and undoubted law that if two or more persons agreed that they would by such means cooperate together against that liberty they would be guilty of an indictable offense. The public had an interest in the way in which a man disposed of his industry and his capital; and if two or more persons conspired by threats, intimidation, or molestation to deter or influence him in the way in which he should employ his industry, his talents, or his capital, they would be guilty of a criminal offense. That was the common law of the land."

It should be observed, however, that some authorities hold that action of the sort involved in the ordinary boycott does not constitute coercion or intimidation in the legal sense. On this point Cooke says, in his work on the Law of Labor Combination:<sup>3</sup>

"As an act producing a reasonable fear of *unlawful* injury is itself unlawful, so there is nothing necessarily unlawful in an act producing a fear of *lawful* injury. \* \* \* But, clear as is the distinction when thus stated and illustrated, the appreciation of it has been much obscured by the ambiguity of the word 'threat,' as used in statutes, pleadings and judicial decisions. Clearly the word applies to an announcement of an intention to do an unlawful injury. Whether it shall be regarded as also applying to an announcement of an intention to do a lawful injury is a mere question of the use of language. But the important point to notice is, that an announcement of an intention to do a lawful act is not made unlawful merely by calling it a 'threat.' \* \* \* The rule, with this special application, thus becomes: *Though by way of incident to a strike or boycott, it is not unlawful to announce one's intention (or threaten) to do a lawful act, though such announcement of intention (or threat) produce injury or a fear of injury.*"

So, too, in the great English case of *Allen v. Flood*,<sup>4</sup> where the question at issue was the right of employees to threaten to quit employment unless a certain person were discharged, the court held that such a threat could not be considered illegal coercion. While the circumstances here are different, the general principle laid down in the language of the court would seem applicable equally in regard to the boycott.

6. *Rights of third parties.*—Still a further point involved in certain boycott cases is as to the right of third parties who are threatened with a withdrawal of patronage from them or with some other injury in case they continue to have dealings with the person against whom the main boycott is directed. The most conspicuous case involving this question is that of *Moore v. Bricklayers' Union*.<sup>5</sup> In this case a union boycotted a certain boss bricklayer and notified all material men that anyone selling material to him would also be boycotted. The plaintiffs continued to sell lime to the bricklayer and the union notified the plaintiffs' customers that none of its members would do work with materials furnished by the plaintiffs. The court laid stress on the fact that the dealings between the boycotted

<sup>3</sup>Sec. 15.

<sup>4</sup>L. R., 1898, 2 A. C. 1. See fuller account of this case above, p. 575.

<sup>5</sup>23 Weekly Law Bulletin, 48.

bricklayer and the material men, or between the material men and their customers, "had not the remotest natural connection either with defendants' wages or their other terms of employment. There was no competition or possible contractual relation between plaintiffs and defendants where their interests were naturally opposed. \* \* \* The immediate motive of defendants here was to show to the building world that punishment and disaster necessarily follow the defiance of their demands. The remote motive of wishing to better their condition by the power so acquired will not, as we think we have shown, make any legal justification for defendants' acts."<sup>1</sup>

**7. Boycott in railway cases.**—Several of the important recent railway labor cases have involved a form of the boycott. Railway boycotts are peculiar in that the element of persuading the general public to refuse to patronize the person boycotted, which is usually the most effective feature of the boycott, is not the chief one. The boycott is primarily a refusal to handle cars, which has a much more serious effect upon the person or company boycotted than could ever arise simply from the concerted refusal of a group of workmen to buy the products of the ordinary employer. By refusing to handle cars the owner of the cars is deprived altogether of their use; even if the public desires to patronize him it can not do so, because the cars can not be hauled. Furthermore, certain classes of cars, especially Pullman cars, are hauled by the railways under contract, and the refusal of employees to handle them results in the violation of the contract. Most important, however, in the legal decisions concerning railway boycotts is the thought that such boycotts are an interference with interstate commerce and a violation of the specific provisions of United States laws on that subject. For this reason the fuller consideration of the cases of railway boycotts is deferred to another section.

**8. Trade boycotts.**—A number of cases have come before the courts involving boycotts by one group of producers or traders against another person or group of persons. Precisely the same principles seem to be involved in what may be called the trade boycott as in the boycott by labor organizations. In the trade boycott there is often, however, the additional element of combination in restraint of trade, the persons engaging in the boycott seeking by means of it to secure a monopoly. Without going into the general consideration of the methods of enforcing monopolies, it may be pointed out that in several cases the highest courts have refused to condemn the trade boycott, although in other cases they have placed their ban upon it. There seems to be no reconciliation of the conflicting decisions.

The leading case of *Bohn Manufacturing Co. v. Hollis* was decided by the supreme court of Minnesota in 1893,<sup>2</sup> and held the trade boycott to be legal. In this case the defendants were an association of retail lumber dealers in several of the Northwestern States. The object of the association was to protect its members against sales by wholesale dealers to contractors directly and to compel them to sell only to retail dealers. By rule of the organization the plaintiff, having sold goods to a contractor directly, was fined 10 per cent on the amount of the sale. On refusing to pay the fine notices were sent to all members of the association that the plaintiff had refused to comply with the rules and that he should not be patronized. He applied for an injunction to prevent the circulation of these notices, which was refused by the supreme court. The court said:

"It is perfectly lawful for any man \* \* \* to refuse to work for or to deal with any man or class of men, as he sees fit. \* \* \* The right which one man may exercise singly, many, after consultation, may agree to exercise jointly, and make simultaneous declaration of their choice. \* \* \* Summed up, and stripped of all extraneous matter, this is all defendants have done or threatened to do, and we fail to see anything unlawful or actionable in it." The court held that retail lumber yards in the various localities are a public necessity, and that when manufacturers or wholesale dealers sell at retail directly to consumers they injuriously demoralize the retail trade, so that associations of the character described are a legitimate defense.

A somewhat similar case was that of the *Dueber Watch Case Manufacturing Co. v. Howard Watch Co.*,<sup>3</sup> decided by the Federal courts. The defendants had agreed among themselves to maintain a fixed price for their goods and to refuse to sell to any person who should buy the goods of the plaintiff. The court held that there was no allegation that the defendants were seeking to absorb the

<sup>1</sup> Another case somewhat similar to this one was decided by the Virginia courts in 1886 (*Baughman's case*, 11 Va. Law Journal, 324. See also opinion in *Thomas v. Cincinnati, N. O. and T. P. Rwy. Co.*, quoted below, p. 600).

<sup>2</sup> 55 N. W. Rep., 1119, 1121, 1122. See for further points in the opinion on this case, pp. 555, 587.

<sup>3</sup> 56 Fed. Rep., 557, 554; 66 Fed. Rep., 637.

entire trade or that they actually controlled any part of it or that the prices fixed by them were unfair. There might be, it was declared, many perfectly legitimate reasons for such an agreement aside from any intent to monopolize. The decision that such an agreement was unlawful "would make unlawful almost every combination by which trade and commerce seek to extend their influence and enlarge their profits." It is noteworthy, however, that the *Duober Company* afterwards brought suit against the *Howard Company* for conspiracy in the New York courts and the charge was upheld.<sup>1</sup>

The opinion in *Bohn v. Holts* has been directly opposed in several precisely similar cases. Thus, in *Jackson v. Stanfield*,<sup>2</sup> the supreme court of Indiana decided that a combination of retail lumber dealers to refuse to patronize wholesale dealers who should sell directly to contractors or consumers, a case identical with that in *Minnesota*, was unlawful. The court specifically stated that it considered the decision in *Bohn v. Holts* to be in conflict with approved authority. "The great weight of authority supports the doctrine that where the policy pursued against a trade or business is of a menacing character, calculated to destroy or injure the business of the person so engaged, either by threats or intimidation, it becomes unlawful, and the person inflicting the wrong is amenable to the injured party in a civil action for damages therefor. It is not a mere passive, let-alone policy, a withdrawal of all business relations, intercourse, and fellowship that creates the liability, but the threats and intimidation shown in the complaint."

Another case of the trade boycott, practically similar in its nature to the two last cited, was that of *Olive v. Van Patten*,<sup>3</sup> in which the court of civil appeals in Texas decided that this form of trade combination and boycott gave a ground for civil action. It was held that the actual injury to the plaintiff, having been done with a malicious motive and involving an interference with his lawful rights, was basis for a claim for damages. The opinion in this case followed closely that in *Dolz v. Winfree*,<sup>4</sup> also decided in Texas, where the circumstances were closely similar.<sup>5</sup>

**9 Legislation as to boycotts.**—There are many States which have statutory provisions prohibiting intimidation, force, or threats for the purpose of preventing any person from entering or continuing in any employment. These statutes may, in some instances, be interpreted as referring to acts designed to prevent employers from continuing their business, although their primary purpose is to prevent interference with employees. The statutes of a few of these States (New Hampshire, Rhode Island, North Dakota, South Dakota, Oklahoma, Georgia, and Alabama) are somewhat more general, and prohibit interference with any person in the conduct of a lawful business, trade, or employment. While this language also is perhaps primarily intended to apply to interference with employees, it can very readily be applied to interference with employers. Part of the States just named, however, limit the definition of interference with business and employment by the words "by any use of force, threats, or intimidation," or similar language, and it would remain for the courts to decide whether the injury to a man's business by a peaceful boycott would be brought under these provisions.

Aside from these statutes relating to acts of individuals, the special laws regarding combinations and conspiracies sometimes contain provisions especially applicable to boycotts. Thus, in New York, Minnesota, Mississippi, and North Dakota combinations "to prevent another from exercising a lawful trade or calling, or doing any other lawful act, by force, threats, or intimidation," are unlawful conspiracies. In Illinois a combination for the purpose of depriving the owner or possessor of property of its lawful use and management is criminal by statute. North Dakota, South Dakota, Montana, and Oklahoma declare combinations to commit any act injurious to trade or commerce unlawful, a provision which might be made apply to boycotts. If, however, any of these provisions defining unlawful combinations should be held by the courts inapplicable to peaceful boycotts, the statutes of the States referred to, as well as those of some other States which expressly repeal the common law of criminal conspiracy, would apparently make combinations to boycott lawful.

A few States have distinct provisions declaring the boycott unlawful, independently of the definitions under the law of conspiracy already referred to. These

<sup>6</sup> See regarding statutes on intimidation, page 578. The statutes on boycotting are more fully described in Reports of Industrial Commission, Vol. V, pp. 69-71, 131, 135.

States are Maine, Illinois, Kansas, Wisconsin, and Colorado. Such statutes, while differing in detail, agree in declaring unlawful combinations and conspiracies with the criminal intent to injure the person, character, business, or property of another. Illinois specifically refers to the ordinary methods of boycotting, such as the distribution of circulars, posting or printing of notices, etc.

## CHAPTER VIII.

### RAILWAY STRIKES AND BOYCOTTS.

During the past decade there have been numerous important decisions by the Federal courts regarding strikes and other labor difficulties upon interstate railroads. The greater number of these cases centered around the great Chicago strike of 1894, but both before and since that time other labor difficulties have been made the subject of decision by the United States courts. The special conditions under which these strikes and disputes have arisen, and the provisions of law applicable to them under the statutes of the United States, serve to distinguish certain principles underlying the court decisions in these cases which are not usually found in connection with the decisions as to other classes of labor disputes. After analyzing these principles we may consider the specific acts as to which adjudication has been made.

#### A. GENERAL PRINCIPLES LAID DOWN BY COURTS.

1. *Interference with interstate commerce generally.*—The most deeply underlying thought of the Federal courts in cases involving labor disputes on interstate commerce railroads is, apparently, that the protection of interstate commerce is the peculiar care of the Federal Government, and that obstruction of that commerce is an offense punishable as a crime and also subject to restraint by injunction. Reference is frequently made to the immense importance of uninterrupted traffic over interstate transportation lines to the welfare of all classes of citizens. It is pointed out that active interference with such commerce results in the most serious public injury and may threaten the very lives of large numbers of citizens. Although most of the decisions seek to bring interference with interstate commerce either under the precise terms of the interstate commerce act or of the antitrust act of 1890, or to treat it as obstructions of the mails, there are several instances in which the courts appear to consider such interference as illegal independent of any specific statute, although usually even in such cases the statutes are also cited as strengthening the position taken.

Thus referring to the strikes growing out of the Pullman dispute in 1894 Judge Taft of the United States circuit court of the southern district of Ohio<sup>1</sup> said:

"But the illegal character of this combination, with Debs at its head and Phelan as an associate does not depend alone on the general law of boycotts. The gigantic character of the conspiracy of the American Railway Union staggers the imagination. The railroads have become as necessary to life and health and comfort of the people of this country as are the arteries of the human body, and yet Debs and Phelan and their associates proposed, by meeting the employees of all the railways in the country to suddenly quit their service without any dissatisfaction with the terms of their own employment, to paralyze utterly all the traffic by which the people live, and in this way to compel Pullman, for whose acts neither the public nor the railway companies are in the slightest degree responsible, and over whose acts they can lawfully exercise no control, to pay more wages to his employees. The merits of the controversy between Pullman and his employees have no bearing whatever on the legality of the combination effected through the American Railway Union. The purpose, shortly stated, was to starve the railroad companies and the public into compelling Pullman to do something which they had no lawful right to compel him to do. Certainly the starvation of a nation can not be a lawful purpose of a combination, and it is utterly immaterial whether the purpose is effected by means usually lawful or otherwise."

The court in this case, however, referred also to the antitrust act of 1890, and concluded by holding Phelan guilty of contempt of court in inciting a strike among the employees of the receiver of the Cincinnati, New Orleans and Texas

<sup>1</sup> In re Phelan, 62 Fed. Rep., 803, 821.

Pacific Railway Company. The element of boycott and the absence of the direct motive on the part of the strikers to benefit their own condition were especially considered by the court in reaching this decision.

In our study of the legality of strikes we have always referred to the Northern Pacific Railway strike of 1894, and the cases growing out of it. It will be remembered that Judge Jenkins, in the case of *Farmers' Loan and Trust Company v. Northern Pacific Railroad Company*,<sup>1</sup> issued an injunction prohibiting the employees of that company from quitting employment with a purpose of crippling its property or hindering its operation, and also from combining and conspiring to quit for those purposes. When upholding this order, the judge referred to the paralyzing effect of the stoppage of the commerce of the vast railroad. "Many portions of States would have been shut off in the midst of winter from necessary supply of clothing, food, and fuel, the mails of the United States would have been stopped, and the general business of seven States, and the commerce of the whole country passing over this railway would have been suspended for an indefinite time."

The case of the Toledo, Ann Arbor and North Michigan Railway Company v. The Pennsylvania and other railroads,<sup>2</sup> which was decided in the circuit court of Ohio in 1893, was quite analogous in some ways to the Phelan case. While the court especially dwelt on the thought that the refusal of engineers on the Lake Shore Railroad to haul cars coming from the Ann Arbor road was a violation of the interstate commerce act, which prohibits discrimination against traffic brought from other railroads, stress was also laid on the idea of the serious effect of concerted cessation of work upon a great line of interstate commerce. "The suspension of work on the line of such a vast railroad, by the arbitrary action of the body of its engineers and firemen, would paralyze the business of the entire country, entailing losses, and bringing disaster to thousands of unoffending citizens. \* \* \* All these evil results would follow to the public because of the arbitrary action of a few hundred men, who, without any grievance of their own, without any dispute with their own employer as to wages or hours of service, as appears from the evidence in this case, quit then employment to aid men, it may be, on some road of minor importance, who have a difference with their employer. \* \* \* It is not necessary, for the purposes of this case, to undertake to define with greater certainty the exact relief which such cases may properly invoke."

In this last, as in practically all of the cases which we have considered, there are found some special circumstances, such as the element of boycott, the presence or alleged presence of intimidation and actual physical obstruction to commerce, or interference with the mails. It is consequently difficult to know how far such expressions as those above quoted are merely used to strengthen the position taken by the courts in condemnation of acts having these special characteristics. It is perhaps doubtful whether in the absence of any of these aggravating circumstances the courts would consider mere interference with interstate commerce by refusal to work or by quitting employment as illegal. The point of such expressions as those quoted seems to be chiefly to show that certain acts of strikers in connection with interstate commerce have a more serious effect than similar acts in other occupations, although even in such other occupations they would be usually held illegal.

**2. Interference in violation of antitrust act of 1890.**—The first section of the antitrust act of 1890 is as follows. "Every contract, combination in the form of trust or otherwise, or conspiracy in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal. Every person who shall make any such contract or engage in any such combination or conspiracy shall be deemed guilty of a misdemeanor and on conviction thereof shall be punished by fine not exceeding \$5,000, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court." A further provision of this same act authorizes the issue of injunction by the Federal courts to restrain and prevent such contracts or combinations.

This act has been several times invoked by the courts against combinations of workmen employed in connection with railroads, and it was perhaps the main reliance in the issue of injunctions and the punishment of strikers in connection with the railway strikes of 1894. Several admit that the primary purpose of the act of 1894 was to prevent combinations of capital, but they go further and declare that in the mind of Congress there was probably some thought of applying it also to combinations of workmen, and that in any case, in the absence of any pro-

<sup>1</sup> 60 Feb. Rep., 803, 813.

<sup>2</sup> 54 Fed. Rep., 746, 753.

vision to the contrary, the courts are entitled to make a broad interpretation and to apply the law to any combination interfering with interstate commerce. The argument in defense of this extension of the application of the antitrust act is most fully stated by the United States circuit court in the Debs case:<sup>1</sup>

"It is perhaps apparent that the original measure, as proposed in the Senate, 'was directed wholly against trusts, and not at organizations of labor in any form.' But it also appears that before the bill left the Senate its title had been changed, and material additions made to the text; and it is worthy of note that a proviso to the effect that the act should not be construed to apply to any arrangements, agreements, or combinations made between laborers \* \* \* was not adopted. \* \* \* But it is more significant that, upon the introduction of the bill into the House, the chairman of the Judiciary Committee, as reported in the Congressional Record (vol. 21, pt. 5, p. 4089), made the following statement

Now, just what contracts, what combinations in the form of trusts, or what conspiracies will be in restraint of trade or commerce, mentioned in the bill, will not be known until the courts have construed and interpreted this provision.

It is therefore the privilege and duty of the court, uncontrolled by considerations drawn from other sources, to find the meaning of the statute in the terms of its provisions, interpreted by the settled rules of construction."

In another case a judge of a Federal court speaks as if the intention of Congress to apply this act to combinations of workmen was very distinct:<sup>2</sup>

"The growth of railways in this country, and the combinations of laborers employed on those roads for the purpose of enforcing, by strikes or otherwise, what they conceived to be their just rights, had led to a condition of things that, in the judgment of Congress, made it imperative that the courts of the United States \* \* \* should be clothed with the power of laying their strong hands on these men. \* \* \* With that view of national duty, on July 2, 1890, Congress enacted a law that enlarged the jurisdiction of the Federal courts, and authorized them to apply the restraining power of the law" for the purpose of checking lawless interference with the mails and with railroad business.

The inability of the court in the Debs case to show from the debates in Congress anything more than an unwillingness specifically to exempt labor organizations from the application of the antitrust law makes it very doubtful whether such a strong statement as that just quoted regarding the intention of Congress is in accordance with the facts. Nevertheless, in several other cases the courts have specifically applied the act of 1890 to labor organizations.<sup>3</sup>

It should be noticed, further, that the statutory law of conspiracy is frequently invoked by the Federal courts in connection with their expressions as to the illegality of interference with interstate commerce. The element of combination under the common law, as we have seen, is treated as giving a different character to acts from that which they would possess as acts of individuals. The common-law principle is stated in the following provision of the Revised Statutes of the United States (sec. 5440): "If two or more persons conspire either to commit any offense against the United States, or to defraud the United States in any manner or for any purpose, and one or more of such parties do any act to effect the object of the conspiracy, all the parties to such conspiracy shall be liable to a penalty of not less than \$1,000 and not more than \$10,000, and to imprisonment not more than two years."

In several of the charges made by Federal judges to the grand juries and petit juries in railroad cases, they undertake to analyze the elements of the offense of conspiracy. We have already above quoted several of these utterances in our study of the law of conspiracy, pp. 551, 553.<sup>4</sup>

**3. Obstruction of mails.**—Another principle underlying the decisions of the Federal courts with reference to strikes on railways is that of the illegality of obstructing the mails. In several of the decisions this matter is referred to, although practically always in conjunction with interference with interstate commerce. The United States statute, with reference to obstructing the mails, provides: "Any person who shall knowingly and willfully obstruct or retard the passage of the mails, or any carriage, horse, driver, or carrier carrying the same, shall, for every such offense, be punished by a fine of not more than \$100."<sup>5</sup> Other provi-

<sup>2</sup> Justice Baker in *U. S. v. Agler*, 62 Fed. Rep., 824, 825.

<sup>3</sup> *U. S. v. Cassidy* (Cal.), 67 Fed. Rep., 698, in re Phelan (Ohio), 62 Fed. Rep., 803; *U. S. v. Elliott*, 62 Fed. Rep., 801.

<sup>4</sup> See the charge of Judge Grosscup to grand jury, 62 Fed. Rep., 828, charge of Judge Ross, 62 Fed. Rep., 834, charge of Judge Morrow, 62 Fed. Rep., 840, in re Phelan, 62 Fed. Rep., 803; *United States v. Cassidy*, 67 Fed. Rep., 698.

<sup>5</sup> Revised Statutes, sec. 3996.

sions of the law require railways to carry mails in accordance with their arrangements with the Government.

In his charge to the grand jury, in the United States district court in California, July 13, 1894,<sup>1</sup> Judge Morrow referred to this statute, and declared that there could be no question that the passage of the mails on certain lines of railway had been obstructed, the question for the jury to decide being as to whether the strikers or the railroad company, or both, were responsible.

About the same time Judge Grosscup, in Chicago, gave a charge to the grand jury, in which he referred to the law of conspiracy, and declared that if the jury should find that a body of men had combined together for the purpose of hindering or obstructing the mails, whether temporarily or permanently by forcible methods, or by quitting employment and preventing others, by threats, intimidation, or violence, from taking their places, it would constitute a criminal conspiracy.<sup>2</sup>

4. *Violation of interstate-commerce act of 1887.*—In only one case have the specific provisions of the interstate-commerce act been invoked against strikers and combinations of workmen. This was the case of the Toledo, Ann Arbor and North Michigan Railroad *v.* the Pennsylvania and other railroads, decided by Judges Taft and Ricks in the United States circuit court of the northern district of Ohio in 1893.<sup>3</sup>

In this case the engineers on the Lake Shore and Michigan Southern and other railroads connecting with the Toledo and Ann Arbor Railroad refused to haul cars coming from that road on the ground that there was an authorized strike of the Brotherhood of Locomotive Engineers on the Ann Arbor line. The court referred to the provision of the interstate-commerce act which requires all common carriers to "afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines, and for the receiving, forwarding, and delivery of passengers and property to and from their several lines." A further section of the same act, imposing a penalty upon any officer, agent, "or person acting for or employed by such corporation" for omitting to do anything required by the act, was also cited. Judge Taft declared that the law could probably be fairly interpreted to apply directly to locomotive engineers refusing to handle interstate freight, since engineers are "persons employed by" a common carrier. If, however, he added, this section should be interpreted as referring only to managing officers and agents, the acts of the strikers would still be illegal. Anyone successfully aiding, abetting, or procuring an officer or agent to violate the law would be punishable as a principal. Persons combining and conspiring to procure the commitment of a crime by others are subject to the statutory law of conspiracy. The act of withholding labor which might under other circumstances be altogether legal becomes illegal if designed to induce or compel another to commit an unlawful act. The court in this case issued an injunction to restrain the defendant railroad companies and their agents and employees from refusing to haul these cars, and another injunction restraining P. M. Arthur, chief of the Brotherhood of Locomotive Engineers, from issuing an order requiring employees of the defendant companies to refuse to haul such cars. (See further discussion below.)

5. *Contempt of receivers.*—Still another ground for declaring certain acts of strikers and labor organizations in connection with interstate commerce to be illegal is found in the fact that certain common carriers are in the hands of receivers appointed by and responsible to the courts. Various acts have been punished on the ground that, being directed against the officers of the court, they constituted contempt of court. And the granting of injunctions has at times been specially defended for the protection of railroads in the hands of receivers.

The leading case where this principle is involved is that of *Thomas v. Cincinnati, New Orleans and Texas Pacific Railway Company*, in which Phelan, who grew out of the Pullman strike, and was decided by the United States circuit court of the southern district of Ohio July 13, 1894.<sup>4</sup> Phelan was endeavoring to persuade the employees of the receivers of the above-named railroad to quit work and to prevent others from taking their places. The court, after declaring that the purpose of Phelan and of the combination with which he was connected was illegal on various grounds, held further that the acts of Phelan, as directed against receivers appointed by the court, were in contempt, and he was accordingly imprisoned for 6 months.

In the *Northern Pacific Railway* case,<sup>5</sup> Judge Jenkins, in issuing an injunction to prohibit the employees of the company from abandoning service in such a way

<sup>1</sup> 62 Fed. Rep., 840, 844.

<sup>2</sup> In re grand jury, 62 Fed. Rep., 828, 831.

<sup>3</sup> 54 Fed. Rep., 730, 746, 750.

<sup>4</sup> 62 Fed. Rep., 803.

as to cripple the operation of the railroad by the receivers thereof, declared that an employee deeming himself wronged by the action of the receivers had a peaceful remedy by appeal to the court, which had authority to direct the receivers in their treatment of the employees.

In the case of the *United States v. Kane*<sup>1</sup> the action of strikers in attempting to prevent engineers from running trains by methods which the court held to involve intimidation, was declared contempt of court because the road was in the hands of a receiver.

## B. SPECIFIC ACTS AND METHODS OF STRIKERS HELD ILLEGAL BY THE COURTS.

Having thus summarized the general principles underlying the decisions of the courts as to the reasons for holding acts of strikers illegal, it becomes necessary to ascertain, so far as practicable, just what classes of acts are considered by the courts as violating these principles. The question is as to what specific things done by strikers or combinations of workmen in connection with railroads have been considered as obstructing interstate commerce, obstructing the mails, violating the antitrust act of 1890, etc. In general, it may be said that the acts specially condemned by the courts and which have been most commonly made the subject of injunctions are in the nature of overt and physical interruption of traffic, or interference, by intimidation or violence, with persons in the employ of, or seeking employment from, railroad companies. Less frequently the element of boycott in the action of the strikers, particularly the refusal to haul Pullman cars during the strike of 1894, has been treated as in itself illegal. In a few cases the acts of officers of labor organizations in ordering strikes or promoting interference with interstate commerce have been restrained. Finally, there have been restraining orders and expressions of courts directed against the refusal to perform ordinary duties while remaining in the service of the common carrier. And in one case the quitting of employment itself has been declared illegal, though this was overruled by a higher court.

1. **Physical obstruction, violence, and intimidation.**—There can be no doubt that in many cases during the great railroad strikes of 1894 the strikers employed means for hindering the operation of trains which amounted to physical obstruction. Without undertaking to ascertain what the precise facts were with regard to the actions of the strikers, we may here confine ourselves to a reference to the terms of the indictments brought against them in the various cases and of the injunctions issued by the courts, together with the remarks of the judges on these subjects.

In the *Debs* case<sup>2</sup> the United States, by its district attorney, under the direction of the Attorney-General, filed a bill of complaint against Debs and others on July 2, 1894, which stated that the defendants, in pursuance of their conspiracy to prevent the running of Pullman cars, had asserted that they would tie up all railways not acceding to their demands, that in pursuance of this intention they had collected in large numbers at the station grounds, yards, and rights of way of various railway companies, and by threats, intimidation, and violence had sought to prevent the railroad companies from employing persons, and to prevent the employees of the railroad companies from performing their duties or to compel them to quit employment. It was also charged that the defendants did by force and violence, stop, obstruct, and wreck engines and trains, by locking switches, removing spikes and rails, displacing and destroying signals, and in other ways. The injunction issued by the Federal court on the basis of this bill commanded the defendants to refrain from "interfering with or stopping the business of" the specified railroads, or from interfering with trains engaged in interstate commerce or carrying the mails, or from interfering with or injuring the property of the railroads or from entering upon their grounds and premises for such purposes. It also enjoined the employees from "compelling or inducing \* \* \* by threats, intimidation, persuasion, force, or violence any of the employees of any of said railroads to refuse or fail to perform any of their duties" or to quit employment. The prevention of any person by threats, force, or violence from entering the service of the railroads or from doing the work thereof was also prohibited. Various specified acts of violence and interference with property were also named in the restraining order.

The indictment in the case of *United States v. Cassidy*<sup>3</sup>, which was brought in California, charges very similar acts to those named in the bill and prohibited in

<sup>1</sup> 23 Fed. Rep., 748.

<sup>2</sup> In re Debs, 64 Fed. Rep., 724, 15 Sup. Ct. Rep., 900, 903.

<sup>3</sup> 67 Fed. Rep., 698.

the restraining order in the Debs case. The indictment was for conspiracy to restrain trade and interfere with United States mails. The jury disagreed, and while a majority were for conviction the failure to agree resulted in a discharge of the jury. The chief methods of obstruction charged by the indictment were as follows: By forcibly taking and keeping possession and control of all yards, depots, tracks, and trains, assembling large crowds of persons in said depots and yards at various points, preventing the movement and passage of said engines, cars, and trains, by threats, intimidation, personal assaults, and other force and violence, to prevent the employees of said Southern Pacific Company from discharging their duties; by forcibly disconnecting air brakes, by putting out the fires in the engines, by throwing switches, opening drawbridges, by burning and destroying bridges, trestles, and culverts; by loosening and displacing the rails, by greasing the rails, by stopping the trains upon railway crossings and upon switches, and by forcibly refusing to allow such trains to be hauled from such crossings and switches, by compelling the employees of said railroad company to leave their work while in the performance of their duty.

In the earlier case of the Northern Pacific Railway strike,<sup>1</sup> the circuit court of appeals, in modifying the injunction issued by Judge Jenkins, which had practically prohibited the strike altogether, retained in the injunction the prohibition against combining and conspiring to quit the service of the receivers "with the object of crippling the property in their custody or embarrassing the operation" of the railroad. But Justice Harlan, in his opinion, stated that the phrases thus used must be construed as referring only to acts of violence, intimidation, and wrong of the same nature as those previously described in the clauses of the writ, very similar to the clauses used in the Debs injunction, and referring to physical interference, destruction of property, violence, intimidation of those in employment or seeking employment, etc.

A majority of the railroad strike cases have been in connection with acts or alleged acts of such direct and forcible interference with commerce as are referred to in the above cases.

In the case of *United States v. Kane*,<sup>2</sup> Justice Brewer, of the Federal circuit court, held that the action of striking employees in surrounding engines and requesting engineers to get off from them was intended to overawe the engineers and amounted to intimidation. He declared that it was not necessary that there should be actual violence, but that if strikers met in considerable numbers and simply said "Please get off this engine," the impression might be left on the minds of the engineers and trainmen that personal prudence compelled them to leave. Such intimidation interfered with the operation of the road by the receivers, and was therefore contempt of court.

**2. Refusing to perform services while remaining in employment.**—The more important question to decide is how far the courts go in holding acts illegal which do not in themselves amount to violence, intimidation, or physical obstruction to the operation of railroads. We find, in this connection, several decisions to the effect that, so long as they remain in employment, railway servants are bound to perform their usual duties, and may not refuse to haul trains or handle particular classes of traffic.

Thus, in the Toledo, Ann Arbor and Northern Michigan case,<sup>3</sup> an injunction was issued prohibiting all employees of the defendant railways from refusing to handle cars from the Ann Arbor road. One of the engineers on the Lake Shore road, Lennon, was charged with contempt in having refused to haul some of these cars. The decision of the court held that so long as the employees of the railroad remained in its service they were bound to obey the injunction order and haul these cars. Moreover, they could not quit employment under circumstances which would endanger life or property, there being an implied contract that they would not do so. Finally, it was held that the action of Lennon in declaring that he had quit employment, in connection with the refusal to haul the cars, was not in good faith, since he, a few hours afterwards, continued the journey.

A much clearer and more far-reaching statement of this idea was made by Judge Ross in the circuit court of California in 1894.<sup>4</sup> This was bill for an injunction to prevent the employees of this railroad from refusing to receive and handle Pullman cars while remaining in the service of the company. The injunction was granted, the court saying: "Why should not men who remain in the employment of another perform the duties they contract and engage to perform? It is certainly just and right that they should do so, or else quit the employment."

<sup>1</sup> 60 Fed. Rep., 803, 812, 63 Fed. Rep., 310, 317, 321.

<sup>2</sup> 23 Fed. Rep., 748.

<sup>3</sup> 54 Fed. Rep., 746.

<sup>4</sup> Southern California Railroad Company v. Rutherford, 62 Fed. Rep., 796, 797.

3. **Illegality of quitting employment under certain circumstances.**—There has been some disposition on the part of certain judges to go even further than to hold refusal to perform services while remaining in employment illegal. Even the quitting of employment by railroad employees under certain circumstances has been placed under the ban of the law. The general trend of opinion, however, appears to be strongly against this extension of the principle.

The most extreme statement regarding the illegality of strikes was made by Judge Jenkins in the Northern Pacific Railroad case.<sup>1</sup> This case has already been referred to under the general head of strikes (p. 563). It will be remembered that an injunction was issued to restrain the employees of the Northern Pacific Company from combining and conspiring to quit the service of the receivers, or "from so quitting the service of the said receivers, with or without notice, as to cripple the property, or to prevent or hinder the operation of said railroad." In defense of this injunction the judge said: "In the interest of the public [the railway] must be kept a going concern. \* \* \* And so, also, employees, in entering the service, assume obligations coextensive in kind with that of the corporation." While the judge admitted the right of workmen to quit employment for a lawful purpose, he declared that in this and in practically all strikes the quitting of employment was only a pretext and not actual, the intent being to cripple the employer so that he would be forced to reemploy the strikers at their own terms.

This extreme action of Judge Jenkins was modified materially by the circuit court of appeals in the case of *Arthur v. Oakes*.<sup>2</sup> Judge Harlan, in delivering the opinion, declared that the injunction could not be used to enforce personal service. The injunction was so modified as to apply only to combination and conspiracy intended to cripple the property, and the judge declared that this referred only to active obstruction, such as the displacement of engines, cars, etc., and the use of force and intimidation to prevent the persons from performing their duties as employees or from entering the service of the railroad.

Another statement, fully as extreme as that of Judge Jenkins, was made by Judge Jackson in the case of the *United States v. Thomas*.<sup>3</sup> Here the transportation of the mails had been checked by a strike, and while there were circumstances of direct interference with the passage of trains, intimidation, etc., the address to the jury contained observations intended for the strikers, which would seem to imply that the act of striking itself was considered not only reprehensible but illegal. The judge said:

"You have no right to go into a strike, and undertake to stop the transportation of the mails of the United States, \* \* \* or undertake to stop the business which is carried on on the great highways of the country \* \* \* If all this is done, then you step upon a right which you have no right to interfere with. \* \* \* Rely not upon combinations and strikes to protect your interests. They are disastrous, stopping your mills and stopping the enterprises and business of the community which furnish the wage-earner the means to support his home \* \* \* If you take this thing up, and look at it, and ponder over it, and see the result that must necessarily follow such a course of action, and the train of circumstances that must necessarily accompany it, you would refuse to enter into these combinations and strikes."

Another extreme expression as to the illegality of strikes, based on the antitrust act of 1890, was made, in the way of obiter dictum, by a Federal judge in the case of *Waterhouse v. Comer*.<sup>4</sup> "Now it is true that in any conceivable strike upon the transportation lines of this country, whether main lines or branch roads, there will be interference with and restraint of interstate or foreign commerce. This will be true also of strikes upon telegraph lines, for the exchange of telegraphic messages between people of different States in interstate commerce. In the presence of these statutes, which we have recited, and in view of the intimate interchange of commodities between people of several States of the Union, it will be practically impossible hereafter for a body of men to combine to hinder and delay the work of the transportation company without becoming amenable to the provisions of these statutes. And a combination or agreement of railroad officials or other representative of capital, with the same effect, will be equally under the ban of the penal statutes. It follows, therefore, that a strike, or 'boycott,' as it is properly called, if it was ever effective, can be so no longer. Organized labor, when injustice has been done or threatened to its membership, will find its useful and valuable mission in presenting to the courts of the country a strong and resolute protest and a petition for redress against unlawful trusts and combinations which would do unlawful wrong to it. Its membership need not doubt that their

<sup>1</sup> 60 Fed. Rep., 803, 813.

<sup>2</sup> 63 Fed. Rep., 310, 318.

<sup>3</sup> 55 Fed. Rep., 380, 381.

<sup>4</sup> 56 Fed. Rep., 149, 157.

counsel will be heard, nor that speedy and exact justice will be administered wherever the courts have jurisdiction. It will follow, therefore, that in all such controversies it will be competent, as we have done in this case, for the courts to preserve the rights of the operatives, to spare them hardship, and at the same time to spare to the public the unmerited hardship which it has suffered from such conflicts in the past. It will be also found that by such methods organized labor will be spared much of the antagonism it now encounters, and in its appeal to the courts it will have the sympathy of thousands, where, in its strikes, it has their opposition and resentment."

Again in the Toledo and Ann Arbor case,<sup>1</sup> it was held that a combination to withhold service from a railroad company for the purpose of compelling it not to handle cars coming from other roads was illegal, being a conspiracy to compel the commitment of a crime. The court declared that the right to quit service was not an absolute one and could not be used to compel others to commit an unlawful act: "But it is said that it can not be unlawful for an employee either to threaten to quit or actually to quit the service when not in violation of his contract, because a man has the alienable right to bestow his labor where he will, and to withhold his labor as he will. Generally speaking, this is true, but not absolutely. If he uses the benefit which his labor is or will be to another, by threatening to withhold it or agreeing to bestow it, or by actually withholding it or bestowing it, for the purpose of inducing, procuring, or compelling that other to commit an unlawful or criminal act, the withholding or bestowing of his labor for such a purpose is itself an unlawful and criminal act."

The element of boycott in this case was, of course, of special significance. We have seen that the courts have often held a strike or threat to strike for the purpose of preventing another from obtaining employment to be illegal, and the circumstances here are closely analogous.

**4. Aiding and abetting strikes to the obstruction of commerce.**—Several of the injunctions issued in connection with the railroad strikes have contained special prohibitions, directed to the officers and leaders of the strikers, to restrain them from promoting or inciting acts in obstruction of interstate commerce or of the transmission of the mails. Thus the injunction issued in the Debs case on July 2, 1894, which was made the basis for the imprisonment of Debs and others later on, not only prohibited intimidation of those remaining in employment, but even forbade "induc[ing]" them to do so by "persuasion." The injunction also contained the following language among its prohibitions:

"From doing any act whatever in furtherance of any conspiracy or combination to restrain either of said railroad companies or receivers in the free and unhindered control and handling of interstate commerce over the lines of said railroads, \* \* \* and from ordering, directing, aiding, assisting, or abetting in any manner whatever any person or persons to commit any or either of the acts aforesaid."

This last prohibition is not very definite. Taking the language literally, it can be construed to prohibit only the direct encouragement of the strictly prohibited acts enumerated in the injunction, acts in the nature of violence, intimidation, etc., or to prohibit acts in furtherance of a conspiracy to restrain commerce, words which would leave it necessary for the courts subsequently to determine whether such a conspiracy existed and whether leaders of the strikers had encouraged it. As a matter of fact the Federal court did so interpret the acts of Debs and his associates as to bring them under the provisions of this injunction.<sup>2</sup> The court admitted in its decision that the leaders had doubtless meant sincerely their warnings against acts of depredation or visible destruction of property, but declared that the strikers did not understand that their leaders desired to forbid intimidation or less conspicuous forms of violence. Moreover no active effort was made by the leaders to preserve peace or to protect property. The chief purpose of the railroad strike itself was further declared illegal, and the leaders were consequently considered to have violated that part of the injunction which prohibited the furtherance of a conspiracy in restraint of commerce.

A much more specific prohibition upon the acts of the leaders of the railway strike was made by the injunction order of Chief Justice Fuller in the circuit court for the district of Indiana on July 3, 1894.<sup>3</sup> In addition to various other prohibitions addressed to the strikers and their leaders, "and to all other persons whomsoever," the order contained the following language:

"And Eugene V. Debs and all other persons are hereby enjoined and restrained from sending out any letters, messages, or communications directing, inciting, encouraging, or instructing any persons whatsoever to interfere with the busi-

<sup>1</sup> 54 Fed. Rep., 730, 737.

<sup>2</sup> In re Debs 64 Fed. Rep., 724, 727.

<sup>3</sup> See report of United States Strike Commission, p. 188.

ness or affairs, directly or indirectly, of any of the railway companies herein above named, or from persuading any of the employees of said railway companies while in the employment of their respective companies to fail or refuse to perform the duties of their employment."

No case was ever brought for contempt under this order, but apparently it has the sanction of the highest authority of the Federal courts. If the words "to interfere with the business or affairs, directly or indirectly," be taken literally, the most ordinary acts of the officers of labor organizations and the leaders of strikes are prohibited, since they could scarcely give any directions to their followers which would not involve a certain degree of such interference. This was done, to be sure, in connection with the strike which the court declared as in itself an illegal conspiracy.

We have referred in another connection to the restraining order in the Northern Pacific Railway case, which prohibited the officers of the railway organizations and their leaders from ordering a strike.<sup>1</sup> It was also noticed that the decision of the circuit court of appeals modifying the original injunction in this case did not make clear whether the provision directed against these officers was allowed to stand or otherwise.

We have also observed that in the Toledo and Ann Arbor case (Chief Arthur, of the Brotherhood of Locomotive Engineers, was specifically restrained by an injunction from issuing or continuing any order which should require the engineers to refuse to handle cars coming from or going to Ann Arbor road. This was interpreted as prohibiting him from ordering a strike on account of the hauling of such cars.

**5. Railway boycotts.**—In nearly all of the cases in connection with the American Railway Union strike of 1894, the courts adverted to the element of boycott in the attempt to prevent the railways from hauling Pullman cars, and this element was generally treated as being either the chief source of the illegal character of the strike, or as being an important factor in it.

Thus, the opinion of the circuit court in the Debs case<sup>2</sup> appears to imply that the boycott of the Pullman cars was an illegal thing in itself regardless of the means used to carry it out. After quoting the order issued by Debs, as president of the American Railway Union, which stated that a boycott against the Pullman Company had been declared by the union, the courts goes on to say: "Pullman cars in use upon the roads are instrumentalities of commerce, and it follows that from the time of this announcement, if not from the adoption of the resolution by the convention, the American Railway Union was committed to a conspiracy in restraint of interstate commerce," and that the members were therefore criminally liable for the acts of one another. Whether the court would have treated the boycott as being illegal, independently of its interference with interstate commerce, is uncertain.

More clear is the statement of the boycott feature in the case of Phelan<sup>3</sup> decided by the circuit court of the southern district of Ohio on July 13, 1894. Phelan was found guilty of contempt for trying to induce the employees of a road, which was in the hands of a receiver, to quit work for the purpose of compelling the road to refuse to haul Pullman cars. The court explained in detail the purpose and method of the American Railway Union in boycotting the cars of the Pullman company by inciting the employees of railroads generally to tie up the roads in order that they might refuse to carry Pullman cars. These acts were declared to be without excuse and therefore malicious. The court said that, while employees have the right to strike to benefit themselves, and while leaders have the right to incite them to do so, a strike for the purpose of injuring a third party is without justification. The American Railway Union "proposed to inflict pecuniary injury on Pullman by compelling the railway companies to give up using his cars. \* \* \* But the combination was unlawful without respect to the contract feature. It was a boycott. The employees of the railway companies had no grievance against their employers. Handling and hauling Pullman cars did not render their services any more burdensome. They had no complaint against the use of Pullman cars as cars. They came into no natural relation with Pullman in handling the cars. \* \* \* Simply to injure him in his business, they were incited and encouraged to compel the railway companies to withdraw custom from him by threats of quitting their service, and actually quitting their service. This inflicted an injury on the companies that was very great and it was unlawful, because it was without lawful excuse. All the employees had the right to quit their employment, but they had no right to combine to quit in order thereby to compel their employer to withdraw from a mutually profitable relation with a third person for

<sup>1</sup> See above, p. 568.

<sup>2</sup> 64 Fed. Rep., 724, 763.

<sup>3</sup> In re Phelan, 62 Fed. Rep., 808, 813.

the purpose of injuring that third person, when the relation thus sought to be broken had no effect whatever on the character or reward of their service. It is the motive for quitting, and the end sought thereby, that make the injury inflicted unlawful, and the combination by which it is effected an unlawful conspiracy."

The element of boycott was also alluded to by Judge Taff in the decision of the Toledo and Ann Arbor case.<sup>1</sup> Here again the court does not make clear whether the boycott would have been considered unlawful in itself, aside from the fact that it was designed to influence railway companies to refuse to handle cars coming from another road, in violation of the interstate commerce act. The language of the court with reference to the illegality of the boycott is as follows:

"Herein is found the difference between the act of the employees of the complainant company in combining to withhold the benefit of their labor from it and the act of the employees of the defendant companies in combining to withhold their labor from them; that is, the difference between the strike and the boycott. The one combination, so far as its character is shown in the evidence, was lawful, because it was for the lawful purpose of selling the labor of those engaged in it for the highest price obtainable, and on the best terms. The probable inconvenience or loss which its employees might impose on the complainant company by withholding their labor would, under ordinary circumstances, be a legitimate means available to them for inducing a compliance with their demands. But the employees of defendant companies are not dissatisfied with the terms of their employment. So far as appears, those terms work a mutual benefit to employer and employed. What the employees threaten to do is to deprive the defendant companies of the benefit thus accruing from their labor, in order to induce, procure, and compel the companies and their managing officers to consent to do a criminal and unlawful injury to the complainant. Neither law nor morals can give a man the right to labor or withhold his labor for such a purpose."

### C. LEGISLATION AS TO STRIKES ON RAILWAYS.<sup>2</sup>

In Maine, Pennsylvania, Illinois, New Jersey, Kansas, Delaware, and Mississippi there are special statutory provisions regarding strikes on railways, the purpose being to prevent such sudden abandonment of employment as shall endanger life or seriously obstruct the actual physical use of the railroad. In several of these States the provision is, essentially, that no locomotive engineer (or, in a smaller number of States, conductor or other trainman) shall abandon a locomotive or train at any other place than at the regularly scheduled end of the route. Other provisions in these States prohibit combinations or conspiracies for the purpose of physical interference with the operation of railroads, whether by destroying property, obstructing the track, disabling rolling stock, or intimidating the employees.

Several other States have special provisions of statute directed against individuals who in any way directly obstruct the operation of railroads or injure railroad property. These statutes are distinct from those above named regarding combinations of railway employees for similar purposes. The penalties imposed are

<sup>1</sup> Thus in Illinois (Revised Statutes, 109-111, 111), and Kansas, substantially:

If any locomotive engineer in furtherance of any combination or agreement, shall wilfully and maliciously abandon his locomotive upon any railroad at any other point than the regular schedule destination of such locomotive, he shall be fined not less than \$20 nor more than \$100, and confined in the county jail not less than twenty days nor more than ninety days.

If any person or persons shall wilfully and maliciously, by any act or by means of intimidation, impede or obstruct, except by due process of law, the regular operation and conduct of the business of any railroad company or other corporation, firm, or individual in this State, or of the regular running of any locomotive engine, freight, or passenger train of any such company, or the labor and business of any such corporation, firm, or individual, he or they shall, on conviction thereof, be punished by a fine of not less than twenty dollars nor less [more] than two hundred dollars, and confined in the county jail not more [less] than twenty days nor more than ninety days.

If two or more persons shall wilfully and maliciously combine or conspire together to obstruct or impede by any act, or by means of intimidation, the regular operation and conduct of the business of any railroad company or any other corporation, firm, or individual in this State, or to impede, hinder, or obstruct, except by due process of law, the regular running of any locomotive engine, freight, or passenger train on any railroad, or the labor or business of any such corporation, firm, or individual, such person shall, on conviction thereof, be punished by fine not less than twenty dollars nor more than two hundred dollars, and confined in the county jail not less than twenty days nor more than ninety days.

This act shall not be construed to apply to cases of persons voluntarily quitting the employment of any railroad company or such other corporation, firm, or individual, whether by concert of action or otherwise, except as is provided in [par. 109]. \* \* \*

<sup>2</sup> 54 Fed. Rep., 530, 746.

<sup>3</sup> See fuller digest and extracts from laws in Reports of Industrial Commission, Vol. V, p. 132.

usually heavy, and the measures are to be looked upon essentially as designed for the protection of life, limb, and property under the police power, rather than as intended to affect the relations of employers and employees. States having such special provisions as to railways are Maine, Connecticut, New York, Wisconsin, Kansas, Nebraska, Kentucky, and West Virginia.

## CHAPTER IX.

### THE INJUNCTION IN LABOR DISPUTES.

During the past 15 or 20 years we find very numerous cases in which the courts have used the injunction to restrain acts of labor organizations and of strikers. The use of the injunction has been especially frequent during the past decade. The most conspicuous instance of its employment was in the great railway strike of 1894, and it was in the decision of the Debs case arising out of that strike that the highest judicial authority was given for the use of the injunction under such circumstances. Probably no other feature of the attitude of the courts toward labor has aroused more discussion on the part of the general public, or more opposition from labor organizations, than the use of such injunctions. It seems to be conceded on all hands that the enjoining of acts of strikers and of members of labor organizations is a recent development, and that it is far more common in the United States than in Great Britain. The courts have, however, upheld their increasing employment of this means of restraint on the ground that new conditions have arisen which have demanded strenuous action. The opinions of various labor leaders and labor organizations and others as to the injunctions have been repeatedly stated before the Industrial Commission.<sup>1</sup> Here it is appropriate to present the arguments of the courts themselves on this subject, as well as the opinions of various legal writers favoring or opposing injunctions. There are several special points with regard to injunctions which may be considered more or less independently.

#### A. COURT DECISIONS AS TO INJUNCTIONS.

1. **Injunctions to restrain acts which are also criminal.**—Probably the most mooted legal question with regard to injunctions is as to whether they may be used to restrain acts which are criminal and which would subject the offender to punishment at common or statute law. It is contended by many persons, including some leading lawyers, that there is no warrant for the issue of an injunction under those circumstances, since the penalties of the law are themselves supposed to be a sufficient deterrent influence without the resort to the extraordinary remedy of the injunction. It is declared that courts of equity have no criminal jurisdiction. It is also especially objected that the introduction of the injunction against acts which are criminal deprives those who are charged with these acts of the right of trial by jury, submitting them exclusively to the jurisdiction of the court on the charge of contempt.

While courts themselves have usually of late years denied the validity of this line of argument, there is some strong language on the part of judges to the effect that injunctions may not properly be used against criminal acts. In one case where an injunction to restrain a boycott was issued by the United States circuit court of appeals of the eighth circuit a strong dissenting opinion was submitted by Judge Caldwell, in which the use of the injunction in criminal cases was severely criticised. He declared most emphatically that courts of equity have no jurisdiction to enforce the criminal laws; that mobs have as much authority to hasten the punishment of crime by avoiding the delay and uncertainty of jury trials as chancellors have. "It is vain to disguise the fact that this desire for a short cut originates in a feeling of hostility to trial by jury, a mode of trial which has never been popular with the aristocracy of wealth, or the corporations and trusts. A distrust of the jury is a distrust of the people, and a distrust of the people means the overthrow of the government our fathers founded. Against the exercise of this

<sup>1</sup>See especially Report of Industrial Commission, Vol. IV Digest, p. 145; Vol. VII Digest p. 118; Vol. XII, p.

<sup>2</sup>Hopkins v. Oxley Stave Co., 83 Fed. Rep., 912, 925.

jurisdiction the constitution of the United States interposes an insurmountable barrier. \* \* \*

"The trial of all crimes, except in cases of impeachment, shall be by jury." Const., art. 3. "No person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia when in actual service in time of war or public danger." Const. amend., art. 5. "In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury. \* \* \* Id., art. 6. "In suits at common law where the value in controversy shall exceed \$20, the right of trial by jury shall be preserved." Id., art. 7.

"These mandatory provisions of the constitution are not obsolete, and are not to be nullified by ministering against them a little horde of equity maxims and obsolete precedents originating in a monarchical government having no written constitution. \* \* \*

"These constitutional guaranties are not to be swept aside by an equitable invention which would turn crime into a contempt, and enable a judge to declare innocent acts crimes, and punish them at his discretion. \* \* \*

"Undoubtedly it is the right of the people to alter or abolish their existing government, 'and,' in the language of the Declaration of Independence, 'to institute a new government, laying its foundations on such principles, and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness.' It is competent for the people of this country to abolish trial by jury, and confer the entire police powers of the State and nation on Federal judges, to be administered through the agency of injunctions and punishment for contempts; but the power to do this resides with the whole people, and it is to be exercised in the mode provided by the constitution. It can not be done by the insidious encroachments of any department of the government. Our ancestors, admonished by the lessons taught by English history, saw plainly that the right of trial by jury was absolutely essential to preserve the rights and liberties of the people, and it was the knowledge of this fact that caused them to insert in the Constitution the peremptory and mandatory provisions on the subject which we have quoted. English history is replete with examples showing that the King and his dependent and servile judges would have subverted the rights and liberties of the English people, but for the good sense and patriotism of English juries. It is to the verdicts of the juries, and not to the opinions of the judges that the English people are chiefly indebted for some of their most precious rights and liberties."

Notwithstanding these objections (more fully set forth in section 6, below) raised against the use of the injunction in restraining acts considered by the courts or declared by statute to be in themselves criminal, the instances in which injunctions have been employed against such acts are exceedingly numerous. Picketing, boycotts, intimidation, interference with interstate commerce, and various other acts of strikers, which the courts, by the language used in their decisions, evidently very generally consider criminal as well as civilly unlawful, have yet been restrained. In not a few cases in recent years courts have specifically considered the question whether an injunction could properly be issued against acts in themselves criminal, and the decision has been quite generally that the use of the injunction in such cases is permissible, where the injury restrained is a continuing and irreparable one.

This doctrine has received the sanction of the Supreme Court of the United States in the famous *Debs* case, and is doubtless now definitely fixed, as regards the Federal courts, several of which, both before and since the *Debs* decision, have used very similar arguments in upholding the issue of injunctions to restrain criminal acts. The general argument is that the action of the court in issuing injunctions under its equity jurisdiction has no reference to the element of criminality; that the courts have always had authority to enjoin acts which threaten irreparable injury to property, and that punishment under such an injunction does not preclude prosecution for criminal acts under criminal law; that the use of the injunction in strikes is especially necessary, because the offenders are usually persons without means, from whom those persons injured could recover no damages for the harm done to their property. The objection regarding the denial of the right of trial by jury is answered by the argument that that right has never been treated as interfering with the power of the courts to issue injunctions and to protect their own dignity by punishing violations of their orders; that the authority of the courts to protect themselves would be of no significance if it was necessary to consult an independent authority in inflicting punishment.

Extracts from the leading decisions on this subject may now be briefly quoted.

The language of the Supreme Court of the United States in the Debs case may be cited somewhat fully on account of its importance.<sup>1</sup>

"Something more than the threatened commission of an offense against the laws of the land is necessary to call into exercise the injunctive powers of the court. There must be some interferences, actual or threatened, with property or rights of a pecuniary nature; but when such interferences appear the jurisdiction of a court of equity arises, and is not destroyed by the fact that they are accompanied by or are themselves violations of the criminal law. \* \* \*

"The law is full of instances in which the same act may give rise to a civil action and a criminal prosecution. An assault with intent to kill may be punished criminally, under an indictment therefor, or will support a civil action for damages; and the same is true of all other offenses which cause injury to person or property. In such cases the jurisdiction of the civil court is invoked, not to enforce the criminal law and punish the wrongdoer, but to compensate the injured party for the damages which he or his property has suffered. \* \* \*

"So here the acts of the defendants may or may not have been violations of the criminal law. \* \* \* If any criminal prosecution be brought against them for the criminal offenses alleged in the bill of complaint, of detaining and wrecking engines and trains, assaulting and disabling employees of the railroad companies, it will be no defense to such prosecution that they disobeyed the orders of injunction served upon them, and have been punished for such disobedience.

"Nor is there in this any invasion of the constitutional right of trial by jury. \* \* \*

"The power of a court to make an order carries with it the equal power to punish for a disobedience of that order, and the inquiry as to the question of disobedience has been, from time immemorial, the special function of the court. And this is no technical rule. In order that a court may compel obedience to its orders, it must have the right to inquire whether there has been any disobedience thereof. To submit the question of disobedience to another tribunal, be it a jury or another court, would operate to deprive the proceeding of half its efficiency."

A brief statement of the same doctrine as that laid down in the Debs case was made earlier by Judge Taft in the Federal circuit court of the northern district of Ohio in the *Ann Arbor Railway* case.<sup>2</sup> He said, "The authorities leave no doubt that in such a case an injunction will issue against the stranger who thus intermeddles and burresses the complainants' business. \* \* \* The rule that equity will not enjoin a crime has here no application. The authorities where the rule is thus stated are cases where the injury about to be caused was to the public alone, and where the only proper remedy, therefore, was by criminal proceedings. When an irreparable and continuing unlawful injury is threatened to private property and business rights, equity will generally enjoin on behalf of the person whose rights are to be invaded, even though an indictment on behalf of the public will also lie."

Again, in the case of *Arthur v. Oakes*,<sup>3</sup> the circuit court of appeals of the seventh circuit, referring to the issue of an injunction to restrain strikers from combining to interfere with the operation of the Northern Pacific Railroad, said: "The authorities all agree that a court of equity should not hesitate to use this power when the circumstances of the particular case in hand require it to be done in order to protect rights of property against irreparable damage by wrongdoers. It is, Justice Story said, because of the varying circumstances of cases that courts of equity constantly decline to lay down any rule which shall limit their power and discretion as to the particular cases in which such injunctions shall be granted or withheld. \* \* \*

"In using a special injunction to protect the property in the custody of the receivers against threatened acts which it is admitted would, if not restrained, have been committed, and would have inflicted irreparable loss upon that property, and seriously prejudiced the interests of the public, as involved in the regular, continuous operation of the Northern Pacific Railroad, the circuit court, except in the particulars indicated, did not restrain any act which, upon the facts admitted by the motion, it was not its plain duty to restrain. No other remedy was full, adequate, and complete for the protection of the trust property, and for the preservation of the rights of individual suitors and of the public in its due and orderly administration by the court's receivers. \* \* \*

"That some of the acts enjoined would have been criminal, subjecting the wrongdoers to actions for damages or to criminal prosecution, does not therefore

<sup>1</sup> In re Debs, 15 Sup. Ct. Rep., 300, 910.

<sup>2</sup> Toledo, Ann Arbor and North Michigan Railway Co. v. Pennsylvania Co., 54 Fed. Rep., 730, 744.

<sup>3</sup> 63 Fed. Rep., 310, 328, 329.

in itself determine the question as to interference by injunction. If the acts stopped at crime, or involved merely crime, or if the injury threatened could, if done, be adequately compensated in damages, equity would not interfere. But as the acts threatened involved irreparable injury to and destruction of property for all the purposes for which that property was adapted, as well as continuous acts of trespass, to say nothing of the rights of the public, the remedy at law would have been inadequate."

Another vigorous defense of the issue of the injunction to restrain criminal acts was made by Judge Rogers, of the United States circuit court for the western district of Arkansas, in the case of *United States v. Sweeney*,<sup>1</sup> decided in 1899. Here an injunction was issued to restrain picketing and violent acts of strikers, and the question was on the punishment of certain persons for violating the injunction. In justifying the imposition of various penalties the court declared that there was nothing novel in the use of an injunction under such circumstances; that as old as equity jurisprudence was the principle of the right of the court to interfere to prevent injury to property and persons where the remedy at law is inadequate and where the injury is irreparable. The judge intimated that the remedy by injunction has become more common in recent times, but added that this fact grows out of the changed conditions of business and industry. By way of illustrating the justice of such interference by the courts a hypothetical case was submitted. Suppose a person who was the owner of a fine forest should complain that another person and his associates, who were insolvent and irresponsible, had conspired together to cut down the trees and haul away and destroy the forest. Suppose the peace officers and local authorities had refused to protect his property. Could the court refuse to grant an injunction to avoid an irreparable mischief for which the remedy at law was inadequate? If the conspirators should be arrested for contempt in violating such an injunction and should demand a jury, we should see the court granting an order which it has no power to enforce or the enforcement of which depends on the verdict of a jury. The hypothetical case, the judge declared, differed in no regard in principle from the case at issue.

The State courts appear to have issued injunctions in labor cases quite as frequently and for the purpose of restraining quite as great variety of acts as have the Federal courts. We find, however, fewer instances in which the State courts have taken occasion to defend their course in issuing injunctions to restrain the commission of criminal acts than is true of the Federal courts.

In the case of *Vegeahn v. Guntner*,<sup>2</sup> the supreme judicial court of Massachusetts granted an injunction to restrain the establishment of a patrol and the intimidation of persons seeking employment from the complainant. The court declared: "Nor does the fact that the defendants' acts might subject them to an indictment prevent a court of equity from issuing an injunction. It is true that, ordinarily, a court of equity will decline to issue an injunction to restrain the commission of a crime; but a continuing injury to property or business may be enjoined although it may also be punishable as a nuisance or other crime."

As the circumstances in this case were closely similar to those in the case of *Sherry v. Perkins*,<sup>3</sup> decided by the same court in 1888, it is probable that, had it considered necessary, the court would then have justified its use of the injunction in the earlier case on essentially the same grounds.

The supreme court of Michigan has very recently defended the use of the injunction to restrain criminal acts.<sup>4</sup> The injunction in this case was directed against boycotting and picketing. The acts of the defendants were declared by the court to be criminal conspiracy, but the court said: "It requires no argument to show that in this case, both in reason and authority, actions at law would be utterly inadequate. The course pursued by these defendants, if unchecked, would soon ruin the complainants' business, and bring upon them financial ruin. \* \* \* While some writers have doubted the remedy by injunction, it is now settled beyond dispute."

**2. Injunctions to compel the performance of personal service.**—No little controversy has arisen regarding the action of the courts in several cases in issuing injunctions to compel the performance of specific service by workmen. In one case the court went so far as to deny the right of men to quit work in such a way as to interfere with the business of the employer. This decision, however, was reversed by a higher court, and it seems probable that the usual attitude of the courts would be to refuse to restrain men from quitting work, although the act of quitting work might by the same courts be held illegal and even criminal if done with a malicious motive or under certain special circumstances, such as

<sup>1</sup> 95 Fed. Rep., 434.

<sup>2</sup> 11 N. E. Rep., 1077, 1078.

<sup>3</sup> 117 Mass., 212.

<sup>4</sup> *Beck v. Teamsters' Union*, 77 N. W. Rep., 13, 21.

have been described in previous sections of this chapter. On the other hand, there have been several injunctions commanding employees, so long as they continue in employment, to perform their customary duties.

The instance just mentioned of a direct attempt to prohibit an ordinary strike by injunction was in the Northern Pacific Railway case.<sup>1</sup> Judge Jenkins, of the Federal circuit court of the eastern district of Wisconsin, in December, 1893, issued an injunction prohibiting the employees of the receivers of that railroad from conspiring to quit employment with the object of crippling the property or embarrassing its operation, and also from quitting the service of the receivers (regardless of the question of conspiracy) with or without notice, in such a way as to cripple the property or hinder its operation. Since it would be practically impossible for men to strike without seriously interfering with the operation of a road, at least temporarily, this was practically an attempt to compel the employees to continue in the service.

Later Judge Jenkins denied a motion to strike out this part of the injunction and defended his action on the ground that the stopping of traffic on a great interstate railroad would seriously injure the general public, and would result in great loss to the receivers. The use of the injunction was necessary because the threatened injury would be continuous and there would be no effective remedy in damages against the strikers.<sup>2</sup> The injunction issued by Judge Jenkins was modified by the circuit court of appeals on October 1, 1894. In the meantime, however, it had remained in force, and had it been strictly obeyed there could for many months have been no action to carry out the intention of the employees to secure higher wages by strike. In other words, the entire movement would have been abortive.

In modifying this injunction Justice Harlan declared that there could be no exceptions to the rule that a court of equity will not prevent one individual, by injunction, from quitting the personal service of another, and that there was no authority for the action of the lower court. Although strikes on railroads might be peculiarly disastrous, in the absence of legislation conferring specific authority upon the courts, there could be no prohibition of the right to quit work, even though the employees should quit under circumstances showing bad faith, or a reckless disregard of their contract, or of the convenience and interest of both employers and the public.

Similarly, in the Toledo and Ann Arbor case,<sup>3</sup> the court declared that the employees of the defendant railway could escape the injunction prohibiting them from refusing to handle certain cars by quitting the service of the employers. "Otherwise the injunction would be, in effect, an order on them to remain in the service of the company, and no such order was ever, so far as the authorities show, issued by a court of equity. \* \* \* It would be impracticable to enforce the relation of master and servant against the will of either." The quitting of employment under certain circumstances might be criminal or unlawful, but could not be prohibited by injunction. On the other hand, the court declared that the quitting to avoid the force of the injunction must be in good faith, and that a mere temporary cessation of work, in the expectation of an order to go on without the cars, was not a bona fide quitting.

The case under discussion is one of those in which the courts have most clearly stated the doctrine that the injunction may be issued to compel the employees to perform their usual duties, so long as they remain in service. To be sure the duty enjoined, namely, the hauling of cars coming from the connecting railroad, was a peculiar one, since railroad companies are prohibited by interstate-commerce law from refusing to handle cars under such circumstances. The court explained that while ordinarily injunctions were prohibitory in form, the issue of a mandatory injunction, commanding men to perform positive acts, was justifiable under certain circumstances, and particularly in the case of railroads, where the refusal to perform such acts would interrupt the regular course of things and result in injury. "The office of a preliminary injunction is to preserve the status quo until, upon final hearing, the court may grant full relief. Generally this can be accomplished by an injunction prohibitory in form, but it sometimes happens that the status quo is a condition not of rest, but of action, and the condition of rest is exactly what will inflict the irreparable injury upon complainant, which he appeals to a court of equity to protect him from. In such a case courts of equity issue mandatory writs before the case is heard on its merits. \* \* \*

"Now, the normal condition—the status quo—between connecting common

<sup>1</sup> Farmers' Loan and Trust Company v. Northern Pacific Railroad, 60 Fed. Rep. 803.

<sup>2</sup> The further argument of the court in regard to the illegality of quitting work has been already set forth under another head. See above pp. 563, 598.

<sup>3</sup> Arthur v. Oakes, 63 Fed. Rep., 310, 318.

<sup>4</sup> Toledo, Ann Arbor and North Michigan Railroad Company v. Pennsylvania Company, 54 Fed. Rep., 730, 741, 743.

carriers under the interstate-commerce law is a continuous passage of freight backward and forward between them, which each carrier has a right to enjoy without interruption, exactly as riparian owners have a right to the continuous flow of the stream without obstruction. Since Lord Thurlow's time the preliminary mandatory injunction has been used to remove obstructions and keep clear the stream."

The most forcible statement of the doctrine that employees must, so long as they remain in service, perform their usual duties, and that an injunction may issue to compel them to do so is found in the case of Southern California Railway Company v. Rutherford, which arose out of the Pullman strike of 1894.<sup>1</sup> Judge Ross in this case issued an injunction commanding the employees to perform their usual duties while continuing in employment; justifying his action on the ground that by refusal they were subjecting the complainant to great damages, causing it to violate its contract with the Pullman Company, and were also interrupting the transmission of the mails and of interstate commerce. While a mandatory injunction compelling employees to perform their services might be novel, every just order of equity courts has been born of emergency, to meet some new conditions, and the rights of the public with regard to railroad transportation have become so increasingly important that the courts must interfere. The court continued:

"It is manifest that for this state of affairs the law—neither civil nor criminal—affords an adequate remedy. But the proud boast of equity is, '*Ubi jus, ibi remedium.*' It is the maxim which forms the root of all equitable decisions. Why should not men who remain in the employment of another perform the duties they contract and engage to perform? It is certainly just and right that they should do so, or else quit the employment. And where the direct result of such refusal works irreparable damage to the employer, and at the same time interferes with the transmission of the mail and with commerce between the States, equity, I think, will compel them to perform the duties pertaining to the employment so long as they continue in it."

3. Right of Federal courts to issue injunctions as to interstate commerce.—In the Debs case<sup>2</sup> the question was raised by the defendants as to whether the Federal Government had the right to interfere regarding strikes at all, and especially as to whether it was entitled to use the injunction for the protection of interstate commerce and for prevention of obstruction to the mails. It was the general position of many workmen and other persons that strikes were essentially matters of State jurisdiction, and that suppression of any violence which might take place in connection with them was the duty of the local or State authorities, with which the Federal Government had no right to interfere. It will be remembered that the Federal courts issued various injunctions in regard to this strike of 1894, not in behalf of private suitors seeking protection from irreparable damage, but on behalf of the Federal Government itself, seeking to prevent obstruction of interstate commerce and of mails. In upholding these injunctions and in suppressing disorder Federal troops were called into service. Debs and others were arrested for violation of the injunctions of the Federal courts, and Debs was committed to prison for contempt of court. A petition for a writ of habeas corpus brought the case before the Supreme Court of the United States, which upheld the injunction. The court declared that the Federal Government, under its constitutional authority to regulate interstate commerce, had the right to interfere by force, or through its courts, to prevent the obstruction of such commerce. It had the right to apply for injunction, not merely because of its property in the mails, but because every government is entitled to call upon its courts to aid it in carrying on its legitimate functions.

The following is quoted from the language of the court on this subject:

"As, under the Constitution, power over interstate commerce and the transportation of the mails is vested in the National Government, and Congress, by virtue of such grant, has assumed actual and direct control, it follows that the National Government may prevent any unlawful and forcible interference therewith. \* \* \* The entire strength of the nation may be used to enforce in any part of the land the full and free exercise of all national powers and the security of all rights intrusted by the Constitution to its care. \* \* \*

"In the case before us the right to use force does not exclude the right of appeal to the courts for a judicial determination and for the exercise of all their powers of prevention. Indeed, it is more to the praise than to the blame of the Government that, instead of determining for itself questions of right and wrong and enforcing that determination by the club of the policeman and the bayonet of

<sup>1</sup> 62 Fed. Rep., 796, 797.

<sup>2</sup> In re Debs, 15 Sup. Ct. Rep. 900

the soldier, it submitted all those questions to the peaceful determination of judicial tribunals. \* \* \*

"Neither can it be doubted that the Government has such an interest in the subject-matter as enables it to appear as party plaintiff in this suit. It is said that equity only interferes for the protection of property, and that the Government has no property interest. A sufficient reply is that the United States have a property in the mails, the protection of which was one of the purposes of this bill. We do not care to place our decision upon this ground alone. Every government, intrusted by the very terms of its being with powers and duties to be exercised and discharged for the general welfare, has a right to apply to its own courts for any proper assistance in the exercise of the one and the discharge of the other, and it is no sufficient answer to its appeal to one of those courts that it has no pecuniary interest in the matter."

In several other cases the lower Federal courts have upheld the use of the injunction regarding interstate commerce on the ground that the antitrust act of 1890 gave specific authority therefor. The Supreme Court, in the Debs case, referred to the act, but declared that there was sufficient authority for the use of the injunction outside of any statutory provision. The provision of the antitrust act referred to is found in the fourth section of the act, which declares that "the several circuit courts of the United States are hereby invested with jurisdiction to prevent and restrain violations of this act." The section also gives authority to issue temporary restraining orders. Since the courts have further held that the provisions of the antitrust act regarding combinations in restraint of interstate commerce apply to labor organizations, authority for enjoining the acts of such organizations and of strikers is claimed.<sup>1</sup>

In the case of United States v. Agler, Judge Baker very specifically declared that the purpose of Congress in this enactment was to enable the courts, without waiting until crimes had actually been committed, to "lay their strong hands on these men \* \* \* for the purpose of saying to everybody that civil liberty can not exist where combinations of men undertake by force and violence to arrest the peaceable and orderly conduct of business among the States."

**4. Injunctions against numerous defendants and defendants not named.**—A practice which has occasioned considerable criticism has been the use of "blanket injunctions." Injunctions have frequently been directed against large numbers of persons not named and not parties to the suit, and in not a few instances the all-inclusive phrase "all other persons whomsoever" has been added. It is usually further provided in such wide-reaching injunction orders that all persons shall be deemed to have received service of the injunction merely by its posting or printing, or upon becoming aware of its existence in any other way. In earlier cases it had been considered usually necessary to serve each person covered by injunction personally with a copy thereof, in the same way as parties to suits in general are served with papers.

The first "blanket injunction" appears to have been that issued by Judge Jenkins in the Northern Pacific Railroad case.<sup>2</sup> This injunction covered certain persons named, all other employees of the railroad, "and all persons, associations, and combinations, voluntary or otherwise, whether employees of said receivers or not, and all persons generally."

In the Debs case the injunction colloquially known as "the Chicago omnibus bill" was directed against 18 defendants by name, "and all persons combining and conspiring with them, and all other persons whomsoever." It was further provided in the injunction that it should be binding upon said defendants "whose names are alleged to be unknown, from and after the service of such writ upon them, respectively, by the reading of the same to them, or by the publication thereof by posting or printing, and after service of subpoena upon any of said defendants named herein, shall be binding upon said defendants, and upon all other persons whatsoever who are not named herein from and after the time when they shall severally have knowledge of such order and the existence of said injunction."

Objection has been made in such cases that an injunction could not issue against a person not specifically named and made a party to the suit, and that personal notice must be served upon the defendant of the fact of the injunction in order to make it binding upon him. (See criticisms quoted below, p. 612, 614.) The courts, however, have quite uniformly denied the validity of this contention.

<sup>1</sup>U. S. v. Elliott, 62 Fed. Rep., 801; U. S. v. Agler, 62 Fed. Rep., 824, In re Debs (lower court), 64 Fed. Rep., 724.

<sup>2</sup>60 Fed. Rep., 808, 806.

<sup>3</sup>64 Fed. Rep., 724.

Thus in the Toledo, Ann Arbor and North Michigan Railway case<sup>1</sup> several employees of the Lake Shore Railroad were held for contempt of court in violating an injunction addressed to the various railroads, their officers, agents, servants, and employees. The counsel for the persons arrested for violating this injunction declared that notice should have been served upon the defendants of the application for an injunction and of the allowance of the restraining order. Judge Ricks, however, held: "I do not concede this proposition. As has been stated, a corporation can act only through its officers and employees, and a duty imposed by law, or by an order of a court of competent jurisdiction, upon a corporation, applies to the officers and employees of that corporation, and takes effect as to them so soon as they are in fact properly notified of the nature and scope of the law or order. \* \* \* It is not necessary to make them parties."

In the Debs case, the Supreme Court of the United States declared that an injunction might issue against many persons, although the question as to giving them notice was not discussed.<sup>2</sup> "It surely can not be seriously contended that the court has jurisdiction to enjoin the obstruction of a highway by one person but that its jurisdiction ceases when the obstruction is by a hundred persons." If the mob against which the injunction was directed can not be controlled by an injunction the situation amounts to revolution.

Again, in the case of *United States v. Agler*,<sup>3</sup> Judge Baker said: "I think the injunction as against unknown defendants is valid and binding when the injunction order is served upon them, although they are not at the time parties to the suit. Indeed, I think an injunction that is issued against one man enjoining or restraining him, and all that give aid and comfort to him or all that aid and abet him, is valid against everybody that aids or gives countenance to the man to whom it is addressed."

**5. Legislative restriction of right of injunction.**—Labor organizations quite generally have, in view of the recent extension of the use of the injunction, recommended the enactment, by Congress and the several State legislatures, of statutes restricting somewhat the powers of the courts in the issue of injunctions. It is proposed especially to provide that in case an injunction is issued to restrain an act which is criminal, the person accused of violating the injunction must be given a trial by jury.

Such a statute as this was enacted by the legislature of Virginia in 1898, but was held by the supreme court of that State to be unconstitutional.<sup>4</sup> The court declared that the constitution itself had established the various courts, and that while nothing is said in the constitution regarding the use of the injunction, courts must of necessity have the power to protect themselves, in accordance with methods employed for centuries. Courts are coordinate with the legislature and the legislature can not interfere with their natural prerogatives.

The Virginia act thus declared unconstitutional, which is very similar to that which has been proposed in other States, is as follows:

"The courts and judges may issue attachments for contempt, and punish them summarily, only in the following cases, which are hereby declared to be direct contempts, all other contempts being indirect contempts.

"First. Misbehavior in the presence of the court, or so near thereto as to obstruct the administration of justice.

"Second. Violence or threats of violence to a judge or officer of the court or to a juror, witness, or party going to, attending, or returning from, the court for or in respect of any act or proceeding had or to be had in such court.

"Third. Misbehavior of an officer of the court in his official character.

"Fourth. Disobedience or resistance of an officer of the court, juror, or witness to any lawful process, judgment, decree, or order of the said court.

"When the court adjudges a party guilty of a direct contempt it shall make an entry of record, in which shall be specified the conduct constituting such contempt, and shall certify the matter of extenuation or defense set up by the accused, and the evidence submitted by him and the sentence of the court.

"Proceedings in Cases of Indirect Contempt. Upon the return of an officer on process, or upon an affidavit duly filed, showing any person guilty of indirect contempt, a writ of attachment or other lawful process may issue, and such person may be arrested and brought before the court, and thereupon a written accusation, setting forth succinctly and clearly the facts alleged to constitute such contempt shall be filed, and the accused required to answer the same, by an order which shall fix the time therefor, and also the time and place for hearing the matter. A copy of this order shall be served upon the accused, and upon a

<sup>1</sup> 154 Fed. Rep., 746, 750

<sup>2</sup> In re Debs, 15 Sup. Ct. Rep. 900

<sup>3</sup> 62 Fed. Rep., 824.

<sup>4</sup> *Carter v. Commonwealth*, L. R. A. 1899, p. 310, 311, 316.

proper showing the court may extend the time so as to give the accused a reasonable opportunity to purge himself of such contempt.

"After the answer of the accused, or if he fail or refuse to answer, the court may proceed at the time so fixed to hear and determine such accusation upon such testimony as shall be produced. If the accused answer, the trial shall proceed according to the rules governing the trial of criminal cases, and the accused shall be entitled to compulsory process for his witness, and to be confronted with the witnesses against him.

"Such trials shall be by the court, or, upon the application of the accused, a trial by jury shall be had, as in any case of a misdemeanor.

"If the jury find the accused guilty of contempt they shall fix the amount of his punishment by their verdict.

"The testimony taken on the trial of any case of contempt shall be preserved on motion of the accused, and any judgment of conviction therefor may be reviewed on writ of error from the circuit court having jurisdiction, if the judgment is by a county court, or on writ of error from the supreme court of appeals, if the judgment is by a circuit or corporation court. In the appellate court the judgment of the trial court shall be affirmed, reversed, or modified, as justice may require. If the writ of error to the judgment of county courts is refused by the circuit court having jurisdiction, application may then be made to the court of appeals."

The following are extracts from the opinion of the supreme court of Virginia:

"Article 6, Par. 1, of the Constitution now in force provides:

"There shall be a supreme court of appeals, circuit courts, and county courts. The jurisdiction of these tribunals, and of the judges thereof, except so far as the same is conferred by this Constitution, shall be regulated by law." In a subsequent portion of the instrument, corporation courts are also provided for the cities of the State. These courts do not derive their existence from the legislature. They are called into being by the constitution itself, the same authority which creates the legislature and the whole framework of State government. \* \* \*

"We are prepared to concede that it is proper for the legislature to regulate the exercise of the power so long as it confines itself within limits consistent with the preservation of the authority of courts to enforce such respect and obedience as are necessary to their vigor and efficiency. \* \* \*

"It was contended by counsel for plaintiff in error that, inasmuch as the act of 1897-98 merely transferred the punishment of contempts from the court to a jury, and even made acts punishable as contempts not embraced within the acts of 1830-31, it was not obnoxious to the objection that it interfered with or diminished the power of the court to protect itself.

"To this view we can not assent. It is not a question of the degree or extent of the punishment inflicted. It may be that juries would punish a given offense with more severity than the court; but yet the jury is a tribunal separate and distinct from the court. The power to punish for contempts is inherent in the courts, and is conferred upon them by the Constitution by the very act of their creation. It is a trust confided and a duty imposed upon us by the sovereign people, which we can not surrender or suffer to be impaired without being recreant to our duty. \* \* \*

"A court and the judge thereof, is as much an agent and servant of the people as any other officer of government, and he is bound by the duty and obligation which he owes to the commonwealth to cherish, defend, and transmit unimpaired to his successors the office with which the commonwealth has seen fit to honor him. \* \* \*

"Reading the Constitution of the state in the light of the decisions of eminent courts which we have consulted, we feel warranted in the following conclusions:

"That in the courts created by the Constitution there is an inherent of self-defense and self-preservation; that this power may be regulated, but can not be destroyed or so far diminished as to be rendered ineffectual, by legislative enactment; that it is a power necessarily resident in, and to be exercised by, the court itself, and that the vice of an act which seeks to deprive the court of this inherent power is not cured by providing for its exercise by a jury; that while the legislature has the power to regulate the jurisdiction of circuit, county, and corporation courts, it can not destroy, while it may confine within reasonable bounds, the authority necessary to the exercise of the jurisdiction conferred. \* \* \*

"The Constitution of the state, which is the law to all, declares in the seventh section of the first article that 'the legislative, executive, and judicial powers should be separate and distinct.' This is a quotation from the Bill of Rights,—an instrument which should never be mentioned, save with the reverence due to the great charters of our liberties."

## B. LEGAL CRITICISMS ON EXTENDED USE OF INJUNCTION.

The increased use of the injunction, and especially its use to restrain criminal acts, and its application to large bodies of men, has called forth no little unfavorable criticism. The opposition of labor representatives has been made perhaps sufficiently conspicuous in their testimony before the Industrial Commission. Two or three legal writers may be quoted on the same subject.

1. C. C. Allen.—A severe criticism of the extended use of the injunction in labor disputes was made by Mr. Charles Claflin Allen, of St. Louis, before the American Bar Association August 22, 1894.<sup>1</sup> The writer strongly disclaims any approval of the acts of strikers, which the injunction is usually aimed against. He urged, however, that the ground for issuing injunctions, in the minds of the judges, was no longer the proper motive, from the legal standpoint, of affording immediate protection to individual parties to litigation, but the general protection of the public peace and welfare. By this change of spirit, he declared, the courts have virtually usurped legislative power and have extended equity jurisdiction over crimes.

Mr. Allen points out that the first case in which an injunction was used against organized labor was that of *Springhead Spinning Company v. Riley*, decided in Great Britain by Chancellor Malins in 1868. The purpose was to restrain a boycott, which the court held to be a criminal act, while it still justified the use of the injunction on the ground that the act tended to the destruction of private property. This decision, according to Mr. Allen, is essentially correct, recognizing the principle that private rights of litigants are to be protected by equity, pending final decision. The courts in England have gone no further than this. In the United States, however, within very recent years the courts have not only used the injunction to protect the private rights of suitors, but as early as 1892, in the case of *Coeur d'Alene Consolidated and Mining Company v. Miners' Union of Wardner*, Judge Beatty, of the United States circuit court, justified his use of the injunction on the ground that, when contests between employers and employees become heated, violation of the laws and of the peace of the community, and destruction of life and property, are threatened. In the *Toledo and Ann Arbor* case, in 1893, Judge Taft issued an injunction against one not originally a party to the proceedings to restrain what was a crime by statute, the idea underlying the whole case being that of enjoining an invasion of public rights. This ground was much more clearly stated by Judge Jenkins in the *Northern Pacific* case. He declared that cessation of the operation of the railway would greatly interfere with public convenience and that an injunction was therefore justified. This attempt to enforce general order in the community by the injunction seems to Mr. Allen contrary to all precedent. The writer also criticises the modern use of the injunction as an attempt to give courts of equity criminal jurisdiction without allowing the person accused the protection of the ordinary formalities of trial. On this point he says:

"What is the purpose of issuing injunctions against great masses of men? What object is to be attained by making 200, or even 500 strikers, parties to a suit, out of a total number of many thousands? Personal service on more than a few, in time to make the writ effective, is impracticable. Is it intended that the mere issuing of the writ should act *in terrorem* over the entire body of men engaged in the strike? Or is it expected, by posting copies in public places, to establish a novel method of service by publication? Is the decree to serve the purpose of a mere executive proclamation, warning evil-doers against a continuance of their misconduct, and without force or validity, except as a basis for invoking the military power? Surely not. Such a construction would be a degradation of judicial process. Then what conclusion remains, unless it be that the real purpose is to use the injunction for calling forth the power of the court to punish for contempt; to make of a court of equity in practical effect a criminal court? This is a phase of the question that calls for the serious consideration of bench and bar. It is well known to all lawyers that courts of equity have not now, and have not had for 5 centuries, any jurisdiction over crimes. \* \* \*

"Punishment for contempt of court is the most summary and arbitrary exercise of authority under the English and American judicature. It is the reserve power inherent in every court of general jurisdiction to punish by fine or imprisonment, in order to maintain its dignity and enforce its commands; a power which is absolutely essential to the proper conduct of courts of justice. \* \* \*

"The person charged with contempt is entitled to be heard, but he must appear in person and not by attorney. He has no right to be heard by counsel, nor to

<sup>1</sup>28 Am. Law Rev., 828, 848-852, 857, 858.

trial by jury. And the trial of facts for contempt not committed in *facie curie* is usually on affidavits. While in contempt of an injunction, he can not move to dissolve, nor can he attack the jurisdiction of the court under the original bill, nor file any sort of dilatory pleading whatever, till he has purged himself of the contempt. In short a party to a suit may go to jail for contempt of a preliminary injunction issued *ex parte*, without notice to defendant, which is subsequently—and after the defendant has served his term of imprisonment—held to be without equity—that is void. There is a tremendous power to place in the hands of one man; for from his judgment there is no appeal."

Finally, Mr. Allen discusses the practice of "blanket injunctions" covering large numbers of persons, not actual parties to the suit, and without personal service upon them. "It is a general rule, as old as equity jurisprudence, that persons not parties to the bill are not bound by the decree. \* \* \* Furthermore, there is a common rule that there must be service of the writ on those to be affected by it, which is usually held to mean personal service. Posting of printed copies of the injunction on freight cars, in railway stations, or other conspicuous places, is not a method of service prescribed by statute, by rules of court, or by general equity practice."

Mr. Allen concludes his arguments with the following paragraphs:

"After all, what does it mean, this sudden development of equity jurisdiction? Whither are we tending? An injunction sued out by the United States against 10,000 strikers and all the world besides. Did the injunction stop the strike? Troops were called out to aid the process. Did they aid it? Some scores of rioters were killed, but where was the injunction meanwhile?

"Was a single result achieved by the military which could not have been as lawfully and effectually accomplished without an injunction? The criminal laws are ample and severe, and the power of Government to enforce them is limited only by the allegiance of its citizens. Every person who interfered with the United States mail, or conspired to violate the interstate-commerce law, or destroyed property, or joined in riotous gatherings such as assembled at Chicago, was guilty of crime and was subject to arrest and punishment. When the marshals were unable to enforce the criminal laws, there was just as much power to call out the military in aid of criminal process as there was in aid of injunction. Why, then, invoke the extraordinary jurisdiction of a civil court, never designed and in no way adapted to such cases? The incident itself is a sad commentary on existing conditions. It points to the conclusion that the people are becoming afraid of their own institutions; afraid of trial by jury; afraid of the cherished guaranties of civil liberty derived through *Magna Charta* and enshrined in their constitutions, State and National."

2. W. H. Dunbar.—The following extracts are from a paper by W. H. Dunbar, of Boston, in the *Law Quarterly Review* (London) for 1897, entitled "Government by injunction;"<sup>1</sup> also published in the *Harvard Law Quarterly*:

"The courts in America, and especially the Federal courts, have shown a disposition to extend their powers beyond any limits heretofore recognized. In seeking to restrain acts in their nature purely criminal, and punishing by summary proceedings for contempt persons accused of committing those acts, they have been charged with usurping the functions of the criminal law; in seeking to restrain all persons, whether parties to the suit or not, and whether identified or not, they have been charged with issuing decrees legislative rather than judicial. The case of the United States *v. Debs*, above referred to, furnishes an example of both these alleged usurpations of power. \* \* \*

"The injunction thus sought to restrain the commission of acts of violence which would be flagrant breaches of public order and serious criminal offenses; acts which the ordinary machinery of police administration would, if possible, prevent by physical interference and punish with heavy penalties if committed. It sought further to restrain all persons whomsoever from committing any of those acts. Not only did a court of equity therefore undertake by its process to grant a cumulative remedy for that which the criminal law already covered, but it undertook to make its decree coordinate in extent with the existing legislative prohibitions. The persons not named in the bill against whom the injunction was directed were not specific individuals unknown by name but otherwise identified; they were all persons who might thereafter engage in the acts specified in the injunction. In like manner the prohibition was not directed against specific threatened acts of interference with the operation of the railroads, but against all acts of that character that might thereafter be contemplated by any persons.

<sup>1</sup> 13 L. Q. R., 347, 353, 354.

"It is not one of the functions of a court of equity to prevent the commission of threatened crimes. In *Gee v. Pritchard*, 2 Swanst., 402, Lord Eldon said: 'The publication of a libel is a crime; and I have no jurisdiction to prevent the commission of crimes; excepting, of course, such cases as belong to the protection of infants, where a dealing with an infant may amount to a crime—an exception arising from that peculiar jurisdiction of this court' (p. 413). Chancellor Walworth in *Mayor, etc., of Hudson v. Thorne*, 7 Paige, 261, 264, declared: 'Again, it is no part of the business of this court to enforce the penal laws of the State, or the by-laws of a corporation, by injunction, unless the act sought to be restrained is a nuisance.' Threats of violent interference in breach of the public peace or other criminal acts injurious to property do not furnish a foundation for an injunction. In *Montgomery and W. P. R. R. Co. v. Walton*, 14 Ala., 207, the plaintiff corporation complained that the defendant prevented it from taking possession of land properly condemned for its use and from prosecuting the construction of the road, by threats that he would kill or injure the workmen, and prayed for an injunction. The court refused to grant relief, saying: 'The rule is too well established to admit of controversy that equity can not interpose by way of injunction to restrain the commission of a personal trespass, although *it may be threatened*. \* \* \* The courts of law have complete jurisdiction to punish the commission of crimes, and can interpose to prevent their commission by imprisoning the offender, or binding him to keep the peace. But equity has no jurisdiction over such matters, at least a court of equity can not entertain a bill on this ground alone.' In *Sparhawk v. Union Passenger Ry. Co.*, 54 Pa. St., 101, the plaintiff complained that the defendant was running its cars on Sunday in violation of law, and that the noise interfered with his use of his property. The court, however, said: 'For this there is a remedy in the penal laws, and not by proceedings in equity, if we regard the fact as we ought to do' (p. 424).

"The jurisdiction of equity over public nuisances has been relied on as justifying interference by injunction where the acts threatened were criminal. It is indeed true that by the weight of authority the jurisdiction is not ousted merely because, as in the case of a public nuisance, the threatened act may be the subject of an indictment. But the foundation of the jurisdiction over public nuisances, as of all jurisdiction in equity, is the greater efficacy of the equitable remedy. By a preliminary injunction to restrain a threatened purpseure or obstruction of highway or establishment of an offensive trade, a court of equity can interfere immediately to prevent the continuance or completion of an act which can not be dealt with at law until irreparable injury has been caused. \* \* \*

"The destruction of the rolling stock or of any part of the works of a railway, or the forcible interference with its operation, may cause such an obstruction of commerce as to be a public nuisance; but the law already provides for the protection of property and persons from violence. The executive power of the State through its police and, if necessary, its military force is bound to prevent, if possible, such acts, and to punish them, if committed, by appropriate proceedings in the criminal courts. To justify the interference of a court of equity it must be shown that by the exercise of chancery powers a more complete remedy can be afforded. \* \* \* But where acts of violence are enjoined the remedies at law and in equity are in fact the same. The injunction is only a prohibition, for violation of which a punishment by fine or imprisonment may be inflicted, and that prohibition and liability to punishment already exist at law. \* \* \*

"Preliminary injunctions are to preserve the subject of litigation in *statu quo* and prevent irreparable injury during the pendency of the suit. The mere fact that the act enjoined is criminal may not oust the jurisdiction of the court, since every crime involves also an infraction of civil rights. But to justify the interference of a court of equity by preliminary or by perpetual injunction, it must be shown that the injunction will prevent some threatened injury for which the law affords no adequate relief. An injunction against destroying property by violence or similar offense against the criminal law accomplishes no such result. It can deter only through the risk of incurring the same sort of penalties that the law provides for the same act. \* \* \*

"A looseness of thought is apparent in the decisions discussing the use of injunctions which has tended to conceal the principles involved. Learned judges have spoken as if courts of equity could prevent acts in some manner other than by fear of the penalties attending the violation of an injunction. \* \* \*

"The only respect in which the remedy in equity can in such cases be more adequate than the remedy at law is in the greater certainty or celerity with which punishment will be inflicted. Ordinarily by inadequacy of remedy is not meant the danger that a court will not enforce the law. \* \* \* The supposed probability of such failure can not afford a ground for assuming jurisdiction. Such a

doctrine would be contrary to any rational conception of the relations of the judiciary to other departments of the Government, or of the distinction between law and equity. In *Attorney-General v. Sheffield Gas Consumers' Co.*<sup>1</sup> application was made for an injunction against tearing up the highway. It was argued in favor of the motion that forcible resistance might be offered and breaches of the peace result. Sir George Turner, in denying the application, observed: 'Something has been said in the course of the argument of the danger to the public peace which may ensue from the noninterference of this court; but surely this court can not suppose that there is an inadequacy of the civil power to preserve the public peace. I say nothing on the question whose fault it will be if this disturbance of the public peace takes place' (p. 323). \* \* \*

'When analyzed the sole inadequacy in the remedy at law as compared with the remedy in equity in these cases will be found in the fact that trials in the former are by jury. It is the existence of those safeguards which have been thought essential to individual liberty that renders punishment of an act as a crime less certain and less swift than punishment of the same as a contempt. It is because of the prejudices of juries that laws to suppress the sale of liquors may be more effectively enforced through the machinery for suppressing public nuisances than by the ordinary course of the criminal law, and it is to avoid the intervention of a jury in such cases that the powers of courts of equity have been called in by legislative enactments. \* \* \*

'The same desire to avoid a trial by jury induces a resort to equity in cases of dispute between employers and employees. If proceedings for contempt were tried before a jury the injunction issued would be recognized as futile; such efficacy as they have in preventing acts of violence arises solely from the greater probability of a conviction for contempt in a trial by a judge alone, without right of appeal, than of conviction by a jury likely to sympathize in some degree with the offender. A criminal prosecution of Debs founded upon the same acts for which he was punished by a court of equity resulted in a failure to convict.

'It is difficult to believe that jurisdiction in equity can be supported on the ground that a judge in chancery will probably, upon a given state of facts, reach one conclusion, while a jury at law on the same state of facts is likely to reach a contrary conclusion. Courts of equity have always hesitated to usurp the function of a jury. Lord Eldon long declined to take jurisdiction in cases of nuisance, because the existence of the nuisance ought to be determined by a jury. The necessity of a prior recovery at law still exists in many branches of equity jurisdiction. Injunctions against slander or libel were consistently refused in England until the law was changed by statute, and in America are still refused, although injury to the plaintiff's business is threatened, upon the ground that, to preserve freedom of speech and of the press, the matter should be referred to the decision of a jury. Can it then be contended that in other cases involving rights no less important the likelihood that a jury will deny punishment affords a ground for seeking relief in equity? \* \* \*

'The sweeping terms of the injunction issued in the Debs case as to persons to whom it was addressed are no less significant than the nature of the acts enjoined. \* \* \* The record does not even show that these individuals, not parties to the bill, fell within the description of persons combining and conspiring with the named defendants. It must be assumed from the terms of the order that the court intended to restrain such persons although acting independently, and that it punished them as such independent actors. We have therefore to consider the proposition that a court of equity may ex parte, upon the motion of a plaintiff, issue an order restraining all persons from doing specified acts, although such persons are not parties to the cause, are in no way connected with the parties, are not identified in any way, and can not be identified except by the fact of their violating the injunction. Such a course if justifiable marks, it is believed, an important departure from the rules of procedure that have heretofore prevailed in chancery.

'Courts of equity, like courts of law, are established for the determination of controversies between individuals. The power to issue preliminary injunction is incidental to the power of determining such controversies. The right to lay down general rules for the government of the community, to declare ex cathedra, in advance of any contentious proceedings in which the question arises, what may and what may not lawfully be done, to impose on the whole community a duty to refrain from doing a certain act, is in its nature a legislative right. The jurisdiction of every court depends upon the existence of a cause in which it is called upon to adjudicate. \* \* \* When, however, such an injunction is issued, addressed to 'all persons whomsoever,' it can in no sense be said that an individual not named or described in the bill as the party to the suit becomes a party

upon having notice of the order. If such an individual is not in fact engaged in the act sought to be restrained, there is no pretense for saying that a controversy exists between him and the plaintiff. Such a controversy may arise if he subsequently engages in the acts complained of, but it is difficult to conjecture how by reason of such a subsequent act he can be deemed to have been a party to the controversy at an earlier time. It has never, it is believed, been contended that the final decree of a court of equity was binding upon persons not parties to the suit, and not claiming under persons who were parties. It is certainly anomalous that an interlocutory order of the court should be given a force which the final decree can not have. \* \* \*

"It has been repeatedly declared in the past that injunctions could issue only against parties to the suit and those persons who acted for them (1 Maddock's Ch. Pr., 175). Lord Eldon in *Iveson v. Harris*, 7 Ves., 351, 256, said: 'And I have no conception that it is competent to this court to hold a man bound by an injunction, who is not a party in the cause for the purpose of the cause. The old practice was, that he must be brought into court, so as, according to the ancient laws and usages of the country, to be made a subject of the writ. The jurisdiction in lunacy is quite distinct.' \* \* \*

"The strong repugnance which every law-abiding citizen must feel for acts of lawlessness renders the task of criticising proceedings designed to preserve order somewhat invidious. None of the persons who have been punished for contempt in violating injunctions such as have been discussed here have been worthy of any personal sympathy. The chivalry of supporting fellow-workmen in a contest with employers ceases to excite admiration when it is directed to the wanton destruction of property and mob violence. Debs, who for a time posed as supreme arbiter over the welfare of millions of his fellow-citizens, was in fact taken red-handed in a flagrant and audacious defiance of the laws, and merited the most severe punishment which the penal statutes authorized. But for the very reason that law and order were thus outraged, it was the more necessary to see that the measures of repression used were fully warranted. It is no light matter that suspicion even should rest upon the judiciary of warping principles to meet the supposed exigencies of cases as to which the strongest passions of a community are aroused."

**3. F. J. Stimson.**—Mr. F. J. Stimson, of the Boston bar, also condemns the undue extension of equity restrictions in labor disputes. In his *Handbook to the Labor Law* from which the following quotation is taken (see p. 312), the criticism is only indirectly suggested, but in an article in the *Political Science Quarterly*<sup>1</sup> he takes a much more decided position.

"Under the procedure of equity courts a person apprehending injury by such combinations may bring a bill against one or more persons, and obtain at once, without waiting for any hearing or answer by the defendant, a preliminary injunction, addressed against not only the defendants named, but all their agents, servants, and subordinates named or unnamed; and, finally, against any persons whatever throughout the world who may have knowledge that such injunction has been granted; so that by widely publishing such injunction orders, posting them on fences, in workrooms and factories, or on railroad cars, it becomes not a difficult matter to render all the world liable to the summary jurisdiction of contempt if they interfere with the property or rights protected by the injunction. Such a preliminary injunction if not vacated may be confirmed after hearing on the merits and made permanent with the same permanent results. Moreover, the process which courts of equity have of enforcing their judgment or decrees is far more effective than any known to the common law-courts. The common-law courts can only mulct a man in damages, and if he refuse to pay may, under certain strict limitations and with very great trouble and delay, occasionally, in rare instances, imprison a man for debt; but when a decree is rendered in a court of equity any party to the suit, or when an injunction is granted any party who may have notice of the injunction, is liable to contempt process if he do or suffer to be done any act against the decree or the injunction only; and contempt process is a very effective one, consisting, as it does, in the immediate and summary punishment of offender by fine, or more usually by imprisonment until he obey the orders of the court. It is unquestioned law that the offender in cases of contempt is entitled to no jury trial. It is also law generally unquestioned that from an order in contempt there is no appeal from the court issuing it to any higher court, although in a few jurisdictions it has been held that there is an appeal in cases where the injunction was issued in reality to protect private interests and not the public; but even this appeal only goes so far as to give the appeal court the right to investigate and see whether the court below had jurisdiction of the subject-matter."

<sup>1</sup> *Pol. Sci. Quar.*, June, 1895. "The Modern Use of the Injunction."

## CHAPTER X.

## LEGAL POSITION OF TRADE UNIONS.

1. **Laws authorizing incorporation of trade unions.**—Numerous States have passed laws legalizing combinations of workmen and strikes, thus modifying the old common-law doctrine that such combinations were unlawful conspiracies. Even in the absence of such legislation the courts have sufficiently modified the common-law doctrine in this country so that in no State would a combination of workmen, temporary or permanent, be considered unlawful if it resorted to no specially reprehensible acts. Trade unions can therefore be formed, in the absence of any special statute, in the same way that voluntary associations and clubs for other purposes may be formed. But such voluntary associations have comparatively few recognized legal powers.

It is probable that in many States where no specific provision regarding the incorporation of labor organizations exists they could still be incorporated under laws provided for nonstock or "membership" corporations for social, benevolent, and similar purposes. Of course such corporations have more limited powers than stock corporations, and labor organizations incorporated under them would lack some of the responsibilities and the rights which, in the judgment of many persons, should belong to them.

In Massachusetts, New York, Pennsylvania, Michigan, Maryland, Iowa, Kansas, and Louisiana special laws authorizing the incorporation of trade unions have been passed.<sup>1</sup> Most of these laws, however, are exceedingly brief and general, and grant few important powers. In several of the States named the statute does little more than to specify labor organizations as one of the classes of corporations which may be formed under the more general provisions applying to nonstock and membership corporations. This is the case, for example, with the great State of New York, where under the present law there are no specific provisions regarding the powers of incorporated labor organizations as distinct from other membership corporations.

The most elaborate statutes regarding the incorporation of labor organizations are found in Massachusetts and Pennsylvania. The most important provisions of the Pennsylvania law are those regarding the powers of incorporated unions, which are enumerated as follows:<sup>2</sup>

"SEC. 8. An association authorized by this act, by virtue of its charter, shall have the following powers:

"First. To have succession by its associated name for the period limited by its charter, and when no period is limited thereby or by this act, perpetually, subject to the power of the general assembly under the constitution of this Commonwealth.

"Second. To maintain and defend judicial proceedings.

"Third. To make and use a common seal and alter the same at pleasure.

"Fourth. To purchase, hold, and transfer such real estate and personal property as the purposes of the corporation may require.

"Fifth. To elect or appoint and compensate such officers or agents as the business of such association may require.

"Sixth. To establish a constitution and adopt by-laws and rules, not inconsistent with law, for the management of its property and the conduct and regulation of its affairs.

"Seventh. To enter into any obligation necessary to the transaction of its business.

"Eighth. To organize and establish, for the purposes mentioned in section 1 of this act, such subordinate associations of employees as shall apply therefor, under such reasonable rules, regulations, and restrictions as may by the parent association be deemed necessary."

The seventh clause, together with that regarding the purpose for which unions may incorporate, "for their mutual aid and benefit and protection in their trade concerns," would probably make it possible for labor organizations to make enforceable contracts regarding the terms of labor. Other sections of this act impose penalties upon officers and members of labor organizations who embezzle funds or are otherwise guilty of malfeasance.

The Massachusetts law,<sup>3</sup> while quite detailed, contains no definite provision regarding the powers of incorporated unions in their dealings with employers and other

<sup>1</sup> See Reports of Industrial Commission, Vol. V, p. 127.

<sup>2</sup> Brightly's Purdon's Digest, 1895, p. 2017

<sup>3</sup> Acts of 1888, ch. 134.

outsiders. A Michigan act<sup>1</sup> authorizes the incorporation of persons "for the improvement of their several social and material interests, the regulation of their wages, the laws and conditions of their employment, the protection of their joint and individual rights in the prosecution of their trades or industrial avocations, the collection and payment of funds for the benefit of sick, disabled, or unemployed members, the securing of benefits to the families of deceased members, and for such other and further objects of material benefit and protection as are germane to the purposes of this act." Associations incorporated under the act may sue and be sued, and may hold property such as may be necessary for corporate purposes. This act has never been authoritatively interpreted, but perhaps it would give nearly as great powers with regard to the making of contracts as the Pennsylvania law.

It is certain that in most States comparatively few labor organizations have incorporated. Nevertheless, we find that in New York a very considerable proportion of all the unions are corporations under the law above described.<sup>2</sup>

There have been comparatively few interpretations by the American courts regarding the legal position of labor organizations, whether unincorporated or incorporated, by virtue of the laws above described. Such organizations themselves have seldom resorted to the courts in their corporate capacity. Even as regards the management of property the unions are less apt to act as organizations directly than by means of trustees. In some few instances, to be sure, civil suits have been brought against labor organizations as corporate bodies, on the ground of injury inflicted upon employers or other workmen, and the unions have been held liable in damages. In several instances, also, injunctions have been directed against unions as such, whether incorporated or unincorporated; but these injunctions include also the individual members of the organization, and it is against these that they are really most effective. Usually suits, whether civil or criminal, are directed against individual officers and members of the union rather than against the body as such.

There have been, especially, very few cases in which suits have been brought by or against unions for violation of agreements between them and employers regarding the conditions of labor. The labor organizations have preferred to rely upon enforcing such agreements by the threat of strike, rather than to incur the expense of litigation or to run the risk of finding themselves possessed of no adequate legal powers to enforce them before the courts.

An interesting instance of the attempt to establish legally binding agreements between employers and workmen is found in the clothing trades of New York. Here the contractors, who secure goods from manufacturers to be made up by workmen employed by them, are themselves usually men of little responsibility, and often inclined to violate agreements. The unions have accordingly sought to draw the agreements as strictly as possible and to provide for their legal enforcement. In various cases the contracts contain provisions fixing the precise amount of damages which shall be paid by the employer in case of any violation. This obviates the difficulty, which is one of the chief hindrances to the enforcement of the terms of agreements, of proving precisely the amount of damage suffered by violation. Several recent agreements in this trade specifically provide that the amount of damages for which the union shall be liable in case of violation of agreement shall not be limited to the sum liquidated as the damages for violation by the employer. This is really, however, an advantage to the union, since the employer must prove the amount of his damages.

The validity of agreements of this sort has been upheld by the supreme court of New York, the highest court of original jurisdiction in that State.<sup>3</sup> The contractors violating the agreement endeavored to prove that the unions went beyond their powers in attempting to enter into contracts of this kind. Being incorporated merely under the membership-corporation act, they could not, it was argued, engage in business transactions such as an agreement regarding the conditions of wages. The unions, on the other hand, maintained that such contracts were not in the nature of the transaction of business for the earning of profit for the organization, but were simply means for carrying out the stated object of the organization, the improvement of the condition of its members. The court upheld this contention, and declared the agreements binding. The further objection that, because they provided for exclusive employment of union men, these agreements were in restraint of trade and unconscionable, was also overruled. In one other case a New York court held that such an agreement was not valid because it was obtained under duress, that is, by threat of strike. More recent agreements in the clothing trade in New York accordingly often contain a sworn statement by the contractor that he makes the agreement

voluntarily and solely for the purpose of obtaining a continuous supply of competent labor.

Should courts in other States take the same position as in New York, there can be little doubt that incorporated unions, even under the existing loose statutes, would be able to enter into contracts with employers regarding the conditions of labor and to enforce them by law. As a matter of fact, however, it is very doubtful whether, in any considerable number of cases, the unions will desire to enforce contracts in this way.

There have been few, if any, cases in the United States in which employers have endeavored to enforce by legal process agreements with labor organizations as to the terms of labor. No reason appears why the New York courts, at least, should not hold agreements of this character to be as binding upon the workmen as upon the employers; and the same might be true in other States. In the case of many unions, however, legal responsibility for agreements would not have great significance, because the unions possess little property or funds, and their individual members likewise, while perhaps nominally liable for the acts of the organization, have often little or no property which can be reached by a legal process. On the other hand, some of the strong unions, both local and national, often possess very considerable funds, and should the attempt be made to enforce their agreements in the courts damages could perhaps be successfully collected. It is probably for this reason that the stronger labor organizations have usually declined to become incorporated, taking no advantage of the Federal law or of the various State laws.

**2. Registration and legal authority of labor organizations in Great Britain.**—British legislation concerning labor organizations is much more detailed than that in any State in this country. We shall see later that labor unions in this country are very much divided in opinion as to the desirability of increasing, by the same legislation, both the powers and the responsibility of unions. British legislation has aimed in general to increase the powers of labor organizations as regards their relations to their own members without giving them very much power or very much responsibility as regards their dealings with employers. The fact that many labor unionists in the United States favor legislation somewhat similar to that found in Great Britain makes desirable a somewhat detailed discussion of the legal status of labor organizations in that country.

The British legislation of 1871,<sup>1</sup> 1875,<sup>2</sup> and 1876<sup>3</sup> not only removed the ban from various acts of trade unions and strikers, but declared that trade unions should not, by reason of being in restraint of trade, be held unlawful, and also granted them special status as organizations by provisions for registration and a limited form of incorporation.

By these acts trade unions are defined as follows:

The term "trade union" means any combination, whether temporary or permanent, for regulating the relations between workmen and masters, or between workmen and workmen, or between masters and masters, or for imposing restrictive conditions on the conduct of any trade or business, whether such combination would or would not, if the principal act had not been passed, have been deemed to have been an unlawful combination by reason of some one or more of its purposes being in restraint of trade.

The act of 1871 declares:

"2. The purposes of any trade union shall not, by reason merely that they are in restraint of trade, be deemed to be unlawful, so as to render any member of such trade union liable to criminal prosecution for conspiracy or otherwise.

"3. The purposes of any trade union shall not, by reason merely that they are in restraint of trade, be unlawful so as to render void or voidable any agreement or trust."

This legal recognition of trade unions, however, and even the provisions for their registration, do not make them liable to suits at law in the same way as ordinary corporations. This point is considered of great importance in England.

"4. Nothing in this act shall enable any court to entertain any legal proceeding instituted with the object of directly enforcing or recovering damages for the breach of any of the following agreements, namely,

1. Any agreement between members of a trade union as such, concerning the conditions on which any members for the time being of such trade union shall or shall not sell their goods, transact business, employ, or be employed:

2. Any agreement for the payment by any person of any subscription or penalty to a trade union:

3. Any agreement for the application of the funds of a trade union,—

(a) To provide benefits to members; or

<sup>1</sup>34 and 35 Vict., ch. 31.

<sup>2</sup>39 and 40 Vict., ch. 22.

(b) To furnish contributions to any employer or workman not a member of such trade union, in consideration of such employer or workman acting in conformity with the rules or resolutions of such trade union; or

(c) To discharge any fine imposed by any person by sentence of a court of justice; or

4. Any agreement made between one trade union and another; or,

5. Any bond to secure the performance of any of the above-mentioned agreements."

It will be seen that these provisions exempt trade unions from liability as regards their relations to their own members and as regards agreements with employers. In fact, until recently it has been the only legal liability of trade unions which relates to their holding of property. The main object of the system of registration which is provided by the act of 1871 is to enable trade unions to hold property in legal form, and to enforce responsibility upon their officers as regards financial management.

The essential provisions of the law regarding registration, and the reports of trade unions to the Government, are contained in the following sections of the act of 1871.

"6. Any seven or more members of a trade union may by subscribing their names to the rules of the union, and otherwise complying with the provisions of this act with respect to registry, register such trade union under this act, provided that if any one of the purposes of such trade union be unlawful such registration shall be void.

"13. With respect to the registry, under this act, of a trade union, and of rules thereof, the following provisions shall have effect:

(1) An application to register the trade union and printed copies of the rules, together with a list of the titles and names of the officers, shall be sent to the registrar under this act.

(4) Where a trade union applying to be registered has been in operation for more than a year before the date of such application, there shall be delivered to the registrar before the registry thereof a general statement of the receipts, funds, effects, and expenditure of such trade union in the same form, and showing the same particulars as if it were the annual general statement required as hereinafter mentioned to be transmitted annually to the registrar:

(5) The registrar upon registering such trade union shall issue a certificate of registry, which certificate, unless proved to have been withdrawn or canceled, shall be conclusive evidence that the regulations of this act with respect to registry have been complied with:

"14. With respect to the rules of a trade union under this act, the following provisions shall have effect:

(1) The rules of every such trade union shall contain provisions in respect of the several matters mentioned in the first schedule to this act:

"15. Every trade union registered under this act shall have a registered office to which all communications and notices may be addressed;

"16. A general statement of the receipts, funds, effects, and expenditure of every trade union registered under this act shall be transmitted to the registrar before the first day of June in every year, and shall show fully the assets and liabilities at the date, and the receipts and expenditure during the year preceding the date to which it is made out, of the trade union; and shall show separately the expenditure in respect of the several objects of the trade union, and shall be prepared and made out up to such date, in such form, and shall comprise such particulars, as the registrar may from time to time require; and every member of, and depositor in, any such trade union shall be entitled to receive, on application to the treasurer or secretary of that trade union, a copy of such general statement, without making any payment for the same.

"Together with such general statement there shall be sent to the registrar a copy of all alterations of rules and new rules and changes of officers made by the trade union during the year preceding the date to which the general statement is made out, and a copy of the rules of the trade union as they exist at that date.

"Every trade union which fails to comply with or acts in contravention of this section, and also every officer of the trade union so failing, shall each be liable to a penalty not exceeding £5 for each offense."

The following are the essential provisions as to holding of property and financial liability of officers:

"8. All real and personal estate whatsoever belonging to any trade union registered under this act shall be vested in the trustees for the time being of the trade union appointed as provided by this act, for the use and benefit of such trade union and the members thereof, and the real or personal estate of any branch of a trade union shall be vested in the trustees of such branch, and be under the control of such trustees. \* \* \* \*

"9. The trustees of any trade union registered under this act, or any other officer of such trade union who may be authorized so to do by the rules thereof, are hereby empowered to bring or defend, or cause to be brought or defended, any action, suit, prosecution, or complaint in any court of law or equity, touching or concerning the property, right, or claim to property of the trade union; and shall and may, in all cases concerning the real or personal property of such trade union, sue and be sued, plead and be impleaded, in any court of law or equity, in their proper names, without other description than the title of their office."

It will be seen that the most important features of the trade union laws of Great Britain are the provisions for officially registering unions, for requiring reports especially of financial transactions, for authorizing the holding or transferring of necessary property, and for protecting the funds of organizations from embezzlement. From the standpoint of the general public the requirement that labor organizations shall make public financial statements is of no little importance; and this requirement also serves to protect the members against imposition by their officers. The authority given to the unions to hold and transfer property is a correlative of the general provisions of the authority of the law making labor organizations lawful. Previous to this enactment the powers of labor organizations in this regard were very imperfectly guaranteed.

3. **Registration and legal authority of labor organizations in the Australian colonies.**—Two or three of the Australian colonies have recently taken a more advanced position with regard to the status of labor organizations than that taken by Great Britain itself. They have, in fact, given to labor organizations very considerable corporate powers, and have specifically enabled them to make legally binding contracts with employers regarding the conditions of labor. In this regard they have adopted a policy which, as we shall see, finds strong advocates in Great Britain and the United States. Unfortunately the conditions in the Australian colonies so differ from those in the greater industrial countries, and the amount of experience with regard to the working of these acts is so slight, that it probably affords little light as to the desirability of such legislation elsewhere.

New Zealand and New South Wales, two of the colonies which have thus recently gone further than Great Britain in regard to the legal position of labor organizations, had previously adopted, almost word for word, the provisions of the English act of 1875, legalizing labor organizations.<sup>1</sup> Queensland<sup>2</sup> has also adopted the British provisions, but has not gone beyond them.

The compulsory arbitration acts which have been passed in New Zealand<sup>3</sup> and in Western Australia,<sup>4</sup> as well as the act of New South Wales,<sup>5</sup> which provides for voluntary conciliation and arbitration, all authorize labor organizations to make enforceable agreements with employers, and give other prerogatives not granted by law to labor organizations in any other country. These acts also apply to organizations of employers.

There are some minor differences in detail as between the three colonies, but these are not important, and a general description will suffice for all. In fact, the laws of New Zealand and of Western Australia are practically identical.

In general, these laws provide that any organization, whether of employers or employees, may register as an industrial union. Only organizations thus registering may take advantage of the compulsory provisions of the arbitration act. Organizations applying for registration must submit a list of their members and officers, two copies of their rules, and evidence that the majority (in New South Wales two-thirds) of the members have voted in favor of registration. The rules of a registered organization must provide for a committee on management and other necessary officers, for the manner of calling meetings and of voting, for the keeping of a list of members, and the regulation of the terms of membership, with the proviso that no person shall discontinue membership without giving at least 3 months' previous notice and paying all dues to the union. The rules must also permit an inspection of the books and of the names of members by every person having an interest in the funds of the society. Any industrial union may hold houses, buildings, and lands, and may sell or exchange them. A union may have its registration canceled after giving due public notice, but no cancellation shall take place during the progress of any conciliation or arbitration affecting the organization. The law also provides for the registration of central organizations of employers and employees including several separate local unions.

Semiannually each registered union or association of unions must make a report to the Government, giving a list of the members already in the association, a list of the

<sup>4</sup> Act of December 5, 1900.

<sup>5</sup> Act of December 21, 1894.

local unions, and the names of the officers. In western Australia financial reports must also be furnished to the Government.

The most important provisions are those regarding the legal position of labor organizations in their relations to outside parties. Every union or association may sue or be sued by its name. Trade unions registered under the earlier act, industrial unions registered under the arbitration law, industrial associations, and employers may be parties to agreements affecting any industrial matter, such as wages and the conditions of labor, or for the prevention or settlement of industrial disputes. Every such agreement shall be for a term to be specified therein, not exceeding 3 years. A duplicate of the agreement shall be filed in the office of the arbitration board or court. The agreements are binding upon the parties and upon every person who is a member of any organization which is a party thereto. Moreover, any employer not a party to the original agreement may later signify that he concurs in the agreement, and shall thereafter be entitled to its benefits and subject to its obligations. This last is evidently an important provision, since it makes it possible to secure essentially uniform conditions of labor in a given district, or throughout the entire colony, without the formation of an association of employers covering the entire jurisdiction.

The enforcement of these agreements is accomplished by the same methods as the enforcement of the awards of arbitrators. The agreements themselves may make provisions limiting the amount of damages which may be collected for breach of agreement. In the absence of any such limit the amount of damages may be fixed by a court, but shall not exceed £500 (in Western Australia, £1,000) as against any organization. The property of any industrial union or trade union may be seized in satisfaction of a judgment of the court against it, and if the property is insufficient the members shall be liable for the deficiency. The provision that members may not withdraw without several months' notice and without payment of all dues to the organization, and the further provision restricting the cancellation of the registration of organizations, makes it possible to enforce fairly effectively these provisions regarding the financial responsibility of organizations of employers or employees. No individual, however, is liable for more than £10. Individual persons injured by the violation of an agreement of this sort have also a separate right of action in case of violation.

It appears that comparatively little advantage has yet been taken, in either New Zealand, New South Wales, or Western Australia, of these provisions for enforcing agreements between employers, or associations of employers, and labor organizations. In New Zealand labor organizations have very generally registered under the new law, though employers have been inclined to hold aloof.

**4. Proposed extension of legal powers and liabilities of labor organizations.**—There has been much discussion both in this country and in England as to the desirability of providing for the legal incorporation of labor organizations, with more wide-reaching powers and more definite responsibilities than they now possess, either as unincorporated associations or as organizations incorporated under the existing weak laws.

It is urged, in the first place, by some members of labor organizations that their powers regarding their own members and their responsibilities to their members should be materially increased. The fact that many trade unions undertake to establish benefit funds and insurance features makes it certainly desirable that the legal rights and responsibilities regarding the management of funds, payment of dues, the right to demand benefit payments, etc., should be more definitely and effectively regulated by law. At present labor organizations generally seek to protect their funds from embezzlement either by provisions for fining members guilty of malfeasance—a penalty evidently not very serious, since the member may simply leave the union—or more generally by requiring the signature of several distinct officers in order to draw funds. The more important organizations have often incorporated their insurance and benefit departments under the laws relating to mutual insurance corporations. Sometimes the property of labor organizations, especially real estate, is put in the hands of trustees who are separately incorporated. Of course unincorporated organizations can hold property, although their powers in this regard are less complete than in the case of corporations.

While the desirability of more definite incorporation laws as regards the relations between labor organizations and their own members, and as regards their property rights, are probably generally favored by labor unionists, there is much greater diversity of opinion as to the desirability of increasing the powers and responsibilities of these organizations in their dealings with employers and with third parties generally. Those workmen and others who advocate increased rights and responsibilities declare that the inability of unions at present to enforce their agreements with employers, regarding the terms on which labor shall be performed, places them

at the mercy of unscrupulous employers. It is urged that labor organizations, since by most States they are recognized as legitimate, should have a definite status before the courts and should be able to bring suit in the same way as other organizations. Those who favor arbitration and conciliation as a means of settling labor disputes frequently point out that both the lack of power and the lack of responsibility on the part of labor organizations tend to weaken their position in such negotiations. The employees belonging to an unincorporated body, it is said, have no properly authenticated representatives to enter into arbitration proceedings, especially where those proceedings, as under State boards of arbitration, take on a more formal character. The absence of incorporation again, it is argued, makes it difficult to enforce awards upon employers, whether such awards be made by State boards or by private arbitrators, or whether they be merely the result of mutual conciliation.

Employers very frequently also urge the desirability of incorporation of labor unions in order that they may be held more strictly to their obligations. They complain of the present irresponsibility of trade unions, and of the frequent violation of oral or written agreements. It is probably a general feeling among employers, so far as they are willing to recognize labor organizations at all, that they would be willing to grant them the added powers which incorporation would give if only added responsibility might be secured at the same time. Many employers, and many persons not directly concerned with the employment of labor, also favor a more definite legal status for labor organizations in the interest of those labor organizations themselves.

Perhaps a majority of labor union leaders in this country, however, oppose any form of incorporation which would increase the responsibility of labor organizations toward employers. They feel that the employer usually has more money to carry on litigation and more skill in doing so, and that accordingly his ability to enforce agreements and to lay responsibility upon the union would be greater than the ability of the union to hold the employer responsible. They fear that legal responsibility would result in frequent attachment of their funds or other interference with their finances, not only under suits for violation of trade agreements, but for alleged damages by picketing, boycotts, and various other acts. This, it is declared, would render their position altogether unstable. Persons who take this position declare that they have no desire to facilitate breaches of agreement on the part of labor organizations, but that, in view of the usual disposition of the courts toward labor, and under all the circumstances, increased financial and legal responsibility would prove disadvantageous. The opinions of various labor leaders, employers, and others on this subject have been presented very fully in oral testimony before the Industrial Commission, and reference is made to that testimony.<sup>1</sup>

It is obvious that, should the desirability of greater powers and responsibility on the part of labor organizations be granted, it would still be a difficult matter to decide upon an effective manner of increasing those powers and especially of increasing responsibility. Labor organizations in general can scarcely be expected to incorporate with a capital stock, nor could they probably be compelled to maintain reserve funds which could be attached by legal process, while members could sometimes avoid contribution to penalties and damages assessed on the organization by withdrawing from it. Nevertheless it is evident that in the case of many labor organizations, if duly incorporated, it would be possible to enforce pecuniary penalties with considerable effectiveness. Some such organizations possess property or reserve funds, designed for various purposes, of no little value. The objection that such funds and property might be unduly subject to attack on all sorts of legal processes might be avoided by limiting the financial liability of unions to contracts regarding the conditions of labor, and also by limiting the amount of liability in some proportion to the membership or property of the union. Another way of enforcing responsibility upon an incorporated union would be by threat of revocation of its charter, with the loss of the various privileges granted it thereby.

The question as to the desirability of increasing the legal powers and responsibilities of labor organizations has been especially prominent in Great Britain where, as we have seen, they are now by statute expressly exempted from liability for their contracts with employers. The arguments were presented with special fullness before the Royal Commission on Labor, and two minority reports, representing the opposing views, were made as to this subject, in addition to the general report of the commission. These reports may be summarized and quoted somewhat fully, since they take up this disputed question in a very thorough manner.

The general report of the royal commission points out that, while special contracts between employers and workmen can be enforced like other contracts, it is practically

<sup>1</sup> See especially reports of Industrial Commission, Vol. IV, Digest, p. 143; Vol. VII, Digest, p. 106.

impossible to sue a large number of persons, say 10,000 workmen, for breach of contract. Moreover, agreements concerning arbitration are usually made between bodies which have no legal personality and which can not sue each other for damages. The real sanction of the agreements between organizations of employers and employees, and of the decision of arbitrators under such agreements, is the moral one. Where an organization of workmen is very strong, embracing most of the men in a trade or district, and where great administrative power and complete control of funds is lodged in the central executive, the organization can exercise very great force over its members to compel them to carry out agreements. Individual members who will not conform to the arrangements approved by the representatives can practically be driven out of a trade by being expelled from the union, for their fellow-workmen will not work with them nor will employers employ them. Strong associations of employers are able to exercise a similar control over their members. Where organization on either side is imperfect it is much less feasible to enforce conformity to agreements or to decisions of arbitrators.

The moral sanction, continues the report, must probably continue to be the chief force to compel employers and employees to abide by agreements and awards. It has, to be sure, been suggested that by legislation organizations of employers and employed should be able to obtain legal personality, so that their agreements could be enforced by actions for damages directed against their collective funds. Various bills proposing such a system have been brought before the legislative bodies of New Zealand and South Australia. [The report was issued in 1894.] The question arises, however, whether an organization can be held liable for any breach of agreement by those who have ceased to be members. Supposing a collective agreement should be entered into by a union consisting of 50,000 members, and 20,000 of them being dissatisfied with it should withdraw from the union and repudiate the agreement, it would certainly seem a strong measure to hold the association legally responsible; but, on the other hand, if this were not done there would seem to be no effective disposal of the old difficulty of enforcing legal penalties against a mass of workmen.

Continuing on this subject the report of the royal commission says:

"If the association were not legally responsible so long as an agreement lasted for its observance by persons who in the meantime ceased to be members, the practical value of a legal guaranty of this kind would in a great measure depend upon the strength of the tie which bound members to their union. It would probably not be very effective in the case of organizations like those of unskilled labor, which have but a weak hold over their members, or add in such cases very much strength to the moral forces which are at present the only sanction to industrial agreements and awards. But in the case of the strongly organized skilled trades, the benefits derived by members from the associations are often so considerable that it would be improbable that they would abandon their associations for the sake of any temporary advantage which they might think themselves able to gain through breach of the collective agreements. It is of course precisely in these trades that agreements are, as matters stand now, best observed, even without any right to sue for compensation, while on the other hand a weak and poor union, even if endowed with legal personality and made legally responsible for any breach of agreement by the persons who had ceased to be members of it, would constitute but a feeble guaranty to employers that the terms of the agreement would be loyally observed."

"One suggestion made by an experienced witness was 'that arbitration in all trade disputes should be made compulsory by law—that is, that strikes or lockouts should be illegal and punishable in cases where arbitration had not been resorted to.' The witness who made this proposal, and who is himself a member of the commission, started from this principle, viz, that no body of men or employers 'have a right to take advantage of an opportunity and cease work, discouraging the whole trade of the district and interfering with the dependent trades.' In fact, what this witness would desire would be to give legal effect to what is already a rule of that trade union with which he is connected, not to resort to strikes before trying to get the dispute settled by arbitration, and to make this binding, not only upon associations which had the rule, but upon all employers and employed. Mr. Trow did not, however, propose to create anything like Government tribunals, but seemed to think that if this proposal became law the employers and employed in every trade would form organizations, if none already existed, and create industrial tribunals to meet the necessities of the case. He did not show how, in practice, a law prohibiting strikes or lockouts could be enforced against large bodies of workmen or employers. The principle suggested by this witness was, however, embodied in a bill brought before the legislative assembly of the colony of South Australia in 1890, which proposed to make liable to fine any organization of employers or employed, or any member thereof, who would take part in or assist any lockout or strike on account of any dis-

pute for the settlement of which any board of conciliation to be created under the act should have jurisdiction. It was suggested by some other witnesses that without making resort to arbitration legally necessary, or making strikes and lockouts before arbitration illegal, legal force should be given to awards made, upon the agreements of the parties, by industrial tribunals or individual arbitrators."

The members of the royal commission were unable to agree, on the basis of the considerations above set forth, in recommending changes of legislation regarding the status of trade unions. A powerful minority of the members, however, made a special report favoring further legal responsibility for trade unions, nominally in the interest both of employers and of unionists. This special report is signed by the Duke of Devonshire, the chairman of the commission, and by Mr. David Dale, Sir Michael E. Hicks-Beach, Mr. Leonard H. Courtney, Sir Frederick Pollock, Mr. Thomas H. Ismay, Mr. George Livesey, and Mr. William Tunstall. It is noteworthy that these gentlemen are all either employers or representatives of employing or of the leisured and professional classes. Their views are so important as to merit extended quotation.

After summarizing the opinion of the commission as a whole upon the subject and quoting the provisions of the trade-union act of 1871 limiting the legal responsibility of unions, the minority report continues as follows:<sup>1</sup>

"The object of this act appears to have been, while freeing trade unions from the last remains of their former character of criminal conspiracies and giving full protection to their property, (1) to prevent them from having any legal rights against their members or their members against them; and next, (2) to prevent their entering into any legally enforceable contracts as bodies with each other or with outside individuals, except with regard to the management of their own funds and real estate.

"In our opinion the experience of the period which has elapsed since the year 1871 justifies some relaxation of these statutory restrictions. We think that the extension of liberty to bodies of workmen or employers to acquire fuller legal personality than that which they at present possess is desirable in order to afford, when both parties wish it, the means of securing the observance, at least for fixed periods, of the collective agreements which are now, as a matter of fact, made between them in so many cases.

"We do not suggest that a scheme of legally enforceable agreements would be applicable to the circumstances of all, or even, at present, of the larger part of the industries of this country. We find, however, from the evidence that a considerable and very important part of British industry is conducted under collective agreements made in the most formal way between highly organized trade associations, and that the substitution of agreements between associations for agreements between individual employers and individual workmen is a growing practice, and one which is intimately connected with the mode and scale upon which modern industry is at present carried on. It seems to us to be clear from the evidence, both of employers and employed, that the advantages of this system greatly outweigh the disadvantages. This may not have been so evident at the date when the trade-union act of 1871 was passed, but it is attested by the growth of the system. Such agreements are in fact the recognition of that virtual 'partnership' between those who supply labor and those who supply managing ability, referred to in paragraph 365 of the report, and are therefore, on the whole, in accordance with the public interest and with the circumstances of modern industry. If this is the case, then it seems to follow that further legislation is desirable in order to bring the law into harmony with the present state of facts and public opinion.

"We think that such an extension of liberty, if conceded (and in so far as it might be acted upon), would not only result in the better observance for definite periods of agreements with regard to wage rates, hours of labor, apprenticeship rules, demarcation of work, profit-sharing and joint-insurance schemes, the undertaking of special works, and other matters, but would also afford a better basis for arbitration in industrial disputes than any which has yet been suggested.

"It would be necessary that they should acquire by some process of registration a corporate character sufficient for these purposes. We are anxious to make it clear that we propose nothing of a compulsory character, but that we merely desire that existing or future trade associations should have the liberty, if they desire it, of acquiring a larger legal personality and corporate character than that which they can at present possess. It must be added that even if trade associations were thus clothed with a legal personality it would be open to them by express stipulation to provide that any special agreement between them should not be enforceable at law.

"We think that the contracting association should be responsible for observance of the collective agreement by all its members, so long as they remained its members,

<sup>1</sup>Final Report, Royal Commission on Labor, pp. 115-119.

and that every member of an association should, during membership, be held to be under a contract with the association for observance of the collective agreement. The effect of this would be (1) to give to those entering into contracts with an association the right to sue it for damages in case of breach of contract by it or any of its members, and (2) to give an association the right to recover damages from those of its members who infringed the collective agreement."

These gentlemen also urge the incorporation of trade unions as a means of furthering the use of arbitration methods, adding:

"It seems that although the most formidable obstacles to resort to arbitration are probably those indicated in paragraphs 136 and 137 of the report, a further obstacle may frequently be found in the uncertainty which exists as to the observance of an award when given. If an arbitrator can only pronounce a decision which may or may not be followed according to the good will of the parties the procedure is to some extent discredited. Although, as a rule, arbitration awards may be loyally accepted, and the exceptions may be very few, yet the possibility of such an exception occurring may make employers or workmen less willing to resort to a troublesome and elaborate process like formal arbitration. It has been shown that it is impossible to compel the observance of any awards in these matters. It remains to be considered whether any better guaranty or motive for such observance can be obtained to supplement and strengthen the moral force which already exists.

"In order to have arbitration in the strict sense of the word there must be two or more parties capable of entering into a legal contract to submit present or future questions to arbitration, and there must be such submission. Then by the ordinary principles of law, damages can be recovered from any party who refuses to go to arbitration, or declines to act on the award when made.

"It must be further observed that if trade associations were able, as bodies with legal personality, to refer present or future questions to arbitration, they could by such agreements under the ordinary law embodied in the arbitration act, 1889, either constitute or indicate their own tribunals or arbitrators, and clothe them with all necessary powers of procedure, and enable them to make awards which could, if broken, be made grounds of action for damages. Thus, in these cases, the problem of how to give powers of procedure to voluntarily formed boards of arbitration, and a legal sanction to their awards, would be solved by the operation of the ordinary law as to agreements made between parties capable of contracting. Inasmuch as such tribunals would, in each case, be constituted by the agreement of the parties interested they would, it might be expected, possess their confidence, while the fact that associations and not individuals were primarily responsible for the observance of the awards might remove some difficulties which have hitherto attended attempts to give a legal sanction to arbitration awards in industrial matters."

This minority report concludes as follows:

"The evidence does not show that public opinion is as yet ripe for the changes in the legal status of trade association which we have suggested; but we have thought it to be desirable to indicate what may, as it appears to us, ultimately prove to be the most natural and reasonable solution of some, at least, of the difficulties which have been brought to our notice."

It is noteworthy that the representatives of labor organizations upon the Royal Labor Commission were distinctly opposed to any increase of the responsibility of trade unions. Another minority report, signed by Messrs. William Abraham, Michel Austin, James Mawdsley, and Tom Mann, contains the following remarks on this subject:

"One proposal, made to the commission by several witnesses, appears to us open to the gravest objection. This suggestion is that it would be desirable to make trade unions liable to be sued by any person who had a grievance against the action of their officers or agents. To expose the large amalgamated societies of the country, with their accumulated funds, sometimes reaching a quarter of a million sterling, to be sued for damages by any employer in any part of the country, or by any discontented member or nonunionist, for the action of some branch secretary or delegate, would be a great injustice. If every trade union were liable to be perpetually harassed by actions at law on account of the doings of individual members; if trade union funds were to be depleted by lawyers' fees and costs, if not even by damages or fines, it would go far to make trade unionism impossible for any but the most prosperous and experienced artisans.

"The present freedom of trade unions from any interference by the courts of law, anomalous as it may appear to lawyers, was, after prolonged struggle and parliamentary agitation, conceded in 1871, and finally became law in 1876. Any attempt to revoke this hardly won charter of trade-union freedom, or in any way to tamper with the purely voluntary character of their associations, would, in our opinion, provoke

the most embittered resistance from the whole body of trade unionists, and would, we think, be undesirable from every point of view."

5. **American laws prohibiting discrimination against union labor.**—In most of the Northern States, except those in the Far West, the legalization of labor organizations is made still more emphatic by legislation prohibiting discrimination against employees because of their membership in labor organizations. These acts usually declare it unlawful to make it a condition of entering or continuing in employment that an employee shall not be a member of a labor organization. The acts prohibiting blacklisting in various States specifically refer to blacklisting of employees on account of membership in labor organizations. The New York act regarding discrimination against members of trade unions is as follows:<sup>1</sup>

"Any person or persons, employer or employers of labor, and any person or persons of any corporation or corporations on behalf of such corporation or corporations, who shall hereafter coerce or compel any person or persons, employee or employees, laborer or mechanic to enter into an agreement, either written or verbal, from such person, persons, employee, laborer, or mechanic, not to join or become a member of any labor organization, as a condition of such person or persons securing employment, or continuing in the employment of any such person or persons, employer or employers, corporation or corporations, shall be deemed guilty of a misdemeanor. The penalty for such misdemeanor shall be imprisonment in a penal institution for not more than 6 months, or by a fine of not more than \$200, or by both such fine and imprisonment."

Opinions differ as to the justification and as to the constitutionality of such legislation as this. It is objected by some that there is no correlative legislation declaring that employers shall not discriminate against nonunion men and that union men shall not refuse to work with them or endeavor to prevent them from getting employment. To be sure, the courts have generally, in the absence of statute, held such discrimination against such nonunion men on the part of union employees to be illegal, although, of course, employers are not prohibited, under the common law, from refusing to employ nonunion men or any other class of men. It is urged further that it is unjustifiable for the legislature to interfere with this common-law right of employers by prohibiting them from refusing employment to men for any reason, such as because of membership in labor organizations.

There is no decision of a court of last resort upholding the constitutionality of statutes of this sort. An intermediate court in Ohio has held the law in that State constitutional.<sup>2</sup>

On the other hand, the supreme court of Missouri has specifically declared the act in that State which prohibits employers from interfering with membership in labor organizations unconstitutional. This decision was rendered June 18, 1895.<sup>3</sup> The courts held that the act conflicted with the provisions of the Constitution of the United States and of the constitution of Missouri, which declare that no person shall be deprived of life, liberty, or property without due process of law. The right to acquire property implies the right to enter into contracts and terminate them at the expiration of their term or at any time if no definite period be fixed therein. The statute was also declared obnoxious as being class legislation. The court said in part:

"The law under review declares that to be a crime which consists alone in the exercise of a constitutional right, to wit, that of terminating a contract, one of the essential attributes of property, indeed, property itself. \* \* \* If an owner, etc., obeys the law on which this prosecution rests, he is thereby deprived of a right and a liberty to contract or terminate a contract, as all others may; if he disobeys it, then he is punished for the performance of an act wholly innocent. \* \* \*

"We deny the power of the legislature to do this, \* \* \* and consequently we hold that the statute which professes to exert such a power is nothing more nor less than a 'legislative judgment,' and an attempt to deprive all who are included within its terms of a constitutional right without due process of law. But the statute is obnoxious to criticism on other grounds. It does not relate to persons or things as a class—to all workmen, etc.—but only to those who belong to some 'lawful organization or society,' evidently referring to a trade union, labor union, etc. Where a statute does this \* \* \* it is a special, as contradistinguished from a general, law. Here a nontrades-union man or a nonlabor-union man could be discharged without ceremony, without let or hindrance, whenever the employer so desired, with or without reason therefor, while in the case of a trades-union or labor-union man he could

<sup>1</sup> Acts of 1887, chapter 688. The general legislation on this subject is further summarized in reports of Industrial Commission, Vol. V, p. 128.

<sup>2</sup> Davis v. State, 30 Weekly Law Bulletin, 342.

<sup>3</sup> State v. Julow, 31 S. W. Rep., 781, 783.

not be discharged if such discharge rested on the ground of his being a member of such an organization. In other words, the legislature have undertaken to limit the power of the owner or employer as to his right to contract with or to terminate a contract with particular persons of a class. The statute which does this is a special, not a general law, and therefore is violative of the State constitution.

"Nor can the statute escape censure by assuming the label of a 'police regulation.' It has none of the elements or attributes which pertain to such a regulation, for it does not, in terms or by implication, promote or tend to promote the public health, welfare, comfort or safety; and if it did, the State would not be allowed, under the guise and pretense of a police regulation, to encroach or trample upon any of the just rights of the citizen, which the Constitution intended to secure against diminution or abridgment."

The Federal circuit court has decided, on the basis of common law in the absence of statute, that employers have the right to make a rule that members of labor organizations will not be employed or retained. This was in a case involving the Reading Railroad Company.<sup>1</sup> The railroad company in 1987 adopted a rule that no one would be employed by it who was a member of a labor organization unless he would agree to withdraw therefrom, and from that time required every applicant for employment to sign an application representing that he was not a member of any such organization, or that if he was, he would withdraw therefrom. Some years later receivers of the railway company were appointed and continued the same rule and practice. Certain employees of the receivers petitioned the court to restrain the receivers from acting upon a notice issued by them stating their intention to discharge any employees who were members of labor organizations unless they severed their connection therewith before a certain date. It appeared that all the petitioners had either obtained employment by canceling their membership in such organizations or had had notice of the rule and been employed in violation of it by subordinate agents, without the knowledge or consent of the receivers; and no others, differently situated, asked to be made parties. The court held that the petitioners, who had thus violated a known rule, had no standing to seek to restrain its enforcement, and that, in any event, the court would not direct the receivers to abrogate a rule, established by the owners of the property, and believed by them and by the receivers, to be advantageous in its management, and which involved nothing unlawful.

**6. Protection of trade-union labels.**—The union label has, during the past 10 or 15 years, become an increasingly common device among labor organizations to influence consumers to buy union-made goods, and thus to induce employers to use exclusively union labor. Nearly all of the States have adopted statutes allowing the registration of union labels and trade-marks, and providing for the punishment of persons using these labels without authority. Statutes of this sort, of course, differ from the ordinary laws regarding trade-marks, since the union working man is not the owner of the article to which he affixes the label, but simply contributes his labor toward its manufacture.

Some of the statutes on this subject apply only to labels adopted by associations of workmen. But with a view to obviating the objection, sometimes expressed, both on the part of the public and on the part of the courts, that such special enactments constitute class legislation, more recent statutes usually provide that any association of persons or any corporation may adopt labels or trade-marks to designate the products of their own labor or of the labor of their members. Both of these forms of the statute usually provide for the registration of the label with the secretary of state. Persons infringing the label are subject to penalty, and may also, under the laws of many States, be restrained by injunction.<sup>2</sup>

<sup>1</sup> *Platt v. Philadelphia and Reading Railroad Company*, 65 Fed. Rep., 690.

<sup>2</sup> For further account of this legislation see reports of Industrial Commission, Vol. V, p. 123. The following are the significant sections of a typical statute, that of New York, acts of 1889, chapter 385:

"Sec. 1. Every union or association of working men or women adopting a label, mark, name, brand, or device, intended to designate the products of the labor of members of such union or association of working men or women, shall, in order to obtain the benefits of this act, file duplicate copies of such label, mark, name, brand, or device in the office of the secretary of state, who shall, under his hand and seal, deliver to the party filing or registering the same a certified copy and a certificate of the filing thereof. \* \* \*

"Sec. 2. Every union or association of working men or women adopting such label, mark, name, brand, or device, and filing the same as specified, \* \* \* may proceed, by suit in any of the courts of record of the State, to enjoin the manufacture, use, display, or sale of counterfeit or colorable imitations of such label, mark, name, brand, or device, or of goods bearing the same; and the court having jurisdiction of the parties shall grant an injunction restraining such wrongful manufacture, use, display, or sale of such counterfeit or colorable imitations, and of goods bearing the same, and shall award to the complainants such damages resulting from such wrongful manufacture, use, display, or sale, as may be proved, and shall require the defendant to pay to the complainants the profits derived from such wrongful manufacture, use, display, or sale, or both profits and damages."

So far as statutes protecting union labels have come before the courts of highest resort they have been held constitutional, especially as against the charge that they are class legislation. The objection that a trade-mark can not be properly placed upon an article not actually owned by the person using the label has also been considered in general an insufficient one. Courts have also held that the use of the label does not amount to a declaration that goods not covered by the label are necessarily inferior.

The following extracts from the decision of the New York court of appeals on this subject rendered February 28, 1899, may be quoted as representing the highest judicial authority:<sup>1</sup>

"It is claimed that the act in question is void for the reason that it grants an exclusive privilege to a private association in contravention of the provisions of the constitution. (Article III, section 18.)

"There is nothing in the title or provisions of the act that in any manner limits its provisions to any particular locality of the State or to any designated association or union of working men or women. Instead, the provisions are all general, including every locality in the entire State, and embracing every association or union of working men or women existing or that may be thereafter organized. It is in no sense local or private, but is in every sense a general law. \* \* \*

"Finally, it is insisted that the act is unconstitutional and void, for the reason that it is contrary to public policy, in that it unjustly discriminates in favor of the labor of members of associations or unions as against that of nonunion workmen. The questions arising under this contention are more serious and require deliberate consideration. \* \* \* The constitution authorizes the legislature to pass general laws under which grants may be made to corporations, associations, or individuals of an exclusive privilege, immunity, or franchise. \* \* \* Among the exclusive privileges and franchises which have been made the subject of grants to private corporations, and with which we are all familiar, are those made by municipal governments under the authority of general laws of the right to occupy streets or highways for the construction and operation of street railroads. In all of these grants, there is, of necessity, discrimination. Some particular corporation is singled out to which the grant is given, and which, thereafter, enjoys the exclusive privilege of operating its railroad through the streets or highways specified in the grant; but the grant being authorized, the discrimination is not unlawful. It is not contrary to public policy, for the reason that the constitution is the foundation upon which the public policy of the State is based. \* \* \* Where, therefore, the constitution grants or authorizes a grant through legislative action of an exclusive privilege, it must be deemed to be in accord with the policy of the State. As we have seen, the label authorized was by a general and not a local act. No particular association or union has been given the exclusive privilege of adopting a label, but every association or union of every kind of working men or women is given the right to adopt its own label, which may indicate its own workmanship. It consequently follows that whatever discrimination there may be is authorized, and therefore, not unjust, and that the privilege granted under the general law is in accord with public policy.

"We are aware that the courts of sister States have had trouble with similar legislation in their States; that very much has been written upon the subject and that the conclusions reached by the courts in the different States have widely differed. We have not thought it profitable to enter upon an elaborate discussion of these cases. The questions here presented arise under our own constitution and are confined within narrow limits. We have not overlooked the intimation that the passage of this act was procured for the purpose of enabling union labor organizations to boycott non-union laborers and to deprive them of the legitimate fruits of their labors. We can not, however, assume that such was the purpose and intent of the legislature or that the association of which the plaintiff is president will resort to acts which are unlawful and criminal. The act allows the members of the union to send the products of their labors into the markets of the country marked in such a way as to indicate the character of their workmanship. This is legitimate and proper. It is a right that the law accords to every manufacturer. We must assume, therefore, that the legislature in passing the act had in view the lawful and legitimate purpose and that they did not contemplate that the provisions of the act might be used for illegitimate purposes. These views render it unnecessary to consider the question as to whether the label was a valid trade-mark at common law."

Other courts which have upheld the constitutionality of union label laws are the supreme court of Illinois (*Cohn v. People*, 37 N. E. Rep., 60), the supreme court of Missouri (*State v. Bishop*, 31 S. W. Rep., 9), and the court of errors and appeals of New

<sup>1</sup> *Perkins v. Heert*, 53 N. E. Rep., 18, 19.

Jersey (*Schmalz v. Wooley*, 41 Atlantic Rep., 939, 941). This last decision discusses especially the question as to the protection of articles not the property of the person affixing the label. The court said:

"But the objection urged by the defendants against the bill is that it does not allege, and the court can not infer, that the journeymen owned the hats made by them; and it is insisted that the ownership of the article to which the trade-mark is affixed is necessary to the acquisition of a right in the mark. \* \* \* The public object sought in the protection of trade-marks is to bring upon the market a better class of commodities, and the means for attaining that object is by securing to those who are instrumental in supplying the market whatever reputation they gain by their efforts toward that end. The workman by whose handiwork the commodity is made is one of these instruments, just as is his employer who furnishes the raw material and owns and sells the finished product; and if the former is permitted by the owner to place upon the commodity a mark to indicate whose workmanship it is, and thereby commend his workmanship to other employers, this license from the owner should be deemed a right against everybody else. His aptitude in his trade is his property, and if by a mark he can have it identified as his in the market, he may enhance its salable value, and thus secure the same sort of advantage as his employer, by similar means. No reason exists why this advantage should not be protected by the courts in the same manner and to the same extent as is the like advantage of the employer."

## PART V.

# STATISTICS OF STRIKES AND LOCKOUTS.

---

### CHAPTER I.

#### STATISTICS OF NUMBER OF DISPUTES AND PERSONS AFFECTED.

Several leading countries have, during the past 20 years, undertaken the compilation of official statistics regarding the number of strikes and lockouts, the number of persons affected, the causes, results, and similar matters. While such statistics are not free from errors, and while it is often difficult to draw satisfactory conclusions from them, they furnish, nevertheless, the most exact source of information which is available regarding this subject.

In the following analysis of these statistics we shall consider:

- (1) The general statistics as to the number of disputes and of persons affected by them;
- (2) The causes of disputes;
- (3) Their duration;
- (4) The amount of time lost by them, as well as the money losses; and
- (5) Their results.

Under each head the statistics of the United States will be presented first and those of the European nations which publish official reports on this subject will then be compared with the figures for our own country. Briefer comparisons of the statistics of the different countries will be found in the introductory summary in this volume.

#### I. UNITED STATES.

The only authoritative statistics regarding strikes and lockouts in the United States are those prepared by the United States Department of Labor. The third annual report of the department presents the statistics for the years 1881 to 1887, while the tenth annual report covers those from January 1, 1887, to June 30, 1894. The sixteenth annual report, just issued, summarizes the earlier figures and includes also strikes and lockouts from 1894 to December 31, 1900. Through the courtesy of the Commissioner of Labor, advance sheets of this latter report have been furnished to the Industrial Commission, so that the present report appears contemporaneously with that of the Department of Labor. The reports concerning strikes prepared by the various State bureaus of labor are for the most part incomplete, even for the States and years which they cover. In no State have statistics covering a considerable number of years been prepared. Occasional reference will, however, be made to the figures from these sources, as well as to still less satisfactory statistics presented by certain labor organizations.

**1. Distinction between strikes and lockouts.**—The statistics prepared by the United States Department of Labor, as well as those contained in the official reports of France, Germany, and Austria, make a distinction between strikes and lockouts. This distinction is one exceedingly difficult to draw in practice, and it probably serves no altogether satisfactory purpose in the presentation of most of the statistics of industrial disturbances. The relatively slight difference between strikes and lockouts is recognized by the Department of Labor itself, which uses the following language in reference to it:

“A strike occurs when the employees of an establishment refuse to work unless the management complies with some demand. A lockout occurs when the management refuses to allow the employees to work unless they will work under

some condition dictated by the management. It appears therefore that these two classes of industrial disturbances are practically alike, the main distinction being that in a strike the employees take the initiative, while in a lockout the employer first makes some demand, and enforces it by refusing to allow his employees to work unless it is complied with. Some difficulty has been experienced in classifying certain of these disturbances, especially those which occurred in the earlier years included in this report, owing to the inadequate information obtainable as to their causes and because of the very slight difference between a strike and lockout as mentioned above."<sup>1</sup>

As a matter of fact, the distinction between strikes and lockouts is scarcely correctly indicated by the above quotation. It is not true that every strike involves a demand initiated on the part of the employees. The statistics of strikes show that a very common cause of refusal to work is unwillingness to accept new terms proposed by the employers. On the other hand, a lockout may perhaps be clearly defined in the language above quoted, although it may readily happen that a lockout may owe its first initiation to a demand on the part of the employees. The only really accurate and important distinction between industrial disputes would be drawn by grouping together on the one hand all cessations of employment which result from a movement begun in the first instance by the employees, and by including on the other hand all cessations of employment resulting from the initiation of the employer in making some change in the conditions of employment. This is not, however, the distinction made by the Department of Labor, nor by the other Governments which separate strikes from lockouts in their statistics. It would perhaps give a clearer idea of the extent, cause, and results of industrial disputes if the statistics for both strikes and lockouts were grouped together in every case. Thus, for example, in the classification of causes, instead of treating some strikes as being caused by resistance to reduction of wages and some lockouts as being due to desire to enforce reduction of wages all disturbances of this sort would be brought together under the general cause "proposed reduction of wages."

An unfortunate result which may arise from careless interpretation, on the part of the general public, of the distinction between strikes and lockouts is connected with the tendency to attribute a certain degree of blame to the party inaugurating the dispute. It appears that there is a much larger proportion of strikes than of lockouts, and employees are blamed for it. When it is ascertained that a considerable number of disputes classed as strikes are due to resistance to proposed changes on the part of the employer, some of this onus is removed, but that fact is not always understood by the ordinary reader of newspaper accounts of individual strikes or to the reader of strike statistics. Doubtless the majority of industrial disturbances are due to demands of workmen rather than to changes proposed by the employer, but the proportion due to action of the employees is not so great as the proportion of strikes compared with lockouts, as the words are ordinarily used, would indicate.

The numbers of lockouts as indicated by the statistics of all countries is so small that the conclusions as to industrial disputes which may be drawn from the consideration of the statistics of strikes alone would not in most cases be greatly modified by inclusion of the figures regarding lockouts. For this reason, in most of the discussion which follows, reference is made only to statistics regarding strikes. As to the more important matters, however, the statistics of lockouts have been considered likewise, so far as the official figures make this possible.

**2. Basis of statistics.**—The summary tables prepared by the Department of Labor in its reports on strikes and lockouts give both the number of establishments in which these disturbances have occurred and also the number of strikes or lockouts themselves, as the term is usually understood. Many disputes, of course, cover several different establishments, the average number of establishments to a strike during the years 1881 to 1900 being 5.2. Strikes are of all degrees of magnitude. In some only 1 establishment is affected; in others the strike may extend through a city, a State, or an entire section of the country, involving hundreds or even thousands of separate plants or enterprises. Statistics as to the causes and results of strikes which take the individual strike alone as a basis might evidently be very misleading in some regards. Thus a strike won by employees in 100 or 1,000 establishments would count no more in the table of statistics as to the results of strikes than would an unsuccessful strike in which a few employees in a single establishment were concerned. Statistics of results on the basis of establishments, such as are presented by the Department of Labor, are therefore somewhat more satisfactory than those based on individual strikes and lockouts, since the more important disputes will, on the average, each con-

cern more establishments than the less important, so that an approach toward a proper weighting will be secured. Nevertheless there are very great differences in the size of establishments and the number of persons employed. A successful strike in an establishment employing 1,000 men counts for no more in the summaries of results based on establishments than an unsuccessful strike in an establishment employing 10 persons. Comparison between different trades as regards prevalence of strikes and lockouts and their results are likely to be especially misleading if made on this basis alone, because of the wide differences in the average size of establishments for the different trades.

The most satisfactory basis of comparison as to strikes is, for most points, the number of employees involved. Thus it is of more importance to know that 40 per cent or 50 per cent of the employees thrown out by strikes and lockouts have won their cause or have lost it than to know that in 40 or 50 per cent of the establishments concerned the workmen have been successful or unsuccessful. The figures of the Department of Labor show distinctly that the proportions of success and failure differ greatly according as the one or the other basis is taken. The tables prepared by the Department give the number of persons thrown out of employment by strikes and lockouts for all industries combined from year to year, and the number of employees who are successful or unsuccessful is also given for the country as a whole. But the number of workmen who have been successful or unsuccessful is not given for separate industries, and the number of persons thrown out of employment by strikes or lockouts for specific causes is also not indicated.

The reports of the Department of Labor do not cover strikes lasting only a single day or less, which are quite numerous and important but which can not readily be traced.

**3. Statistics of strikes and lockouts for all trades.**—The following table shows for each year from 1881 to 1900 the number of strikes and lockouts in the United States, the number of establishments affected, and the number of employees thrown out of work:

*Strikes and lockouts by years, January 1, 1881, to December 31, 1900.*

Year	Strikes	Establishments affected by strikes.	Average establishments to a strike	Employees thrown out of employment by strikes	Lockouts	Establishments affected by lockouts	Average establishments to a lock-out.	Employees thrown out of employment by lockouts.
1881.....	471	2,928	6.2	129,521	6	9	1.5	655
1882.....	451	2,105	4.6	151,671	22	42	1.9	4,181
1883.....	478	2,759	5.8	119,763	28	117	1.2	20,512
1884.....	413	2,367	5.3	147,051	42	351	8.1	18,121
1885.....	645	2,284	3.5	212,705	50	183	3.7	15,424
1886.....	1,432	10,053	7.0	508,014	140	1,569	10.8	101,980
1887.....	1,436	6,589	4.6	379,676	67	1,281	19.1	59,680
1888.....	906	3,506	3.9	147,704	40	180	4.5	15,176
1889.....	1,075	3,786	3.5	249,559	36	132	3.7	10,731
1890.....	1,833	9,424	5.1	351,911	61	324	5.1	21,555
1891.....	1,717	8,116	4.7	298,939	69	546	7.9	31,014
1892.....	1,298	5,540	4.3	206,671	61	716	11.7	32,014
1893.....	1,305	4,555	3.5	265,911	70	305	4.4	21,842
1894.....	1,349	8,196	6.1	660,425	55	875	15.9	29,619
1895.....	1,215	6,973	5.7	392,493	40	370	9.3	14,785
1896.....	1,026	5,462	5.3	241,170	40	54	1.3	7,668
1897.....	1,078	8,492	7.9	408,391	32	171	5.3	27,733
1898.....	1,056	3,809	3.6	1249,002	42	161	3.9	14,217
1899.....	1,797	11,317	6.3	417,072	41	323	7.9	14,817
1900.....	1,779	9,248	5.2	505,066	60	2,281	38.0	62,653
Total.....	22,793	117,509	5.2	16,105,694	1,005	9,933	9.9	504,307

<sup>1</sup> Not including the number in 33 establishments for which these data were not obtainable.

The total number of strikes for the 20 years covered by these tables is seen to be 22,793. The number of establishments affected by these strikes was 117,509, making an average of 5.2 establishments affected by each strike. The number of establishments affected by lockouts is less than one-tenth as great as the number affected by strikes—9,933. The number of lockouts was 1,005, and the average number of establishments per lockout 9.9, a much larger proportion than in the case of strikes.

The number of employees thrown out of employment by strikes during the years 1881 to 1900 was 6,105,694, while the number thrown out by lockouts was again less

than one-tenth as great—504,307. The average number of employees affected by each strike was 268, and by each lockout 500.

It is particularly to be noticed that the figures above given regarding the number of persons thrown out of employment by strikes are not the same as the figures regarding the number of persons who actually originated strikes. In many cases the cessation of work by one body of employees forces out of employment others in the same establishment, or even in other establishments, who perhaps have no grievance or desire to strike. While the total number of persons forced out of employment by strikes from 1881 to 1900 was 6,105,694, the number of strikers during the same period was only 4,694,849.

It should also be remembered that the same persons may strike two or more times in a single year, in which case they would be duplicated in the statistics of the number of strikers. The same is true of the figures for persons thrown out of employment.

It will be observed that the number of strikes and of persons thrown out by strikes varies greatly from year to year. Aside from mere elements of chance or from special causes which could not be distinctly traced without the most elaborate investigations, there are doubtless certain general influences affecting the frequency of strikes throughout the country. It is noteworthy, for instance, that since 1886 the average annual number of strikes, as well as the number of establishments affected and the number of persons thrown out of employment, has been much greater than during the years 1881 to 1885—approximately, at least twice as great. While this difference may perhaps be partly due to incompleteness of the figures for the earlier years, it is also doubtless to some extent explicable by the growth of the organized labor movement and by the increasing demand of workmen for a larger share of the product of industry and for better conditions generally. The years 1886 and 1887 mark the culmination of the strength of the Knights of Labor, and the very large number of strikes and of strikers in those years is probably due in part to the activity of that organization.

The large number of strikes and strikers in 1894 was probably largely due to the great railway disputes in that year, which affected a very considerable proportion of the railway employees of the country, and which had some influence in leading workmen in other lines of industry to strike also. The increase in the number of strikes during 1899 and 1900 has been attributed by many labor leaders to the prosperity of those years, after the long depression, workmen putting forth vigorous efforts to secure a share in the generally advancing prosperity. It seems, however, impossible, from a close scrutiny of the statistics of strikes and lockouts throughout the entire 20 years covered by these tables, to show any general parallelism between the number of labor disputes and the state of prosperity or depression of general business. Workmen are sometimes moved to strike during hard times in resistance to reductions of wages, although often the more conservative leaders advise them against such a step on the ground that it would prove futile. On the other hand, in times of prosperity, workmen often deem it necessary to strike in order to secure what seems to them a proper share of the increased prosperity of industry.

It should be noted, however, as regards strikes during hard times, that the fact that an increase in the number of persons out of employment on strike does not necessarily mean a corresponding increase in the total amount of unemployment above what would have existed in the absence of an added prevalence of strikes. When hard times come the first thought of employers is apt to be reduction of wages with a view to meeting the fall in prices of products. To this reduction workmen may object and strikes result. In many cases, however, in the absence of a strike employers find that even with reduced wages their establishments can not be run at a profit. The closing of factories follows, and many men are thus thrown out of employment. It is doubtless often true that those who go out on strike under such circumstances merely anticipate what would have been an inevitable cessation of employment.

While the number of strikers has tended to increase somewhat during the period covered by the above table, each 5-year period showing a somewhat larger number than the one before, the increase, except as compared with the years 1881–1885, is scarcely if at all greater than that in population, and is less than the increase in the number of persons employed in those industries in which strikes are likely to occur.

The average number of establishments affected by each strike has varied greatly from year to year. The average number of employees thrown out by each strike has varied much less. This fact would seem to show that strikes have in some years been especially numerous in trades where each establishment employs a large number of men; while in other years the trades most engaged in strikes have apparently been those in which the establishments are smaller. The total

number of strikes, as we shall see, is greatly influenced by the number in the building trades. Nearly one-fifth of all strikes occur in these trades. In them the establishments are usually small. The unions are strong and each strike is likely to reach numerous establishments. The number of establishments affected by strikes in these trades is about 35½ per cent of the total number of establishments in all trades affected by strikes. An increase in the tendency to strike in these trades in any year will therefore increase materially the total number of establishments in which strikes occur without correspondingly increasing the total number of persons out of employment by reason of strikes.

The indications as to the prevalence of labor difficulties from year to year are not materially affected by the inclusion of the statistics of lockouts, except in the case of the years 1886, 1887, 1892, and 1900, when the number of establishments affected by lockouts and the number of persons thrown out of employment by them was, as compared with the number of strikes, much higher than usual, thus considerably increasing the figures for the total number of labor disputes and of persons affected by them. For the year 1886 it appears that no less than 610,024 persons were thrown out of employment by strikes and lockouts, a number exceeded only in 1894, and considerably greater than in 1900, when both classes of disputes threw 567,719 persons out of employment. There seems to be no special connection between the number of strikes and the number of lockouts. This of course follows from the fact that there is really so little difference between the strike and the lockout that a difficulty which under one set of circumstances might lead to the application of the term lockout, would under other circumstances be classed as a strike.

In order to arrive at a more adequate idea as to the significance of the figures concerning the number of persons thrown out of employment by strikes and lockouts, it is necessary to compare these figures with the total number of persons employed. The average number thrown out of employment at some time during each year from 1881 to 1900 was 305,285. The number of persons thrown out of employment by lockouts in the same period averaged each year 25,215. The total number thrown out each year by both classes of disputes has averaged 330,500.

If we take the statistics of occupation according to the census of 1890,<sup>1</sup> we must exclude farmers and agricultural laborers, domestic servants, those engaged in professional service, merchants, and dealers, and employers generally, since among these classes strikes can scarcely be expected to occur. With these deductions, we find the number of persons, over 16 years of age, employed in 1890 in the various industries subject to strike to be 9,843,466. This number is doubtless considerably greater than the average number of persons actually employed in the establishments covered by the investigation as to strikes. Many persons who rank as belonging to certain occupations are either permanently out of employment or out of employment part of the time. Moreover some of those included are independent workmen or even employers in a small way. Nevertheless this figure may be fairly compared with the average number of persons thrown out by strikes.

By this comparison we find that during the years 1881 to 1900 there were on the average 31.02 persons thrown out of employment by strikes, at some time during each year, for every 1,000 persons employed in occupations subject to strike. In other words, 1 person out of every 32.2 was thrown out of employment by strikes each year.

The number of persons thrown out of employment by lockouts each year was 2.57 for every 1,000 persons employed. The number of persons thrown out of employment yearly by lockouts and strikes combined was 33.59 per 1,000, or about 1 out of every 29½ persons employed. In another connection we shall consider the average number of days lost by each of these strikes, with a view to ascertaining the proportion of the working time of American employees which is lost through labor disputes. (See p. 664.)

The number of strikes in different States of the Union is shown by one of the tables of the report of the Department of Labor. It is conspicuous that the number of strikes and of persons thrown out of employment bears little proportion to the total population. This, of course is to be expected, since strikes very seldom occur in agricultural industries and are therefore likely not to be numerous in States where the great body of the population is engaged in such industries. Strikes, also, are relatively few in the Southern States, not only because of the prevailing agricultural character of their industries, but also because the labor movement has become less advanced in these States than in the North. Thus in South Carolina only one-twentieth of 1 per cent of all the strikers of the country

<sup>1</sup> Figures for occupations by the census of 1900 are not yet available, and in any case 1890 is near the middle of the period covered by the strike statistics.

from 1881 to 1900 were found, while the proportion in North Carolina is only about one-sixtieth of 1 per cent. Strikes are most numerous naturally in the great manufacturing States. In the 5 States, Illinois, Massachusetts, New York, Ohio, and Pennsylvania, occurred from 1881 to 1900 74.78 per cent of all the strikes occurring in the country, the basis for estimating the number of strikes in this case being the establishments affected. The proportion of lockouts occurring in these 5 States is even higher, 84.81 per cent of the total number of establishments affected by lockouts from 1881 to 1900 being located in these States.

During the 20 years included New York shows the largest number of strikes as well as the largest number of establishments affected, the number of strikes being 6,460, representing 28.342 per cent of the total strikes during the period, and the number of establishments affected being 37,845, representing 32.206 per cent of the total number involved during the period. Pennsylvania follows with 2,846 strikes, or 12.486 per cent of total strikes, and Illinois with 2,640, or 11.583 per cent. As regards establishments affected by strikes, Illinois follows New York with 20,784, or 17.687 per cent, while Pennsylvania comes next with 18,438, or 15.691 per cent. The greatest number of employees thrown out of employment by reason of strikes is found in Pennsylvania, which shows 1,666,043 for the 20-year period, or 27.287 per cent. New York follows with 1,193,361, or 19.545 per cent; Illinois with 850,599, or 13.931 per cent; Ohio with 415,651, or 6.808 per cent; Massachusetts with 348,470, or 5.707 per cent, etc.

The fact that Pennsylvania shows the largest number of strikers of any State, although not the largest number of strikes or of establishments affected, is probably due to the frequent strikes in the coal mining industry, each of which is likely to affect a very considerable number of persons.

**4. Prevalence of strikes by industries—Effect of labor organization.**—It is especially important to consider the separate industries, with a view to ascertaining the relative prevalence of strikes and lockouts and to discussing the causes of their relative frequency or lack of frequency.

The table below gives information as to the prevalence of strikes by trades. The figures as to the number of strikes, of establishments involved, and of employees thrown out of work are taken from the report of the Department of Labor for 1900. By division the average number of persons thrown out in each trade per year has been ascertained and appears in the fourth column.

The relative prevalence of strikes in the various occupations has been determined by comparing the total number of persons thrown out by strikes with the total number actually employed in the respective trades, as shown by the census of 1890. Unfortunately, the census method of grouping occupations does not correspond to that of the Department of Labor, and comparison between the number of strikers and the number of persons employed is accordingly very misleading in some cases. The statistics of the Department of Labor are based upon the classification of establishments; thus, all the persons concerned in strikes in breweries would be brought under the head of the brewing industry. The census classification, on the other hand, takes account of the actual character of the work done by the individual employees. In a brewery there may be employed carpenters, coopers, engineers, and followers of other crafts, in addition to brewers and maltsters. Persons engaged in these special kinds of work in breweries are classed by the census under their respective special occupations, not under the head of the brewing industry. In some trades this difference in the two methods of classification employed is likely to make very little difference in the actual grouping of employees. Thus, it is probable that most of the employees of boot and shoe factories are actually engaged in the factory work and would be classed by the census as boot and shoe operatives. The same is true of employees in cotton, silk, woolen, and various other factories. So, too, probably most carpenters, bricklayers, and members of other crafts chiefly concerned with building are actually employed in the building trades, although some are employed in mines, factories, and other places. In other cases, however, the difference in the methods of classification must necessarily result in very considerable differences in grouping, rendering the comparison of figures entirely misleading. This is true, for instance, with regard to the transportation industries. The census figures for employees engaged in transportation apply only to those actually engaged in the conduct of traffic, such as engineers and firemen, the many mechanics and laborers employed in shops and on roadbed not being included under that head. Similar difficulties occur as regards the manufacture of machines, metals, and metallic goods. Many less-skilled workmen employed in connection with these industries are probably classed by the census as mere laborers. There are also molders and pattern makers employed in both these groups of occupations. Nevertheless, the figures for most trades are roughly comparable, so far as the methods of classification are concerned. In a few cases, and so far as possible, groups distinguished by

the census under separate heads, which would yet come under one class of establishments as defined by the Department of Labor, have been combined. In the coal industry the difficulty has been avoided by taking the figures of the Geological Survey for the number of persons actually employed in connection with mines, whether miners or not, as a basis for comparison.

Another difficulty in comparison between the figures of the Department of Labor and those of the census is that in the various occupations the census includes many persons who are themselves independent workers, not employed by others, or who are employed in establishments having such very small numbers of employees as to make strikes practically out of the question. The proportion of such craftsmen, not subject to strike, differs greatly in different industries. Thus among furniture and cabinet makers there are many persons employed in small shops throughout the country, or who are themselves owners of shops, who would naturally not be expected to strike. The same is true to a less degree in the building trades and in the trades concerned with the working of metals and of leather. In the case of the clothing trades there are included in the census figures tens and perhaps hundreds of thousands of dressmakers and milliners who do not work under employers, or who work in shops having only one or two employees. Strikes in the clothing industry are mostly confined to establishments employing a considerable number of persons, and the discrepancy in the methods of classification is so great as to make it not worth while to compare at all the number of strikers with the number employed in the trade as shown by the census.

In the case of the figures regarding public ways construction and public works construction, we have no census statistics of occupations to compare with the statistics of strikes. The persons employed on public ways and works will be found distributed under numerous heads by the census. They include laborers, carpenters, and other kinds of mechanics. The same is true in regard to the workmen employed in railroad-car building. In the case of domestic service strikes are confined, for the most part, to large hotels and similar establishments, and it is evidently absurd to compare the number of strikers with the enormous number of domestic servants of all classes, mostly employed singly, enumerated in the census.

With proper caution on account of the necessary elements of incomparability in the two classes of statistics, we may gain a rough idea as to the relative prevalence of strikes in some of the leading industries by the total number of persons in the trade, the average number of persons thrown out of employment by strikes yearly during the period from 1881 to 1900. This division gives the number of persons thrown out by strike per year to 1,000 persons employed in 1890. The figures obtained in this way are shown in the last column of the table.

*Strikes and persons thrown out by them, by industries, January 1, 1881, to December 31, 1900.*

In comparing the prevalence of strikes in different trades it must be remembered, as already pointed out, that idleness caused by strikes may often simply take the place of idleness which would have occurred in any case. In periods of depression when employers try to reduce wages, workmen may strike, merely anticipating by a short time the closing of the establishment by the employer himself on account of its unprofitableness. There are some industries especially where periods of idleness are very common and often seasonal. In these trades it is likely to be the case that a relatively large number of persons idle during strikes does not mean a corresponding increase in the total amount of unemployment above what would have existed in the absence of strikes. It follows also that the greater prevalence of strikes in a trade under such circumstances does not necessarily show a more combative and unstable disposition on the part of the workers in the trade than exists in other trades.

For instance in the clothing trades, especially in the manufacture of ready-made goods, the work is usually crowded into certain periods of the year, and between these there are times of great dullness. It is during these intervals that strikes among clothing makers are most apt to occur, and, if they are extended into the period of busy work, the result is likely to be that that period will last longer than would otherwise have been the case, or that work will be rushed more rapidly, with perhaps consequent higher pay. In fact, strikes in the clothing trades in our large cities are often little more than pauses for negotiation as to the terms of labor during the following busy season, and in the absence of strikes the idleness would have been almost as great.

An important question often asked is as to the effect of labor organizations in increasing or decreasing the prevalence of strikes. There are many who hold that labor organizations become quarrelsome and dictatorial and are disposed to strike frequently, while the officers of the labor organizations deny this charge.

The statistics available concerning the number of strikes and strikers in the various trades apparently throw little light upon this question. As to many trades, in fact, it is impossible to arrive at a conclusion as to the extent to which they are organized, or otherwise. Statistics as to organized labor are few and untrustworthy, and this is especially true as regards earlier years covered by the strike statistics. It is, of course, a well-known fact that only a small proportion of all workmen are organized, but the proportion differs greatly in different trades. There can be little doubt that among most groups of wholly unorganized workmen strikes are less prevalent than among organized workmen. As a matter of fact, a large proportion of unorganized workmen are engaged in unskilled labor, where the supply is often so great that a strike would be sure to

meet defeat. The nature of the employment of unskilled labor, which is often temporary, also tends to make strikes among them less frequent. It may be laid down as a general proposition, almost axiomatic, that strikes are more likely to occur in trades or under conditions where there is a reasonable chance of success than where there is little chance of success. The chance of success is greatest where workmen are most necessary to their employer, and where they are most intelligent, best paid, and most strong generally. It is among such workingmen, who are in a relatively strong position in their relations to their employers, that organization most flourishes. It obviously follows that strikes will usually be most prevalent in organized trades. Moreover, a strike means collective action, which can only grow out of consensus of opinion and a sense of unified interest. It is precisely such a state of feeling which is fostered by labor organizations, and which, in their absence, is less likely to develop.

It is more important, however, to ascertain, if possible, whether strong labor organizations, embracing a large proportion of the members of the trade, furnished with benefit systems and led by powerful officers, are more disposed toward strikes than weak organizations. It is argued on the one hand that strong organizations, by the respect which they can command from employers, by the intelligence of their members and their officers, by their experience of the expensiveness of strikes, and for other reasons, are more able to avoid strikes, and more disposed to avoid them, than weak organizations. It is urged that in weak organizations there is usually little control over the local unions by more intelligent national officers; that the lack of accumulated funds and of benefit systems makes the members less conservative; that the members generally are less intelligent and more subject to whims and to the dictation of ignorant and unprincipled leaders than the members of strong organizations. On the other hand, it is maintained by some persons that strong organizations are more apt to strike because of the belief that they are more likely to win their cause. That strength becomes, in itself alone, an encouragement to strike is undoubtedly true, and if there were no other influences at work we should perhaps expect to find strong organizations ordering strikes more frequently than weak organizations. It is urged further, however, by the opponents of labor organizations, that with added strength they become more and more dictatorial; that instead of becoming more intelligent and conservative they yield more and more to the leadership of demagogues, and that by many strong unions the slightest grievance is instantly resented and made the ground for a strike. What light do our statistics give as to the correctness of these opposing views?

Apparently not much light as to the effect of labor organizations on strikes afforded by the figures in the following table prepared by the Commissioner of Labor, and showing from year to year the proportion of strikes which have been reported as ordered by labor organizations as compared with all strikes. It is by no means certain that the reports as to the ordering of strikes are in every case correct. Again, it may readily be that in some instances the strikers are all members of a labor organization, but that the strike was nevertheless not formally ordered by a vote of the union, either local or national. The classification of the strike in such a case would be somewhat doubtful. The mere fact that more than five-eighths of strikes are ordered by labor organizations, while probably one-eighth of the workmen in the manufacturing, transportation and mining industries are organized, is, of course, by no means indicative of a special predilection for strikes on the part of such organizations. As already suggested we have every reason to expect more strikes where organizations exist than where they are wholly wanting.

*Strikes and lockouts ordered by organizations. January 1, 1881, to December 31, 1900.*

Year.	Strikes	Lockouts.	Year.	Strikes.	Lockouts
	<i>Per cent.</i>	<i>Per cent.</i>		<i>Per cent.</i>	<i>Per cent.</i>
1881.....	47.13	33.33	1892.....	70.72	22.95
1882.....	48.02	18.13	1893.....	69.43	21.43
1883.....	56.69	21.43	1894.....	62.83	9.09
1884.....	53.95	26.19	1895.....	54.25	7.50
1885.....	55.97	20.00	1896.....	64.69	2.50
1886.....	53.07	30.00	1897.....	55.25	3.13
1887.....	66.34	25.37	1898.....	60.42	7.14
1888.....	68.14	20	1899.....	62.05	9.76
1889.....	67.35	11.11	1900.....	65.43	5.00
1890.....	71.33	14.06			
1891.....	74.83	13.04	Total.....	63.46	17.01

From this table it will be seen that during the years 1881 to 1886 the proportion of strikes ordered by labor organizations in no case reached 60 per cent, being thus considerably less than the proportion ordered by labor organizations since 1887, which has fallen below 60 per cent only in 2 years, 1895 and 1897. The proportion of strikes due to the initiation of labor organizations seems to have been especially high during the years 1891 to 1893, immediately preceding the great business depression. There is no doubt that labor organizations have increased in strength during the past 20 years. It is also true that during the years of depression their membership fell off relatively, or at least ceased to increase as rapidly as before. The past 2 or 3 years of prosperity have witnessed a marked increase in the strength of labor organizations, but the figures do not show any material increase in the proportion of strikes due to their initiation.

As to most of the trades covered by the statistics of strikes, it is impossible to express a certain opinion as to whether the workmen are strongly organized or otherwise. There are available no general statistics showing what proportion of the total number of persons employed in the respective trades belong to labor organizations, and, even if such figures were at hand, they would not always indicate the ability of the unions to cope with employers. The form of organization, the intelligence and spirit of officers and members, and many other factors enter into the making of the strength or weakness of a labor organization. In some cases an industry comprises widely different grades of employees. Thus in the iron and steel industry there are very highly skilled men, strongly organized in the Amalgamated Association, while there are also many unskilled and unorganized men. There are, however, a few trades in which it is well known that the labor unions are strong, in the sense of including a large proportion of the members of the craft, and possessing vigorous administration and effective means of mutual aid during strikes. There are a few other important trades in which it is equally certain that labor unions are either for the most part lacking or are very weak.

Another possible indication as to the strength of labor organizations in the various trades is found in the statistics of strikes themselves, which distinguish between those ordered by labor organizations and those not so ordered. If a large majority of the strikes in a given industry are ordered by labor organizations it may either be an indication of the fact that those organizations are peculiarly disposed to strike, or it may be merely an indication that the great majority of the workmen in the district belong to the organizations, so that practically all the strikes ordered must be ordered by them. On the basis of such indications, the following table has been drawn up, comparing the tendency toward strikes on the part of strongly and weakly organized trades:

*Number of strikers in strongly organized and weakly organized industries, 1881-1900.*

	Strikes ordered by organizations	Strikes not ordered by organizations	Persons thrown out yearly by strikes per 1,000 persons employed, 1890		Strikes ordered by organizations	Strikes not ordered by organizations	Persons thrown out yearly by strikes per 1,000 persons employed, 1890.
<b>STRONGLY ORGANIZED</b>				<b>WEAKLY ORGANIZED</b>			
Glass trade.....	188	186	140.5	Coal and coke.....	1,303	1,209	297.3
Tobacco.....	1,102	107	118.1	Carpeting.....	15	92	124

Total.....	7,558	2,332	162.47	Total.....	2,380	2,502	182.88

<sup>1</sup> Average.

It will be observed that in all of the 9 strongly organized trades, except glass, shipbuilding, and transportation, a very large proportion of all strikes are ordered by labor organizations. As shown by the table above, about 63 per cent of strikes in all industries from 1881 to 1900 were ordered by labor organizations, while for the nine strongly organized trades selected for comparison the average percentage of all strikes which were ordered by labor organizations was fully 76 per cent. The proportion of strikes ordered by labor organizations is especially

high in the building trades, where about seven-eighths of all strikes from 1881 to 1900 took their origin in the action of labor organizations. These trades are well known to be especially strongly organized.

On the other hand, in the 9 trades of the weakly organized group, less than half of all the strikes during this period were ordered by labor organizations—2,380 being so ordered as compared with 2,502 not ordered by labor organizations. The boot and shoe trade is the only one in this column which shows a larger proportion of strikes ordered by labor organizations than the average for all trades in the country; but this trade nevertheless is known to be weakly organized. The workers in the coal and coke industry, until very recent years, were either unorganized or weakly organized, and we find that in this industry only a little more than half of all strikes during the twenty years covered by the statistics were ordered by labor organizations.

As already suggested, the fact that in the group of strongly organized trades a larger proportion of strikes are ordered by labor organizations than in the second group of weakly organized trades is in itself not necessarily an indication of a greater tendency to strike on the part of strong organizations. A more satisfactory basis of comparison is found in the figures showing the number of persons thrown out of employment yearly by strikes in proportion to the number of persons employed in the respective industries. These figures are given in the last column of the above table. It will be seen that from 1881 to 1900 the average number of persons thrown out of employment yearly, per thousand of persons employed, in the 9 strongly organized trades, was 62.4, while in the weakly organized industries the proportion was 82.8. This apparently indicates on the surface a greater tendency toward strikes in the weakly organized industries.

It will be remembered, however, that the figures given relate not to the number actually striking, but to those thrown out of employment by strikes. In some of the industries where the workingmen, as a whole, are not well organized, there may be cases where a small group of strongly organized workers in the industry may, by striking, throw many others out of employment.

It should be noted, moreover, that the high proportion of strikes in the weakly organized trades is largely explicable by the very large number of strikers in the coal and coke industries. The total number of establishments affected by strikes in this industry during the 20 years from 1881 to 1900 was 14,575, out of a total of 117,509 establishments affected by strikes in all trades. The average number of persons thrown out of employment per year in this industry was 94,621, so that for every 1,000 persons employed there was on the average during these 20 years 297 persons on strike at some time in each year. During most of the years covered by these statistics the mine workers' organizations were of very little power and importance. It is especially important to observe, however, as in large part explaining the high prevalence of strikes, that in both bituminous and anthracite coal mines there has been for a long period of time an oversupply of labor and an overcapacity for production. The number of mines opened has been much greater than was necessary to satisfy the demand, and the average number of days on which mines operate has for many years been very much less than the possible total number of days—ranging from 160 to 250 out of a possible 313 days. The strikers in the mines have in most cases probably simply sought to make the periods of idleness come at times which would be most convenient for them, instead of allowing them to come at times most convenient for the employers. It is doubtful if the total amount of idleness in the industry has been materially increased by the strikes. It is certainly true that in many years in which strikes have been less numerous the period of idleness has been fully as great as in years when they were more numerous.

If the strikes in the coal and coke industry should be eliminated from the above table we should find approximately the same proportion of strikers per 1,000 persons employed in the weakly organized trades named as in the strongly organized. Indeed, as between the various trades under each group there is the widest possible variation in the proportion of strikers. Thus among the strongly organized trades we find the glass trades with no less than 140 persons thrown out of employment yearly per 1,000 persons employed, and at the other extreme the printing trade in which only 15.5 persons were thrown out by strikes per 1,000 employed. Among the weakly organized trades we have a gradation from 124 strikers per 1,000 in the carpeting industry to only 2.8 per 1,000 in the paper manufacturing.

It is perhaps worthy of notice that in most of the trades enumerated under the weakly organized group the employment of women is an important factor. Four of these industries have to do with the manufacture of textile goods, while in rubber, boot and shoe, and paper factories women are also very commonly employed. It is a familiar fact that in trades where the proportion of female labor is large it is

difficult to maintain strong labor organizations or a high rate of wages. It is generally believed that women are much less prone to strike than men. This opinion, however, is apparently not borne out by the facts as regards those trades in which the employment of women is largest. The following table shows, for the industries in which women are most commonly employed, the percentage of females employed, and the percentage of the total number of strikers in the trade from January 1, 1887, to December 31, 1900, who were females. The figures of the Department of Labor cover only the 14 years indicated. They refer to the actual number of strikes, and not to the number of persons thrown out of employment as the result of strike, and hence give a fair view of the disposition of women to strike:

*Percentage of females employed and of female strikers.*

Industry.	Percentage of females employed, 1890.	Percentage of females among total strikers, 1887-1900
Boot and shoe workers . . . . .	15.8	22.3
Carpet manufacture . . . . .	51.7	38.4
Cotton-mill operatives . . . . .	53.8	50.3
Rubber goods . . . . .	40.2	49.8
Silk goods . . . . .	59.3	32.6
Tobacco . . . . .	25	21
Woolen and worsted goods . . . . .	43.4	47.7

From this table it will be seen that the proportion of strikers who are females in the industries named does not, on the average, differ greatly from the proportion which the number of females employed in the industry bears to the entire number of persons employed. In the manufacture of rubber goods, of tobacco, of woolen goods, and of boots and shoes the women apparently show a greater disposition to strike than the men. On the other hand, the proportion of male strikers is greater in the carpet, cotton, and silk industries. It may be true, indeed, that the initiative in strikes in establishments where both men and women are employed comes in more instances from the men than from the women, but as to this point the statistics give no information.

The comparatively high proportion of strikers in the carpet, silk, and cotton industries is perhaps explicable in part by the seasonal nature of the trades. Especially during the period of depression following 1893 the mills in these industries were frequently closed for lack of demand for their products; and at all times there is a tendency toward alternate periods of activity and of sluggishness in these industries. It may be, therefore, that the employees, as in the coal and coke industry, merely seize the occasion to strike in anticipation of a time when, perhaps, in any case the mills would be closed, so that the total of unemployment may not be so greatly increased by strikes as would appear at the first glance.

It seems, therefore, from a careful comparison between strongly organized and weakly organized trades, that no definite conclusion can be reached as to whether the existence of strong labor organizations tends to increase strikes or to decrease them. So many other factors enter into the determination of the number of strikes in the various trades that this one factor can not be clearly differentiated. Perhaps the most near approach to similarity in conditions, aside from the matter of organization, is found between the building trades and the coal and coke industry, both of which are subject to seasonal fluctuations in employment, and both of which employ exclusively men. Nevertheless, the building trades can not be said to be overcrowded in the same way that the coal and coke industry is, and the much smaller proportion of strikers in them (30.2 per thousand persons employed), as compared with the coal and coke industry (297.3 per thousand), is probably partly due to this difference in the degree of competition for work. The strength of organization in the building trades, however, is doubtless influential in reducing the number of strikes. If it were possible to distinguish between the strikes of bituminous coal miners and of anthracite coal miners we should find a very great reduction in the number of persons thrown out of employment by strikes in the bituminous coal mines since about 1897, when the labor organization, the United Mine Workers, first became strong. As elsewhere pointed out, this organization has entered into a system of joint conferences with employers which has greatly reduced the number of strikes, and in some important fields has practically done away with them altogether.

5. *Prevalence of lockouts, by industries.*—The following table shows for the years 1881 to 1900 the number of lockouts, and of persons and establishments concerned in them:

*Lockouts, by industries, January 1, 1881, to December 31, 1900.*

Industries	Lockouts	Establishments	Average establishments to a lockout	Employees thrown out of employment.	
				Number	Per cent of total
Agricultural implements. . .	1	5	1.3	930	0.184
Boots and shoes. . .	59	232	4.9	37,013	7.339
Brewing. . .	16	166	10.4	7,173	1.422

Rope and bagging. . .	1	1	1.0	300	.060
Shipbuilding, etc. . .	3	7	2.3	357	.071
Silk goods. . .	5	6	1.2	2,098	.416
Stone quarrying and cutting. . .	13	516	12.0	15,861	3.116
Telegraph and telephone. . .	1	1	1.0	15	.003
Tobacco. . .	121	339	2.7	11,762	8.281
Transportation. . .	23	127	5.5	10,875	2.156
Watches. . .	1	1	1.0	65	.013
Woolen goods. . .	11	51	1.6	1,716	.310
Woolen and worsted goods. . .	12	2	2.1	7,820	1.551
Miscellaneous. . .	39	213	5.5	23,192	4.658
Total. . .	1,005	9,935	9.9	501,307	100.000

The figures regarding the prevalence of industrial disputes in different trades are for the most part not greatly modified by including the lockouts in addition to the strikes. It has already been pointed out that the total number of lockouts and of persons thrown out of employment by lockouts is less than one-tenth as great as the corresponding figures for strikes. There are some trades, however, in which the number of lockouts, as distinguished by the Department of Labor, is unusually large, and it may be worth while to notice these especially.

Thus, in the boot and shoe trade the total number of employees thrown out of employment by lockouts during the years 1881 to 1900 was 37,013, or more than one-fourth of the number of persons thrown out by strikes. If we combine the figures for strikes and lockouts we find that the average number of persons thrown out of employment by both these causes of disturbances in this trade is 8,714 per year, as compared with 6,863 thrown out by strikes alone. For every thousand persons employed in boot and shoe factories in 1890 the number thrown out of employment per year by strikes and lockouts is about 41.2, as compared with 32.5 for strikers alone.

## 644 THE INDUSTRIAL COMMISSION:—STRIKES AND LOCKOUTS.

The other trades in which the inclusion of lockouts makes an important difference in the statistics are the building trades, the glass trades, and the tobacco trade. The relative figures are shown in the following table:

*Persons thrown out of employment by strikes and lockouts, 1881-1900.*

Industry.	Number thrown out per year by strikes	Number thrown out per year by lock-outs	Number thrown out by strikes and lock-outs	Number thrown out by strikes per 1,000 employed.	Number thrown out by strikes and lock-outs per 1,000 employed
Boots and shoes .....	6,863	1,851	8,714	32.5	41.2
Building trades .....	33,297	6,001	39,298	30.2	35.6
Glass .....	4,457	1,312	5,769	140.5	183
Tobacco .....	12,551	2,088	14,639	118.1	136

## II. FOREIGN COUNTRIES.

1. **Great Britain**<sup>1</sup>—The British statistics of strikes and lockouts do not endeavor to separate the two classes of disputes, although both words are used in the titles of the reports and tables. The basis for calculation in the British reports is the individual strike or lockout and not the establishment in which the dispute occurs. Fortunately the reports of later years give full statistics as to the number of persons affected by strikes, the number of persons concerned in successful and unsuccessful strikes, and in strikes for different causes, etc. During the most recent years the British authorities have distinguished between the number of persons actually engaged in strikes or lockouts, and the number of persons thrown out of employment as the result of strikes and lockouts. Since the earlier statistics, however, gave only the figures for the total number of persons thrown out of employment, these figures are here used for the later years also, disregarding those for the number of actual strikers and of employees locked out.

The following table shows, for the years 1890 to 1900, the number of strikes and lockouts in Great Britain and Ireland, the number of persons affected, and the number of days of time lost, together with the average number of days lost by each person affected by strikes and lockouts.

*Number, time lost, and persons affected by strikes and lockouts, Great Britain and Ireland, 1890 to 1900.*

Year.	Total strikes and lock-outs	Persons affected (directly and indirectly).	Days of lost time	
			Number.	Average per person affected.
1890 .....	1,010	373,650	7,317,469	19.5
1891 .....	906	258,718	6,809,371	26.3
1892 .....	700	351,243	17,248,376	49.1
1893 .....	782	627,969	31,265,062	49.7
1894 .....	1,061	324,215	9,322,096	28.8
1895 .....	876	263,758	5,542,652	21
1896 .....	1,021	198,687	9,748,525	18.9
1897 .....	864	230,267	10,315,523	41.9
1898 .....	711	253,907	15,289,478	60.2
1899 .....	719	180,217	2,516,416	14
1900 .....	623	184,773	3,784,985	20.5
1890-1900 .....	9,303	3,247,434	113,129,953	34.9

It will be seen that the total number of persons affected by strikes and lockouts during these 11 years was 3,247,434, or an average for each year of 295,220 persons at some time out of employment on account of labor disputes. It will be remembered that in the United States from 1881 to 1900, on the average, 305,285 persons were thrown out of employment each year by strikes alone, while if the figures for lockouts should be added the number would be brought up still further above

<sup>1</sup> Reports of Chief Labour Correspondent on Strikes and Lockouts, 1890-1899. Bulletin United States Department of Labor, 1899, p. 30, 1899, p. 867, (British) Labour Gazette, 1901, pp. 4, 5.

the English figure. The population of the United Kingdom is less than two-thirds as great as that of the United States. Nevertheless, the proportion of the population which is engaged in those pursuits in which labor disputes are likely to occur is much greater in Great Britain than in the United States. Thus it is well known that the relative importance of the agricultural industry in the island kingdom is very slight as compared with its importance in this country. Taking the census figures for Great Britain for 1891<sup>1</sup> we find that there were actively engaged in mining, manufacturing, industrial, and commercial pursuits—in which only strikes are at all likely to occur—10,689,018 persons. This number includes some employers and other classes whom we were able to exclude from the corresponding figure in the United States (9,843,466), so that it is probable that the classes of people actually subject to the possibility of strikes are about equal in number in the two countries. On the basis of the above number for Great Britain, however, it appears that from 1890 to 1900, on the average, 27.6 persons out of every 1,000, or 1 person out of 36, engaged in such occupations was thrown out of employment at some time during each year by strike or lockout, as compared with 33.6 out of 1,000 thrown out by strikes and lockouts in the United States. The conditions in the two countries as regards the prevalence of industrial disputes are therefore not widely different, though Great Britain shows a somewhat smaller proportion of strikes and lockouts.

It will be seen that the number of persons affected by strikes in Great Britain from year to year varies quite independently of the total number of separate strikes and lockouts. This shows, of course, that there are great differences in the relative importance of different strikes and lockouts. The British statistics have for recent years distinguished between strikes and lockouts of different degrees of magnitude, and it is found that in several years two or three large disturbances account for a very large proportion of the total number of strikes in those years respectively.

The number of persons thrown out of employment by strikes and lockouts in Great Britain and Ireland was smallest in 1899 (180,217) and largest in 1893 (627,969). The extremely large number in the earlier year was accounted for by the general strike in the great coal-mining industry. It will be observed that the number of persons affected by strikes and lockouts from 1890 to 1894 was considerably larger than the number for the 6 later years covered by the table. It is probable that, as maintained by the British labor department, the growing extent of the system of trade conciliation and arbitration in part accounts for the decrease in the number of persons thrown out of employment by labor disputes.

As just pointed out, the statistics of strikes in Great Britain distinguish between disputes of different degrees of magnitude. It appears that in the year 1898 more than half of all the persons affected, 51.2 per cent, were involved in 3 great strikes, while 25 per cent more of those thrown out of employment were engaged in 68 other large strikes, involving more than 500 persons each. In 1897 4 strikes included 31.6 per cent of the number of persons thrown out of employment, while 80 other strikes, each involving more than 500 men, accounted for 37 per cent more of the total number of persons affected. In 1896 there were relatively more small strikes. Only 9.6 per cent of all persons thrown out of employment were concerned in strikes involving more than 5,000 persons, while 45 per cent of all persons affected were engaged in strikes involving less than 500 persons each. In 1899 and 1900 also there were fewer large strikes.

The following table shows the classification of persons affected by strikes and lockouts in Great Britain and Ireland each year from 1892 to 1900:

*Table showing persons affected by strikes and lockouts during the years 1892 to 1900.*

Industries.	1892	1893	1894	1895	1896	1897	1898.	1899.	1900.

Total .....	356,799	636,386	324,245	263,758	198,687	230,267	253,907	180,217	184,773

<sup>1</sup> On practically the same basis as that used for the United States.

The strikers in the building trades of Great Britain, as in the United States, seem to bear roughly the same proportion to the total persons employed in those trades as is found for the comparison of strikers and persons employed in all trades.

As in the United States, so also in Great Britain, the mining industry is peculiarly subject to trade disputes. Considerably more than one-half of the entire number of strikers during the years 1892 to 1900 were employed in the mining and quarrying trades, while in 1893, 1894, and 1898 fully two-thirds of the persons affected by labor disputes were employed in these lines. To be sure, in Great Britain the total number of persons engaged in mining and quarrying is larger than in the United States, there being 650,425 miners alone in the United Kingdom, as against 318,204 coal miners in the United States. The conditions in the mining industry in Great Britain are, roughly, similar to those in this country, although on the whole rather more favorable for the miners. Strikes, involving nearly all the workers in large districts, often occur, while one strike, in 1893, involved nearly half of the miners in the country. The recent development of systems of conciliation in the mining industry is tending to reduce the number of strikes, as may be clearly seen from the table.

The workmen in the great metal, engineering (machinery), and shipbuilding trades of England are very strongly organized. Systems of conciliation and arbitration have been adopted in various localities for the settlement of trade disputes, yet the number of persons affected by strikes and lockouts in these trades is decidedly large, ranging from one-third to one-tenth of the total number of persons thrown out of employment by disputes, while only one twenty-fifth of the industrial population is employed in these trades (401,916). In 1897 especially there occurred an exceedingly widespread strike of the engineers.

The textile employees are the most numerous class of workers, aside from the unskilled laborers, in Great Britain. They numbered no less than 1,465,023 in 1891, or nearly one-seventh of the industrial population. It is not surprising that the number of persons affected by strikes and lockouts in these trades is large, averaging from year to year nearly one-sixth of the total number of persons affected by strikes and lockouts. The proportion of strikers to total workers in the textile trades is less in England than in our country.

The number of persons employed in transportation in Great Britain who are thrown out of employment by strikes and lockouts does not exceed in any one year 23,500 persons, and averages more nearly 10,000. The persons employed in railroad transportation (strikes are not likely to occur in water transportation) in Great Britain (222,668) is small as compared with the corresponding class in the United States. Strikes among dock laborers, which are quite numerous, come under this head. The number of strikers in the clothing-manufacturing trades in Great Britain, as in the United States, is comparatively small.

**2. France.**<sup>1</sup>—The French Government has presented detailed statistics of strikes each year since 1890, although the earlier reports are somewhat less detailed than those which have appeared in the more recent years. The following table shows the number of strikes and the number of strikers each year, together with the number of days' work lost by the strikers:

*Strikes and strikers in France.*

	Number of strikes	Number of strikers	Days lost		Number of strikes	Number of strikers	Days lost.
1890 . . . . .	313	118,929	1,340,000	1896 . . . . .	476	49,851	644,168
1891 . . . . .	267	108,944	1,717,200	1897 . . . . .	356	68,875	780,944
1892 . . . . .	261	47,903	917,690	1898 . . . . .	368	82,065	1,216,306
1893 . . . . .	634	170,123	3,171,850	1899 . . . . .	739	176,722	3,550,734
1894 . . . . .	391	54,576	1,062,180				
1895 . . . . .	405	45,801	617,469	Total, 1890-1899.	4,210	924,486	15,021,841

From this table it is seen that the total number of strikes in France during the last decade was 4,210, involving 924,486 strikers, or an average of 219 persons per strike. From this it appears that the average strike in France involves a somewhat smaller number of persons than in the United States, where the average

<sup>1</sup>Compiled from the annual report of the French Office du Travail, *Statistique des Grèves*, 1890 to 1898, also from Bulletin de l'Office du Travail, September, 1900, see also summaries in Bulletin of United States Department of Labor

number of persons thrown out of employment, including some others besides strikers, from 1881 to 1900 was 268. The average number of persons thrown out of employment each year by strikes in France was 92,448, as compared with 305,285 in the United States. It must be remembered, however, that the part of the population in France which is actually employed in manufacturing, mining, and commercial pursuits—the ones in which strikes are likely to occur—is very much less than the corresponding groups of population in the United States. The French census statistics enable us to eliminate employers altogether and to obtain the number of employees engaged in the above-named classes of occupations, which was 1,779,787 in 1891<sup>1</sup>. Thus it appears that on the average from 1890 to 1899 18.3 persons out of every 1,000 employed in these industries in France went on strike at some time during each year, as compared with 31 persons thrown out of employment by strikes in the United States during the years 1881 to 1900 to each 1,000 of the industrial population.

The number of strikes in France, as shown in the table, appears to bear no particular relation to the number of strikers, showing, of course, that there are very great variations from year to year in the average size of strikes.

The fluctuation in the number of strikers in France from year to year is very conspicuous, ranging from 45,801 in 1895 to 176,722 in 1899. It does not appear that there has been generally an increasing tendency toward strikes with the progress of time, although the figures for the last year are larger than those for any other covered by the tables.

More than one-half of the entire number of strikes and of strikers in France during the years 1890 to 1899 were found in 3 trades—the textile industry, the metal-working industry, and the building trades. In these 3 industries there were 2,583 strikes, involving 490,162 strikers. Moreover, these trades show an especially large proportion of strikers as compared with the total number of persons employed in them. The statistics show that on the average each year during the 10 covered by these tables 35.4 persons out of every 1,000 persons employed in the textile industry were on strike at some time during the year. In the metal industries 31.4 persons out of every 1,000 employed were on strike at some time during each year, while in the building trades the corresponding proportion was 30.2 out of every 1,000.

For the more recent years the French statistics show for each leading group of trades the proportion of strikers as compared with the number of persons employed in the trade. These figures for the years 1895 to 1899 are tabulated below.

*Strikers per 1,000 work people in respective trades in France, 1895-1899.*

Industries	1895	1896	1897	1898	1899
Agriculture, fisheries	0.02	1.23	13.19	0.66	1.21
Mining and quarrying	21.43	12.42	17.22	27.80	171.12
Food products	6.97	3.80	13.20	12.09	13.27
Chemical industries	65.18	15.53	9.25	27.53	99.31
Printing	3.87	1.91	6.19	2.89	18.53
Hides and leather	16.66	12.19	7.62	11.56	32.73
Textiles proper	20.27	23.20	12.61	17.32	55.28
Clothing	20	81	19	37	.96
Woodworking	6.20	6.71	9.98	1.43	12.52
Metal refining	13.86	6.93	5.74	5.21	227.95
Metallic goods	7.61	16.61	13.61	18.58	89.07
Stone cutting and glass	21.50	28.60	1.77	11.12	71.82
Building trades	19.27	10.65	34.96	101.79	10.73
Transportation	16.61	2.80	5.22	7.22	35.41

From this table it appears that in general agriculture and fisheries are almost free from strikes, as might indeed have been anticipated. Somewhat curiously, however, we find that in 1897 no less than 13.19 persons out of every 1,000 employed in these occupations engaged in strikes. The mining and quarrying trades, which employ a very much smaller proportion of the entire population in France than in most countries, show a relatively high proportion of strikers. In no year from 1895 to 1899 was the number of strikers per 1,000 of the population engaged in these trades as small as the number of strikers for all trades per 1,000 of the industrial population during the years 1890 to 1899; while in the years 1896 to 1897 the proportion in the mining and quarrying trades was more than twice as high as this average for all trades. The chemical industries of France also

<sup>1</sup>Statesman's Year-Book, 1901, p. 540.

show a comparatively high proportion of strikers, especially in the year 1895 (65.18 per 1,000). The printing trades, on the other hand, are remarkably free from strikes, the highest number of strikers, in 1897, being equal to only 6.49 persons out of every 1,000 employed in these trades. The textile trades, which employ a larger number of persons in France than any other group of trades, show for the years 1895 to 1899 a proportion of strikers not differing greatly from the proportion for all trades combined, but it will be remembered that, taking the decade as a whole, these trades show a much larger proportion of strikers. In the metal working and machine trades the proportion of strikes is somewhat less than the average, the highest number, 1898, being 18.58 per 1,000 employees. We have already seen that the building trades in France have an especially large proportion of strikers. While the number of strikers in these trades in 1895 and 1896 was comparatively low, it rose to 34.96 per 1,000 persons employed in 1897, and to no less than 109.79 per 1,000 persons employed in 1898. The number of strikers in the transportation industries in France is proportionately much less than in most of the other occupations.

**3. Germany.**—The German Empire began to present systematic statistics concerning strikes only in the year 1899, and figures for but a single year are as yet available. These are interesting in themselves, but doubtless they can not be assumed to be typical of the conditions in other years.

It appears that there were begun during this year 1,336 strikes, while 1,288 strikes were brought to an end during the year. The number of persons thrown out of employment in the strikes ending during the year was 109,460, of whom 99,338 were directly engaged in the strikes, the remainder being thrown out of employment incidentally. The German statistics distinguish between "attack" and "defense" strikes, lockouts also being considered in a separate category. It appears that in 1899, 82,913 strikers "attacked" and 16,425 "defended."

The number of persons engaged in mining, industrial, and commercial occupations in Germany in 1895 was 10,619,731.<sup>2</sup> This figure includes some employers, and it is probable that the number of persons among whom strikes are at all probable is nearly the same in Germany as in the United States. It appears, therefore, if the year 1899 be considered as typical, that the number of persons thrown out by strikes as compared with the great industrial population of Germany is decidedly small, only 10.3 persons per 1,000 employed, as compared with 31 persons per 1,000 thrown out of employment by strikes in the United States from 1881 to 1900. It is a well-known fact that labor organizations are much less advanced in Germany than in either the United States or Great Britain, a fact which may have some influence on the prevalence of strikes. Moreover, the employer still stands in many German communities in the position of a patron or patriarchal ruler, and the respect of his workmen is so great that strikes are by no means likely to occur.

The number of lockouts in Germany in 1899 was 28, affecting 427 establishments, and throwing 8,290 employees out of work. The proportion of lockouts as compared with strikes is about the same as in the United States. If lockouts be included with strikes we should find a little more than 11 persons thrown out of employment per 1,000 employed.

The figures for the German Empire for the year 1899 would seem to indicate that in that country, as in the United States, the building trades are peculiarly subject to strikes, more than 40 per cent of all the strikes designed to secure changed conditions (as distinguished from strikes to ward off proposed changes) having taken place in these industries. The masons, especially, had no less than 21,500 persons thrown out of employment by strikes during the year. This entire number of persons employed in that trade in the Empire was 222,410 in 1895, so that nearly 1 in 10 went on strike at some time during 1899. The next largest number of strikes is found among the woodworkers, while the workers in metals were engaged in about one-tenth of the entire number of strikes throughout the Empire, this class also representing about one-tenth of the entire number of strikers. It is conspicuous that the mine workers, who show such an excessive tendency to strike in the United States and Great Britain, are much less given to labor disputes in Germany. Only 9,967 persons engaged in mining struck during the year 1899, although the total number of persons engaged in the industry by the census of 1895 was no less than 493,917. The fact that a considerable proportion of the mines of the Empire are owned by the various governments is perhaps a partial explanation of the relatively small number of strikes. The textile work-

<sup>1</sup> *Streiks und Aussperrungen im Jahre 1899*, pp xi-xxi.

<sup>2</sup> *Statistisches Jahrbuch für das Deutsche Reich*, 1897, p. 7.

ers also show a small proportion of strikers, only 11,088 having been thrown out of employment by strikes during 1899, as compared with 726,643 persons employed in the industry. As might be anticipated, strikes upon German railways and transportation lines, which are mostly controlled by the Government, are conspicuously rare. Other classes of workmen among whom strikes were especially rare during the year 1899 were the glassworkers, the machinists, and shipbuilders (one of the most important industries of the country) the tobacco workers, and the printers. It must be remembered, however, that statistics for a single year are by no means the surest indication of general tendencies as between different trades.

4. *Austria.*<sup>1</sup>—The statistics of strikes in Austria for recent years have been prepared with especial care, and give a more comprehensive view of the labor disturbances in that country than can be obtained from the statistics of any other country. The following table shows the number of separate strikes for each year from 1894 to 1899, together with the number of establishments affected, the number of strikers, and the number of days of working time lost:

*General statistics of strikes in Austria, 1894-1899.*<sup>1</sup>

Year.	Strikes	Establishments concerned.	Strikers	Days lost
1894 .....	172	2,542	67,061	795,416
1895 .....	209	871	28,652	300,348
1896 .....	305	1,499	66,231	899,939
1897 .....	216	851	38,167	368,098
1898 .....	255	885	39,658	323,619
1899 .....	311	1,330	54,763	1,029,937

<sup>1</sup> *Arbeitsstellungen und Aussperrungen in Oesterreich, 1899*, p. 12

From these figures it will be seen that there is in Austria no connection between the number of strikes and the number of establishments concerned. During the year 1894 there were a few great strikes in the building trades of Vienna, each of which involved numerous establishments, and this fact explains the very high number of establishments concerned in the small number of strikes in that year. Similar explanations could be given regarding variations in the number of establishments affected in other years.

The most significant figures are those showing the number of strikers. The average number annually during the 6 years covered by the table was 49,139. The industrial population of Austria is much less than that of Germany, England, or the United States. The number of employees (excluding employers) in the mining, industrial, and commercial establishments of Austria in 1890 was 3,264,188.<sup>2</sup> This would indicate that on the average during the 6 years covered by the statistics, 15 persons out of every 1,000 persons employed in industries subject to strikes went on strike at some time during each year, the corresponding proportion for the United States being 31 to 1,000. The proportion of strikers to persons employed is thus considerably greater in Austria than it was in Germany for the year 1890, but is much less than in the United States or Great Britain. The relative weakness of labor organizations in Austria, and the persistence of small hand-working establishments and of patriarchal methods of factory administration, probably explain this small proportion of strikes and strikers.

It is noteworthy also that the number of days of working time lost by strikers in Austria, in proportion to the number of strikers, is much less than in the United States or in Great Britain, showing a relatively short duration of strikes. The average number of days lost by each striker from 1894 to 1899 was 12.6 days. There appears from the figures no special tendency of the number of strikes and strikers to increase or to decrease from year to year, although the fluctuations have been very noticeable.

<sup>1</sup> *Arbeitsstellungen und Aussperrungen in Oesterreich, annual 1894 to 1899.*

<sup>2</sup> *Statesman's Yearbook, 1900*, p. 372

## 650 THE INDUSTRIAL COMMISSION:—STRIKES AND LOCKOUTS.

The following table shows for each year from 1894 to 1899 the proportion of the total number of striking workmen in Austria who were concerned in the strikes in the leading groups of trade:

*Percentage of all strikers belonging to particular industries, Austria, 1894-1899.<sup>1</sup>*

Industries	1894	1895	1896	1897	1898	1899
Mining.....	31.28	2.19	15.47	9.41	17.17	6.35
Stone, clay, and glass.....	9.58	31.70	1.86	7.91	11.33	3.86
Metal industries.....	4.10	12.89	4.49	1.08	2.50	4.49
Machine trades.....	0.29	0.88	3.11	12.19	6.23	2.47
Woodworking trades.....	11.60	8.15	9.02	3.59	3.22	5.81
Textile industry.....	9.42	11.26	11.75	22.31	8.00	55.24
Manufacture of food products.....	0.44	1.80	0.51	3.95	6.09	2.76
Building trades.....	22.33	18.71	8.20	12.98	35.20	14.32
All others.....	4.96	6.42	9.53	16.52	10.26	4.67
	100.00	100.00	100.00	100.00	100.00	100.00

<sup>1</sup>Arbeitsstellungen und Aussperrungen in Oesterreich, 1899, p. 15

It will be observed that the proportion of the total number of strikers belonging to the respective industries varies very greatly from year to year. This, of course, is to be expected, and the more so since one or two great strikes in a particular group of trades in a single year will greatly affect the proportion which the number of strikers in that group of trades bears to the total number of strikers. Taking the period as a whole, it appears that the largest number of strikers is found in the mining trades, the extremely high proportion in the years 1894 and 1896 especially swelling the average for the 6 years. While in 1899 only 6.35 of the total number of strikers in that year were engaged in mining, in 1896 the proportion rose to 45.47, fully 30,000 persons having been concerned in mining strikes in that year. The mining population in Austria is relatively considerably less than in the United States or Great Britain.

The next largest number of strikers, taking the period as a whole, has been furnished by the textile industry. In the year 1899 no less than 55.24 per cent of all strikers were members of this group of trades, while the proportion in other years ranged from 8 per cent to 29.31 per cent. The textile workers in Austria number 465,201, or about 12½ per cent of the entire industrial population. As in other Continental countries, the building trades show a very large number of strikers, ranging from 8.20 per cent of the total number in 1896 to 35.20 per cent of the total in 1898. The total number of persons employed in these trades is about 8 per cent of the industrial population. The relatively small proportion of strikers in the metal industries and the machine trades may be noticed.

The following table shows the number of lockouts in Austria for each year from 1894 to 1899, together with the number of persons locked out:

*Lockouts in Austria, 1894 to 1899.*

Year.	Number of lockouts	Number of persons locked out	Year.	Number of lockouts	Number of persons locked out.
1894.....			1897.....	11	1,712
1895.....	8	2,317	1898.....		
1896.....	10	5,415	1899.....	5	3,457

The number of lockouts is thus seen to be decidedly small as compared with the number of strikes. The number of persons thrown out of employment by lockouts during the entire period is not over one-twentieth of the number of persons thrown out of employment by strikes. In 1894 and 1898 no lockouts whatever were reported. As has already been pointed out, the distinction between strikes and lockouts is such a difficult one to draw that it may readily happen that the relative infrequency of lockouts in Austria, as compared with the United States, is explainable rather by a difference in the methods of defining lockouts, or of applying the test to individual cases, than to any difference in the actual relations between employers and employees.

5. *Italy*.<sup>1</sup>—Italian statistics regarding strikes have been presented since 1879, although the figures for the earlier years are probably less complete than those for the later years, and at any rate do not present as great a variety of information. The following table shows, for each year from 1879 to 1898, the number of separate strikes, the number of strikers, and the number of days lost by the strikers:

*Strikes, strikers, and days lost on account of strikes, in Italy, 1879 to 1898.*

Year	Total strikes	Strikers	Days lost	Year	Total strikes	Strikers	Days lost
1879	32	4,011	21,896	1889	126	23,322	215,880
1880	27	5,900	91,899	1890	139	38,402	167,657
1881	41	8,272	95,578	1891	132	31,733	258,069
1882	47	5,851	25,119	1892	119	30,800	216,907
1883	73	12,900	111,697	1893	131	32,109	231,323
1884	81	23,967	119,215	1894	109	27,995	323,261
1885	89	31,166	211,293	1895	126	19,307	125,968
1886	96	16,951	56,772	1896	210	96,051	1,152,503
1887	69	25,057	218,612	1897	217	76,570	1,113,535
1888	101	28,971	191,201	1898	206	35,705	239,292

From this table it appears that the number of strikes and of strikers in Italy has increased, with greater or less steadiness, from year to year. It is probable that the very small figures for the years 1879 to 1882 are explainable in part by the incompleteness of the returns. Nevertheless, it is likely that the labor movement in Italy was comparatively weak during the earlier years covered by these tables, and that there has been in recent years a growing feeling of class interest among workmen and a growing tendency to demand better conditions from employers.

Dividing the 20 years covered by these statistics into 5-year periods, we find that there were 36,937 strikers during the years 1879 to 1883, inclusive, 129,085 during the next 5 years, 159,396 during the years 1889 to 1893, and 255,228 during the years 1894 to 1898. The steady increase in the number of strikers is thus made evident. The number of strikers from 1896 to 1899 especially was nearly double the number in any 3 preceding years, the number in 1896 alone being not less than 96,051. The remarkable increase in the number of strikers during the years 1896 and 1897, however, is largely explained by the fact that in each of those years there was a great strike among the straw-hat makers of Florence, most of whom were women. The number of persons involved in each of these strikes was more than 40,000, and their long duration explains the enormous increase in the number of days lost by strikers during these two years as compared with the earlier years.

In order to ascertain more clearly the significance of these figures as to the number of strikers, they should be compared with the number of persons engaged in industrial pursuits subject to strikes. The population of Italy is very largely agricultural, and the number of those engaged as employees in industrial pursuits, according to the census of 1890, was only 3,001,314.<sup>2</sup> The average number of strikers each year from 1889 to 1898 was 41,462. Thus 13.8 persons out of every 1,000 persons employed in industrial pursuits, on the average, went on strike at some time during each year. Strikes in Italy are therefore less than half as common as in the United States or Great Britain, and somewhat less common than in Austria and France. If we consider only the years 1894 to 1898, the average number of persons thrown out of employment by strikes in Italy was 17 for every 1,000 employed.

The available census statistics of Italy do not group workmen in the same way as the statistics of strikes group them, so that it is impossible to compare the prevalence of strikes by industries. It appears from the reports, however, that nearly 29 per cent of the strikers of Italy during the years since 1892 have been employed in the textile industries, and about 14 per cent in the mining industries. The reports also state that strikes are relatively most prevalent in these two groups of industries and in the various building trades, and attribute the fact in part to the comparatively large extent to which workers in these lines are organized.

<sup>1</sup> See annual reports entitled *Statistica degli Scioperi avvenuti nell'Industria e nell'Agricoltura*, 1891-1898, Bulletins United States Department of Labor, 1895-1901.

<sup>2</sup> *Statesman's Yearbook*, 1900, p. 734.

## CHAPTER II.

## STATISTICS OF CAUSES OF STRIKES AND LOCKOUTS.

## I. UNITED STATES.

1. **Introduction.**—Statistics as to the causes of strikes and lockouts are apt to be somewhat deceptive. In many cases a strike is nominally for several different causes, yet some one of these may really be very much more truly the point at issue than the others. Again, the cause of a strike may be given as the demand for the adoption of union rules. These rules cover numerous subjects and some one point in them may be the only matter really in dispute. In the reports of the United States Department of Labor the causes of strikes are stated very fully. Where, as often happens, a strike is for two or more objects combined, these are treated together as one separate cause in the tabulation. There is little attempt at bringing together allied causes. Another difficulty in discussing causes is that there are many technical points of dispute in special trades which give rise to a large number of minor causes of strikes. To a person unfamiliar with the trade the precise significance of strikes of this sort is apt to be lost.

The following table as to the leading causes of strikes is taken from the report of the United States Department of Labor for 1900 and covers the period 1881 to 1900, inclusive. It shows the number of establishments in which strikes for the respective causes occurred, and the percentage of establishments under each cause to the total number of establishments affected by strikes.

*Leading causes of strikes, January 1, 1881, to December 31, 1900.*

Cause or object	Estab- lish- ments	Per cent
For increase of wages.....	33,731	28.70
For increase of wages and reduction of hours.....	13,201	11.23
For reduction of hours.....	15,416	11.16
Against reduction of wages.....	8,123	7.17
In sympathy with strike elsewhere.....	4,078	3.47
Against employment of nonunion men.....	2,751	2.34
For adoption of new scale.....	2,742	2.33
For recognition of union.....	1,649	1.40
For increase of wages and recognition of union.....	1,111	.95
For enforcement of union rules.....	1,068	.91
For adoption of union scale.....	928	.79
For reduction of hours and against being compelled to board with employer.....	927	.79
Against task system.....	917	.78
For reduction of hours and against task system.....	901	.77
For adoption of union rules and union scale.....	880	.75
For reinstatement of discharged employees.....	868	.74
For increase of wages, Saturday half holiday, and privilege of working for em- ployers not members of masters' association.....	800	.68
Against reduction of wages and working overtime.....	750	.64
For increase of wages and against use of material from nonunion establishment.....	750	.64
For increase of wages and Saturday half holiday.....	729	.62
Total of 20 leading causes.....	90,320	76.86
All other causes (1,383) ..	27,189	23.14
Total for the United States.....	117,509	100.00

From this table it appears, as might be expected, that the demand for increase of wages causes a larger number of strikes than any other single cause. This demand, standing alone, appeared in 28.70 per cent of the establishments affected by strikes, while in combination with other demands, as indicated in the table, it occurs as a cause of strikes in many other establishments. The demand for the reduction of hours comes next in importance, this demand standing by itself causing 11.16 per cent of the strikes as measured by the number of establishments affected, while the demand also occurs in about the same proportion of establishments in connection with that for the increase of wages. Strikes against reduction of wages are about one-fourth as numerous as those for increase of wages. The number of sympathetic strikes is not so great as is sometimes supposed, but is nevertheless considerable, sympathy being the cause of strikes in 3.47 per cent of the establishments affected. It is apparent that the number of sympathetic strikes has been greater during the past 13 years than before, since the report of the Department

of Labor regarding the strikes from 1881 to 1886 showed only 0.77 per cent of establishments affected by strikes of this sort. The proportion of sympathetic strikes from 1887 to 1894, however, 7.73 per cent, was much greater than the average for the entire period, and there seems to be reason to believe that these strikes are now decreasing somewhat in number.

The next most important cause of strikes enumerated is resistance to the employment of nonunion men, which appears as the cause of the strikes in 2.34 per cent of the establishments affected. Here again we find the proportion of strikes for this cause larger for the entire period of 20 years than for the period from 1881 to 1886, showing apparently a somewhat increasing tendency toward exclusiveness on the part of the unions.

**2. Summary of causes for all trades.**—It is desirable, in order to judge more accurately the relative importance of different causes of strikes, to recombine the figures in a somewhat different way, and especially to reduce the causes to a small number of groups. A very large proportion of strikes are for two or more causes. If each of these be taken separately in the tabulation, a fair comparison as to the relative stress laid upon demands of different kinds will be reached and the number of groups of causes diminished. In the preparation of the tables following, this separation of causes has been made. Moreover, the demand for new scales and for union scales, as well as some other minor similar demands, have been treated as demands for higher wages. Demands for Saturday half holidays, for changes in the time of beginning or quitting work and for extra pay for overtime, as well as some other minor demands of a similar character, have been grouped under the head of hours. Under the heading of strikes regarding times and methods of payment have been included a large number of causes, such as those relating to fines and deductions from wages, methods of estimating wages, cash payment of wages, company stores, weighing of coal, etc. Under the heading of strikes against the employment of persons or classes of persons have been grouped, besides those against nonunion men which are by far the largest number, strikes against obnoxious foremen, superintendents, members of other labor organizations, and various other persons or classes.

On the basis of this grouping the total number of establishments affected by strikes involving each of these various classes of demands has been ascertained for each period. By adding together the number of separate causes as thus ascertained and dividing the number for each cause by this total, the percentage which the number of each class of causes bears to the total number of causes is ascertained. Since the total number of causes, as explained, is considerably greater than the total number of strikes, it is evident that the percentage of strikes into which each separate class of causes enters is larger than the percentages here given. For the sake of brevity we have sometimes referred in the following text to the proportion of strikes due to a group of causes, but the fuller and more accurate expression would indicate that the figures represent the proportion which causes of a certain class bear to all causes, a proportion which gives correctly the relative importance of the respective classes of causes.

*Causes of strikes by general groups, 1881-1900.*

Causes.	Number of establishments involved in strikes	Per cent.
For increase of wages and adoption of scales	64,321	41.3
Against decrease of wages	10,843	6.9
For reduction of hours, overtime pay, holidays, etc.	40,228	25.8
Regarding time and method of paying wages, fines, screening of coal, company stores, etc.	8,254	5.3
For recognition of union and adoption of union rules	9,968	6.4
In sympathy with strikers or men locked out elsewhere	4,700	3.0
Against employment of nonunion men, foremen, foreigners, negroes, etc.	8,273	5.3
For employment, retention, or reinstatement of persons	1,638	1.05
Regarding apprenticeship and employment of children	1,223	.78
Regarding use of machinery and appliances	221	.14
Regarding working rules and miscellaneous matters	6,075	3.9
	155,711	100.00

From this table it appears that the total number of separate causes of strikes, as measured by the establishments in which strikes occurred, during the period from 1881 to 1900, was 155,744. Of this number 64,321, or 41.3 per cent, were due

to the demand for an increase of wages. If to these be added the 10,843 strikes due to resistance against reduction of wages, equal to 6.9 per cent of the entire number, we find that nearly half (48.2 per cent) of all the causes of strikes have to do with the rate of wages. As already indicated, we have grouped under the head of demands for increase of wages some which are not specifically reported under that head by those concerned. Strikes for a new scale, or for the adoption of the union scale, involve in most cases a demand for higher wages, and that is usually the chief object sought. It seems probable that the proportion of strikes due to demands for increased wages is decreasing somewhat in recent years, since the statistics of strikes for the years 1881 to 1886 show 48.1 per cent of the causes to be the demand for higher wages or for the adoption of union scales, as compared with 41.3 per cent for the entire period, 1881-1900. The fact that the demand for higher wages appears so much more frequently than resistance to reduction of wages indicates, doubtless, two things: First, that when times are so hard that decrease of wages by employers is attempted, workmen are apt to realize the futility of striking; second, that the general tendency of wages in the United States is upward, as might be expected from the increasing productivity of industry.

Next to wages, the most important cause of strikes is the desire for shorter or more conveniently arranged hours. No less than 25.8 per cent of all strikes during the years 1881 to 1900 were concerned with the matter of hours of labor. The great majority of these strikes sought reduction of hours. Many labor leaders consider the shorter-hour movement even more important than that for higher wages, believing, indeed, that by reducing the number of hours of labor wages will ultimately be increased. Comparatively seldom do employers attempt to increase the hours of labor after once they have been reduced, so that only a small proportion of the total number of strikes are caused by resistance to such an attempt. On the other hand, in a very considerable number of strikes workmen seek higher pay for overtime work. This is evidently, in a sense, a method of resisting the extension of the workday through the requirement of overtime. In not a few instances, also, strikers have sought to obtain a reduction in the number of hours of labor on Saturdays or to obtain release from labor on Sundays and legal holidays.

Many strikes, amounting to 5.3 per cent of the total number, arise from demands regarding the methods of determining the rate of wages or of paying them. Often demands of this sort involve indirectly the desire for a higher rate of wages or resistance to reduction of wages. Among the most common demands under this head is that for the payment of wages weekly or fortnightly instead of at longer intervals. Frequently, too, workmen resist the attempt of employers to require them to accept part or all of their pay in orders on stores, or to compel them to deal with stores owned by the employer. Again, strikes are sometimes caused by the demand for a change from payment by the hour or the day to payment by the piece, while on the other hand resistance to piecework is shown even more frequently. (As to the attitude of different classes of workmen on this subject of piecework, reference should be made to the summary, p. 14v.) In the coal mines differences frequently arise regarding the methods of measuring or weighing coal as the basis for the payment of wages. Thus the question as to whether coal shall be screened before weighing or as to the form of screens used becomes often the cause of strikes. Miners also strike at times to secure the right to employ a check weighman, or against alleged unjust deductions or "docking" in the weighing of coal on account of slate and other impurities.

Under the next head have been grouped strikes seeking recognition of the union, or the adoption of union rules in general as distinguished from the mere adoption of a new union scale. In barely one-sixth of the number of cases grouped under this head in the above table was the demand one exclusively for the recognition of the union. The demand for recognition is naturally connected usually with demands for the adoption of a union scale, for increase of wages, or for some other special privilege. It is a familiar fact that in many instances employers refuse to recognize labor organizations, or to deal with their men collectively regarding the conditions of labor. When the men in an establishment where this attitude has existed become organized and feel sufficiently strong, they naturally demand recognition and demand that their collective desires shall be considered by the employer in the determination of the conditions of labor.

A form of strike which is very generally disapproved by persons of the middle class, and by not a few representatives of organized labor as well, is the sympathetic strike. It appears that during the 20 years from 1881 to 1900 there were 4,700 establishments in which strikes occurred in sympathy with men on strike or men locked out elsewhere. This is equal to 3 per cent of the entire number of causes of strikes.

About one-twentieth of the entire number of strikes during the past 20 years (5.3 per cent) have been due to opposition to the employment or to the continuance in employment of particular classes of workmen. In perhaps half of the cases such strikes have been directed particularly against nonunion men. In quite a considerable number of instances they have been designed to exclude members of other labor organizations from employment. It sometimes happens that two labor organizations whose general fields are distinct each claim the exclusive right to perform certain classes of labor lying on the boundary between them, or that one union claims the exclusive right to certain work and seeks to prevent others from sharing any of it. In a somewhat smaller number of instances competing unions in the same trade or branch of a trade are established, perhaps as the result of a split in the ranks of a previously existing organization. Probably about one-tenth of the entire number of strikes enumerated as being directed against obnoxious employees seek to secure the discharge or prevent the employment of foremen who are unpopular, either for personal reasons or because they are not members of the union, or perhaps because they are believed to be unjust in their treatment of the men. Strikes also occur in some cases against the employment of foreigners, of negroes, or even of women, but the number of strikes having these objects is comparatively small.

Strikers also seek at times to secure the reinstatement of men who have been discharged for one reason or another, or to compel the employer to retain men whom he has in mind to discharge. Especially in cases where workmen have been discharged on account of membership in unions or of activity in union work their fellows are apt to insist on reinstatement. About 1 per cent of all strikes are due to causes of this nature.

As indicated in another connection (see p. 11), the number of unions which are able to enforce limitations upon the employment of apprentices is comparatively small. Demands seeking to limit the number of apprentices, to regulate the conditions of their employment, or to prevent the employment of children or young persons on work which men consider as properly falling within their sphere, account for seventy-eight hundredths of 1 per cent of the total number of disputes. The charge that labor unions try to prevent the introduction of machinery and improved appliances may be well-founded in some instances, but apparently they seldom feel justified in ordering strikes for this purpose. The entire number of establishments affected by strikes regarding the use of machinery during the 20 years covered by the table show only 221, only about one-seventh of 1 per cent of all causes of strikes.

The remaining causes of strikes are very numerous and it would hardly be profitable, in a summary table, to attempt to subdivide them into groups. The headings above discussed include the great majority of all causes of strikes; no less than 96 per cent. The 6.075 remaining causes of strikes have to do in most instances with the physical conditions under which labor is performed, the sanitation of shops, the methods of work, the character of food and lodging, when these are furnished by the employer, and the like matters. Several hundred strikes are reported as having been caused by the attempt to prevent employers from violating agreements or breaking away from previously recognized union rules.

It will be seen from this discussion that no less than three-fourths of all strikes are due to the direct desire of workmen to improve their condition, either by raising wages, preventing decrease of wages, or reducing hours of labor. All the other innumerable minor causes account for only one-fourth of the entire number of such disputes.

**3. Causes of strikes by industries.**—Especially interesting is the inquiry as to the relative importance of different causes of strikes in the different industries. The following tables, showing the total number of establishments affected by strikes for the respective causes in certain leading industries for the years 1887 to 1894, together with the percentage of the strikes due to each cause, have been compiled in precisely the same manner as the tables for the causes of strikes for all industries.<sup>1</sup> Similar figures are not available for 1881-1900.

<sup>1</sup>Tenth Annual Report of the Department of Labor, pp. 1829-1856.

## 656 THE INDUSTRIAL COMMISSION:—STRIKES AND LOCKOUTS.

*Number of strikes due to specified groups of causes, by leading trades, 1887-1894.*

Causes.	Building trades.	Stone quarrying and cutting	Glass trades	Printing trades.	Tobacco and cigar manufacture	Coal mining and coke manufacture	Clothing manufacture	Cotton and woolen industry.	Boot and shoe industry.

Total.....	100	100	100	100	100	100	100	100	100

These tables make possible to some extent a comparison between the more strongly organized trades and the less strongly organized, as regards the objects sought by strikes. The trades covered by the first 4 columns may be considered relatively strongly organized, while in those covered by the last 4 columns labor organizations are either largely wanting or weak. The tobacco and cigar trades, stand in an intermediate position, and probably can scarcely be considered as strongly organized from the standpoint of relations to employers. The demand for higher wages was a somewhat less common cause of strikes in the more strongly organized trades than in the more weakly organized, the percentages ranging from 27.5 per cent to 46.2 per cent for the more strongly organized, and from 32.1 per cent to 52.9 per cent for the more weakly organized. It is especially noteworthy that strikes against decrease of wages were much less common, presumably because less necessary, in the more strongly organized than in the more weakly organized trades. In the building, quarrying and stonecutting, glass, and printing trades combined, less than one-twentieth of all strikes were due to resistance to reduction of wages, the proportions ranging from 2.9 per cent to 5.3 per cent, while in the coal mining,

cotton and woolen manufacturing, and boot and shoe trades, nearly one-fourth of all strikes were due to this cause, and in the tobacco and clothing trades the proportions were 11.1 per cent and 12.7 per cent, respectively.

It is also noteworthy that in the more strongly organized trades the demand for reduction of hours is an especially common cause of strikes. During the years 1887 to 1894 more than one-fifth of the strikes in each of the 4 trades named were due to this cause, and in the building and stone quarrying trades the proportions were 27.6 per cent and 31.2 per cent, respectively. Weakly organized trades, where wages are lower, can not afford to demand shorter hours, involving, perhaps, less wages. The proportion of strikes in the 4 such trades named, which were due to demands as to hours, ranged from a bare .15 of 1 per cent to 12.8 per cent.

Sympathetic strikes and strikes against nonunion men are naturally found especially where labor organizations are strong. In the strongly organized trades named the proportion of sympathetic strikes ranged from 0.4 for the glass trade to 7.2 per cent for the building trades, while the strikes against obnoxious men ranged from 7.7 per cent to 14.4 per cent of all. A weak organization finds so many nonunion competitors that a strike against them is very likely to fail. Sympathetic strikes occur for the most part only where different local unions are affiliated in central bodies, and this implies strong organization. Nevertheless, we find that the proportion of establishments affected by sympathetic strikes in the coal industry was relatively considerable, 7.2 per cent, while in the tobacco and cigar manufacture the proportion was excessive, 23.7 per cent. The high figures in these two industries are probably due to some few great strikes in which large organizations sought to improve their general condition by sustaining some of their members in prolonged struggles. The smallness of the average establishment in the cigar manufacture, and the centralized character of the Cigar Makers' Union, help to explain the large number of establishments concerned in sympathetic strikes. The number of strikes against nonunion and other obnoxious men in the weakly organized trades ranged only from 1.1 per cent to 5 per cent of the total, except in the boot and shoe trade, where the proportion was quite high, 10.8 per cent.

Strikes regarding apprentices are naturally most frequent in strongly organized trades, although even there this cause produces relatively very few strikes. A weak organization can do little to prevent any person from entering the trade at any time he sees fit. Among the less strongly organized trades we find strikes due to this cause in only the most insignificant numbers.

The glass trade has from early times been very strongly organized, and on account of the high skill required a prolonged apprenticeship is necessary. The trade unions have endeavored with very considerable success to enforce strict limitations concerning the number of apprentices, and we find that in no less than 12.3 per cent of the total number of establishments affected by strikes from 1887 to 1894 the cause was connected with apprenticeship. From 1 to 2 per cent of the strikes in the building, stone quarrying, and printing trades were due to the desire to restrict apprenticeship.

The building trades, which account for a very large proportion of the total number of strikes, are relatively strongly organized. In these we find that the demand for recognition of the union was from 1887 to 1894 a much more prolific cause of strikes than in any other of the trades covered by the table, 8.8 per cent of all strikes coming under this cause. The sympathetic strike has also been very common in these trades, which naturally lend themselves peculiarly to that form of conflict. It very frequently happens that all the workmen of different trades employed upon a building quit work in sympathy with the members of some one trade, while strikes upon several buildings in sympathy with workmen upon a single building are also not uncommon. The proportion of all strikes due to this cause was 7.2 per cent.

In the stone quarrying and stonecutting trades we apparently trace a more marked opposition to nonunion men than in any other trade, this cause constituting 14.4 per cent of the total number of causes of strikes from 1887 to 1894. The proportion of strikes designed to secure shorter hours was especially large in these trades also, 31.2 per cent, being approximately the same as the proportion of strikes designed to secure higher wages.

The printing trade, among those which may be regarded as strongly organized, showed the largest proportion of strikes in favor of higher wages, 46.2 per cent. Taking strikes for increased wages and against reduction of wages together, more than half of all the causes of strikes in this trade were connected with wage matters. The opposition to the introduction of typesetting machines did not apparently during this period manifest itself in the form of strikes to any considerable

extent, since only one establishment reported a strike due to the opposition of machinery.

In the case of the tobacco and cigar manufacture the extremely small number of strikes due to demands concerning hours of labor is especially noteworthy, only one-tenth of 1 per cent of all being due to this cause. This fact is probably explained in part by the existence of the system of piecework and of labor in small shops or homes, where the workman determines largely for himself the length of his day's labor. The enormous number of sympathetic strikes in this trade has already been alluded to.

Among the less strongly organized trades the coal industry is the most important. It is noteworthy that considerably more than three-fourths of all the causes of strikes in this trade from 1887 to 1894 had to do with wages, almost one-fourth being in resistance to proposed reductions. There had been up to 1894 little effort to reduce the hours of labor in this industry. The methods of paying wages, on the other hand, caused many disputes, 8.1 per cent of all. Strikes arose especially because of alleged unfairness in the weighing of coal, in the docking of impurities, and because of alleged compulsion to deal at company stores or to buy powder and other supplies at high prices. The movement for weekly or fortnightly payment has also been the cause of many strikes in the coal industry.

The most noteworthy feature regarding the causes of strikes in the cotton and woolen trades, aside from the high proportion due to resistance to the lowering of wages, 23.7 per cent, is the large number of cases of resistance to alleged unfair methods of payment, of measuring goods, of fines and deductions from wages on account of imperfections, etc. Eight and eight-tenths per cent of all the strikes in these trades were caused by differences of this sort. The proportion of strikes to compel reinstatement of employees was also large, 6.6 per cent.

The statistics as to the causes of strikes in the clothing trade present no peculiar features.

In the boot and shoe trade the relatively very large number of strikes against the introduction of machinery is especially noteworthy, nearly 4 per cent of all the causes from 1887 to 1894 being connected with machinery. The proportion of strikes against nonunion and other obnoxious men is also high, 10.8 per cent; as well as the proportion of those in favor of retention or reinstatement of employees, 6.1 per cent.

## II. FOREIGN COUNTRIES.

1. *Great Britain.*<sup>1</sup>—The statistics of strikes and lockouts prepared by the British Government in recent years group the causes under 6 main heads, most of them corresponding fairly well to some of the groups of causes above presented for strikes in the United States. The statistics show for the years 1893 to 1900 the number of persons affected by strikes for the respective classes of causes. Since the American statistics show only the number of establishments affected by strikes for different classes of causes, the basis of comparison between the two countries is not perfect, but some idea of the relative prominence of the respective causes of labor disputes may, nevertheless, be gained by this comparison. The following table shows for each year the total number of persons affected by strikes and lockouts (from 1898 on the basis of figures was changed to the number of persons actually striking or actually locked out, instead of the total number of persons affected, but the change does not materially affect the result), together with the number of persons affected by disputes involving each of the leading causes:

### GREAT BRITAIN—CAUSES OF STRIKES AND LOCKOUTS.

*Persons affected by strikes and lockouts for respective causes or objects.*

Year	Total	Wages	Hours.	Employ- ment of persons or classes	Working rules	Trade union- ism	Other causes.
1893. . . . .	636,386	\$567,460	1,191	7,310	25,667	19,298	15,160
1894. . . . .	324,245	234,903	6,105	3,699	37,763	15,519	26,256
1895. . . . .	263,758	113,198	2,858	4,167	81,393	6,611	22,228
1896. . . . .	198,687	115,817	3,658	7,478	33,121	12,031	26,582
1897. . . . .	230,267	106,293	52,769	19,529	38,311	8,018	6,347

<sup>1</sup> Report of Chief Labor Correspondent on Strikes and Lockouts, 1893-1899, Labor Gazette, 1901, p. 5.

It will be observed that the proportion of strikers engaged in strikes due to the respective classes of causes varies materially from year to year. It has already been pointed out that in Great Britain a few large strikes, involving thousands of persons each, have, in almost every year, contributed largely to the total number of persons affected by labor disputes. The causes involved in these important strikes will accordingly have a very powerful influence upon the aggregate number of persons engaged in strikes for the respective causes.

Taking the figures for the 8 years together, it appears that no less than 71.5 per cent of the total number of persons affected by strikes and lockouts were affected by those in which the question of wages was the chief point at issue. It will be remembered that in the United States, taking the number of establishments as the basis for comparison, a little less than one-half of the total number of strikes from 1881 to 1900 appear to have been connected with disputes as to wages. On the other hand, the number of strikes in which the question of hours of labor was involved in Great Britain was very much less than in the United States. Only 3.4 per cent of the persons affected by strikes and lockouts in the former country had changes in the hours of labor as their object, while in the United States more than one-fourth of the total number of strikes involved this cause.

Strikes against the employment of nonunion men and other obnoxious persons, and strikes in favor of the employment of particular persons or classes, account for 3.2 per cent of the number of persons thrown out of employment by strikes and lockouts in Great Britain from 1893 to 1900. During the years from 1881 to 1900, 6.3 per cent of the number of establishments affected by strikes in the United States were affected by strikes involving this class of causes. Strikes for this cause, however, are apt to be relatively small, so that the proportion of strikers having this object may be somewhat less in the United States than the proportion of establishments.

The group of causes summarized under the head of working rules in the British statistics covers, roughly, besides most of those classed in the American tables under the heading "working rules and conditions," also the 3 groups in the American statistics—time and method of payment, fines, etc., regarding apprentices, and regarding machinery. One-eighth of the total number of persons affected by strikes in Great Britain sought changes in their working rules, while in the United States the 4 groups of causes which have been enumerated account for 10.1 per cent of strikes.

Strikes involving the principles of unionism, as classified by the British Government, correspond fairly well to strikes for recognition of the union. In Great Britain, 4.2 per cent of the persons affected by labor disputes were involved in strikes and lockouts having this for a cause. In the United States the corresponding figure is 6.4 per cent. The number of sympathetic disputes in Great Britain was not formerly reported separately, but during the last few years covered by available statistics this cause is distinguished from the others. It appears that in 1896 somewhat over 4 per cent of the total number of persons affected were engaged in sympathetic disputes; in 1897 the proportion was about 2 per cent, while in 1898 the number was so small as to be insignificant. These disputes are apparently, therefore, less common in Great Britain than they have become in more recent years in the United States.

**2. France.**—The report of the French Labor Department regarding strikes for the year 1899<sup>1</sup> includes a summary table showing the number of strikes in which different classes of causes appeared during the years 1890 to 1899. Just as has been done in the analysis of corresponding figures for the United States, each separate demand in connection with a strike involving more than one object has been tabulated. The table shows the number of strikes in which each respective group of causes came forward, as well as the number of strikers who sought each group of objects, these figures exceeding the number of strikes and of strikers themselves because many disputes involve two or more causes.

<sup>1</sup> Statistique des Grèves, 1899, p. 294

*Number of strikes and strikers for respective causes.*

Principal causes of strikes	Number of strikes	Number of strikers	Per cent of strikers
Demand for increased wages, . . .	2,125	541,639	37.3
Resistance to reduction of wages . . .	541	56,776	3.8
Hours of labor . . .	472	141,651	9.7
Method of fixing and paying wages . . .	347	196,387	13.6
Regarding piecework . . .	103	11,698	.8
Regarding suppression or reduction of fines . . .	132	66,720	1.6
Regarding deductions for insurance and relief funds . . .	128	75,088	5.2
Regarding working rules and shop conditions . . .	119	17,061	1.1
Reinstatement of workmen, foremen, etc . . .	319	70,163	1.6
Demand for discharge of workmen, foremen, etc . . .	147	79,640	5.5
Demand for discharge of women . . .	47	2,705	.2
Limitation of number of apprentices . . .	26	2,169	.15
Miscellaneous . . .	91	86,020	5.9
Total . . .	5,218	1,151,545	100.00

From this table it will be seen that in France strikers sought increase of wages in 37.3 per cent of the cases in which they struck. This is a somewhat smaller percentage than is shown by the statistics of the United States as regards establishments, but it may readily happen that the different bases of the statistics account for this difference. The proportion of strikers in France who resisted reduction of wages is also lower than the proportion of establishments in the United States in which this question was at issue; altogether only a little more than two-fifths of strikers in France made demands regarding the rate of wages. On the other hand, it is noticeable that the proportion of strikes regarding methods of paying wages or of estimating them is very high, no less than 13.6 per cent of all strikers having this object. Moreover, the 3 groups of causes which follow this group in the above table, those regarding the question of piecework, regarding the suppression or reduction of fines and deductions from wages, and regarding deductions for insurance and benefit funds, are all closely related to the previous group, having largely to do with the methods of determining the actual compensation of the employees. In the American statistics all causes of strikes of this character have been grouped together, and they amount to only 5.3 per cent of the entire number of strikes as measured by establishments. If we group the 4 classes of causes enumerated in France we find that no less than 24.2 per cent of all strikers struck for objects of this sort.

Strikes regarding the hours of labor are apparently less numerous in France than in the United States, only 9.7 per cent of all strikers making demands on this subject, while more than one-fourth of all establishments in the United States were affected by strikes regarding hours. The proportion of strikers seeking to exclude nonunion men and obnoxious foremen and others is 5.5 per cent, very nearly the same in France as in the United States. On the other hand, strikes seeking the reinstatement or discharge of workmen are especially numerous in France, no less than 1.6 per cent of all strikers making demands of this sort. As in the United States, strikes regarding apprenticeship are relatively few in number.

**3. Germany.**—The statistics published by the German Empire regarding strikes and lockouts in the year 1899 show that there were 2,101 distinct objects or demands in the 1,288 strikes occurring during that year, the individual strike being the only basis of comparison given. Of these demands, 1,126, or 53.6 per cent of the total number, had to do with the rate of wages. This proportion is somewhat greater than the proportion of establishments in the United States which were engaged in strikes involving this cause during the years 1881-1900. In 1899, in Germany, 379 strikes involved, singly or in connection with other causes, the demand for changes in the hours of labor, holidays, etc. These demands were 13 per cent of the entire number of demands, a smaller proportion than in the United States. Other causes were present in 596 strikes in Germany, or 28.4 per cent of the total number.

Of the 1,126 strikes regarding rate of wages, 820 were designed to secure an increase of wages, while only 67 were intended to prevent reduction, the remaining 239 having to do with other phases of the wage problem. Two hundred and

<sup>1</sup>Streiks und Aussperrungen im Jahre 1899, p. XV.

seventy-five of the 379 strikes regarding working time were designed to secure a reduction of hours, while 23 sought to do away with overtime. Sixty-four strikes sought changes in the methods of paying wages, 31 involved the object of securing the discharge of foremen, while 153 sought to secure the reinstatement of discharged employees. These last two causes appear relatively more frequently than in the United States.

**4. Austria.**—The Austrian statistics distinguish between the causes of strikes and the demands of employees. The difference is not a great one and gets its significance chiefly from the fact that a number of demands may be made at or after the beginning of a strike, although these are only incidental and do not represent the fundamental cause which led to the dispute. Disregarding accordingly the figures showing the demands of the employees, the following table may be presented, which gives the proportion of the total number of strikes which owed their origin to the enumerated classes of causes during the years 1894 to 1899:

*Percentage of all strikes due to enumerated causes, Austria, 1894-1899.<sup>1</sup>*

Causes	1894	1895	1896	1897	1898	1899	Total
Discontent with wages . . .	30.81	12.58	15.90	17.15	18.63	13.98	14.39
Discontent with working time . . .	11.09	11.83	21.97	19.11	21.17	23.47	19.12
Discharge of employees . . .	19.77	14.83	13.11	13.01	11.12	12.86	11.22
Reduction of wages . . .	13.37	9.09	9.18	10.57	12.91	9.32	10.55
Working conditions and rules . . .	9.30	3.83	3.93	7.12	7.84	5.79	6.11
Extension of hours of labor . . .	2.91	2.87	2.30	2.03	3.53	1.29	2.40

<sup>1</sup>Arbeitseinstellungen und Aussperrungen in Oesterreich, 1899, p. 20.

It will be observed that the Austrian statistics as to the causes of strikes are based upon the number of separate strikes and not upon the number of employees, or of establishments concerned in strikes, the latter being the basis in our own country. It appears from the above table that, taking the years 1894 to 1899 together, discontent with the existing rate of wages was the chief cause for the inauguration of 44.39 per cent of the total number of strikes, while resistance to reduction of wages occasioned 10.55 per cent of the total number.

These proportions exceed somewhat those for establishments in the United States from 1881 to 1900, the relative number of strikes designed to resist reduction of wages as compared with strikes designed to increase wages, being indeed considerably greater in Austria than in the United States. Discontent with the existing hours of labor occasioned 19.12 per cent of the entire number of strikes in Austria during the period in question. In addition, however, 2.4 per cent of the strikes sought to prevent proposed increase of the hours of labor. The total number of strikes in which the question of working time was involved was therefore 21.80 per cent of all, rather less than the proportion of establishments affected by strikes for this cause in the United States.

Strikes designed to secure the discharge of obnoxious employees, nonunion men, foremen, etc., or to insist upon the reinstatement of discharged employees, were especially numerous in Austria from 1894 to 1899. In general it is probable, however, that strikes of this class were smaller in size than those for the other causes. No less than 14.22 per cent of the total number of strikes involved questions relating to employees, while the strikes of this sort in the United States involved only 6.3 per cent of the entire number of establishments affected by strikes. Discontent with the working conditions and rules occasioned 6.11 per cent of the entire number of strikes in Austria from 1894 to 1899.

There is a considerable variation in the relative prominence of the different classes of causes of strikes from year to year, as shown by the above table. Nevertheless there are very few cases in which the difference is sufficiently great to change the order of importance from that of the average for the entire period.

**5. Italy.**—The Italian statistics do not distinguish all the causes of strikes, but separate only the leading classes of causes, grouping all others under one head. Moreover a single cause is assigned for each strike, even though other subsidiary objects may be sought. The following table shows for the two periods, 1879-1891

<sup>1</sup>Compiled from *Statistica degli Scioperi, 1890-1899*, and *Bulletin of United States Department of Labor, 1895-1901*.

## 662 THE INDUSTRIAL COMMISSION:—STRIKES AND LOCKOUTS.

and 1892-1899, respectively, the proportion of the entire number of strikes in Italy for the respective classes of causes:

*Percentage of strikes in Italy due to respective causes, 1879-1898.*

CAUSES	1878-1891	1892-1899
	<i>Per cent</i>	<i>Per cent</i>
For increase of wages . . . . .	52	48.8
For reduction of hours . . . . .	7	7
Against reduction of wages . . . . .	11	12.4
Against increase of hours . . . . .	2	2.8
Other causes . . . . .	28	31

From this table it appears that in each period about one-half of all strikes in Italy sought to secure higher wages, the proportion in the later period, 48 per cent, being slightly lower than in the earlier period, while the total number of strikes having wage questions at issue was 63 per cent in the earlier period and 60 per cent in the later period. It will be remembered that in the United States from 1881 to 1900 about one-half of the establishments affected by strikes were those in which wage questions were at stake. The proportion of strikes against reduction of wages in Italy was 11 per cent of the total number of strikes during the period 1879-1891 and 12 per cent of the entire number during the period from 1892 to 1899. This proportion is considerably higher than that in the United States.

It is noteworthy that the number of strikes in Italy which seek reduction in hours or which oppose increase in hours is very much less than in most other countries. During each period of the table, 7 per cent of the strikes in Italy sought reduction of hours and 2 per cent opposed an increase. It will be remembered that more than one-fourth of the strikes in the United States have had to do with the hours of labor. The difference is doubtless due to the inferior position of the working classes in Italy and the more backward state of the labor movement.

No marked difference, as between the earlier and the later period, in the proportion of strikes due to different classes of causes appears from the Italian statistics. Of course the variations in the number of strikers engaged in strikes for respective causes varies greatly from year to year, as will be seen from the following table showing the percentage of strikers having the respective objects during the years from 1895 to 1899:

*Percentage of strikers concerned in strikes for respective causes in Italy, 1895-1899.*

CAUSES	1895	1896	1897	1898	1899
	<i>Per cent</i>	<i>Per cent</i>	<i>Per cent</i>	<i>Per cent</i>	<i>Per cent</i>
For increase of wages . . . . .	44	81.7	79	47	48
For reduction of hours . . . . .	6	1	1.7	2	7
Against reduction of wages . . . . .	16	6	6	19	12
Against increase of hours . . . . .	1	3	3	3	2
Other causes . . . . .	10	11	10	29	31

The marked fluctuations in the percentages shown in this table are largely explicable by the fact that a very large proportion of the entire number of strikers in each of the years 1896 and 1897 were concerned in the great strikes among the hat makers of Florence. The desire for increased wages was the cause of these strikes, so that the proportion of the entire number of strikers in Italy during these years who sought higher wages was enormously increased by these strikes alone.

## CHAPTER III.

## DURATION OF STRIKES AND LOCKOUTS AND TIME LOST BY THEM.

## I. UNITED STATES.

1. *Statistics for all trades.*—It is obviously difficult to determine as to any particular strike or lockout what is its actual duration. In a case where all the employees striking are afterwards reinstated at one time the duration of a strike is easy to determine; but when, as often happens, the strikers either surrender a few at a time or are gradually replaced by other men no particular point can be fixed for the end of the strike.

The statistics prepared by the Department of Labor show, for such establishments as were actually closed as the result of strikes, the length of time during which they were thus closed and the average number of days per year during which they were closed. Of course, labor disputes do not always result in the closing of an establishment. Of the establishments in which strikes occurred from 1881 to 1900, 65.73 per cent were closed on account of them, the proportion for lockouts being 71.95 per cent. It appears that for the 74 years from 1887 to June 30, 1894, the average number of days during which establishments closed by strikes were closed was 22.3 days. For the entire period from 1881 to 1900 the average number of days closed was 20.1. The average length of time for which establishments were closed on account of lockouts during the whole period was 52.4 days.

It is obvious that, generally speaking, the length of time during which establishments are closed as the result of strikes will be somewhat less than the length of time elapsing before all the strikers will return to work or, in case they do not return, until their places are filled by others. For the years 1881 to 1900 the report of the Department of Labor shows that the average number of days for each strike before the places of the strikers were filled or the strikers were reemployed was 23.8 days, while the average duration of lockouts was 97.1 days.

The following table shows the average duration of strikes for each year from 1881 to 1900, as measured by the length of time before the places of strikers were filled by their reemployment or by the employment of others.

*Duration of strikes and lockouts, January 1, 1881, to December 31, 1900.*

Year	Strikes		Lockouts	
	Estab-lish-ments	Average duration (days)	Estab-lish-ments	Average duration (days)
1881 .....	2,928	12.8	9	32.2
1882 .....	2,105	21.9	42	105
1883 .....	2,759	29.6	117	57.5
1884 .....	2,367	30.5	354	41.4
1885 .....	2,284	30.1	183	27.1
1886 .....	10,653	23.4	1,709	39.1
1887 .....	6,589	20.9	1,281	49.8
1888 .....	3,506	20.3	180	71.9
1889 .....	3,786	26.2	132	57.5
1890 .....	9,421	21.2	321	73.9
1891 .....	8,116	31.9	516	37.8
1892 .....	5,540	23.1	716	72
1893 .....	4,555	29.6	365	34.7
1894 .....	8,196	32.4	873	37.7
1895 .....	6,973	20.5	370	31.6
1896 .....	5,462	22	51	65.1
1897 .....	8,192	27.4	171	38.6
1898 .....	3,809	22.5	164	48.8
1899 .....	11,417	15.2	323	37.5
1900 .....	9,218	23.1	2,281	265.1
Total .....	117,509	23.8	9,933	97.1

The average duration of strikes as shown by this table has varied considerably from year to year, ranging from only 12.8 days in 1881 to 34.9 days in 1891. Generally the figures range between 20 and 30 days. It seems impossible to trace any connection between the relative success and failure of strikes and the length of their duration, except that for the year 1894, when strikes were exceedingly unsuccessful, the average duration is higher than in most other years; while in 1881, when the percentage of success was unusually high, the average duration was unusually short. Aside from actual statistics, it might perhaps be anticipated that where conditions were such as to favor success in strikes the strikes would generally be shorter than where conditions were unfavorable for success.

**3. Time lost by strikes and lockouts.**—From a combination of the figures showing the average duration of strikes and lockouts and those showing the number of persons who are thrown out of employment by them, we may ascertain, somewhat roughly, the total labor time lost as the result of strikes and lockouts. It will be remembered that the total number of employees thrown out of work during the years 1881 to 1900 as the result of strikes was 6,105,694. The average duration of strikes during those years was 23.8 days. This means that during the period the number of days of labor lost as the result of strikes amounted to 145,315,517, equivalent, on the hypothesis that the average working year is 300 days (which is a rather unduly high estimate), to the labor of 481,385 persons for one year. The average number of persons thrown out of employment each year by strikes during the period in question was 305,685. The average number of days lost each year therefore would be 7,265,775 days, equivalent to the labor of 24,219 persons for one year. The significance of these figures can not be properly judged except by comparison with the total number of persons employed in industry during the period in question, and the total number of days which they might have worked. It will be remembered that, making proper eliminations for classes of employees who do not or can not strike, the number of persons employed in trade and industry in 1890 was 305,685. The number of days lost by strikes each year was equivalent to the labor of 24,219 persons, or  $\frac{1}{12}$  of the number of persons employed. It follows that for every day lost by strikes during this period the working force of the country might have worked 406 days. On an average each workman engaged in such industries as are subject to strike lost considerably less than one of his possible working days during a year as the result of strikes.

The total number of persons thrown out of employment by lockouts during the years from 1881 to 1900 was 504,307. The average duration of these lockouts was 97.1 days. The total number of working days lost as the result of lockouts during this period may be roughly obtained by multiplying these figures together, the result being 24,012,211, or an average of 1,300,612 days lost to workmen by lockouts each year. The number of working days lost by lockouts is thus seen to be somewhat more than one-sixth as great as the number of days lost by strikes.

Combining the figures for strikes and lockouts, we find that the average number of days lost by workmen each year as the result of both classes of disputes was 8,566,387, equal to the working time of 28,554 persons for a year, on the basis of 300 days to the working year. Since the total number of persons employed in industries subject to strikes and lockouts was 9,843,466, it follows that the amount of time lost by strikes and lockouts combined each year during this period was equivalent to the entire loss of the work of 1 person for each 350 persons employed.

It will, of course, be remembered that cessation of employment because of strikes and lockouts may often merely offset time which would be lost in any case because of the irregularity of work.

## II. FOREIGN COUNTRIES.

**1. Great Britain.**—The total number of days of time lost by strikes and lockouts in Great Britain each year from 1890 to 1900 has been shown in the table above on page 644. The aggregate number of days lost for the 11 years was 113,129,953, or an average of 10,284,541 days yearly. This figure may be compared with that for the United States for the years 1881 to 1900, 8,566,387. The British statistics do not show the duration of strikes by the number of days before the employees of an establishment return or are replaced, but they give what amounts to practically the same thing, the average number of days lost by each person affected. The average number of days lost per person affected during the 11 years covered by the table was 34.9 days. This figure is fairly comparable with those for the duration of strikes and lockouts in the United States from 1881 to 1900, 23.8 days for strikes

and 97.1 days for lockouts. Disputes are thus, on the average, considerably longer in the United Kingdom than in our country.

The number of days lost each year per person affected by British strikes and lockouts was as follows (see p. 644):

*Days lost by strikes and lockouts per person affected, Great Britain.*

Year	Days	Year	Days
1890 . . . . .	19.5	1896 . . . . .	18.9
1891 . . . . .	26.3	1897 . . . . .	44.9
1892 . . . . .	49.1	1898 . . . . .	60.2
1893 . . . . .	49.7	1899 . . . . .	14
1894 . . . . .	28.8	1900 . . . . .	20.6
1895 . . . . .	21		
		Average	34.9

The average number of days lost per person affected shows thus the greatest possible variation from year to year. In 1899 the average number of days lost was only 14, while in 1898 it was 60.2. These wide differences are chiefly explained by differences in the duration of a few important strikes, which embrace a large proportion of the total number of persons affected by strikes and lockouts during the respective years. Thus the extremely high proportion of days lost as the result of strikes and lockouts during 1898 was due to the very prolonged disputes in the coal-mining industry, which involved many thousands of working-men. The unusually high average of time lost by strikers in 1892 and 1893 was also due to the long and wide-reaching strikes in the coal mines.

2. *France.*—On page 646 will be found a table showing the number of strikers and the number of days of labor lost through strikes in France from 1892 to 1899, inclusive. The figures for days lost there given, however, include those lost by persons not themselves striking but thrown out as the result of strikes. The French statistics do not give us information as to the average duration of strikes, but the average number of days lost by each striker from year to year gives essentially the duration of strikes. The following table shows the number of days lost by each striker himself, excluding those lost by others through strikes after 1893:

*Days lost by strikes per striker—France.*

Year	Days lost	Year	Days lost
1890 . . . . .	11	1896 . . . . .	10
1891 . . . . .	16	1897 . . . . .	10
1892 . . . . .	19	1898 . . . . .	13
1893 . . . . .	18	1899 . . . . .	14
1894 . . . . .	18		
1895 . . . . .	12	1890-1899 . . . . .	14

From this table it will be seen that the average number of days lost by each striker during the 10 years covered by the table was 14. It will be remembered that the average duration of strikes in the United States and the average number of days lost by strikers in Great Britain very considerably exceed this figure.

The variation in the number of days lost by each striker from year to year is somewhat less marked in France than in Great Britain or the United States. The strikes in France during the years 1896 and 1897 were the shortest, the average number of days lost by strikers being 10 in each year. The strikes of 1894 (the year 1893 not being comparable) were the longest, 18 days on the average being lost by each striker in that year.

# 666 THE INDUSTRIAL COMMISSION:—STRIKES AND LOCKOUTS.

The French statistics show also the number of strikes lasting from 1 to 7 days, from 8 to 15 days, etc. The following table covers the years from 1894 to 1898, inclusive, and shows the number of strikes, with respective degrees of duration.

*Duration of strikes in France.*

Year	Number of strikes lasting—				
	1 to 7 days	8 to 15 days	16 to 30 days	31 to 100 days	101 days and over
1894.	232	82	36	35	6
1895.	276	61	35	31	1
1896.	306	98	39	34	1
1897.	231	64	32	24	2
1898.	212	60	35	28	3
1894-1898	1,290	365	175	150	16
Percentage, 1894-1898.	61.6	18.3	8.8	7.6	0.8

From this table it appears that in France during the years covered there were 1,396 strikes, of which 1,290, or 61.6 per cent, lasted only from 1 to 7 days. The number of strikes lasting from 8 to 15 days was 365, or 18.3 per cent of the total number of strikes. Strikes lasting more than 16 days but less than 1 month numbered 175, or 8.8 per cent of the total number.

All longer strikes, lasting more than 31 days, were less numerous even than strikes lasting from 16 to 30 days, these strikes numbered 150, or 7.6 per cent of the entire number of strikes. The number of strikes lasting more than 100 days during this period were only 16, or less than one one-hundredth of the entire number of strikes. More than 90 per cent of all the strikes in France during this period lasted less than 1 month.

An interesting inquiry is as to the relative duration of large and small strikes. The following table, compiled from the French statistics for 1894 to 1898, shows the percentage of the entire number of strikes of different degrees of magnitude which lasted 1 week, 2 weeks, 1 month, 100 days, and more than 100 days, respectively:

*Duration of strikes according to number of strikers, France, 1894-1898.*

Number of strikers	Percentage of strikes lasting—				
	1 to 7 days	8 to 15 days	16 to 30 days	31 to 100 days	101 days or more
5 to 25 ..	71.9	15	7.6	5.1	0.3
26 to 50 ..	67.4	16.8	7.3	8	4
51 to 100 ..	62.6	18.2	9.7	6.2	1
101 to 200 ..	56.1	21.1	12.5	9.3	1.1
201 to 500 ..	40.5	23.1	13	10.5	1.2
501 to 1,000 ..	38.9	15.9	22.7	18.2	4.3
1,001 and over	29	23.7	13.2	29	5.1

From this table it appears that the smaller strikes are in general shorter than those involving a larger number of strikers. No less than 71.9 per cent of all strikes involving less than 25 persons during this period lasted only 1 week or less, while of strikes involving from 500 to 1,000 persons, 38.9 per cent only were as short as 1 week, and the proportion of such short strikes among those involving more than 1,000 persons is still smaller—29 per cent. On the other hand, of strikes involving less than 25 persons, only 5.1 per cent lasted more than 30 days, while of strikes involving from 500 to 1,000 persons, 22.5 per cent lasted more than 30 days, and of strikes involving more than 1,000 persons, 34.1 per cent lasted more than 30 days. While the figures do not indicate that the average duration of strikes is in strict proportion to the number of strikers, there is a clearly marked tendency in that direction. Thus there is only one group of strikes, as measured by the number of strikers, which shows a larger proportion of short strikes, lasting 1 week or less, than is shown by the group of strikes of the next smaller degree of magnitude. So, too, there is only one group of strikes which shows a proportion of long strikes, lasting more than 30 days, greater than that of the group of the next larger degree of magnitude.

The result indicated by these figures might be anticipated from general considerations. While in France a strike involving many persons, as will be seen later, is more likely to result in success than one involving a small number of persons, the duration of the larger strike is likely to be more prolonged because of the importance of the interests involved and of the unwillingness of either party to yield until the last extremity. Moreover, strikes involving many persons are less likely to be entered upon hastily and thoughtlessly than is the case with small strikes, and the point at issue in large strikes is more apt to be one as to which there is a strong difference of opinion.

**3. Austria.**—The Austrian strike reports present information on one point not covered by the statistics of any other country except France, namely, the time of the beginning of strikes. The large proportion of the total number of strikes which are begun in the spring is especially conspicuous. The Austrian statistics show that for the 6 years from 1891 to 1899, 37.2 per cent of all strikes, including 49.5 per cent of all striking workmen, began in the spring, 28.9 per cent of all strikes, including 19.6 per cent of all strikers, began in the summer; the number of strikes beginning in the fall was 18.3 per cent of the total number of strikes, and included 16.9 per cent of the total number of strikers, the corresponding figures for strikes begun in the winter are 15.6 per cent and 14 per cent respectively. It appears accordingly that in Austria nearly one-half of all strikers began their movements in the spring, while less than one-third began striking in both fall and winter.

The reasons for this difference in strikes according to seasons are of course obvious. Work in any case is apt to be more slack in winter than in summer at least for many trades, and the need of a regular income on the part of the workman is greater at that time than in the spring or summer.

The average duration of strikes in Austria for each year from 1894 to 1899 was as follows:

*Duration of strikes in Austria*

Year	Days	Year	Days
1894	12.34	1897	12.4
1895	13	1898	11.1
1896	15	1899	14

The variation in the average length of strikes from year to year is thus seen to be comparatively slight, especially as compared with the United States and Great Britain. The average length of strikes also is very much less than in either of the countries just mentioned. It will be remembered that according to the statistics of the United States Department of Labor for 1881 to 1900, the average length of time elapsing between the beginning of strikes and the time when strikers were either reemployed or replaced was 23.8 days, while the average number of days lost by each striker in Great Britain from 1890 to 1900 was 34.9.

The Austrian statistics show further the number of strikes continuing from 1 to 5 days, from 6 to 10 days, etc. It appears that about 53 per cent of all strikes during the years 1894 to 1899 lasted less than 5 days, while strikes lasting from 6 to 25 days varied from 26.4 per cent of the total number to 37.2 per cent of the total number. Strikes lasting more than 25 days were thus usually less than one sixth of the total number of strikes.

## CHAPTER IV.

### MONEY LOSSES FROM STRIKES AND LOCKOUTS—UNITED STATES.

**1. For all trades.**—The following table, prepared by the Department of Labor, is an estimate of the amount of wage losses resulting from strikes during the years 1881 to 1900. The wage loss has been calculated by multiplying the number of days elapsing between the beginning of each strike and the time when the places of the strikers were filled, by the average wages of the strikers. The amount of assistance paid to employees by labor organizations was ascertained as accurately as possible from the officers of those organizations. The losses of employers were

# 668 THE INDUSTRIAL COMMISSION:—STRIKES AND LOCKOUTS.

reported by the employers themselves, and were based on the estimated deductions from profits resulting from strikes. It is of course especially difficult to estimate these losses accurately. On this point the Commissioner of Labor says, in his Sixteenth Annual Report: "The figures here given are for the immediate, and in many instances only temporary, losses of employees and employers. In most businesses, as previously intimated, there are seasons of entire or partial idleness among the employees, owing to sickness, voluntary lay-offs, running slack time, etc., the working days per year being on an average from 200 to 250 days out of a possible 313. When a strike or lockout occurs in an establishment whose business is of such a character it is often followed by a period of unusual activity, in which the employee and employer both make up the time lost by reason of the temporary cessation of business on account of the strike. The employer may in some instances be subjected to an ultimate loss by reason of his inability to fill contracts already made, but it may be accepted as a fact that much of the loss in the cases of both employer and employee is only temporary. It was found impossible, however, for the agents of the Department to take these facts into consideration, inasmuch as in many instances a period of six months or even a year must have elapsed before the whole or even a part of such loss was made up."

*Wage loss of employees, assistance to employees, and loss of employers, January 1, 1881, to December 31, 1900.*

Year.	Strikes			Lockouts		
	To date when strikers were reemployed or employed elsewhere	Assistance to employees by labor organizations	Loss of employers	To date when employees locked out were reemployed or employed elsewhere	Assistance to employees by labor organizations	Loss of employers
1881 .....	\$3,372,578	\$287,999	\$1,919,483	\$18,549	\$3,150	\$6,960

1893 .....	9,938,048	563,183	3,106,105	6,459,401	364,284	1,034,120
1894 .....	37,145,532	934,052	18,982,129	2,022,769	160,244	982,584
1895 .....	13,044,830	559,165	5,072,282	791,703	67,704	584,155
1896 .....	11,098,207	462,165	5,304,245	690,915	61,355	357,535
1897 .....	17,168,904	721,161	4,868,687	583,606	47,336	298,044
1898 .....	10,037,281	585,228	4,596,462	880,461	47,098	239,403
1899 .....	15,157,965	1,096,030	7,143,407	1,785,174	126,357	379,365
1900 .....	18,311,570	1,434,452	9,431,299	16,436,872	418,219	5,417,930
Total.....	257,863,478	16,171,793	122,731,121	48,819,745	3,451,461	19,927,983

The loss to employees in the establishments in which strikes occurred, for the period of 20 years, was \$257,863,478. The loss to employees through lockouts for the same period was \$48,819,745; or a total loss to employees by reason of these two classes of industrial disturbances of \$306,683,223. The number of persons thrown out of employment by reason of strikes was 6,105,694, making an average loss of \$42 to each person involved. The number of employees thrown out by lockouts was 504,307, making an average loss of \$97 to each person involved. Combining the figures for strikes and lockouts it is seen that the wage loss to employees, as above stated, was \$306,683,223, and the number of establishments involved, 127,422, while 6,610,001 persons were thrown out of employment. These figures show an average wage loss of \$2,406 to the employees in each establishment, and an average loss of \$46 to each person involved.

The aggregate amount of loss shown by these figures appears startling at first glance. It must be remembered, however, that the figures cover a period of 20 years. While the total loss to employees as the result of strikes during this period was \$257,863,478, the average loss per year was only \$12,893,174, which is after all a relatively small amount when compared with the billions of dollars received by

employees annually in wages. The fact, which has already been pointed out, that less than 1 day per year of the working time of the laboring force of the country, employed in industries where strikes are likely to occur, is lost through strike is sufficient indication of the relatively small percentage of wages which are lost in this way.

It will be observed that the losses of employers are shown to be considerably less than those of employees, the aggregate for strikes and lockouts from 1881 to 1900 being \$142,659,104, somewhat less than one-half of the amount lost by strikers. This is of course to be expected, since the amount paid in wages in the majority of establishments is considerably greater than the profits of the employer. Of course the figures for the losses of employers make no account of the higher wages which they may be compelled to pay as the result of a successful strike.

The losses through strikes and lockouts vary from year to year, in accordance with the number of persons affected, the duration of disputes, the rate of wages or profits in the industry, and other conditions. The excessive losses both of employers and employees through lockouts in 1900 are explained chiefly by the prolonged and expensive dispute in the Chicago building trades.

The relative proportion of the loss to employers, as compared with that of employees, differs considerably in different years. Thus in 1889 the loss of employers was apparently less than one-third as great as that of the employees, while in 1886 the loss of employers was more than three-fourths the loss of the employees. No useful generalizations can be drawn from the statistics as to the causes of these differences. The same is true as to the relative proportion between the wage loss of employees and the amount of assistance paid to employees by labor organizations. This proportion will vary from year to year, according as the strikes are more or less frequent in those trades in which the system of strike benefits is highly developed and according as other conditions differ.

It may not be inappropriate here to call attention to the fact that representatives of organized labor very generally contend that the advantages and disadvantages of strikes can not be measured by the mere number of cases in which the strikers succeed immediately or fail immediately to gain their demands, or by the amount of wages lost during the strike. In the first place it is claimed that although the proportion of unsuccessful strikes may be high, yet the policy of striking may advance the interests of the working classes. Frequently employers, it is said, learn from prolonged strikes the strength of organization among their employees, even though for the time being the demands may be successfully resisted. Rather than encounter again the losses attending upon a strike, the employer may be willing to grant the next demand of the workmen; in fact, he may voluntarily advance wages or improve conditions as soon as he is able to do so. It is pointed out that an unsuccessful strike usually means merely that the workmen remain in the same position in which they were before, not that they are in a worse position, while the successful strike means that they are in an absolutely better position.

In judging the relative gain or loss from strikes it is necessary to compare the total loss of time and of strike funds in both successful and unsuccessful strikes with the total increase in wages or other improvements in conditions coming from successful strikes. It is obvious that no satisfactory statistical comparison of such a sort can be made. The value of many of the improved conditions obtained by successful strikes can not be measured as advances in wages are measured. Again, the length of time during which the better conditions prevail as the result of the strikes can not be ascertained. Labor leaders claim that, generally speaking, the advantage resulting from successful strikes is practically permanent, so that when once the losses of strikes have been recouped as the result of higher wages or improved conditions, the benefit for the future is clear gain, but this is certainly not always the case.

Finally, great stress is made by workingmen on the point already elaborated above, that the loss of wages during strikes might have been partly or wholly balanced by loss of wages as the result of enforced idleness in the absence of a strike. If, they say, a certain number of days of employment are to be lost during the year in any case, it is better that the idleness should occur at the time when the striker desires rather than at a time when the employer desires. Here again it is obviously impossible to measure quantitatively the importance of this contention of the workmen. No one can tell how much more unemployment results from strikes than would have existed in their absence, but there is beyond question some truth in the position stated.

**2. Losses of employers and employees, by industries.**—The following table shows for the years 1887 to June 30, 1894, the losses of employers and employees by strikes in the leading industries, similar data for the entire period from 1881 to 1900 not being available at the time the present report goes to press.

# 670 THE INDUSTRIAL COMMISSION:—STRIKES AND LOCKOUTS.

*Losses of employers and employees by strikes in leading industries, 1887-1894.*

Industries	Employees		Loss of employers
	Wage loss	Assistance	
Boots and shoes .....	\$3,143,432	\$216,340	\$1,317,186
Brewing .....	173,676	47,416	123,855

Tobacco .....	3,321,569	658,311	1,258,818
Transportation .....	8,828,681	1,701,621	18,118,971
Wooden goods .....	556,663	41,416	366,100
Woolen and worsted goods .....	708,007	14,368	267,217
Miscellaneous .....	1,926,318	98,791	1,259,849
Total .....	111,992,934	7,589,819	51,888,233

It will not be profitable to consider in detail the losses of employers and employees from strikes in the respective industries. It is obvious that in those industries in which the number of strikes is the greatest relatively to the total number of persons employed in the trade, and in which the average duration of the strike is the longest, the per capita wage loss of employees will be the greatest. The average rate of wages of employees will of course also affect the loss materially. The extremely high proportion of strikes in the coal and coke industry and their long duration explains the fact that out of the total \$111,992,934 of wages lost by strikes during the years of 1887 to 1891, more than \$50,000,000 were lost by those employed in this industry. It must not be forgotten, however, that this is an industry in which, quite aside from strikes, employment is very irregular, and it may be questioned whether the amount of time lost has been materially increased by strikes.

A comparison between the amount of wages lost in strikes and the amount of assistance received by strikers from trade unions will give a reasonably fair method of estimating the strength of organizations in the respective trades, since the adoption of a system of strike benefits and the ability to continue payments during a prolonged strike is usually the mark of effective organization. The degree of hardship entailed on employees during strikes varies also roughly as the proportion of assistance received to wages. From the above table it will be seen that the proportion of strike assistance to wage loss for all industries from 1887 to 1894 was about one-sixteenth. The largest proportion of strike assistance is found in the transportation trades, where the amount paid out in this way was nearly one-fifth of the amount of wages lost. While a considerable number of strikes on transportation lines are doubtless among the less skilled employees who are not strongly organized, the great railway brotherhoods of engineers, firemen, conductors, and trainmen pay such large benefits to those who are idle on strike, and have such large accumulated funds with which to continue payments, that for the industry as a whole the amount of strike assistance is very great. The strongly organized glass workers have also highly effective systems of strike benefits, and from 1887 to 1894 the amount paid out for assistance to strikers was equal to about one-eighth of the amount of wage loss. The proportion in the case of the building trades, which are also relatively strongly organized, was a

little more than one-tenth. The Cigar Makers' Union has also a particularly effective system of strike benefits and reserve funds, and the organization was able to furnish assistance to strikers equal to one-sixth of the wages lost. Among the weakly organized trades, the boot and shoe workers were yet able to pay an amount of strike assistance equal to one-thirteenth of the wage loss. In the cotton manufacture the assistance was only approximately one-nineteenth of the amount of wage loss. Most conspicuous of all is the great coal and coke industry, in which the amount of strike assistance was only about one-sixtieth of the enormous amount of wage loss.

A comparison of the loss of employers with the wage loss of employees shows also a great difference in the different industries. For all industries, collectively, the proportion of the loss of employers, as compared with the wage loss of employees, is about 43 per cent. For the transportation industries, however, the losses of employers are reported as more than twice as great as the wage losses of employees. It is obvious that the stopping or partial stopping of great transportation lines interferes much more seriously with the prosperity of a transportation company than the mere closing of a factory interferes with the prosperity of its owner. The enormous fixed plant of a railway company which is rendered idle, or whose operation is seriously hampered, by a strike is the most important element in explaining this high loss to employers from railway strikes. Moreover, the action of a small part of the employees may derange an entire system. In the printing trades also the loss of employers from strikes is reported as fully greater than that of the employees. Here, again, the interference with the publishing of a newspaper as the result of a strike can scarcely fail to result in great loss to the employer. The proportion of loss to employers as compared with employees in the building trades is approximately the same as the average for all trades. In the great number of strikes by the coal and coke industry, however, the loss of employers is reported as only about 22 per cent of the loss of employees.

The figures for losses in lockouts do not sufficiently differ in their significance from those for strikes as to warrant special discussion, especially as the aggregate of losses is so much less than in the case of strikes.

## CHAPTER V

### RESULTS OF STRIKES AND LOCKOUTS.

#### I. UNITED STATES.

1. *Success and failure of strikes and lockouts, by establishments.*—The following table shows, by years, from 1881 to 1900, the per cent of establishments in which employees engaged in strikes succeeded, succeeded partly, or failed, with similar statistics regarding lockouts:

*Results for establishments, January 1, 1881, to December 31, 1900.*

Year	Per cent of establishments in strikes in which employees—			Per cent of establishments in lockouts in which employees—		
	Succeeded	Succeeded partly	Failed	Succeeded	Compromised	Failed
1881.	61.37	7.00	31.63	—	11.11	88.89
1882.	53.59	8.17	38.24	35.71	—	64.29
1883.	58.17	16.09	25.74	13.59	—	86.41
1884.	51.50	3.89	44.61	71.75	—	28.25
1885.	52.80	9.50	37.70	58.17	3.28	38.25
1886.	31.50	18.85	49.65	65.71	13.11	21.18
1887.	15.61	7.19	77.17	64.56	1.25	34.19
1888.	52.22	5.18	42.59	21.67	3.89	74.44
1889.	16.19	18.91	64.90	33.33	25.76	40.91
1890.	52.45	10.01	37.54	28.70	7.56	63.74
1891.	37.88	8.29	53.83	21.79	11.29	66.92
1892.	39.31	8.70	51.99	5.59	25.28	69.13
1893.	50.86	10.32	38.82	29.79	18.31	41.90
1894.	38.09	13.50	48.41	86.29	2.40	11.31
1895.	55.24	9.91	34.82	86.49	2.7	13.24
1896.	59.19	7.17	33.64	17.65	1.96	80.39
1897.	57.31	28.12	14.57	35.67	3.51	60.82
1898.	64.19	6.38	29.43	35.98	.61	63.41
1899.	73.21	14.25	12.54	81.37	.62	18.01
1900.	46.13	20.62	33.25	5.79	.31	94.30
Total.....	50.77	13.04	36.19	42.33	6.28	50.79

For the 20 years covered by this table, the proportion of strikes which succeeded was 50.77 per cent, and the proportion which failed 36.19 per cent, as determined by the statistics for establishments. It must be remembered, however, that a strike which partly succeeds in obtaining its object is, generally speaking, to be considered a victory for the employees. It is very common for strikers to demand more than they really expect to get, and a partial success may mean a material improvement in the condition of the workers. In some cases, to be sure, the gain in a compromised strike may be so slight as in no sense to offset the loss of wages and other losses attending it.

If the percentage of strikes which succeeded partly be added to that of strikes which succeeded altogether, the result will be that in 63.81 per cent of all establishments in which strikes occurred during the period from 1881 to 1900, they resulted advantageously to the strikers.

The proportion of successful and unsuccessful strikes has varied greatly in different years. Considering the third column, which shows the establishments in which strikes are to be considered failures, we find a range from 12.51 per cent in 1899 to 53.83 per cent in 1891. It would be interesting, were it possible, to discover the leading causes for the differences in the proportion of success and failure from year to year, but the elements entering into the matter are so complex and the evidence so scanty that generalization would probably be misleading. It might, however, be expected, broadly speaking, that strikes would be more successful in years of general prosperity, when the employers could afford to raise wages or grant improved conditions, than in years of commercial depression. Strikes during the relatively prosperous years from 1898 to 1900 show a considerably greater degree of success than those in the depressed years from 1894 to 1896. At the same time 1891 and 1892, prosperous years, were marked by less than average success for strikers.

It is noteworthy that strikes during the last six years covered by the table were in general much more successful than during earlier years. This is possibly an indication of growing strength on the part of labor organizations.

It is interesting to notice that, according to these statistics, the proportion of strikes in the United States which result in compromise is very much less than in any European country for which statistics are given, where compromised strikes are usually from one-third to one-half of the entire number. It is by no means impossible that this wide difference is due in part to different methods of reporting and estimating the results of strikes. It may be that the American statistics would represent a strike as a total failure, while the foreign authorities would discover some element of advantage to the employees and would enter it as a compromised strike. Of course, on the other hand, there might be strikes which the American reports would treat as wholly successful, but which in Europe would be considered as compromised. In this country, moreover, strike statistics are secured only a considerable time after the end of the dispute. In the meantime the minor facts regarding the settlement of a dispute may be forgotten and only the general gain for the one side or the other may be reported. In Europe strikes are usually reported soon after they occur, while the precise points at issue and the results are more fresh in memory. Doubtless, however, different conditions in Europe bring it about that there are really many more compromised strikes than in our country.

The inclusion of the statistics regarding the results of lockouts modifies very slightly the conclusions regarding the success and failure of industrial disputes gained from consideration of strikes alone. In the above table the statistics of the Department of Labor have been reversed. The results of lockouts, as well as the results of strikes, have been based upon the success or failure of the employees, while in the original table the success or failure of a lockout meant success or failure of the employers. The difference between the strike and the lockout, as already indicated, is so slight that there seems no great gain in employing a different method of stating the results. The only difficulty arises as to the significance of a partly successful lockout. We have considered partly successful strikes in general as resulting to the benefit of the employees. It might seem at first that a partly successful lockout is really a victory for the employer, since he takes the first step in proposing the changed conditions and succeeds in establishing part of the desired change. But precisely the same situation arises in the case of the strike which is designed to resist a proposed reduction of wages. If the reduction made after the strike is less than the employer had proposed, the employees may, perhaps, fairly be stated to have succeeded in part with their contention. Although their position is worse than before the strike it is better than it would have been without the strike. In the same way a compromised lockout leaves the employees in a better position than they would have occupied had there been no resistance to the proposals of the employer. The fairness of this method of estimating success is dependent mainly on the fact that the employer is, under

our system of industry, theoretically the dictator of labor conditions. Whatever the workmen get beyond what he is willing to grant may be considered gain for them. On the basis of this reasoning we may perhaps fairly call a partial successful lockout a partial success for the employees, rather than for the employers.

In any case little difference would be made in the figures for the results of industrial disputes did we include compromised lockouts under the head of successes for employees or failures for them. The number of lockouts is less than one-tenth of the number of strikes. The proportion of compromised lockouts is only one-sixteenth of the total number of lockouts, and the percentage of success or failure for employees in strikes and lockouts combined would be varied less than 1 per cent by classing these compromised lockouts one way or the other.

The table shows, for the entire period of 20 years, that the employees had the advantage in 42.93 per cent of the establishments in which lockouts occurred; that the employers gained their point in 50.79 per cent of the establishments, and that in 6.28 per cent of the establishments there was a compromise. Although the proportion of success for employees in lockouts is considerably less than in strikes, the fact that the number of lockouts is so small indicates that the statistics of success and failure for both classes together would not vary materially from the statistics for strikes alone. The very large proportion of establishments in which locked-out employees were defeated during 1900 is accounted for chiefly by the result of the great lockout in the Chicago building trades, in which very many establishments were concerned and in which the employers won their contention.

2. *Success and failure of strikes by persons concerned.*—The relative proportion of success and failure in strikes appears somewhat differently if we consider, instead of the number of establishments in which strikes succeeded or failed, the proportion of employees who gained or lost their object in the strikes of the respective years. The percentages of success and failure from this standpoint are shown in the following table:

*Results of strikes for employees, January 1, 1881, to December 31, 1900.*

Year.	Per cent thrown out of employment		
	In successful strikes	In partly successful strikes	In strikes which failed.
1881.....	12 33	13 50	43 57
1882.....	29 58	4 60	65 82
1883.....	36 82	11 37	51 81
1884.....	35 86	3 13	60 71
1885.....	47 54	9 82	42 63
1886.....	38 48	14 61	46 91
1887.....	33 60	6 97	59 43
1888.....	27 83	7 54	64 63
1889.....	28 89	25 09	46 02
1890.....	45 12	13 77	41 11
1891.....	27 02	7 65	65 33
1892.....	29 58	7 95	62 47
1893.....	23 11	15 79	60 77
1894.....	17 79	20 83	61 38
1895.....	39 86	11 14	49 00
1896.....	41 39	14 31	44 30
1897.....	38 90	37 29	23 81
1898.....	43 64	9 24	47 12
1899.....	54 48	14 30	31 22
1900.....	28 81	38 75	32 44
Total.....	35 02	16 72	48 26

It will be observed that this method of comparison shows the results of strikes much less favorable to the employees than the method of comparison by the number of establishments. While for the entire period the percentage of establishments in which strikes succeeded or partly succeeded was 63.81, the number of persons thrown out of employment in successful and partly successful strikes amounted to only 51.74 per cent of the total number of persons thrown out of employment. Almost half of all strikers failed altogether to win their object. This difference seems to indicate that strikes in larger establishments are somewhat less apt to be successful than those in smaller ones, a fact which might perhaps be expected on general grounds, since in the larger establishment the employer is likely to have more capital and greater resisting power.

If we consider the relative proportion of successful and unsuccessful strikes from year to year, as shown by the figures for the persons thrown out of employment, we have again results differing somewhat from those shown by the table regarding establishments. Nevertheless, the above suggestions as to the relative success of strikes in prosperous years as compared with years of depression are fairly borne out, except by the figures for the years 1882 and 1884. Thus, while in 1882 only 38.24 per cent of the establishments involved in strikes show a failure, no less than 65.82 per cent of the persons thrown out of employment by strikes in that year failed to win their case. The proportion of employees who were successful in the strikes of 1884 was also large. Both of those years were years of fair prosperity. The figures for the number of strikers in 1898 to 1900 confirm the opinion that prosperity of business tends to make strikes successful. At the same time comparisons for other years, as before, fail to show a close parallelism between the degree of industrial prosperity and the result of strikes.

Such discrepancies as a detailed comparison from year to year shows between the results, as indicated by establishments, and as indicated by persons thrown out of employment, emphasize the difficulty of properly handling strike statistics. A few strikes lost or won in great establishments employing many thousands of persons may make a wide difference in the relation between totals for establishments and the total for strikers in the measurement of results. Since the causes of success or failure in these large establishments may be peculiar and independent of causes affecting the country generally, conclusions as to the effect of wide-reaching causes on the results of strikes as a whole may be vitiated. For some purposes comparisons of strike statistics on the basis of the number of strikers are most satisfactory; for other purposes comparisons by establishments are to be preferred. Either method is somewhat inconclusive as a means to measure the effect of conditions and causes on the success or failure of strikes, or even to measure the degree of success or failure.

It must further be remembered in considering the results of strikes that the statistics of the Department of Labor do not cover at all strikes lasting only a single day. Such strikes are very numerous and their short duration is usually due to a concession by the employer.

In another connection some discussion has been given as to the relative significance of successful and unsuccessful strikes.<sup>1</sup> It is often urged that though a majority of strikers may fail to gain their cause immediately, yet the policy of striking may still be advantageous.

**3. Statistics presented by State bureaus and labor organizations.**—It would be desirable, if possible, to compare with the statistics of the Department of Labor regarding the results of strikes comprehensive statistics for separate States and trades prepared by other authorities. Unfortunately no such comprehensive statistics exist and the accuracy of the few figures available is open to question.

It may be, however, worth while to call attention to the strike statistics prepared by the New York bureau of labor statistics, covering the years from 1885 to 1892.<sup>2</sup> This is approximately the same length of time as that covered by the second strike report of the Department of Labor, January 1, 1887, to July 1, 1894. The New York statistics are, like most of those of the Department of Labor, based upon the number of establishments. The total number of establishments affected by strikes in New York reported for the 8 years was 23,559, while the Department of Labor discovered only 9,539 strikes in that State during the years 1887 to 1894. The difference, so far as it is not explicable by the difference in the years covered, is probably due rather to differences in the method of defining establishments than to the greater completeness of the New York returns.<sup>3</sup>

According to the reports of the New York bureau the number of successful strikes, by establishments, during the years 1885 to 1891 was 15,259; compromised 1,752; unsuccessful, 5,362. The proportion of successful strikes would thus appear to be a little over 67 per cent, while the number which failed entirely was only about 25 per cent. These figures show a much larger proportion of successful strikes than are reported by the Department of Labor for the strikes of the entire country, either from 1887 to 1894 or from 1881 to 1900. Nevertheless, it is not to be hastily inferred that there is a material discrepancy between the statistics of the two authorities. The reports of the Department of Labor itself show the proportion of successful strikes in New York to be considerably above the average for the nation as a whole, successful strikes in that State from 1887 to 1894 being stated as 63 per cent of all, and strikes wholly unsuccessful only 32 per cent. The strong organization of the building and other leading trades in the

<sup>1</sup> P. 669.

<sup>2</sup> Summarized in Report of New York Bureau of Labor Statistics, 1891, p. 1080, and 1892, p. 3.

<sup>3</sup> Some strikes lasting less than 1 day are probably counted by the New York bureau, which would be excluded by the Department of Labor.

great cities of New York probably explains the large proportion of successful strikes in that State.

The bureau of industrial statistics of the State of Pennsylvania also kept some records of strikes for a considerable number of years. The basis for the enumeration in that State was the individual strike, not the establishments affected, and the numbers accordingly are relatively small. Moreover, it seems probable that by no means all of the strikes are covered by the statistics. For this reason it will not be profitable to consider the figures for any considerable number of years or to analyze them in detail. It will suffice to point out that for the years 1887 to 1890 the Pennsylvania bureau reported 37 successful and partly successful strikes as against 72 unsuccessful strikes. The proportion of successful strikes would thus appear to be considerably lower than that indicated by the statistics of the United States Department of Labor for the entire country, based on establishments. The proportion of wholly successful strikes in Pennsylvania from 1887 to 1894, as reported by the national department, is somewhat lower than the average for all States,<sup>1</sup> but reaches nearly 40 per cent of all, while wholly unsuccessful strikes amounted to about 53 per cent of all.

The American Federation of Labor has during the past few years made a practice of obtaining strike statistics from the organizations included in its membership. These organizations cover a very considerable proportion of the number of organized laborers in all trades, but of course the proportion of members of the American Federation of Labor to the total number of employees, organized and unorganized, is comparatively small. The basis of the reports concerning strikes presented by the American Federation is the number of individual strikes, not the number of establishments affected. Information is, of course, obtained exclusively from the members of the allied unions. The general inclination of the officers of the separate unions, as well as the officers of the Federation, is probably to make the most favorable showing possible as to the results of strikes, for the purpose of encouraging nonunion men to join the organization, and for other ends. The following table shows the report of the American Federation of Labor concerning strikes for the years 1897 to 1900, inclusive.<sup>2</sup>

Year	Persons striking	Successful	Compromised	Unsuccessful
1897 .....	161,872	189	31	33
1898 .....	22,311	160	29	36
1899 .....	114,282	425	39	48
1900 .....	213,190	455	74	106
Total .....	.....	1,229	173	223

From this it will be seen that the Federation claims that its constituent unions have won 1,229 strikes out of the 1,625 strikes which have been brought to a definite settlement in the 4 years. This proportion of successful strikes, approximately three-fourths, may be contrasted with the 50.77 per cent of successful strikes (as measured by establishments) reported by the Department of Labor for the years 1881 to 1900, and as contrasted with an average of 60.3 per cent of successful strikes reported by that Department for the years 1897-1900. If the number of compromised strikes be added to the number of successful strikes, we find that nearly seven-eighths of all the strikes reported, according to the American Federation of Labor, resulted in advantage to the employees.

It may, of course, readily be that these figures of the Federation are fairly accurate, and that the explanation of the greater success of the strikes reported is that they are conducted by the strongest labor organizations in the country. The strikes covered by the statistics of the Department of Labor include many by unorganized workingmen or by weak local unions, while the great majority of the strikes reported by the Federation are made by unions affiliated with large national organizations. The figures of the Federation cover less than one-third of the total number of strikes occurring in the country, as reported by the Department of Labor, which found 5,710 strikes from 1897 to 1900, while the Federation reports cover only 1,625. Finally, the basis of statistics as to results in the one case is the separate strikes and in the other the establishments.

The reports of the American Federation of Labor concerning the results of strikes in individual trades show for almost every trade a larger number of successful strikes than of unsuccessful strikes. For the year 1900 the only trades reporting that they had lost more strikes than they had won were the iron molders and the printers.

<sup>1</sup> See Report of Commissioner of Labor, 1894, p. 1185, Annual Report Secretary of Internal Affairs of Pennsylvania, part 3, 1890, pp. 30-50.

<sup>2</sup> Compiled from annual reports of the secretary of the American Federation of Labor.

Two or three of the leading labor organizations have kept records of the results of strikes for a considerable number of years. Thus the Secretary of the United Brotherhood of Carpenters and Joiners, an organization including from 25,000 to 40,000 members, reported in 1898 that during the 15 years since 1883 the members of the organization had engaged in 1,026 strikes and lockouts, of which 898 were successful, 87 compromised, and 61 lost. Here the proportion of successful strikes is considerably higher than even for the American Federation as a whole, the number of successful and partly successful strikes being considerably more than nine-tenths of the total number. The same comments as to the trustworthiness of these statistics may be made as have been suggested concerning the statistics of the Federation. The Brotherhood of Carpenters is a strong national organization and its local unions are still further strengthened in many cases by affiliation with other unions in the building trades, or with local unions generally. By means of sympathetic strikes, as well as by the strength of the separate unions themselves, the organization is doubtless able to win a large proportion of its strikes, but the percentage indicated by the above figures is so very high as to cause some doubt of the methods employed in collecting and presenting the statistics.

We have also, among other less important statistics prepared by labor organizations, a record of the strikes of the Brotherhood of Painters and Decorators for the years 1891 to 1892.<sup>1</sup> This shows for the 2 years 107 successful strikes and 20 partly successful, as compared with only 16 strikes which failed.

4. **Results of strikes for respective causes.**—An important question arises as to the relative success of strikes for different classes of objects. The following table has been prepared for strikes of the years 1881 to 1900, as reported by the United States Department of Labor. The same method has been used as in compiling the table above (p. 653), regarding the causes of strikes. That is, where in the reports two or more causes are given for a single strike, each cause has been tabulated separately and the result of the strike has also been entered under the heading for each cause. The detailed causes have been brought together into comprehensive groups in the way already indicated. This method gives the most satisfactory available basis of comparison as to the relative success of strikes for different causes. Of course where a strike is intended to accomplish two or more objects it is impossible to know which was the most important, upon which the general success or failure of the strike depended. In the case of partly successful strikes especially, it may be that the objects gained were much less important than those which the strikers failed to gain, while on the other hand precisely the reverse may be the case.

*Results of strikes according to causes, 1881-1900.*

Causes	Total number of establishments in which strikes were caused by demand <sup>1</sup>	No. of establishments in which strikes for causes named were—			Per cent of establishments in which strikes were—		
		Successful	Partly successful	Unsuccessful	Successful	Partly successful	Unsuccessful
For increase of wages and adoption of scales.....	61,321	34,227	11,745	18,338	53.2	18.2	28.6
Against decrease of wages.....	10,813	1,480	1,296	5,032	41.3	12.1	46.5
For reduction of hours, overtime pay, holidays, etc.....	40,228	23,779	5,779	10,653	59.3	14.2	26.5

For recognition of union and adoption of union rules.....	9,968	5,063	1,369	3,536	50.8	13.8	35.4
In sympathy with strikers or men locked out elsewhere.....	4,700	1,173	104	3,420	24.9	2.2	72.9
Against employment of nonunion men, foremen, foreigners, negroes, etc.....	8,273	4,256	370	3,640	51.7	4.5	43.9
For employment, retention, or reinstatement of men.....	1,638	577	119	941	35.9	7.3	57.7
Regarding apprenticeship and employment of children.....	1,223	724	38	461	59.1	3.1	37.7
Regarding use of machinery and appliances.....	221	90	5	126	40.7	2.3	57
Regarding working rules and miscellaneous matters.....	6,075	4,127	248	1,695	68	4	28
Total.....	215,744	82,718	21,921	51,046	53.1	14.1	32.8

<sup>1</sup> See p. 136 of this volume.

<sup>2</sup> Slight discrepancies between the totals and the figures for results are due to the inclusion in the first column of a very few strikes for which results were not ascertained.

From this table it appears that during the years 1881 to 1900 the number of causes of strikes in different establishments amounted to 155,744. The employees carried their point as regards 82,718 of the objects sought, or 53.1 per cent; they were partly successful as regards 21,921 of their objects, or 14.1 per cent, while they failed as regards 51,046 objects, or 32.8 per cent of the entire number.<sup>1</sup>

It will be seen from the table that strikes for increase of wages, which are by far the most numerous of all strikes, show a proportion of entire success almost precisely the same as is found in the case of those for all causes combined. The proportion of strikes seeking increase of wages which result in partial success (18.2 per cent) is slightly above the average, while total failure is somewhat less frequent when the demand is for increase of wages than in the case of all strikes combined. On the other hand, strikes against decrease of wages are particularly unsuccessful, no less than 46.5 per cent failing altogether, and only 41.3 per cent showing entire success.

Strikes regarding the hours of labor, which are no less than one-fourth of the entire number, are somewhat more successful than those for most other causes. During the years from 1881 to 1900 the workmen were successful in 59.3 per cent of the cases where they sought reduction or readjustment of hours, payment for overtime, etc., while only in 26.5 per cent of their strikes for this object did they fail altogether.

Strikes regarding the methods of adjusting and of paying wages, which, as pointed out in another connection (p. 651), include a considerable variety of different objects, show a little less degree of entire success than is found in the case of strikes for increase of wages, while 38.6 per cent of strikes for these latter objects resulted in entire failure for the workmen. The result of strikes for the recognition of the union does not show materially differing proportions, a little more than half of them resulting in entire success and 35.4 per cent in complete failure.

Sympathetic strikes, as readily seen by the table, are peculiarly unsuccessful. For the years 1881 to 1900 the workmen were successful in their object in only 24.9 per cent of the establishments where they struck out of sympathy. This seems to show that the sympathetic strike which is certainly unpopular with people outside the working classes, is not a very effective method of industrial warfare. It is probably true that workmen strike in sympathy only when the weakness of the position of those whom they seek to aid has become manifest, so that the chances of a successful result are slight. It is also true that, except so far as those who strike from sympathy are employed in the same establishments as the original strikers, or in establishments very directly connected with those in which the original strike occurs, the employer against whom the first strike was directed is not very directly and powerfully influenced by the sympathetic cessation of labor on the part of other workmen.

Strikes against the employment of nonunion men, members of other unions, obnoxious foremen, negroes, and other persons, are somewhat more unsuccessful than most other classes of strikes. While 51.7 per cent of strikes of this class were won by the workmen, the proportion of partially successful strikes is so small that no less than 43.9 per cent of the strikes having these objects were entire failures. Even more unsuccessful are strikes seeking to secure the reinstatement or the retention of members of the union or of other employees, only 35.9 per cent of which were wholly successful, while 57.7 per cent failed entirely.

Strikes regarding apprenticeship and the employment of young persons and children show a somewhat larger proportion totally successful (59.1 per cent) than in the case of all strikes combined, but very few of these strikes result in partial success, so that the failures are as high as 37.7 per cent. Strikes regarding the use of machinery and appliances, which are comparatively few in number, show very unfavorable results to the workmen, no less than 57 per cent of them proving wholly unsuccessful. Miscellaneous strikes, which cover those seeking a large variety of different objects, especially such as relate to the methods of work and the conditions of workshops, are more successful than all classes of strikes combined.

From these statistics for the causes and results of strikes we may conclude that strikes seeking an increase of wages and those regarding hours, which together include about two-thirds of all strikes, are relatively more successful than the average for all strikes. The most unsuccessful strikes are those against reduction of wages and those in sympathy with other strikers.

<sup>1</sup>The proportion of success as estimated by the number of causes differs somewhat from the proportion of success as measured merely by the number of establishments affected by strikes. This is due to the fact that often strikes occur for two or more causes, and that the duplication of them and of their results makes the proportions of success and failure vary somewhat from those found on the other basis.

5. *Success and failure of strikes by industries.*—Hitherto we have been considering the results of strikes as regards industries as a whole. We may now present similar statistics for the leading individual industries, for the years from 1881 to 1900, as compiled by the report of the Department of Labor for 1900. The following table shows for the leading trades the percentage of establishments in which strikes succeeded and failed for the 20 years, distinguishing between strikes ordered by labor organizations and those not so ordered. Unfortunately it is impossible to ascertain the proportion of strikers for each trade who succeeded or who failed in obtaining their demands.

*Per cent of establishments in which strikers succeeded, succeeded partly, and failed in strikes ordered and not ordered, by organizations, by industries, January 1, 1881, to December 31, 1900.*

[This table does not include the results for 37 establishments for which the data were not obtainable by reason of the fact that strikes were still pending, etc., and 101 establishments engaged in strikes for which information was not obtainable as to whether they were ordered or not ordered by organizations.]

These figures show very distinctly the fact that strikes ordered by labor organizations are more successful than those not so ordered. While the workmen were wholly successful in 52.86 per cent of the establishments in which strikes were ordered by trade unions, they were successful in only 35.56 per cent of the establishments in which strikes were not so ordered. The proportion of entire failure for strikes ordered by labor organizations is only 33.54 per cent, while 55.39 per cent of strikes not ordered by organizations were entire failures.

It might, indeed, be argued that the fact of the greater proportion of success among strikes ordered by labor organizations was due rather to the greater skill and intelligence of the workmen in the trades where most strikes are ordered by organizations than to the mere element of organization itself. It is, of course, true that in those trades in which the position of the workman is naturally the strongest, we find also the strongest trade unions. Nevertheless, a comparison between those strikes in each particular trade which are ordered by organizations and those not so ordered shows in most instances that strikes ordered by trade unions are more successful than those which are initiated without the action of a labor organization.

Further light as to the effect of strong labor organizations in promoting the success of strikes may be obtained by a comparison of the results of strikes in certain leading industries where workmen are known to be strongly organized with results in other leading industries where the employees are either unorganized or weakly organized. The same 9 trades of each class, which were selected for comparison as regards the number of strikes and strikers, may be compared as regards results. The following table presents such a comparison:

*Results of strikes in certain leading industries, 1881-1890.*

	Strikes ordered by organizations				Strikes not ordered by organizations			
	Number of strikes	Per cent of establishments in which strikes—			Number of strikes	Per cent of establishments in which strikes—

Total.....	2,380	28.82	17.69	53.48	2,502	26.25	9.08	64.55

It will be seen that in the 9 trades selected as being strongly organized the workmen were successful, on the average, in 48.07 per cent of the establishments in which strikes were ordered by labor organizations. They were partly successful in 12.77 per cent of the establishments, and wholly unsuccessful in 39.15 per cent of the establishments in which strikes were ordered by labor unions. It is true that these figures show a somewhat lower degree of success than is found for strikes ordered by labor organizations in all industries combined. The favorable figures in a number of industries which can not with certainty be grouped under the head of strongly organized industries, some of which, indeed, are misleading because they represent the results of only a very small number of

strikes, combine to bring about this discrepancy. On the other hand, a comparison between the 9 strongly organized trades and the 9 which are known to be weakly organized shows a much higher proportion of success for the first group than for the second. In the weakly organized industries the workmen were successful, on the average, in only 28.82 per cent of the establishments in which strikes were ordered by labor organizations, while they failed altogether in 53.48 per cent of the establishments where strikes were so ordered. This marked difference is not solely to be attributed to the difference in the strength of the organizations, since many other factors enter into the determination of the relative strength of workmen as against employers. Thus, in the coal and coke industry, which shows an exceedingly low proportion of success for strikers, the very great oversupply of labor, and the periodical seasons of unemployment, render the position of the workmen in strikes especially insecure. There is reason to believe, however, that the fact of strong organization is an important element in the explanation of the markedly higher degree of success shown for the first 9 trades covered by the above table as compared with the second group.

The proportion of success in strikes ordered by labor organizations among the trades enumerated is the highest in the machinists' trade, where 57.95 per cent of all strikes so ordered were wholly successful. The building trades come next with 55.24 per cent of strikes ordered by unions wholly successful, and only 31.58 per cent wholly unsuccessful. The percentages for strikes connected with transportation do not differ greatly from those for the building trades. On the other hand, in the brewing industry, which must rank as strongly organized, the proportion of entire success is only 37.29 per cent, while in the tobacco industry, although the percentage of entire success is somewhat greater, the partly successful strikes are relatively few, so that 51.96 per cent of all strikes ordered by trade unions proved unsuccessful.

Among the weakly organized trades the lowest proportion of successes is shown in the manufacture of rubber goods, where the working people gained their point in only 7.69 per cent of the establishments where strikes were ordered by labor organizations, and in only 25.58 per cent of the establishments where they were not so ordered. It should be noted, however, that the entire number of strikes among the makers of rubber goods is comparatively small, so that the figures for results are less significant than they would be in a more important trade. The great cotton manufacturing industry also shows the employees conspicuously unsuccessful in their strikes. In only 12.11 per cent of the establishments where strikes were ordered by trade unions did they prove wholly successful, while in 65.53 per cent of such establishments they failed altogether. In establishments where strikes were ordered otherwise than by labor organizations, the working people in this industry succeeded in 22.15 per cent of the cases, while the percentage of failure is even higher than for strikes ordered by labor organizations, 70.16 per cent. The great coal and coke industry, in which strikes are more prevalent than in any other, shows also a decidedly low degree of success for the workmen. Strikes ordered by trade unions were successful in only 18.54 per cent of the establishments, partly successful in 33.59 per cent, and entirely unsuccessful in 47.87 per cent. The figures for the mining industry differ somewhat in the case of strikes not ordered by labor organizations, but these also show a very low measure of success.

Detailed comment on the figures for strikes not ordered by labor organizations will scarcely be necessary. It may be noted that in the weakly organized trades the strikes ordered by labor organizations do not show so much greater success than those not so ordered, as in the strongly organized. This is to be expected, since the presence of many unorganized workers in a trade weakens greatly the position of those who are organized. The strikes not ordered by labor organizations in the stronger trades show a greater measure of success than those ordered by unions in more weakly organized industries.

## II. RESULTS OF STRIKES IN FOREIGN COUNTRIES.

1. *Great Britain.*—The British statistics show the results of strikes and lockouts combined from 1889 to 1899. The most satisfactory basis for comparison being the number of employees thrown out by strikes and lockouts, the following table gives these figures with an indication as to the success or failure of the employees. The total number of persons affected as given excludes a small number concerned in strikes and lockouts for which the results were not reported. The figures, up to 1897 inclusive, relate to the entire number thrown out by strikes and lockouts, while those of 1898 and 1899 represent only those directly interested in the disputes. The difference in the proportions under the different methods of calculation, however, is not great.

*Results of strikes and lockouts by persons striking or locked out, Great Britain, 1889-1899.<sup>1</sup>*

Year.	Number of employees affected by strikes or lockouts in which—			
	Employees succeeded	Employers succeeded	Compromise resulted	Total (so far as results reported)
1889-1893	821,631	82,545	610,295	1,817,471
1891	71,661	136,373	111,078	319,112
1895	63,511	73,748	121,137	261,129
1896	78,186	66,120	53,598	198,104
1897	19,788	102,182	75,265	227,535
1898	15,490	120,667	31,501	206,658
1899	36,808	60,275	10,237	138,068
1891-1899	313,777	569,865	438,816	1,315,196
1889-1899	1,170,403	942,410	1,049,111	3,162,667

	Percentage of employees affected by strikes or lockouts in which—		
	Employees succeeded	Employers succeeded	Compromise resulted
1889-1893	45.4	21.1	33.5
1891-1899	25.7	11.6	32.7
1889-1899	37.6	29.2	33.2

<sup>1</sup> Compiled from Bulletins of United States Department of Labor, 1895, p. 29, 1896, p. 537, 1898, p. 716, 1899, p. 869, 1900, p. 888.

It will be observed that for the last 6 years covered by the statistics, which are presented separately, there have been considerable variations from year to year in the relative success and failure of the employees, while the proportion of strikes and lockouts which resulted in compromises was especially subject to variation. In the absence of more adequate information as to the changes in industrial conditions and the other circumstances, it will not be desirable to attempt to comment as to the causes of these variations. It should be noted especially that the totals for any particular year will be affected greatly by the results of a few large strikes, since, as we have already seen, a large proportion of the total number of persons thrown out of employment in Great Britain are concerned in a few leading disputes.

For the 11 years covered by the statistics there were 3,162,667 persons thrown out of employment in strikes and lockouts for which the results were reported. Of these, 1,170,403, or 37.6 per cent of the total number, were successful in winning their objects, while 1,049,111, or 33.2 per cent, succeeded in obtaining a compromise which gave them some advantage. On the other hand, 942,410, or 29.2 per cent of the total number, were engaged in strikes and lockouts in which the employers were successful. From these figures it would appear that strikes and lockouts result much more to the advantage of the employees in Great Britain than is the case in the United States. It will be remembered that from 1881 to 1900 only 51.74 per cent of the persons thrown out of employment by strikes in the United States succeeded in gaining any advantage, while in Great Britain

nearly 71 per cent were successful or partly successful. The proportion of employees engaged in wholly successful strikes in Great Britain during 1889 to 1899 was 37.6 per cent, as compared with 35.02 per cent in the United States for the years 1881 to 1900.

It is noteworthy that the English statistics show a very much larger proportion of strikes and lockouts resulting in compromises than those of the United States show. No less than 29.2 per cent of the employees affected by strikes and lockouts in Great Britain from 1889 to 1899 were concerned in disputes which were settled by compromise, while the proportion of employees thrown out of employment in compromised strikes in the United States was only one-sixth. It is a well-known fact that labor organizations are more general and more strongly organized in the United Kingdom than in our own country, and this fact possibly accounts for the greater success of the English employees in their disputes with employers.

The reports show that the British employees were much less successful in their disputes with employers during the period from 1894 to 1899 than during the period from 1889 to 1893. While the proportion of compromised strikes was almost the same in each period, only 25.7 per cent of the total number of employees affected by strikes were wholly successful during the second period, as compared with 45.4 per cent successful during the first period.

The following table shows the number of individual strikes in Great Britain and Ireland from 1889 to 1893 for respective causes or objects, together with the number in which the employees succeeded partly or failed.

*Results of strikes, by causes, Great Britain, 1889 to 1893.<sup>1</sup>*

Cause or object.	Succeeded	Succeeded partly	Failed	Not reported	Total.
For increase of wages, and the same combined with secondary causes. ....	940	635	380	160	2,115
Against reduction of wages, same combined with secondary causes. ....	210	117	199	53	579

In sympathy with other strikes and disputes. ....	5	10	28	15	58
Cause not known. ....	2	2	7	28	39
All causes. ....	1,815	1,055	1,284	372	4,526

<sup>1</sup> Bulletin of U. S. Dept. of Labor, 1895, pp. 27, 28.

It will be observed that out of 4,526 strikes during this period, 1,815 succeeded; 1,055 succeeded partly, and 1,284 failed. Disregarding those the results of which were not reported, we find that 44 per cent of the strikes for which the results are given resulted favorably to the employees, while 25 per cent were compromised, and 31 per cent resulted in favor of the employers. The largest number of strikes was for increased wages. As in the United States, we find that the proportion of successful strikes for this cause is somewhat larger than that for all causes combined, while the proportion of partly successful strikes is also conspicuously large and the proportion of total failures conspicuously small. On the other hand, as in the United States, strikes against a reduction of wages were much less successful than the average, almost as many resulting in entire failure as in success. The same statement applies to strikes against conditions of work, materials, fines, etc., a class of strikes which does not correspond closely to any one head in the American statistics. Strikes against the employment of nonunion men were also conspicuously unsuccessful, and the small number of sympathetic strikes shows the largest proportion of failure of any class. Strikes in favor of the reduction of hours were somewhat more successful than the average, herein resembling the results in the United States, where such strikes have been relatively successful.

A more satisfactory method of comparing the results of strikes is by taking the number of persons engaged in successful, partly successful, and compro-

mixed strikes, rather than the separate strikes themselves, as a basis. Such statistics, classified according to the causes of strikes, are available in Great Britain only from 1896 to 1898. It will not be profitable to present the figures for each separate year, since it would require a very detailed study to ascertain the causes of the marked variations in the results from year to year.

The following table shows for these years the number of persons actually striking or actually locked out (not, as in the previous tables, the total number of persons thrown out of employment by strikes and lockouts) in strikes and lockouts involving the respective classes of causes, together with the number of employees who were successful, who failed, or who succeeded in obtaining a compromise. The table also shows the percentage of the total number of persons engaged in strikes and lockouts for particular causes who were successful, unsuccessful, or partly successful.

The period as a whole is so short, and the effect of the few great strikes upon the statistics is so strong, that the whole comparison is not altogether satisfactory. Nevertheless it doubtless presents a reasonably accurate view of the relative success and failure of strikes for different classes of causes in the United Kingdom.

*Number and percentage of employees striking or locked out in Great Britain, 1896-1898, in strikes and lockouts for respective classes of causes.*

Causes.	Number of employees where—				Percent of employees where—		
	Employ-ees suc-cessful	Employ-ees suc-cessful	Comprom-ised	Total	Employ-ees suc-cessful	Employ-ees suc-cessful	Comprom-ised
Wages .....	115,240	184,466	95,401	398,502	28.9	46	24
Hours .....	5,134	19,897	2,130	57,194	8.9	87.2	3.7
Employment of persons or classes .....	9,614	18,398	20,852	49,008	19.6	37.5	42.5
Working rules, discipline, etc. ....	21,342	22,840	48,529	83,174	25.7	27.5	46.5
Trade unionism .....	16,144	8,839	2,265	22,264	72.5	17.1	10
Sympathetic disputes .....	3,635	6,151	3,786	13,572	26.8	45.3	27.9
Miscellaneous .....	2,655	2,878	401	5,999	44.2	47.9	6.6
Total .....	173,764	288,469	163,364	629,703	27.5	45.8	26

It will be observed that there were, counting a few persons engaged in strikes as to which the results were not ascertained, 629,703 persons actually striking or locked out in Great Britain from 1896 to 1898. Of these, 173,764, or 27.5 per cent of the whole number, were successful in winning their point, while 163,364, or 26 per cent, were partly successful. The number of employees engaged in strikes and lockouts in which the employers were wholly successful was 288,469, or 45.8 per cent. In strikes involving wages as a cause 28.9 per cent of the employees concerned were successful and 24 per cent partly successful, these proportions not differing greatly from those for all classes of strikes combined. The strikes having changes in hours of labor as an object were apparently astonishingly unsuccessful, less than 13 per cent of the employees engaged in such strikes attaining their objects in any degree. This result, however, was brought about by the defeat of the strikers in one or two large strikes involving a great majority of the total number of persons engaged in strikes for this cause. Strikes concerning the employment of persons or classes, the larger number of which are directed against nonunion men, show a large proportion resulting in compromise, 42.5 per cent, while the proportion of employees securing compromises in the case of strikes regarding working rules, discipline, etc., was still higher—46.5 per cent. The proportion of strikes for these two classes of causes which wholly failed was accordingly considerably below the average. Strikes designed to secure recognition of the union and to enforce the principles of unionism appear to have resulted by far the most favorably to the employees, 72.5 per cent of those engaged in such strikes having been entirely successful and 10 per cent partly successful. These figures contrast with the moderate proportion of success for strikes for the recognition of the union in the United States from 1881 to 1900. Sympathetic disputes in Great Britain show results very closely parallel to those for all classes of disputes combined.

It should be remembered in contrasting the results of strikes in Great Britain for these 3 years, 1896-1898, with those of the 5 years, 1889 to 1893, as indicated above, both that the basis of comparison is entirely different, and that strikes for all classes of causes were much less successful during the latter period than during the former.

## 684 THE INDUSTRIAL COMMISSION:—STRIKES AND LOCKOUTS.

2. *France*.<sup>1</sup>—The following table shows for each year from 1890 to 1899 the proportion of all strikers in France who were engaged in successful, partly successful, and unsuccessful strikes, respectively:

*Results of strikes in France.*

Year	Percentage of all strikers who were engaged in strikes which were—		
	Successful	Partly successful	Unsuccessful
1890.....	11.4	23.8	64.7
1891.....	20.6	49.8	29.5
1892.....	20.1	49.8	29.7
1893.....	21.3	26.4	52.4
1894.....	23.6	45.1	30.9
1895.....	18.7	45.1	36.2
1896.....	23.2	34.2	42.5
1897.....	28.8	41.8	29.4
1898.....	12.9	39.7	47.4
1899.....	11.9	70.6	17.5
1890-1899.....	18.04	43.33	38.63

It appears that, taking the 10 years as a whole, only 18.04 per cent of all persons engaging in strikes were wholly successful in securing their demands. This proportion of wholly successful strikers is much less than in the United States, where the successful strikers from 1881 to 1900 were 35.02 per cent of the entire number of strikers. On the other hand the number of strikers in France who were partly successful in winning their objects was extremely large, being no less than 43.33 per cent of all strikers, as compared with 16.72 per cent of strikers in partially successful strikes in the United States. It thus appears that French strikes probably on the whole result quite as much to the advantage of the employees than in the United States. Only 38.63 per cent of all strikers during the period covered by the French tables were wholly unsuccessful, as compared with 48.26 per cent in the United States.

If we take as a basis the number of separate strikes instead of the number of strikers, we find that 24.10 per cent of all strikes in France from 1890 to 1899 were wholly successful, while 31.29 per cent were partly successful, and 44.61 per cent wholly unsuccessful. From these figures it would appear that in France larger strikes are more likely to result in compromise or partial success for the employees than the smaller strikes, since the proportion of strikers in compromised strikes (43.33 per cent) is considerably higher than the proportion of all strikes which are compromised. Conversely, the proportion of strikers who were wholly successful and the proportion of strikers wholly unsuccessful are both smaller than the corresponding proportions of strikes which were wholly successful or wholly unsuccessful.

Taking the results of strikes for separate years, we find very considerable variations in the degree of success. Since the results of a few large strikes have a powerful influence upon the number of strikers who are successful or unsuccessful, it is impossible to draw any general conclusions as to the causes of these variations. The year 1899 is especially conspicuous for the very large proportion of strikers who were engaged in compromised strikes, 70.5 per cent of the entire number of strikers.

The French statistics make it possible to judge of the relative success of strikes of different degrees of magnitude. The following table, covering the years 1894 to 1898 only, shows the percentage of the total number of strikes of each size which resulted in success, partial success, or failure:

*Results of strikes in France according to number of strikers, 1894-1898.*

Number of strikers	Percentage of strikes which—		
	Succeeded	Partly succeeded	Failed.
5 to 25.....	19.8	17.9	62.3
25 to 50.....	23.1	30.2	46.7
51 to 100.....	23.6	37	39.4
101 to 200.....	24.3	42.1	33.6
201 to 500.....	23.4	46.9	29.7
501 to 1,000.....	25	38.7	36.3
1,000 and over.....	21.1	44.7	34.2
5 to 100.....	21.7	26.3	52
100 and over.....	23.8	43.5	32.6

It appears from this table that in France strikes involving a larger number of persons are more likely to prove successful than those involving a smaller number, although in the United States the opposite is true. Of the very numerous strikes in France involving less than 25 persons, only 19.8 per cent resulted in complete success, and 17.9 per cent in partial success, while no less than 62.3 per cent failed entirely. These figures may be contrasted with those for strikes involving from 101 to 200 persons, of which 24.3 per cent succeeded wholly, 42.1 per cent partly, while only 33.6 per cent resulted in total failure. The corresponding percentages of success for strikes involving from 201 to 500 and from 501 to 1,000 persons, respectively, do not differ greatly from those for strikes involving 100 to 200 persons. If we group together all strikes involving less than 100 persons on the one hand and all strikes involving more than 100 persons on the other hand, we find that of the smaller strikes 21.7 per cent resulted in entire success, while 23.8 per cent of the larger strikes were wholly successful. The difference here is not great, but in the case of partially successful strikes the workmen secured much more favorable results in the larger strikes than in the smaller. While only 26.3 per cent of the strikes involving less than 100 persons were partially successful, 43.5 per cent of those involving more than 100 persons were partially successful. As the reciprocal of these figures, more than half, 52 per cent, of the smaller strikes resulted in total failure, while only 32.6 per cent of the larger strikes were wholly unsuccessful.

The French statistics enable us also to compare the results of strikes according to their duration. The following table shows the percentages of all strikes from 1890 to 1899, lasting less than 1 week, which resulted in success, partial success, or failure, with the corresponding figures for strikes lasting more than 30 days, and with similar percentages also for the number of strikers engaged in successful, partly successful, and unsuccessful strikes of the respective lengths:

*Results of strikes in France according to duration, 1890-1899.*

Duration.	Percentage of strikes—			Percentage of strikers—		
	Success- ful	Partly success- ful	Unsuc- cessful	Success- ful	Partly success- ful	Unsuc- cessful
One week or less.....	27.74	28.43	43.83	32.66	34.89	32.45
More than 30 days.....	13.86	36.14	50	7.47	18.26	44.27
All strikes.....	24.1	31.29	44.61	18.04	43.33	38.63

It will be seen that of all strikes in France from 1890 to 1899, 24.1 per cent resulted in entire success. Short strikes, lasting less than 1 week, were somewhat more successful than all strikes combined (27.74 per cent being wholly successful), but it must be remembered that the results for all strikes are themselves greatly affected by the short strikes, which are much more numerous than longer ones. The proportion of partly successful strikes among those lasting less than 1 week is somewhat smaller than the proportion for the entire number of strikes, while the wholly unsuccessful strikes less than a week in duration bear very nearly the same proportion to all strikes of that length (43.83 per cent) as the entire number of wholly unsuccessful strikes bears to the entire number of strikes (44.61 per cent).

If, on the other hand, we consider only strikes lasting more than 30 days, we discover that they are relatively much less successful than the average for strikes of all lengths. Only 13.86 per cent of all long strikes during this period were wholly successful, while 50 per cent resulted in total failure.

The relative figures with regard to the percentage of strikers in short and long strikes who were successful or unsuccessful show results somewhat different from those indicated by the number of strikes, but confirm the conclusions already stated. Generally speaking, strikes lasting less than 1 week are not widely different in their results, as measured by this standard, from all strikes combined. On the other hand, strikes lasting more than 30 days show a very low proportion of wholly successful strikers, 7.47 per cent (as compared with 18.04 per cent for all strikes), while the proportion of those who failed altogether (44.27 per cent) is considerably greater than the proportion of strikers who were unsuccessful in all strikes combined (38.63 per cent).

### 3. Germany.<sup>1</sup>—Of the 1,288 strikes reported for the German Empire in 1899, 331, or

<sup>1</sup> Streiks und Aussperrungen im Jahre 1899, p. xxiv.

25.7 per cent, resulted in entire success for the workers. In 429, or 33.3 per cent, the strikers were partially successful, while in 528, or 41 per cent, they failed altogether. The proportions, as indicated by the number of strikers, were somewhat different. Only 18.8 per cent of all strikers were wholly successful, while the proportion of those who were partially successful was extremely high—52.2 per cent—contrasting conspicuously with the figures for partly successful strikers in the United States. The number of those who were engaged in wholly unsuccessful strikes in Germany was only 29 per cent of the entire number of strikers. It appears accordingly that, for this single year, there was a smaller proportion of German strikers who were wholly unsuccessful than was found in the United States for the years 1881 to 1900.

The German statistics distinguish the results of strikes as between those strikes which involve single establishments only and those which involve several establishments. The proportion of strikes in single establishments which resulted in entire success was 26.6 per cent in partial success, 25.3 per cent, and in entire failure, 48.1 per cent; while, of strikes each involving several establishments, 23.3 per cent were wholly successful; 54.3 per cent partly successful, and only 22.4 per cent entirely unsuccessful. This would appear to indicate that strikes covering several establishments are likely to be more vigorously carried on and to result in greater advantage to the employees than those involving single establishments only.

The German report distinguishes also between the results of strikes in which labor organizations were concerned and those in which labor organizations took no part. It appears that 25 per cent of the strikes ordered by labor organizations were successful; 41 per cent partly successful, and 34 per cent wholly unsuccessful; the corresponding figures for strikes occurring without the intervention of labor organizations being 26 per cent; 22.8 per cent, and 50.5 per cent. This shows, as in the United States, a considerably higher proportion of success (if partially successful strikes be grouped with the wholly successful ones) for strikes ordered by trade unions than for other strikes.

4. Austria.<sup>1</sup>—The following table shows by years the percentage of the total number of persons engaging in strikes in Austria during the years 1894 to 1899, who succeeded wholly or partly in obtaining their objects, or who were wholly unsuccessful.

*Results of strikes in Austria, 1894-1899.*

Year.	Percentage of all strikers engaged in strikes which were—		
	Successful.	Unsuccessful.	Partly successful.
1894.....	9.1	53.5	37.3
1895.....	12.8	26.5	60.7
1896.....	4.6	32.6	62.8
1897.....	15.7	36.5	47.8
1898.....	8.4	25.2	66.5
1899.....	10.2	17.8	72
1894-1899.....	9.4	33.5	57

The most noticeable feature in this table is the very large proportion of strikes resulting in compromise, by which some advantage was secured to the employees, although they failed to secure all of their demands. Taking the period as a whole, no less than 57 per cent of strikers were partially successful in gaining their objects, while only 9.4 per cent were wholly successful. It will be remembered that in the United States from 1881 to 1900 only 16.72 per cent of all employees were engaged in strikes reported as partly successful, while 35.02 per cent were engaged in wholly successful strikes. If we consider both the successful and the partly successful strikes as being, on the whole, victories for the employees, it would perhaps appear that strikes resulted more favorably to the working classes in Austria than in the United States, since some advantage was gained by 66.4 per cent of all strikers—essentially two-thirds—as compared with only 51.74 per cent in the United States. Of course, however, it is impossible to know how great are the advantages actually secured in compromised strikes.

<sup>1</sup> *Arbeitseinstellungen und Aussperrungen in Oesterreich, 1899*, pp. 23-33.

The proportion of success and failure shown by the Austrian statistics varies considerably from year to year. The year in which the workmen were least successful was 1894, when 53.5 per cent of them failed altogether to gain their objects, while the greatest success was attained in 1899, when only 17.8 per cent were wholly unsuccessful. In fact, there seems to be a general tendency toward greater success on the part of the employees from year to year. While this may be accidental, it may also be due to a growing strength in the labor movement.

If instead of the number of strikers, the number of separate strikes be taken as the basis for the comparison as to success and failure, we find that for the period of 6 years, from 1894 to 1899, 20.2 per cent of the entire number of separate strikes resulted in complete success, while 43.3 per cent were wholly unsuccessful, and 36.5 per cent partly successful. From this it would appear that the smaller strikes are more apt to prove wholly successful in Austria than the larger ones, since the proportion of strikes which were successful was considerably higher than the proportion of strikers who were successful. On the other hand, the strikes in the smaller establishments seem also to have resulted in an especially large number of complete defeats on the part of the workmen, since the proportion of unsuccessful strikes is considerably larger than the proportion of unsuccessful strikers. It is in the larger strikes that compromise most frequently results, since the proportion of strikes which resulted in compromise, 36.5 per cent, is very much less than the proportion of strikers engaging in partly successful or compromised strikes.

The Austrian statistics distinguish between strikes involving the entire number of employees of a given class in the establishments affected and those involving only part of such employees. As might be expected, strikes involving the entire number of employees are found to have been materially more successful than those which were only partial. When, however, the attempt is made to ascertain whether the degree of success varies as the proportion of the total number of employees who engaged in the strike, the Austrians have thus far found it impossible to draw any generalizations on this basis.

The following table shows for the years 1895 to 1899 the results of strikes in Austria, according to the nature of the demands of the workmen, these demands being grouped under three main heads:<sup>1</sup>

*Results of strikes in Austria according to causes, 1895-1899.<sup>1</sup>*

Causes.	1895	1896	1897.	1898	1899.
Wages	<i>Per ct</i>	<i>Per ct</i>	<i>Per ct</i>	<i>Per ct</i>	<i>Per ct</i>
Successful .....	29.2	20.8	17.7	21.5	16.1
Partly successful .....	21.6	35.5	36.7	40.1	41.2
Failure .....	46.15	43.6	45.6	38.4	39.6
Hours.					
Successful .....	41.7	34.9	17.9	33.3	32
Partly successful .....	11.7	24.1	29.8	26.7	23.8
Failure .....	46.6	41.9	52.2	40	44.2
Other causes					
Successful .....	33.6	25.8	27	22.3	26.6
Partly successful .....	16	29.7	20.6	26.9	27.8
Failure .....	50.1	54.5	52.1	50.8	45.6

<sup>1</sup> Arbeitseinstellungen und Aussperrungen in Oesterreich, 1895, p. 39, 1896, p. 34, 1897, p. 35; 1898, p. 32; 1899, p. 32.

It appears from this table that in Austria strikes regarding wages and those regarding hours have been approximately equal in their degree of success. The number of instances in which strikes involving wage questions resulted in total failure was slightly less than in the case of strikes involving hours of labor; but the proportion of strikes concerning hours of labor which resulted in complete success was materially greater than the proportion of strikes regarding wages which had this outcome. Strikes involving demands other than those concerning wages and hours, which include especially demands for the employment or discharge of persons or classes of persons, were relatively less successful than other strikes. More than half of strikes involving this group of causes resulted in total failure. The proportion of strikes of this class resulting in compromise, however, was somewhat less than the proportion of compromised strikes regarding wages, so

<sup>1</sup> In these figures the basis for calculating the number of causes is the number of separate demands made by the working people, as distinguished from the number of subjects giving rise to disputes in the first instance, used as a basis in the statistics of causes on p. 661

that the proportion of wholly successful strikes for these miscellaneous causes was greater than the proportion of wholly successful strikes regarding wages, although less than the proportion of wholly successful strikes involving hours of labor. We may conclude therefore that, as in other countries, strikes regarding wages and hours are those somewhat most likely to result favorably to the employees. The Austrian statistics, however, do not show any material difference in the degree of success of strikes for higher wages and those against reduction of wages, such as appears in England and the United States.

The Austrian reports give interesting information as to the effect of strikes upon the employment of the strikers. It appears from these figures that a very small proportion of the total number of strikers are wholly replaced, against their will, as the result of the strikes. The proportion of the total number of strikers thus replaced varied from 3.12 per cent in 1890 to 5.7 per cent, in 1895. A small number of strikers in each year left employment willingly, but more than 90 per cent in every year were reemployed after the strikes, either under improved conditions or under the same conditions as existed before.

5. *Italy*.—The following table shows the proportion of the entire number of strikes in Italy which resulted in success for the employees, in partial success, and in failure for the period from 1879 to 1891, and for each year since 1892. It also shows similar proportions for the number of strikers.

*Results of strikes, 1879-1891 and 1892-1898*<sup>1</sup>

Year	Per cent of strikes			Per cent of strikers		
	Success- ful	Partly success- ful	Failed	Success- ful	Partly success- ful	Failed
1879-1891 .....	16	43	41	25	47	28
1892 .....	21	29	50	29	19	52
1893 .....	28	38	34	29	11	27
1894 .....	34	28	38	19	21	57
1895 .....	32	31	37	33	10	27
1896 .....	38	24	38	70	18	12
1897 .....	33	27	40	10	75	15
1898 .....	27	27	46	27	31	42
Average 1892-1898 .....	..	..	..	36.3	37.6	26.1
Average, 1892-1898, omitting hat makers' strikes of 1896 and 1897 ..	..	..	..	30	33.1	36.7

<sup>1</sup> *Statistica degli Scioperi, 1891-1898*, Bulletin of the United States Department of Labor, 1901, p. 148.

It will be observed that, for the years 1879 to 1891, 16 per cent of the strikes and 25 per cent of the strikers were successful. The number of partly successful strikes in this period was 43 per cent of the entire number, while partly successful strikers were 47 per cent of the entire number. These figures show that the larger strikes were, on the whole, more advantageous to the employees than the smaller strikes. Conversely a larger proportion of the strikes failed wholly than the corresponding proportion of strikers, the percentages being 41 and 28, respectively.

Comparing the results for the separate years from 1892 to 1898, we find that there are very great differences between the proportions of success and failure as regards strikes and the proportions as regards strikers, but the general conclusions deducible from the percentages for the earlier years hold good here also. In most years the proportions of strikers who wholly failed to obtain their objects was somewhat smaller than the proportion of strikes which wholly failed. The proportion of wholly successful strikers, taking the period as a whole, was greater than the proportion of wholly successful strikes. The results as regards strikers for the years 1896 and 1897 were enormously affected by the single great strike of each of those years among the hat makers of Florence, each involving more than 40,000 persons. The hat-makers' strike of 1896 was, at least for most of its participants, wholly successful, while in 1897 it resulted for the most of the strikers in partial success. Accordingly we find that 70 per cent of the entire number of strikers in 1896 were successful, as compared with only 38 per cent of successful strikes, while in 1897 75 per cent of the entire number of strikers were partially successful, as compared with 28 per cent of strikes partly successful. The very small percentage of strikers who wholly failed during 1896 and 1897 is explained by the result of these two great strikes.

The Italian authorities now omit the two great hat makers' strikes in their summary tabulation of results apparently because of the unusual character of the industry and of the relations between employers and employees in it. In this way the proportion of wholly successful strikers in 1896 becomes 49 per cent; of partly successful, 31 per cent, and of unsuccessful, 20 per cent; while the corresponding figures for 1897 become 23 per cent, 45 per cent, and 32 per cent, respectively. This change reduces the average percentage of wholly successful strikers from 1892 to 1898 to 30 per cent; and that of partly successful to 33.1 per cent; while the proportion wholly unsuccessful becomes 36.7 per cent.

The results of strikes for the earlier period, 1879 to 1891, may be compared with those of the period from 1892 to 1898. While 25 per cent of the strikers in the earlier period were wholly successful, the proportion of wholly successful strikers rose to 36.3 per cent in the later period. This great difference is chiefly due, however, to the result of the one wide-reaching strike among the hat makers of Florence in 1896. The proportion of partly successful strikers from 1879 to 1891 was 47 per cent, while in the latter period it was only 37.6 per cent. It seems that the number of strikes which resulted in compromise during the later period was very much less than during the earlier period, and even the fact that the great strike, involving more than 40,000 persons, in the Florence hat trade in 1897 resulted in partial success, fails to bring the proportion of partly successful strikers during the later period up to within 9 per cent of the figure for the earlier series of years. The percentage of strikers who wholly failed was slightly less during the later period, 26.1 per cent, than during the earlier one, 28 per cent; but had it not been for the favorable outcome of the two great strikes of the hat makers, the percentage of failure among the strikers would have been considerably greater in the later period than in the earlier one.

## APPENDIX.

### VIEWS OF VARIOUS WRITERS ON ARBITRATION AND CONCILIATION.

The following extracts from, and abstracts of, the opinions of various prominent economic writers, labor leaders, and persons who have had experience in regard to conciliation and arbitration, may be of interest. They are given without comment and with no intention of indicating approval or disapproval in presenting them.

#### ARBITRATION AND CONCILIATION.

Paper by WILLIAM H. SAYWARD, secretary National Association of Builders, before the Congress on Industrial Conciliation and Arbitration, Chicago, Ill., November, 1891. Report, pp. 81-83.

Arbitration, as ordinarily and narrowly interpreted, gives no promise of permanency. Arbitration is a measure which must of necessity comprehend the existence of conditions inimical to permanent peace, and such measures, pacific though they be, if utilized only in their restrictive sense will be found to fall far short of establishing lasting harmony. We must do better than this. We must search for a method of conducting those affairs which are mutually the concern of employer and workman upon a basis that will substitute primary agreements for contest and conflict, and thus anticipate and render unnecessary the operation of palliative methods, which at best are but temporary in their effect.

Consider for a moment what arbitration really means. Arbitration means the settlement of something in controversy, it presupposes disputes which are to be settled by others than those party to the questions at issue, its outcome is almost invariably a compromise, the terms of which are fixed by a third party, and with which one of the disputants at least is quite sure to be dissatisfied. This is not what we are seeking. Let us not be deceived by that which "keeps the word of promise to our ear and breaks it to our hope" but probe a little deeper, that the cure may be lasting.

Conciliation, however, may be so understood and applied as to promise and produce results much more permanent and lasting, indeed it has been so used and applied in Belgium and England in some notable instances, where it has been so used as to mean an accepted method of combined action to secure the settlement of affairs of mutual concern, but conciliation, as ordinarily understood and used, signifies that the parties concerned have been permitted to quarrel and need a mediator, our contention is that it is poor policy to allow things to reach such a pass as this. I therefore would be glad to strip from the word all that significance which arouses in the mind a sense of existence of grievances which need to be soothed and alleviated. It is a foolish waste of opportunity to sit idly by while the parties get warmed up to the fighting point and then offer palliative processes to heal wounds that ought never to have been permitted, for the labor and difficulty of handling such questions is thereby increased an hundredfold. \* \* \*

The objective point in our study of the labor problem must be to discover some permanent, businesslike method of settlement of all questions of mutual concern between employers and employed that will work with automatic regularity and as a matter of course, thus forestalling all less comprehensive methods of healing breaches by preventing the breaches from occurring.

Now, what is this plan which we believe covers all these points and effects the result hoped for?

Comprehensively stated it is simply a plain business method, such as precedes, almost invariably, all commercial transactions where goods are purchased and sold. Namely, a mutual agreement made before sale or purchase by the buyer and the seller, covering the amount and quality of goods, when, where, and how delivered, the price, and other matters incident thereto.

The agencies by and through which the agreement is effected are the organizations representing, respectively, the buyer and the seller.

Specifically stated and precisely as it is in operation under the recommendations of the National Association of Builders, "A joint committee, composed of an equal number of delegates from the association of employers and from the association of workmen in any craft or calling, to which joint committee is referred all matters of mutual concern, the decision of the said joint committee to be final and binding upon all members of either and both associations. If the joint committee be equally divided on any question, then an umpire, who is chosen as the first item of business at each annual meeting of the joint committee, and consequently before any differences of opinion have been reached, is called in, and then his decision is final and binding on all parties. This umpire must be from some calling outside that of the craft concerned, preferably a judge of some of the higher courts or in such commanding position in the community as to place him above suspicion. No strikes or lockouts to occur under any condition, but work to proceed undisturbed. \* \* \*

ARBITRATION.<sup>1</sup>

President ARTHUR T. HADLEY, Yale University

President Hadley thinks that the demand for State arbitration, and especially for compulsory arbitration, comes chiefly from the workmen. After pointing out the superior position of the employer in a strike, he continues:

"If, however, the employer can be prevented from protracting the dispute, the position of the strikers is different. They have only to hold together for a short time in order to be assured of success. They are placed on the kind of vantage ground enjoyed by the man who makes a corner in wheat when a large number of people have contracts which they must fulfill within a limited period. This is the most potent motive with those who demand compulsory arbitration.

"They support this demand with strong arguments. They urge that the capitalist who builds a railroad must undertake to serve the public continuously. The more complete the monopoly, the greater is the public necessity for uninterrupted service. This public need is paramount to all other considerations. The capitalist should not be allowed to withhold the necessary service from the public, merely because he can not agree with his workmen as to the terms of payment.

"To this argument there is an equally strong reply. If capital is to be compelled to maintain continuous service on terms like these, it will be difficult to find investors who are ready to put their money into business enterprises which are subject to this liability. Such an arrangement as the one proposed, while apparently fair to both laborers and capitalists, is really quite one-sided. It could be enforced against the employer, but not against the employee. Laborers can not be compelled to work on the basis of an arbitrator's award. They have not, as a rule, property enough to be held to such an agreement by the threat of pecuniary damages. No one would put them in prison if they refused to accept the rates offered. Even if they could be thus compelled to work against their own will, the service rendered under such terms would resemble slave labor, and might become dangerous alike to the property of the employer and to the safety of the public.

"If capitalists are afraid to invest their money in new enterprises, both laborers and consumers suffer, the consumer for lack of new sources of supply, the laborer for lack of new fields of employment. The loss to the laborer from this cause more than neutralizes any good which he may have obtained from the temporary enforcement of his demands by a board of arbitrators. This is illustrated by the history of the years 1885 and 1886, when the industries of the United States were virtually under a régime of compulsory arbitration [during the time of the Knights of Labor].

"It may be objected that the system of arbitration as administered by the Knights of Labor was a one-sided one, and that no conclusion can properly be drawn from such an instance as to the effect of equitable arbitration under public authority. But reasons have been already given to show that arbitration under public authority is likely to be one-sided. It is sought by the laborers and not by the capitalists. It deals with conditions which are as yet unknown and can not be predicted with assurance by any board of arbitrators. If the decision of such a board is unfavorable to the workmen, they have it in their power to nullify it. If it is unfavorable to the capitalist, he must nevertheless accept it.

"We are placed in an awkward dilemma. If we do not admit the principle of compulsory arbitration we are liable to interruptions of public service at points where its continuous maintenance is essential to the comfort and prosperity of the community. If, on the other hand, we adopt compulsory arbitration as a principle, we are liable to an interruption of the investment of capital where it is essential to social and industrial progress. The public is the sufferer in any event.

"Fortunately, the practical chance of escape from our dilemma is rather better than the theoretical one. Every strike teaches either workmen or capitalists some useful lessons for the future. \* \* \* So far as the managers on either side become in the true sense leaders of men, there is a chance for reducing labor disputes to a minimum. This may be a slow and unsatisfactory remedy for present troubles, but it is the only one which appears to promise much hope of permanent success.

"Government agencies for arbitration can be arranged either to help or hinder this consummation. \* \* \* The history of boards of arbitration, both in Europe and America, shows how little can be accomplished by the exercise of political authority after a light has once begun. \* \* \* A very considerable proportion of the disputes between labor and capital may be characterized as wholly unnecessary. They are the outcome not of direct quarrels, but of misunderstandings. The employer wants to do one thing, the laborers think he wants something else, they object to the latter, and he believes that they are taking exception to the former. Or it may happen that the men protest against a reduction in wages without knowing what the conditions of trade really warrant, the employer insists on the reduction without giving facts to sustain his position, the workmen strike in the belief that he is willfully refusing to give the wages they demand, when the truth is that he is prevented by sheer inability. After the strike is once inaugurated it is often too late for further explanations. But a board of conciliation, whether organized by the Government or by the voluntary action of employers and employed, can render the greatest service in enabling each side to get a clear understanding of the other's position before matters have gone so far as to render cool action on the basis of such an understanding impossible.

"If, before any dispute arises, both parties can settle upon a satisfactory scheme for the determination of wages and make a long-time contract on this basis, it precludes much of the danger of labor troubles. The system which has seemed best adapted to this end is known as the sliding scale.

"Where the conditions will admit of its use, it has a decided influence in preventing labor troubles, by settling in advance the share in which the laborer and capitalist shall divide the advantages of a rising market or the burdens of a falling one, nor is it, under favorable conditions, so complicated as to give rise to misunderstanding and suspicion.

"From the employer's standpoint no exception can be taken to the principle of the sliding scale. It undertakes to do for noncompetitive labor what economic forces do for competitive labor—to give the workman the total value of what he makes, less a deduction for the necessary profits of capital. But from the workman's standpoint there is always a possible objection which may prove very serious. What if the price of the product, less the necessary deductions, fails to give him the income he needs in order to keep himself and his family alive? Looking at the matter from this side he proposes another standard as a basis of just remuneration—the standard of the living wage. According to this view, labor should be paid enough to maintain it at a good grade of efficiency, the amount necessary for this purpose being determined by the habits of life of the workers themselves."

## INDUSTRIAL AGREEMENTS AND TRADE ARBITRATION.

Opinion of NEW YORK BOARD OF MEDIATION AND ARBITRATION.<sup>1</sup>

The experience of the board leads us to the conviction that two of the most common causes of strikes are unwillingness on the part of employers to recognize trades unions, and a lack of cordiality on the part of employers toward their employees. It may be stated, as a general proposition, that employers in this State are, as a rule, opposed to the organization of their employees into trades unions, and only tolerate their existence because they are powerless to prevent them. It is not likely that the employers generally would admit the truth of this statement. In most instances employers will state that they have no objection to the organization of their employees into unions, and that they have no desire or purpose to interfere for or against them. But their refusal to treat with or recognize union committees, and their disposition to resent any so-called interference with their right to conduct their business as they please, so far as it relates to questions of wages or labor conditions, is a practical repudiation of the principles of unionism and a most prolific cause of labor troubles. Workmen have long since learned that when employers refuse to deal with them save as individuals there is really only one side to the case. They believe that a union of individual interests is necessary, unless they are to remain at a decided disadvantage in their demands for what they consider their rights.

This general disinclination to recognize trades unions in a practical way has its origin in part in a common lack of cordiality on the part of the employers toward their employees. Both sides are apt to act from selfish motives, and it is, perhaps, not strange that in the struggle the employer desires to have full control over labor conditions, and is not often willing to admit any close relation which would make these conditions a question for debate. A closer relation would lead to a wider knowledge of the facts as to whether labor was receiving its fair share of the product of labor, and for this reason there is hesitation on the part of employers to put themselves in a position where greater publicity, or a seeming surrender of legal rights, would be recognized. In view of this attitude on the part of employers, and of the great increase in the aspirations to the ranks of trades unions, there is a growing need of a fair consideration of the best means for avoiding industrial disputes, or for their settlement by peaceful means. It must be manifest that any method which is to be resorted to with favor by the great body of employees must be based upon the right of workmen to organize and their right to know the true condition of the trades which may be involved. To be successful both sides must meet on a common basis at short range, imbued with a desire for fairness and candor, and a determination to reach fair conclusions. There must be discussions, which will give opportunity for giving and taking arguments, for learning each other's point of view, and for being influenced by reasonable conditions. It is the opinion of the board that these conditions can best be met through the medium of industrial agreements between employers and employees, by which all disputes shall be referred to boards of conciliation and arbitration made up in part of employers and in part of employees. This method of settling labor disputes has been pursued with great success in England, where its use has led to a desire, on the part of employers, for the organization of their employees, because of the greater facility afforded for an open exchange of views for settlement of hundreds of disputes without recourse to strikes or lockouts, and to industrial peace, which has been of inestimable value to manufacturers and to hundreds of thousands of workmen. Whether this method of settling industrial disputes shall become general in this country must lie with the employers of labor. It is for them to decide whether, in the face of changed and changing industrial conditions, they are willing to open the way for free discussion and intercourse, even though it involves a surrender on their part of what they deem their rights.

## ADVANTAGES AND DIFFICULTIES OF ARBITRATION.

Extract from Report of Mr. JOSEPH D. WILKES to Governor of Pennsylvania, 1878.

There are two, possibly three, objects sought in the formation of boards of arbitration and conciliation. The first is to prevent differences between employed and employers from becoming disputes, and leading to strikes and lockouts, and the second is to settle disputes that have unfortunately arisen, and to put an end to strikes and lockouts, should they occur. The third, object which is possibly included under the first mentioned, is to promote mutual confidence and respect between these two classes. The only sufficient reason for the adoption of the principle is that it accomplishes these purposes.

Whether it has accomplished these objects in the trades in which it has been fairly tried in England can be judged by the facts set forth in the preceding pages of this report. For myself, I do not hesitate to say that it is not only the best method yet devised, but the only rational one for adjusting the relative rights of employers and employed under the present constitution of industrial society. In making this statement, I do not forget the method by strikes and lockouts, nor do I consider it. These methods are neither rational nor civilized. A victory or defeat for either side, under the pressure of strikes or lockouts, neither proves or disproves the justice of a position assumed, but it is fair to infer that an award given by a board of arbitration, after due consideration, would be as near just and right as it is possible for human judgment to reach. It is to be observed, also, that a decision of a board should not be, and in most cases is not, regarded as a victory by one side or a defeat by the other. There is no exultation over victory, no smart over defeat, nor a determination to wait for a convenient season and revenge. The burning questions that arise are settled in a friendly manner.

Another advantage of a permanent board of arbitration, with stated meetings, is that it furnishes an opportunity, seldom possessed without these, for the workmen to obtain a knowledge of the needs of trade and the demands of the future both upon them and the manufacturers. Labor troubles are as often the result of a lack of information as to the true state of a trade as of any other one thing. It is true that workmen may be told the facts rendering a reduction necessary, but they are not inclined to credit them, and believe that affairs are not as represented. In the working of the English boards, especially in fixing prices, notice is taken of the state of trade and competition with other countries and other districts, and the information thus gathered, not by the employer members, but by the board, is brought to bear in the settlement of wages. \* \* \*

This suggests another and a most important advantage of these boards. Accepting the fact that unions of workmen exist, and will doubtless continue to exist, it is only through the means of arbitration or conciliation of some kind that the trades unions and those employers can meet except as

<sup>1</sup> Report of New York Board of Mediation and Arbitration, 1900, p. 52.

antagonists. The manufacturer and his workmen can never be brought face to face to discuss trade questions, except when their interests are hostile. With these boards there is a possibility of meeting as fellow members of the same trade, whose interests are indissolubly joined.

Another and perhaps the most important advantage of these boards is the bringing of employer and employed together, and thereby increasing their respect and esteem for each other, and the consequent growth of confidence. One of the greatest barriers to an understanding between capital and labor is a feeling on the part of workmen that they are regarded as holding a servient position, and a feeling on the part of manufacturers that theirs is a dominant one. Out of these feelings, which are altogether too common, come a brood of evils that have cost our industries dear. Even when nothing is farther from the mind than the thought of cherishing such sentiments as these, suspicion, ever quick to grasp an appearance for a reality, catches at some chance word, and all the horrors of a labor war are the result. \* \* \*

But the chief advantage of these boards is that they form an open market where labor and capital can come together, and in a friendly spirit fix what is "a fair price for a fair day's work." In these boards the statements made by each side can be challenged, each other's arguments answered, and estimates impeached. I verily believe that, without limiting the influence of fair competition, boards of arbitration, properly worked, afford the best means of fixing the market price for a fair day's work. I believe, moreover, that their action has a tendency to secure the maximum prices which are consistent with steady employment, and that the presence of an umpire prevents the ruinous consequences to both parties which follow separation upon a disagreement.

#### DIFFICULTIES AND OBJECTIONS

The chief obstacle encountered in the formation of boards of arbitration and conciliation, as well as in the earlier operations of the same, is suspicion and prejudice. These are the sources of some of the most bitter and ill-advised strikes and lockouts that the history of industry has known, and it is this tendency to quarrel upon what Judge Kettle so aptly terms "matters of sentiment" that stands most in the way of arbitration. Happily, these feelings are passing away, a more intimate knowledge and a more generous estimate of the acts of each other are removing this suspicion and prejudice. Once boards are established, their very existence, as we have shown, tends to the removal of all sources of strife founded upon passion or ignorance.

Another difficulty that arises immediately upon the decision to form a board is the selection of an umpire. Shall he be a permanent officer, or chosen to decide a particular case? Shall he be practically acquainted with the trade in which he is called upon? Or is this not necessary, so that he have the other qualifications? These are questions that it seems almost impossible to answer from the results of experience. \* \* \*

On the part of the workmen there have been very strong objections at times to what they term "a stranger referee," but it will be found that the success of a referee will not depend upon his practical acquaintance with the trade so much as it will upon the man himself. If he is at all fitted for his responsible position in other ways he can gain sufficient knowledge of the trade to enable him to give a just and intelligent decision. It seems, however, advisable that when it is possible, the referee should be an officer selected by the board, with a tenure of office the same as the board. It is not well to wait until the struggle begins, and each side, perhaps, is striving for victory and all they can get before the one who is to decide between them is named. It is best to select him when judgment and reason rule. In this country, I think, little difficulty will be experienced in securing umpires. I think it is possible to name men in our own State in whose fairness and judgment our iron and coal industries would be willing to confide.

When the practical operation of these boards is considered, a very serious difficulty is found in the absence of any recognized definite principle as a basis on which awards shall be made. For example. First and foremost among industrial questions is that relative to the wages of labor. When this is before a board for decision the question arises at once, What shall be the basis upon which the award shall be made? It is because of this very difficulty that arbitration boards exist. If there were such a basis definitely established and universally acknowledged the decision as to the wages at a given time would be a simple question of arithmetic or bookkeeping. It is to endeavor to discover what is fair and right at a given time that these boards are organized. As a matter of information it may be said that in the practical operation of the boards, while all the facts relative to prices, competition, demand, and supply, both of labor and products, are considered, wages are generally based on the selling price of the articles produced. Mr. Kettle, in a noted arbitration in the coal trades, found a certain date at which the wages paid for work about the collieries were satisfactory to both sides. This became the ideal, and served to fix in a general way a ratio of wages to prices that would be a satisfactory one to both parties. Due notice was taken of any changes that had occurred that should serve to increase or diminish this ratio, such as reduction in the hours of labor, increased expense from mine-inspection laws, etc., and the arbitrator in his award endeavored to approximate this ratio as near as could be done without injustice or injury.

It has been objected to this course that it involves an exposure of secrets in connection with one's business that a manufacturer should not be called upon to make. To arrive at the wages paid and prices received for any commodity at a given time an inspection of books is necessary. This objection must arise from a misapprehension of what is really done. The books are not brought into the board, nor are the arbitrators as a body, nor any one of them, permitted to inspect them. An accountant, sworn not to divulge the details, but only the results, and these only to the board, unless they differ differently, is elected. He ascertains how much it has cost to produce an article, unless so agreed upon, nor how much profit has been made, but what was the actual selling price of the commodity at the times desired. There can be no objection to this. No secrets are divulged, the accountant covering his work in such a way that it is impossible to trace a sale.

It is further argued, as against arbitration, that an umpire may make mistakes. They are human and consequently liable to err. What would be the result if they did? It would be a very careless or ignorant umpire, one who had no business to occupy the position, who would make a mistake of, say 2 per cent, in his award. This would be, if the award held for 6 months, equal to about half a week's work—3 days. Would not this loss be better than a strike or a lockout for probably many times this? A more pertinent answer to this objection might be to ask the question whether an arbitrator is more liable to make a wrong decision than a strike or lockout? That is, is cool deliberation more liable to err than passionate impulse?

There is another objection that I imagine will have more weight in England than in this country. It is that arbitration is an attempt to interfere with the operation of natural laws, by which term is meant the politico-economical theories of Adam Smith and his successors and followers. It is not germane to the purpose of this report to discuss the truth or falsity of these theories. It is enough for us to say that at present our knowledge as to industrial laws is extremely limited, and that the assumed facts upon which theories have been based, or from which these laws are deduced have been questioned by some able political economists. However this may be, the law or theory is good

only so long as the facts or phenomena remain the same. There is nothing eternal in an economic law, and when the facts change or are modified then the law, which is only a statement of these facts and their relations, changes or is modified. Would it be wise or truthful to say that the facts or phenomena of labor have not undergone a wonderful change in the past century? Have not elements been introduced that promised permanence, that have produced marked changes in the relation of labor to employment, and demand changes in the statements of these relations, or, in other words, of the laws? But no argument is necessary on this point. No one will deny that interference with these laws is possible. Demand or supply may be increased or diminished, and thus, by a deliberate interference, changes to our advantage or disadvantage made to occur.

Just now I suggest the vital question as to the advantage or disadvantage of arbitration is to be asked. We must acknowledge that just so long as labor maintains its present constitution interference with these so-called laws will occur. Now, is it better to interfere with these laws by the peaceful and friendly methods of arbitration and conciliation or by the destructive and hostile ones of strikes and lockouts?

#### TRADES UNIONS AND ARBITRATION

In the practical workings of arbitration trades unions have been found essential to its success. They have formed the center around which the entire body of labor, nonunionist as well as the unionist, has gathered, and by which the workmen members of the boards have been elected. As the result of his long experience, Mr. Kettle says:

"I confess I see no organization but trades unions to fall back upon for the purpose of conducting the business of electing workmen delegates. It must be distinctly understood that I do not here intend that members of a trade society should elect the workmen's arbitrators. In all our staple trades there are unions, but the proportion of their members to the total number of workmen differs greatly in different trades. In all there are a greater number of what are called non-society men."

"All the workmen, whether unionists or not, should be represented on the arbitration board. I suggest that the trades-union organization is at present the most accessible means of carrying this out."

The organized union also gathers the facts upon which the arguments for the labor side are based, and it is in them that the moral power resides which has been found not only essential but sufficient to the enforcing of the awards of the board.

#### JOINT BOARDS OF CONCILIATION AND ARBITRATION.

Abstract of paper of Mr. JOSEPH D. WEEKS before the Congress on Industrial Conciliation and Arbitration, 1891, pp. 42-53.

Mr. Weeks in his paper declares his opinion that competition is not a satisfactory method of adjusting wages, and that it is also impossible for legislatures to determine wages fairly. "I do not believe either in strikes or lockouts. Strikes and lockouts settle nothing." They simply decide which can hold out the longest. It gradually comes to a point where the long purse on the one side gives out, or when the other side can starve no longer. The struggle is settled, not because right has prevailed, but simply because human endurance fails.

Nevertheless, it is not impossible to settle these questions peacefully. "I will agree to take any question, I do not care what it is, if I can get half a dozen honest men on either side, face to face, I will settle the question." The chief point is to get the parties together in friendly conference. Arbitration by outside authorities, as by State boards, may have a desirable effect, but the most successful results are to be obtained by conciliation and negotiation between representatives of the parties themselves. If they can sit down, each recognizing that the other is not a scoundrel, and that the object is to get at the facts as to the matter in which both parties are interested, an adjustment can be reached.

The chief force which must be relied upon to compel parties to abide by the decisions of their representatives in joint boards or of outside boards of arbitration is public opinion. "In the last analysis our Government throughout rests upon public opinion."

The main hindrance to the adoption of methods of arbitration and conciliation, in the opinion of Mr. Weeks, is the belief on the part of many employers that questions relating to labor are matters which employers alone have the right to decide.

There are indeed certain questions which may arise in the workshop as to which the employer ought to have the only say, but there is also a large class of questions in which he is no more concerned than the employee. The assertion that the right to dictate the terms upon which labor shall be performed rests with the employer alone is a monstrous one. It means slavery or starvation. The employee has the right to assert his industrial independence and his equality with his employer. He demands his living as his right, not as a favor, and is entitled to a voice and equal power in the decision of the questions that affect his interests in his relations to his employer, his work, and his product.

#### NECESSITY OF ORGANIZATION OF LABOR AND OF STRIKES.

Paper by SAMUEL GOMPERS, president American Federation of Labor, before Congress on Industrial Conciliation and Arbitration, Chicago, Ill., November, 1894, pp. 89, 90.

Speaking of strikes, I am free to say that it is a subject more largely misunderstood than any one subject that I know of. Men believe that the only existence of a labor movement is a strike, when, as a matter of fact, the strike is merely the external manifestation and the infrequent manifestation of the labor movement. The labor movement is carried on day and night. While we are here discussing the question of conciliation and arbitration, on the question of organization of workers and employers, there are committees in the offices, in the meeting rooms with employers, obtaining and receiving concessions in the shape of wages, hours, and improved conditions. To strike, as I say, is but one of the eruptions of the labor movement, and one of the infrequent occurrences considered beside the great work that the organizations of labor perform, and even these strikes men and women who are honest desire zealously to see entirely eliminated or reduced in number. But will the denunciation of strikes prevent strikes? History has proven the very opposite to be the fact. The truth

is that when workmen denounce strikes, when they are led to the belief that strikes are completely to their injury, their attention is diverted from this means of defense, and greater advantages are taken of them by unfair, unscrupulous employers, and strikes are provoked entirely unnecessarily. An organization of labor which resolves that under no circumstances will it strike reminds me very much of a militia regiment which resolved that upon the breaking out of war it will disband. As one who has been intimately and closely connected with the labor movement for more than 30 years—from boy-hood—I say to you that I have yet to receive a copy of the constitution of any general organization or local organization of labor which has not the provision that before any strike shall be undertaken conciliation or arbitration shall be tried, and with nearly 12,000 local trade unions in the United States I think that this goes far to show that the organizations of labor are desirous of encouraging amicable arrangements of such schedules and conditions of labor as shall tend to peace. To urge arbitration previous to the organization of labor simply means the destruction of the interests of labor. Arbitration is not strange to English workmen. Arbitration was practiced between the workmen of England and their employers for quite a long time, but their experience demonstrated that arbitration, so far as they were concerned, was considerably one-sided, and it is more than 20 years ago that the workmen of Great Britain repudiated arbitration as being inimical to the interests of British workmen. And it is for that reason that with the growth of the organizations of labor there has been much more conciliation or conference, resulting in the adjustment of economic disputes.

### NECESSITY OF STRONG ORGANIZATION TO MAKE ARBITRATION EFFECTIVE.

Abstract of paper of P. J. McGuire, secretary of the United Brotherhood of Carpenters, before the Congress on Industrial Conciliation and Arbitration, 1894, pp. 84-88.

Mr. McGuire appeared as a representative of the United Brotherhood of Carpenters, an organization including at the time over 10,000 members. The speaker declared that the carpenters' organization had always sought to bring about friendly negotiations with employers regarding labor disputes. The constitution provides that in case of any difficulty the president of the local union shall appoint a conference committee of 3 members to wait on the employers. As a matter of fact, however, employers in very many cases refuse to recognize these committees. They declare themselves willing to talk to the men in their own shops, but not to negotiate with officers of labor organizations. Mr. McGuire stated that he had during the past 3 years gone in very many cases to builders' exchanges, and other organizations of employers and implored them to meet a conference committee of the trade union, in order to save trouble from strikes, but in vain. On the other hand, the employers quite generally accede to the demands of the bricklayers for recognition of their conference committees. The reason is that the bricklayers are so strongly organized that they have power to compel the employers to meet them. When the carpenters become sufficiently strong they can similarly compel employers to treat with them by conciliatory methods.

Just as strong organization of the workmen on the one side is desirable in order to effect conciliation or arbitration, so a thorough organization of the employers on the other side is to be desired. In fact, organization is essential to successful conciliation or arbitration. Trade unions do not ask the State to step in and help them settle their difficulties. If they can not help themselves they have no right to exist.

Mr. McGuire was not disposed, however, to admit that strikes are always injurious or undesirable. He declared that since 1881 the United Brotherhood of Carpenters had conducted 873 strikes, of which 761 were successful. Since 1886 the expenditure in strike funds by the organization had been about \$330,000. The average increase of wages brought about by the strikes has been 50 cents per day, amounting to more than \$3,750,000 during the 7 years since 1886. At the same time the hours of labor had been reduced largely in most cities of the country.

### STATE ARBITRATION: COMPULSORY ATTENDANCE OF WITNESSES AND ENFORCEMENT OF DECISIONS.

#### OPINION OF ILLINOIS BOARD OF ARBITRATION.

The Illinois arbitration act was amended in 1899, at the instance of the State board itself, so as to increase its powers of investigation. The amended law provides that the board shall have power in all cases to require an operative or expert, or a person who keeps records, or any other person, to testify, and to require the production of books containing records of wages paid and of any other books or papers deemed necessary to a full investigation. A person who is served with a subpoena or other process and who refuses to obey it, or who refuses to answer questions, may be compelled to do so by order of the circuit court or the county court, on application of the board.

The Illinois State Board of Arbitration, commenting on this amendment in its annual report for 1899, declares that it believes that the provision will prove a strong incentive to arbitration. Knowledge of the fact that they may be compelled to appear before the board and to produce books and papers will, it is thought, induce employers, for the protection of their own interests, to become parties to the arbitration proceedings. Since a court of record is to pass upon the question of the authority of the board to require the production of books and papers, there is no likelihood that the power can be abused. The amendment, also, will increase the weight of the findings of the board in cases which are investigated upon the application of one party only, since the effect of the decisions in each case depends largely on the force of public opinion, and since public opinion will be greatly strengthened by accurate knowledge of the facts based on the testimony thus obtainable. The new provisions enable the board, also, to give to both employers and employees information which they would be otherwise powerless to obtain.

The laws of Indiana and Illinois are more stringent than those of any other State, with regard to the enforcement of the decision of the State board of arbitration, in cases where both parties have applied for its intervention.

The Indiana law provides that if either party after the arbitration decision shall present to the circuit court of the county a petition stating that the award has not been complied with, the court may

<sup>1</sup> Report Illinois State Board of Arbitration, 1899, pp. 11, 12.

issue a rule against the party charged with noncompliance after proper hearing. Disobedience by any party to such an order is to be deemed contempt of court and may be punished accordingly, although the punishment shall not extend to imprisonment "except in cases of willful and contumacious disobedience."

The Illinois act, as amended in 1899, is very similar to that of Indiana, but contains a provision that the punishment shall in no case extend to imprisonment. The Illinois board, commenting on this difference between the two laws, declares that it is of the opinion that the end sought will be quite as effectively attained by means of a fine as by means of imprisonment. The amount of the fine lies wholly within the discretion of the court. The board is of the opinion, also, that in most cases fines against workmen can be collected, especially since the workmen who wield the greatest influence, and who would be most apt to be parties to arbitration proceedings, are the most likely to have property. The board believes, also, that the possibility of imprisonment would make both employers and employees very much averse to submitting their differences to arbitration, and hence would hinder the usefulness of the system.<sup>1</sup>

### ARBITRATION OF RAILWAY DISPUTES.

Chief conclusions and recommendations of UNITED STATES STRIKE COMMISSION of 1905.<sup>2</sup>

NOTE.—This commission was appointed by the President to investigate the great railway strikes of 1894. It consisted of Carroll D. Wright, United States Commissioner of Labor, John D. Kernan, of New York, and Nicholas F. Worthington, of Illinois.

It is encouraging to find general concurrence, even among labor leaders, in condemning strikes, boycotts, and lockouts as barbarisms unfit for the intelligence of this age, and as, economically considered, very injurious and destructive forces. Whether won or lost is broadly immaterial. They are war—interference war—and call for progress to a higher plane of education and intelligence in adjusting the relations of capital and labor. These barbarisms waste the products of both capital and labor, defy law and order, disturb society, intimidate capital, convert industrial paths where there ought to be plenty into highways of poverty and crime, beat as their trait the arrogant flush of victory and the humilitating sting of defeat, and lead to preparations for greater and more destructive conflicts. \* \* \*

The general sentiment of employers, shared in by some of the most prominent railroad representatives we have heard, is now favorable to organization among employees. It results in a clearer presentation and calmer discussion of differences, instills mutual respect and forbearance, brings out the essentials, and eliminates misunderstandings and immaterial matters. To an ordinary observer argument to sustain the justice and necessity of labor unions and unity of action by laborers is superfluous. \* \* \*

The question of the right of Congress to legislate in regard to the conditions of employment and service upon railroads engaged in interstate commerce is a most important one, and the right seems by analogy to exist. Similar powers as to rates, discriminations, poolings, etc., has been exercised in the act to regulate commerce and has been sustained by the courts. The position of railroads as quasi public corporations subjects them and their employees to this power and imposes its exercise upon Congress as a duty whenever necessary for the protection of the people. The question of what shall be done is therefore one of expediency and not of power. When railroads acted as judge and jury in passing upon the complaints of shippers, the people demanded and Congress granted a Government tribunal where shippers and railroads could meet on equal terms and have the law adjust their differences. In view of the Chicago strike and its suggested dangers, the people have the same right to provide a Government commission to investigate and report upon differences between railroads and their employees, to the end that interstate commerce and public order may be less disturbed by strikes and boycotts. Public opinion, enlightened by the hearings before such a commission, will do much toward settling many difficulties without strikes, and in strikes will intelligently sustain the side of right and justice and often compel reasonable adjustments. Experience, however, has taught that public opinion is not alone powerful enough to control railroads. Hence power to review and enforce the just and lawful decisions of the commission against railroads ought to be vested in the United States courts. There can be no valid objection to this when we bear in mind that we are now dealing simply with quasi public corporations and not with either individuals or private corporations. What is safe and proper as to the former might be unsafe and unjust for the latter. That which is done under the act to regulate commerce as to rates can safely and ought properly to be done as to railroad wages, etc., by a commission and the courts.

Some stability and time for consideration and amicable adjustment of disputes can also be secured by providing that labor unions shall not strike pending hearings which they seek, and that railroads shall not discharge men except for cause during hearing and for a reasonable time thereafter. A provision may well be added requiring employees during the same period to give 30 days' notice of quitting and forbidding them unions from ordering or advising otherwise.

Many assert with force that no law can be justly devised to compel employers and employees to accept the decisions of tribunals in wage disputes. It is insisted that while the employer can readily be made to pay under an arbitration decision more than is or than he thinks is right, the employee can not practically be made to work. He can quit, or at least force his discharge, when the decision gives him less than he demands. Hence nothing reciprocal can be devised, and without that element it is urged that nothing just can be enacted of a compulsory nature. This may be true in general industries, but it has less weight as between railroads and their labor. Railroads have not the inherent rights of employers engaged in private business, they are creatures of the State, whose rights are conferred upon them for public purposes, and hence the right and duty of government to compel them to do in every respect what public interest demands are clear and free from embarrassment. It is certainly for the public interest that railroads shall not abandon transportation because of labor disputes, and therefore it is the duty of the Government to have them accept the decision of its tribunals, even though complete reciprocal obligations can not be imposed upon labor. The absence of such reciprocal obligations would rarely affect railroads unjustly if we regard the question in a practical light.

Railroad employment is attractive and is sought for. There has never been a time in the history of railroads when men did not stand ready to fill a labor vacancy at the wages fixed by the roads.

<sup>1</sup> Report of Illinois State Board of Arbitration, 1899, pp. 12, 13, 117.

<sup>2</sup> Report of the United States Strike Commission, pages XLVI-LIV.

The number is constantly increasing. If railroads can thus always get the men that they need at what they offer, is there any doubt that the supply will be ample at any rates fixed by a commission and the courts? A provision as to notice of quitting, after a decision, would be ample to enable railroads to fill vacancies caused in their labor departments by dissatisfaction with decisions. To go further, under present conditions, at least, in coercing employees to obey tribunals in settling their labor would be a dangerous encroachment upon the inherent, inalienable right to work or quit as they please.

When railroad employees secure greater certainty of their positions and of the right to promotion, compensation for injury, etc., it will be time enough to consider such strict regulation for them as we can now justly apply to railroads, whose rights are protected by laws and guarded by all the advantages of greater resources and more concentrated control. \* \* \*

To secure prompt and efficient data for the formation of correct public sentiment in accordance with this line of thought the commission contends that law should make it obligatory upon some public tribunal promptly to intervene by means of investigation and conciliation, and to report whenever a difficulty of the character of that occurring during the past season at Chicago arises. This intervention should be provided for, first, when the tribunal is called upon to interfere by both of the parties involved, second, when called upon by either of the parties, and, third, when in its own judgment it sees fit to intervene. The proper tribunal should have the right, in other words, to set itself in motion, and rapidly, too, whenever in its judgment the public is sustaining serious inconvenience. If the public can only be educated out of the belief that force is and must always remain the basis of the settlement of every industrial controversy, the problem becomes simplified. A tribunal, however, should not intervene in mere quarrels between employer and employed unless the public peace or convenience is involved, but where it is a clear case of public obstruction, whether caused by individuals or by a corporation, a tribunal should not wait until called upon by outside agencies to act. All parties concerned should be notified that the tribunal proposes upon a certain day,—and the earlier the day the better,—to be at a given place, there to look into the cause of the trouble, to adjust the difficulties by conciliation, if possible, and, in the event of failure, to fix the responsibility for the same. Proceeding in this way the report of such a commission would cause public opinion promptly to settle the question, or at least to fix the responsibility where it belonged, and to render successful opposition to the conclusions reached an improbability. To carry out this idea involves no complicated legislation.

The commission therefore recommends

(1) That there be a permanent United States strike commission of three members, with duties and powers of investigation and recommendation as to disputes between railroads and their employees similar to those vested in the Interstate Commerce Commission as to rates, etc.

a. That, as in the interstate-commerce act, power be given to the United States courts to compel railroads to obey the decisions of the commission, after summary hearing unattended by technicalities, and that no delays in obeying the decisions of the commission be allowed pending appeals.

b. That whenever the parties to a controversy in a matter within the jurisdiction of the commission of one or more railroads upon one side, and one or more national trades unions, incorporated under chapter 567 of the United States statutes of 1885-86 or under State statutes, upon the other, each side shall have the right to select a representative, who shall be appointed by the President to serve as a temporary member of the commission in hearing, adjusting, and determining that particular controversy.

(This provision would make it for the interest of labor organizations to incorporate under the law and to make the commission a practical board of conciliation. It would also tend to create confidence in the commission, and to give to that body in every hearing the benefit of practical knowledge of the situation upon both sides.)

c. That during the pendency of a proceeding before the commission inaugurated by national trades unions or by an incorporation of employees it shall not be lawful for the railroads to discharge employees belonging thereto except for inefficiency, violation of law, or neglect of duty, nor for such unions or incorporation during such pendency to order, initiate, aid, or abet strikes or boycotts against the railroads complained of, nor, for a period of six months after a decision, for such railroads to discharge any such employees in whose places others shall be employed, except for the causes aforesaid, nor for any such employees, during a like period, to quit the service without giving 30 days' written notice of intention to do so, nor for any such union or incorporation to order, counsel, or advise otherwise.

(2) That chapter 567 of the United States statutes of 1885-86 be amended so as to require national trades unions to provide in their articles of incorporation and in their constitutions, rules, and by-laws that a member shall cease to be such and forfeit all rights and privileges conferred on him by law as such by participating in or by instigating force or violence against persons or property during strikes or boycotts or by seeking to prevent others from working through violence, threats, or intimidations, also, that members shall be no more personally liable for corporate acts than are stockholders in corporations.

(3) The commission does not feel warranted, with the study it has been able to give to the subject, to recommend positively the establishment of a license system by which all the higher employees or others of railroads engaged in interstate commerce should be licensed after due and proper examination, but it would recommend, and most urgently, that this subject be carefully and fully considered by the proper committee of Congress. Many railroad employees and some railroad officials examined, and many others who have filed their suggestions in writing with the commission, are in favor of some such system. It involves too many complications, however, for the commission to decide upon the exact plan, if any should be adopted.

## ARBITRATION IN RAILROAD DISPUTES.

### Opinion of NEW YORK STATE BOARD OF MEDIATION AND ARBITRATION.<sup>1</sup>

These circumstances suggest the question whether provision of law may not be properly made to prevent or punish arbitrary or abrupt interruption of travel and transportation of freight, to the great inconvenience of the public and danger to human life and material values upon lines for the transportation of persons and property, whether by the corporate powers owning and operating them or by the persons in service upon them. \* \* \* The principle of law that applies has been laid down and settled by the court of appeals of the State of New York in the case of *The People ex rel. Kimball v.*

<sup>1</sup> Report of 1887 and Report of 1894, p. 26 ff. The latter report quotes from the former as in the text.

Boston and Albany Railroad Company (Sickels, 25) and by the Supreme Court of the United States in the Granger cases and in the Chicago elevator case. "Railroad corporations," says the opinion of the court of appeals, handed down by Judge Earl, all concurring, "hold their property and exercise their franchises for the public benefit, and are therefore subject to legislative control." The legislature may regulate the mode in which they shall transact their business, the price which they shall charge for the transportation of freight and passengers, the speed at which they may run their trains, and the way in which they shall cross or run upon public highways or turnpikes used for public travel. It may make all such regulations as are appropriate to protect the lives of persons carried upon railroads or passing upon highways crossed by railroads. All this is within the domain of legislative power, although the power to alter or amend the charter of such corporations has not been reserved. This whole subject of legislative power over railroads and over private persons holding and using their property for public purposes has been so fully discussed recently in the Supreme Court of the United States, in the Granger cases and the Chicago elevator case, as to make further discussion unnecessary here." As a corollary of this judgment, it would seem to follow that the legislature exhausts only half its power and performs only half its duty when in making appropriate regulation for the protection of the lives of persons and transportation of property carried upon railroads it stops with their application to the corporations and their officers. Of what avail is it for the State to possess and exercise a power of control and regulation over railroad corporations created for the public benefit and over private persons holding and using their property for public purposes if it permits combinations of unauthorized and irresponsible employees of such corporations and other persons to arbitrarily arrest and hold at will the operations of railroads or other properties in the service of the public? The operatives of a railroad, from engineer down to trackman, are, in the practical relations of their services to persons and property transported, far more important as factors than officers of the corporation, and should be held to due responsibility. Nor would the extension of regulations by law to employees upon railroads work any hardship to them. On the contrary, it would be their guaranty and protection, as well as the guaranty and protection of the corporation and the people. A railroad is a public highway of the State, subject as much to regulation by the State for the public benefit and for the protection of the lives of people who travel, and for the transit of property carried upon it, as if the State owned and operated it itself. When a man takes service upon a railroad, whether as an agent of the corporation or as an operative upon the line, he becomes a public officer, and hence subjected to such regulations he lays, in the discharge of all his duties and the time and manner of his abandonment of the line, as are appropriate to protect the lives of persons and secure the transit of property upon the road. \* \* \* The State should lodge somewhere a power, with ample means of law to make its intervention effective, for the speedy settlement of all disputes between the officers of railroad corporations and operatives of railroad property.
